Not only is George Hooper Wolfe—known by the people as the "Sage of Williamsport"—an authority on the C. & O. Canal, but he has also been extremely active in efforts to preserve the canal as a National Park area for future hikers, cyclists, nature lovers, and campers.

There are not many George Hooper Wolfes around.

I ask unanimous consent that the article entitled "Canaller—Storyteller and Author," published in Maryland Living of August 16, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CANALLER—STORYTELLER AND AUTHOR

(By Eleanor Heldrich)

George ("Hooper") Wolfe, of Williamsport, was born near the Potomac River in a house that stood 200 feet from the spot where the waters of the old Chesapeake and Ohio Canal crossed the Conococheague Creek via the Conococheague Aqueduct.

Williamsport was a canal town in those days. Lying midway between Cumberland and Georgetown, the town of 2,000 was the nerve center for the whole canal. Most of its people were either canal workers or canal traders. Many of the Irish brought over to build the canal in the 1830s had stayed to run the boats, which now plied their way along the 185-mile water highway. Hooper Wolfe's great grandfather, Thomas Gallagher, was one of them.

Hooper himself was the youngest of seven children. Three of his older brothers already worked on the canal. His brother Daise would one day become the captain of Canal Boat No. 4. It was natural, then, that when Hooper was seven years old and ready to go to work, he chose to work on the canal. It was part of his heritage.

Off and on for the next 12 years, young Hooper walked the towpath driving a pair of mules. He met the people of the canal, the boat owners and their families, the hired hands, the captains, the lock tenders and the section crews, the wharf loaders and the dredge crews, the men and boys, women and mules who made the "big ditch" their way of life.

"They were rough people," Hooper Wolfe says looking at you through a pair of large spectacles. "If they thought they could get by without paying a man, some of them, they'd kill him instead."

Strange words from a man whose gentle appearance and mild manners appear to disqualify him from such a violent life. But he did live on the canal and he can remember the way it was. The pay for carrying 100 tons of coal from Cumberland to Georgetown was $48, and a captain could average three trips a month for the nine months of the year that the canal was free from ice.

"What was bad," Hooper Wolfe recalls, "was the empty back loads. They could make two miles an hour going downstream loaded with coal, but the trip back up, against the current, took the same mules three miles an hour with no load at all."

The boats carried two mule drivers and four mules working in shifts. Every six hours the teams would change places and the tired mules and driver would climb up a ramp onto the boat. The mules were stabled right on the deck. At the peak of the canal years there were nearly 800 boats and 3,000 mules making the trip from Western Maryland mining country to the tidewater gateway.

At the end of the trip, in Georgetown, there would be a two or three-day layover while waiting for the boats to be unloaded. The canal people passed this time visiting back and forth across the boats. That was how Hooper met Minnie Zimmerman.

Her father was the captain of Boat No. 31 out of Big Pool, near Fort Frederick. Their courtship was a series of lucky meetings and unfortunate passings on the water until young Hooper finally convinced Miss Minnie to marry him by promising her a life away from the canal. For the next few years, the young bridegroom tried his hand at several jobs, including construction work on a new school building that was going up in Williamsport.

"You know how old I'm getting," says Mr. Wolfe with a chuckle. "They just condemned the school I helped to build."

In 1920, the young couple decided to try store keeping, so they bought a small grocery store on Conococheague St. in Williamsport. Four years later, putting together all their hopes and savings, they sold the grocery store and bought the old hotel across the street.

"Partly because it had such a good story connected with it," Hooper Wolfe admits.

The hotel was already a hundred years old during the Civil War when Gen. Robert E. Lee led his troops up Maidstone Hill across the Potomac River from Williamsport to shoot out the C. and O. Canal. The cost being shipped downstream to Union forces in Washington was an annoying thorn in the Confederates' side.

"Well, sir," says Mr. Wolfe, a storytelling gleam in his eye, "they weren't much on accuracy in those days so there was no telling where the cannon balls were going to land. A man named Jack Ensminger owned the old 30-room hotel and he didn't have much faith in Lee's intentions or his accuracy. So he cast about for a sucker who would be willing to make an immediate cash settlement on the hotel. Stables, furnishings, supplies, everything for one low, low price—$1,000. A certain Mr. W. J. Taylor rose to the bait. The next morning the Conocoheague Aqueduct was a shambles, but the newly named W. J. Taylor Hotel was standing proudly without a scratch on her."

Hooper and Minnie Wolfe bought that hotel in 1924 from W. J. Taylor Jr., and changed the name to Hooper's-on-the-Square. They modernized the building, adding indoor sanitary facilities and converted it into an apartment and boarding house. On the first floor they put a general store and lunch counter.

With the opening of Wolfe's general store, Hooper's great natural talent began to unfold, for he is one of the last survivors of a dying art, storytelling, the lengendary, cracker-barrel kind.

One of his favorites is about an old man who had spent his whole life along the shores of the Potomac River. He never did a good day's work in his life, surviving solely on what he could take from the water. One day he was sitting on the bridge with his line in the Potomac River trying to catch a fish, when along came this tourist lady.

She walked up to him and said, very politely, "Pardon me, sir, but could you tell me the name of this body of water?"

"Danged if I know," replied the old man and, adds Hooper Wolfe triumphantly, "By George, he didn't!"

Hooper can remember a good story about every man, woman and child in Williamsport, and even some about the streets and buildings. Naturally, the local residents can remember some about Hooper, too, like the time a stranger came into Hooper's store and asked for "some of that there cheese."

"The Swiss?" asked Hooper.

The stranger nodded. "How much is it?"

"Sixty cents a pound."

"Oh, no!" says the fellow backing off, "I won't pay that price. Abe Martin sells it for 50 cents a pound."

"Well," says Hooper, "why don't you go and get your cheese from him?"

"He don't have any," came the reply.

"Tarnation," exploded Hooper, "if I didn't have any, I could let you have it for 40 cents a pound!"

As the years passed Hooper Wolfe began to relish in particular stories about the old canal days. He collected pictures and mementos and posted them on his wall. He became a storyteller with a specialty.

In 1969, when he was 75 years old, he decided it was time to gather his pictures, stories, maps, charts, way bills and other memorabilia into a book. Not an easy project for a man whose formal education stopped short of four full years, but education or no education, Mr. Wolfe knew he was one of the last remaining boatmen with first-hand knowledge of a life that was already fading into history. If he didn't write it, who would?

As a result of his determination to tell it like it was, George Wolfe moved out of the company of back porch story tellers and into the rank of local historians. The book, "I Drove Mules on the C. and O. Canal," is ready to go into its third printing and copies have found their way across the country and into 35 states. Not bad for a first author of more than 70 years.

"Seventy years!" exclaims Hooper Wolfe "I don't call that old!"

## GAMAL ABDEL NASSER

Mr. BROOKE. Mr. President, all of us have been deeply shocked and saddened by the sudden, tragic death of Gamal Abdel Nasser, the greatest leader the modern Arab world has known, and one of the great world figures of our time.

Colonel Nasser helped to free his land and its people from the shackles of a corrupt and feudal king.

President Nasser, for all that his term in office was marked by conflict, was nevertheless a man primarily concerned with the welfare of his people. The Aswan Dam, the sale of Egyptian products abroad, the rise to new political and economic prominence of the Arab world—these were the accomplishments he favored, these were the projects he preferred to promote.

Mr. President, the American Government and the American people have often found themselves at odds with the policies of President Nasser. As the principal leader in the Arab world, he posed the greatest threat to the security of Israel; he united the Arab States in a common cause which we could not condone, and which we were forced to oppose.

But we can never forget that it was President Nasser who, only a few weeks ago, led the Arab world in acceptance of the U.S. peace proposal. And let us remember clearly, too, that the last act of his life was to bring about a truce between the Jordanian Government and the Palestinian guerrillas.

The image of Nasser as a peacemaker can not obliterate his earlier role in fostering great divisions in the troubled Middle East; it can not by any means excuse the fact that he was primarily responsible for introducing into that conflict an unacceptable level of great power participation.

But I dwell on the significance of these last, peaceful acts of President Nasser's life, in the full knowledge that it was on his final pilgrimage that the first and greatest Arab leader, the Prophet Mohammed, uttered the prayer:

Oh God, make the end of my life the best of my life!

And the best of my deeds, their conclusion!

I was struck with an interesting parallel, Mr. President, in thinking back over the life of this founder of the Muslim religion. The last time that the Prophet Mohammed left Mecca, he journeyed with several thousand followers to the town of Arafat. It was here that he confronted his God, and learned that his life's work was done.

President Nasser, too, has met his Arafat, in the very tangible person of the leader of the Palestinian liberation movement. But in the case of Egypt's President, a course has been set, but his work is not done.

There has already been much speculation in the press about who would—who could—succeed Nasser, both in Egypt and in the Arab world. I am no prophet, and I make no claims to special prescience. But I would suggest on this solemn occasion that the most appropriate way to honor the life of Gamal Abdel Nasser would be to carry on the pattern which represented the last and best of that man's life. We now pray that steps toward peace negotiations, the concluding acts of his life, will be pursued by those who succeed him. Let the peoples of the Middle East come finally to know the fullness of the blessing, so similar in their two tongues: "Sala'am," and "Shalom."

## GENOCIDE CONVENTION DOES NOT ENDANGER PRISONERS OF WAR

Mr. PROXMIRE. Mr. President, opponents of the genocide convention have maintained that our ratification of this important human rights convention could subject American prisoners of war held by North Vietnam to charges of genocide.

This is nonsense. Ratification of this treaty has no bearing on any charges that might conceivably be trumped up against our prisoners of war by the enemy. Any appeal made against the genocide convention on this basis is strictly an emotional argument and does not represent the facts of the situation.

Former Attorney General Nicholas Katzenbach, a prisoner of war himself for over 2 years and aware of the dangers inherent in that type of situation, has endorsed the genocide convention. He has, in fact, said that the genocide convention would present no new dangers to American troops in Vietnam or any other country.

I agree completely with Mr. Katzenbach. If this convention did in any way represent a threat to American POW's I would be the last to argue for its ratification.

It is most important that the United States ratify this convention immediately. Time is wasting. We must go on record as opposed to this real threat to a basic right of man. I sincerely hope that the Senate Foreign Relations Committee will report this convention to the Senate in the very near future.

## CONCERN FOR THE ENVIRONMENT

Mr. BYRD of Virginia. The preservation and enhancement of our environment are major national goals. The air, water, and land have been so long neglected and have become our very existence on this earth are being threatened.

The growing concern for our environment in all segments of our society indicates that we are faced with a very serious problem. Everyone recognizes this seriousness, but there is a danger that America may not dedicate itself to the continued hard work which is necessary.

I sincerely hope that our concern for the environment does not prove to be just a "fad." If we are to win the war on pollution, there must be a continuing commitment to conserve the resources on which we depend.

Each bill enacted has been a step toward a more livable environment. The Air Quality Act of 1967, the Clean Air Act of 1970, the Federal Water Pollution Control Act Amendments of 1966, the amendments to the Federal Water Pollution Control Act of 1969, and the establishment of an Office of Environmental Quality in the Executive Office of the President, are major pieces of legislation designed to improve our environment. I voted in favor of all these measures.

But we must search for new approaches to old and neglected problems.

The environmental protection agency, proposed by President Nixon, can be a step toward more efficient administration of environmental programs.

A similar proposal advanced by the Senator from Maine (Mr. MUSKIE) also provides a workable approach to this administrative problem.

I am also impressed with the list of pending environmental legislation before Congress, and I hope that each of these problems will be given careful consideration.

A few of these proposals include the international biological program, the Technology Assessment Act of 1970, the

Water Bank Act, the Joint Committee on Environment and Technology, and the Federal Lands for Recreation Act.

In addition, I cosponsored a bill to stimulate the development, production, and distribution in interstate commerce of low-emission motor vehicles, which has passed the Senate. I also cosponsored an amendment that will insure that environment considerations—including noise problems—will be incorporated into hearings on airport expansion. This also was approved.

In the scientific and technological fields, more and continued research is necessary to devise and test new methods for combating pollution.

For example, many solid waste disposal facilities are obsolete. New methods are needed to handle the increased volume of solid waste, and to do so in a way that will not adversely affect the quality of our air and water, and local planning grants.

Such research-oriented legislation is vital and commendable. It is important that science and the Government move together in the battle against pollution.

Yet, despite the gravity of our environmental problems, we cannot afford to approach these problems in isolation.

The Nation needs cleaner water and air; but at the same time, it needs economic development to provide job opportunities for the young men and women graduating from our high schools and colleges.

A proper balance between industrial development and pollution control is necessary in order for our Nation to provide a prosperous and healthy life for its citizens.

For example, automobile exhaust emissions are a major source of air pollution. But an economic tragedy could result if the Congress were to legislate an immediate ban on the use or production of the internal combustion engine.

The Clean Air Act of 1970, recently passed by the House and Senate provides a workable compromise to achieve reductions in automobile exhaust emissions, by allowing adequate time to meet required standards. Science, business, and the Government must work and move forward together toward workable, acceptable, and timely solutions.

We can no longer ignore the problems of our environment. We must move ahead in the effort to protect our air, water, and land. Our actions must not be taken in panic, but we cannot afford to stand still.

---

## STATEMENT ON HIGHWAY TRUST FUND BY CAROLINAS BRANCH, ASSOCIATED GENERAL CONTRACTORS OF AMERICA, INC.

Mr. THURMOND. Mr. President, this morning the South Carolina congressional delegation was privileged to meet with the representatives of the Carolinas Branch, Associated General Contractors of America. The purpose of the meeting was to discuss the future of the Federal highway program, and particularly the highway trust fund.

The highway trust fund is the backbone of our Federal highway system. We must take the necessary steps to assure the citizens of our country that this trust fund will continue to be used for improvement of highway transportation. The money for the highway trust fund is provided through taxes imposed only on owners and users of motor vehicles. If a person does not own a motor vehicle or utilize highway transportation, he contributes no revenues to the highway program. Although everyone does not contribute, everyone benefits. At our meeting this morning, representatives of the Carolinas Branch, Associated General Contractors of America, Inc., presented an excellent statement to the congressional delegation.

Mr. President, I ask unanimous consent that this statement be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT: CAROLINAS BRANCH, ASSOCIATED GENERAL CONTRACTORS OF AMERICA, INC.

Ladies and Gentlemen: Our mission here today is relatively simple. We wish to express to our congressional delegation, in the most positive way we know, our strong concern over the future of the Federal highway program.

As you are well aware, our group does not represent just a handful of special interests. Instead, it represents a broad cross-section of South Carolina citizens and business interests.

Today, we have restricted our petition to only one area of discussion. This is the crisis that is facing the highway trust fund.

As highway taxpayers, we take a particular pride and understandable interest in this fund. This pride stems not only from the fact that we are direct beneficiaries of improved highways, but—as South Carolina citizens—we have observed first hand the great progress which comes in the wake of improved highway transportation.

Through the highway trust fund, highway users in this country pay their own way without asking for or receiving handouts or subsidies from the Federal Government. Every penny going into the highway trust fund is taken from taxes imposed only on owners and users of motor vehicles. In other words, if a person does not own a motor vehicle or utilize highway transportation, he contributes no revenues to the highway program. In spite of the fact that everyone does not contribute, everyone benefits.

Highway transportation has provided untold benefits toward every aspect of the social, economic and cultural development of our Nation and has made the "good life" possible for many that would have been bypassed otherwise. In many parts of South Carolina, modern economic progress would have been virtually impossible without the growth of our highway system. Even though we have for decades had good ports and rail service and—more recently—fine air service, there are many sections of South Carolina that depend exclusively on highways for their transportation needs. Without economical highway transportation, these localities would be isolated from the progress enjoyed by other sections of the State.

Not only are South Carolina's great industries—textiles, electronics, aero-space components, tobacco and agriculture—heavily dependent on highway transportation, but the State's most recent one, recreational travel, is almost totally dependent on it. This is an extremely lucrative market for our State's abundant natural beauty and holds tremendous growth potential.

Nationally, recreational travel generates an estimated $32 billion annually with more than 77 million people participating. *Yet*, 60% of all American adults have never spent a night in a hotel or motel. And, 52% have never traveled over 200 miles from home. On an interstate highway, this is only about one-half day of comfortable driving time.

This offers a tremendous opportunity for the palmetto State to capture a larger volume of this travel business. Much of this potential business will be turned into actual business, however, only with the completion of the interstate highway system nationwide. Little will it matter if South Carolina has a fine highway system if missing links in other sections of the country make it difficult to get there.

Of course, the key to the success of our national highway program is the highway trust fund. This fund is scheduled to expire, as you know, on September 30, 1972. If that is allowed to happen, we will no longer have an effective means of paying our own way. We will simply have to accept crowded, dangerous roads as a fact of life; or, be willing to pay higher and higher general taxes to pay for a highway system whether we use it or not. It is our understanding, however, that Congress is unlikely to let the fund lapse and is now considering enactment of appropriate legislation.

In regard to this new legislation, we believe it is in the best interest of South Carolina and most of the other States that the highway trust fund be established as a permanent instrumentality for funding the Federal highway program. We feel this way because it has proven to be one of the soundest Federal programs ever devised.

We also feel that the highway trust fund should remain inviolate to the end that no highway funds are diverted to non-highway purposes. Many people believe that once the interstate system is completed, all our highway problems will be over. Actually, the worst is yet to come in the way of highway needs. Right now, there are about 105 million vehicles and 110 million drivers on the road. According to the Secretary of Transportation, that traffic volume will have doubled by 1980. His staff has estimated that $320 billion will be needed for highway improvements by 1985 if we are to keep pace with such astronomical growth.

In South Carolina, we will have some 1,857,000 motor vehicles by 1985 driving some 22.4 billion miles. Clearly, now is not the time for complacency. Nor, is it the time for diversion of highway revenues.

Only the highway trust fund, adequately protected from diversion, will permit the long-range, efficient planning that must go into a sound highway improvement program such as we will need to meet our growing needs. We feel it is absolutely essential that this fund survive in its present form.

As we all know, the highway trust fund is not a general sort of kitty. It is a pool of Federal taxes motorists pay on gasoline, tires and diesel fuel in addition to the excise taxes on trucks and buses and trailers and automotive parts as well as the special set of taxes just on trucks. In other words, the trust fund can be looked upon as a "fare box" in which users—in proportion to the degree of utilization—pay for their individual use of the public roads.

We are very much aware of some of the proposals in Washington these days to siphon off Federal highway revenues into a national transportation fund, which would finance all forms of transportation, including mass transit. This would be extremely inequitable and unfair. Rail transit, for instance, is feasible—at best—in only about 15 of the Nation's largest urban areas. What justification can be found for asking *just* the motor vehicle owners in South Carolina and elsewhere to contribute to such a program? Beyond that, the question again appears: If highway revenues are diverted to other purposes, where will we get the money needed for future highway improvements that will benefit not just 15 or so select areas but the entire country? Moreover, common sense tells us that higher costs of transportation wheth-

er through taxes to replace diverted dollars on the delays and inefficiency brought on by inadequate and congested highways will ultimately lead to the increase in the cost of goods and services to everyone.

This delegation of South Carolina citizens is not opposed to any rail transit program if the people it is to serve want it *and* are willing to pay for it. We do, however, vigorously object to being handed the bill for this unbelievably expensive form of transportation in which experience of failure in the market place is the rule rather than the exception.

Highway transportation, on the other hand, has had a history of unparalleled success. To divert money from such a successful program to one of proven failure would seem to us to be the worst kind of folly.

We are, of course, aware that the anti-highway forces point to a few areas such as the one we're now in—Washington, D.C.—as being an example of highway transportation's inability to handle the increasing traffic volume. They say, based on this experience, that urban freeways are not an efficient way to move large volumes of people.

This is a calculated distortion of the facts. Highway people agree that the present D.C. area system won't do the job. The problem here is that this area doesn't have a freeway *system*. A sixty miles per hour expressway with a stop light at the end is not really an expressway at all. We believe that if the highway network as originally planned for this area had been built, our Nation's Capital would today stand out as a viable, mobile city with a healthy economy instead of one that sees an exodus of business to locations near existing freeways outside the city. In other words, Washington, D.C. appears to us to be not a failure of highway transportation, but a failure of those charged with the responsibility to face up to reality. We mention this today, because we do not want such irrational reasoning to tarnish the image of a continuing national highway program that holds the key for economic health in South Carolina and virtually every other section of the country.

In our judgment, the interstate system should be completed at the very earliest possible date and as soon as money becomes available. The economic and humanitarian factors alone demand this. Using the value of time at its low figure of $1.00 per hour, we estimate that the completed interstate system will bring an aggregate savings of some $110 billion to the Nation. On an annual basis, we estimate continuous savings of $21.7 billion per year to consumers from a reduction in operating costs and accidents not to mention the 8,000 lives per year that will be saved when the system is completed.

In summary then, our group vigorously endorses the tremendously successful interstate highway system. We likewise endorse the highway trust fund concept of financing which has become the backbone of the entire Federal-aid highway program. It has given the country this tremendous public facility without taking one penny from the general taxpayer and thus has had no adverse effect on any other Federal program. Whether they know it or not, this is probably the best bargain the American taxpayer has ever received in the form of a Federal program. We know of no other program in the past, present or proposed for the future that even suggests it can save the consumers of this country $21.7 billion per year and at the same time annually save 8,000 lives of our fellow citizens.

We, therefore, urge our fine men in Congress to not only vote support for the highway trust fund, but to vigorously sell and promote its virtues as the *ideal* Federal program which we feel it is. I believe our presence here this morning will assure you that the great majority of our citizens of South Carolina are behind you.

## THE CATHOLIC URBAN SCHOOL: THE PATTERNS OF SURVIVAL

Mr. WILLIAMS of New Jersey. Mr. President, Dr. Francesco Cordasco, professor of education, Montclair State College, and a member of the Newark, N.J., Archdiocesan Board of Education, read an important paper last April before the 67th Annual National Catholic Education Association Convention, held in Atlantic City, N.J.

Mr. President, in order that Senators may study Dr. Cordasco's significant analysis of the present and future roles of Catholic education, I ask unanimous consent that his remarks be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

THE CATHOLIC URBAN SCHOOL: THE PATTERNS OF SURVIVAL

(By Francesco Cordasco)

If there is agreement on anything in American Catholic education, it is the grim statistical data which delineate a symptomatology of decline in enrollments and the closing of schools. Catholic school enrollment has dropped 500,000 in two years; in June 1969, some 301 Catholic elementary and secondary schools closed throughout the nation, and some 111 more began phasing out grades and consolidating classes. In 1968, school closings numbered 445 with the heaviest attrition in the elementary sector; the school mortality pattern in American Catholic education was inexorably progressive: in 1966–67, 50 elementary schools closed ; in 1967–68, 152; and in 1968–69, 225. The National Catholic Education Association has predicted that some 200 schools will close in 1969–70.[1] According to Msgr. James C. Donohue, director, Division of Elementary and Secondary Education, U.S. Catholic Conference, "Enrollment in Catholic elementary and secondary schools has dropped from 5.6 million in the 1964–65 school year to an estimated 4.86 million in the current school year (1969–70)—a decline of three quarters of a million students in only five years."[2] And Msgr. Donohue couples with his notice of the declination of enrollments the severe financial straits in which Catholic schools currently find themselves, and the adverse fiscal burdens which the loss of children from the Catholic schools impose on the public schools:

The reason is obvious. When children leave a Catholic school which has closed or been forced to cut back its operations for financial reasons, they do not vanish. They go to school somewhere, and "Somewhere else" means the local public school.

The dollars and cents implication for public schools are clear. The more former students of Catholic schools enroll in public schools, the more public schools will be obliged to provide additional teachers, classrooms, equipment, and materials—and this is at precisely the time when they are increasingly hard pressed for funds.

The available figures demonstrate that this is no fantasy. For instance, it is estimated that taxpayers in the Detroit area have paid some $90 million over the past four years to accommodate in public schools some 50,000 former Catholic school students who have been forced out of Catholic schools which have closed, consolidated, or curtailed classes. This is, furthermore, a continuing expense, since these students will continue to be a drain on the taxpayers' pocketbook for as long as they remain in public school.[3]

There can be no retreat before the appalling attrition in Catholic school enrollments; and there can be no denial of the fiscal burdens which have rendered, in a period of the inflationary havoc, Catholic schools no less immune to the rigid and iron laws of economics. But Catholic leadership has failed to examine the total context out of which the declining enrollments have emerged. For the most part, Catholic educators have attributed the closing of their schools simplistically to severe financial drain, an equation which has assumed the force of a *post hoc, ergo propter hoc* demonstration in logic; and if they have not sought a causal connection between declining enrollments and the phenomenon of fiscal crisis, they have squandered an immeasurable prodigality in pleading the righteousness of their quest for public funds. But like Odysseus, the Catholic educator has not yet made his way home: for if he has encountered and vanquished federal interdiction (Polyphemus), he has been lost to the ideologies of extravagant praise for Catholic schools in America's search for a true pluralism, or to grim warnings (such as expressed by Msgr. Donohue) to the public sector as to the grave financial consequences that must follow the closing of Catholic schools.

In my judgment, Catholic educators, in their emphasis on the search for financial support, have made a twofold tragic error. First, they have attributed to the need for money, the grave and imperiled condition of Catholic schools; and second, they have failed to discern that the struggle for public support for Catholic schools can no longer be argued in the rhetoric and language which characterized the 1950's and early 1960's. And this is not to minimize the struggle of those earlier years,[4] or to suggest that the history of public support for private schools in America has been fully written.

A survey conducted by the American Jewish Congress showed that bills to provide direct state aid to parochial and other private schools were considered by 20 state legislatures in 1969, with passage achieved in three of the legislatures, but with "a continuing effort by religious groups to win public funds for parochial schools." Whatever form public support of private schools assumes, the intricacies of the pattern it assumes will be formulated within the ensuring few years.[5] The questions which should concern Catholic educators are those which ask: What is the quality of our schools? Whom are we (and whom should we be) educating? What are our responsibilities to the new poor in the cities in which our schools have been traditionally located? Have we a philosophic commitment and a set of clearly defined objectives which justify Catholic schools? What is to be done about the declination in religious vocations and the staffing of parish schools?

As always, history can be used as an instructive force in confronting current problems. The history of Catholic education in America has been written more as church history than as social process and as a consequence many of the dynamics which underlie the origins of a parochial school system have been adumbrated under the religious rubrics of the third Plenary Council of Baltimore (1884), religious protocol, and clerical and episcopal intransigence faced with the reputedly irreligious public school. What (in our judgment) has been paid little attention to is the struggle and social adaptation of an Irish peasant immigrant urban subcommunity out of which the parish school (fashioned in the mandates of the Third Plenary Council) emerged.[6]

It is my view that the improverished urban Irish community created a community school system to serve its children and that its motivation was political and social; only incidentally were the strategies of a church-school system evolved, in a measure dictated, in order that the Irish community school be

Footnotes at end of article.

given cohesiveness, a *Gemeinschaft* strength, and an inviolable religious ideology. And this is not intended to demean the religious motivation: it is rather to note that an impoverished and deprived ("disadvantaged," if one prefers the current euphemism) urban community used both ethnicity and religion as the basic weapons against an oppressive establishment. Seen in this perspective, the Catholic parish schools are an historical analogue which should help explain the efforts of the contemporary urban poor (predominantly Black, Puerto Rican, and Mexican-American) to create community school systems which reflect their *ethos* and assure their cultural survival; and out of a multitudinous experience, Irish Catholic schoolmen should be, not only the best informed educators on urban education and the aspirations of ethnic enclaves, but should be (as they have not been) the most stalwart defenders of urban educational decentralization and of community control of schools.[7] The two basic ingredients which irretrievably relate Catholic schools to the contemporary urban context are poverty and ethnicity; and the contemporary setting is an urban America in which the parish school originated and in which it has traditionally prevailed.

The contemporary urban educational scene is one of confusion, bitterness, a worsening reality which persists despite massive federal aid and a plethora of ambitiously experimental constructs: the answers to a multitude of problems are not easy, but as Daniel P. Moynihan (who is an exemplar both of ethnicity and social class) sardonically observes, it may be that the problems have not been correctly defined:

As the decade closed the New York City Master Plan was to declare: "The plain fact is that no one yet knows how to make a ghetto school work."

This statement in itself is a considerable advance, even though the problem is still poorly stated by describing the slum school as a "ghetto" school.

(The plain fact is that nobody knows how to make a real ghetto school—that is, one made up of European Jewish students—not work. The ghetto schools of Europe were where Nobel physicists first learned calculus. One of the most profound misstatements of the situation of the black in urban America—or, for that matter, that of the Irish, Italian and other agricultural immigrants who arrived in the cities in circumstances comparable to those of the blacks—has been to state it in terms of the Jewish experience.)

Nonetheless, the illusion of knowledge faded with the New York City Master Plan, and this at least is the beginning of problem solving.[8]

Characteristically, Moynihan will have infuriated some people, but with typical perspicacity, he has cut down to the root of the matter. If education is to be effective (Moynihan is saying) in urban schools (which have traditionally been the schools of the minority poor), then it must reflect the lifestyles, the mores, and the needs of its constituency: in sum, it must be both of and by the community. The public schoolmen have not yet comprehended this elemental dynamic: the complexity of the struggle for the control of public schools cannot be understood unless one sees the struggle in ethnic and community terms with all of the intricacies of a socio-economic tableau in which new destinies and power are being forged.[9]

But the Catholic schools do understand the dynamic; both their genesis and experience confirm the fact. For the Catholic urban schools, the problem has a different dimension. As community schools, the problems of community relevancy and participation would (in my view) be quickly resolved for urban Catholic schools. An Irish, Italian, or Polish Catholic slum school which has kept intact its ethnic wellsprings and community anchorages can be equally as well a Black or hispanic Catholic slum school with the strength which ethnicity and community afford. For Catholic schoolmen, the problem quite simply is: "Will we undertake to educate the Black and hispanic poor who are the new constituencies of our urban parishes?" [10] And the answer to this question must be forthright and honest; on it hinges the survival of the urban Catholic school.[11]

It is not an easy question. And it cannot be dismissed by noting that the Black urban poor are, in the main, non-Catholic: for, if this imposes the need to define Catholic endeavour in apostolic terms, it cannot obscure the relatively modest efforts of American Catholicism in behalf of Black Americans.[12] But what of the hispanic poor, traditionally Catholic, and the mission of the Catholic urban school? How are we to explain our essentially unsubstantial efforts in their behalf? Has the urban parish school retreated so far from its twin dynamics of ethnicity and community that the hispanic poor are invisible in its midst? [13]

It is the urban *demos* which Catholic schoolmen must redefine once again. With this done, other problems will be easily resolved. If we keep in mind that it is to the urban citadels of the poor that Father McCluskey is referring in his apostrophe to the Catholic school, his words have a poignant eloquence.

Have the Catholic schools in America been a failure or a success? The first answer is a retort: Has any human institution been an unqualified failure or success? One could as easily ask: Is any marriage an unqualified failure or success? Perhaps in all fairness, we should let each generation return its own answer. In general, however, it can be readily said that in many important ways, as shall be seen, the Catholic school has been and is an outstanding success. Frankly, where it may have fallen short of its demanding ideal, a portion of the blame can be laid at the door of government whose policies on support have made the burden of financing the Catholic school such a heavy one. In any event, the Catholic school has tried to keep troth with the transcendent character of its Master's mission.[14]

I have prepared a seven-point check list of recommendations for Catholic schools, and they are skeletally appended; in my text I have intruded on most of them, and they might be considered an inventory for survival. No one of them is listed without a full awareness of the difficulties imposed and the uncertainties to be encountered. Yet, in my considered judgment, they point the way to a renaissance of Christian effort in behalf of children: For Catholic schools there can be no retreat from the urban centers and the contexts of socio-economic deprivation; Catholic schoolmen must define as their major constituency the urban poor; ethnicity and community must provide the animus which gives meaning and dimension to educational programs, governance, and participation; Catholic schools must draw support from all Catholic institutions (health services, etc.) to assure all needed service for the child and his family; the declination in religious vocations must be reversed, and the dominant administrative and teaching cadres of Catholic schools must be the religious; liaison between suburban and urban Catholic schools must be established with a major assumption of fiscal support borne by affluent suburban parishes, with a continuing exchange of staff, students, and an eclectic sharing of facilities; Catholic colleges and universities must be continuously involved in educational experimentation within Catholic schools and must become the major resource for innovation and advisement.

My recommendations are neither naive nor quixotic. If money is a necessary ingredient, it is not the major element which prognosticates success or failure. The major ingredient must be a commitment to the ideals of Christian education, and the tenets of an Judaic-Christian ethic. All else is, at best, relative. Catholic schoolmen in today's troubled times, should find encouragement in the words of St. Jean Baptiste de La Salle, an earlier Catholic educator of modest talents, who faced the staggering problems of his devout commitment with these words: "As our office offends the schoolmasters, we have in everyone of them a declared and inveterate enemy, and all in a body they have often armed the powers of the world to destroy us. Yet, notwithstanding all, the edifice is standing, although it was so often trembling on the brink of ruin. This is what leads me to hope that it will endure, and render to the Church the services she has a right to expect from it." [15]

[3] *Ibid.*

[4] The best account of the struggle for federal aid to private schools is Leo R. Ward, *Federal Aid to Private Schools* (Westminster, Md.: Newman Press, 1964), for which *cf.*, review-critique, Francesco Cordasco, *The Catholic Educational Review*, 63:56–57, January, 1965; a recent trenchant review of the subject and its literature is in Neil G. McCluskey, *Catholic Education Faces its Future* (New York: Doubleday, 1969), pp. 139–183; and a sourcebook is William W. Brickman and Stanley Lehrer, eds., *Religion, Government and Education* (New York: Society for the Advancement of Education, 1961).

[5] See Donohue, *loc. cit.*, for the discussion of a number of Congressional bills which are (or have been) under consideration. The text of the Pennsylvania non-public Elementary and Secondary Education Act is available in McCluskey, *op. cit.*, pp. 291–295. This statute may well become the prototype for state support.

[6] A good example of the neglect of social history with virtually no attention paid to power and reform, is J. A. Burns and Bernard J. Kohlbrenner, *A History of Catholic Education in the United States* (New York: Benzinger Bros., 1937); nor does McCluskey, *op. cit.*, deal with the *demos* of an impoverished urban Irish subcommunity's creation of a school system as a basic leverage against a dominant old stock, white, Protestant establishment, and this failure to conceptualize a social dynamic is seen in much of the popular writing on Catholic education, *e.g.*, John Cogley, "Catholics and their Schools," *Saturday Review*, Oct. 15, 1966, pp. 72–74, 94–96. The intensity of the struggle, and its ethno-religious character in mid-nineteenth century America (*re* Archbishop John Hughes and the fight for tax support for the New York parochial schools) is vividly portrayed in Victor P. Lannie, *Public Money and Parochial Education* (Cleveland: Case Western Reserve University Press, 1968).

[7] It is instructive to note the history and experience of other non-Irish Catholic ethnic communities, and the emergence of "nationality parishes"; it is not invidious to observe that the Catholic church in America was (and is) in essence, an Irish church and that other Catholic ethnic communities entertain(ed) a subordinate relationship to Irish dominance and power. See, in this connection, Rudolph J. Vecoli, "Prelates and Peasants: Italian Imigrants and the Catholic

Church," *Journal of Social History*, 2:217–268, Spring 1969; and for the educational experience of a subordinate Catholic ethnic community, see Leonard Covello, *The Social Background of the Italo-American School Child: A Study of the Southern Italian Mores and their Effect on the School Situation in Italy and America*, edited and with an introduction by Francesco Cordasco (Leiden: E. J. Brill, 1967).

[9] See "Reconnection for Learning: The Strategies of Community Involvement," in Francesco Cordasco, Maurie Hillson, and Henry Bullock, *The School in the Social Order: A Sociological Introduction to Educational Understanding* (Scranton: International Textbook Co., 1970), pp. 309–398.

[10] For the new urban demography, see David Alloway and Francesco Cordasco, *Minorities in the American City: A Sociological Primer for Educators* (New York: David McKay, 1970).

[11] I disagree with my colleague, Dr. Maurie Hillson, who has recommended that urban Catholic schools develop a limitedly deployed "model school" posture which would serve as a catalyst to the public educational sector; the quality which Dr. Hillson proposes should be sought, but not at the expense of the very community-wide anchorages which would assure the objectives which are to be achieved. I would opt for the expansion, not the retrenchment, of urban Catholic schools. See Maurie Hillson, "Why Catholic Schools?" *Catholic School Journal*, 8:22–24, December 1969. I would reappraise Dr. Hillson's assessment with reference to Catholic suburban schools where the case for the restructuring of Catholic schools might be postulated on his model; but the Catholic church in suburbia (and certainly, its schools) have coalesced into a cultural landscape of such homogeneity as to resist both contradistinction and definition of its elusive components. In American suburbia, Friedenberg's high school could have been Catholic or public. See Edgar Z. Friedenberg, "The Modern High School: A Profile," *Commentary*, 36:373–380, November 1963. See also Andrew M. Greeley and Peter H. Rossi, *The Education of American Catholics* (Chicago: Aldine Publishing Co., 1966).

[12] Of special note is the work of the National Catholic Conference for Interracial Justice (Chicago). See, generally, Sr. Margaret Ellen Traxler, "American Catholics and Negroes," *Phylon: The Atlanta University Review of Race and Culture*, 30:355–366, Winter, 1969.

## PRISONERS OF WAR, THE LAW OF NATIONS AND COMMON HUMANITY

Mr. GURNEY. Mr. President, in his first annual foreign affairs message to Congress in February 1970, President Nixon said:

> This (treatment of prisoners of war in Vietnam) is not a political or military issue but a matter of basic humanity. There may be disagreement about other aspects of this conflict but there can be no disagreement on humane treatment for prisoners of war. I state again our readiness to proceed at once to arrangements for the release of prisoners of war on both sides.

The Communists are fully aware of the United States attitude—and indeed the attitude of the Western world—toward the treatment of prisoners of war.

We must recognize, unfortunately, that prisoners of war are used as political instruments by a number of nations in the world. The recent history of North Korea and China are cases in point. Even the Soviet Union, which we saved from Nazi conquest in World War II, has an unappetizing record in this regard.

The Communists of North Vietnam are in clear violation not only of the Geneva Convention, which Hanoi signed, but of all the internationally recognized principles of war laboriously compiled during the past two centuries. The continued maltreatment of American prisoners of war is in direct violation of the law of nations. It is in direct violation of the laws of humanity which everyone everywhere must recognize.

The total rejection by the United States of this practice should be clear to the entire world. It is totally and forever unacceptable to the United States.

## THE LOOMING ENERGY CRISIS—HOW TO AVOID IT

Mr. MONTOYA. Mr. President, in the past several months there has been growing concern about an energy crisis. Voltage reductions on electricity supplied to consumers have been required in a number of States on several occasions in order that electric power service could be maintained. But equally as important, although it has not yet received major public attention, is the impending shortage of natural gas. Gas consumption in the United States in 1969 was at an all-time high of over 20 trillion cubic feet, valued at nearly $3.5 billion. This was an increase of 7.1 percent over 1968. Consumption is expected to continue to rise sharply again in 1970.

Although average retail prices for gas for residential heating ranged from $1.30 to $1.50 per 1,000 cubic feet in major eastern markets, the average price at the wellhead continued to be only 16.7 cents per thousand cubic feet. Average prices at the wellhead in my State of New Mexico in 1969 were measurably less than the national average. Since December 1963, average residential heating prices for gas have increased over 20 percent, or 25 to 30 cents per thousand cubic feet for an average homeowner. At the same time, average field price has increased less than 1 cent per thousand cubic feet. There is no uniform price paid for this fuel on a national basis, and there should be one. This is the responsibility of the Federal Power Commission.

In New Mexico, there are major sources of natural gas and oil in the San Juan and Permian basins. In each of these areas, producers are being offered significantly less than the going price. In truth, it can be called a classic case of internal colonialism.

In the face of looming shortages, it does not make sense to choke off private initiative in such prime areas. The Federal Power Commission has it within its power to create new incentitives for exploration and development of resources we know we possess in these areas. Now is the time to raise the price New Mexico producers receive for their depletable resources. This argument is especially powerful in light of the known fact that some States tax this natural gas more than New Mexico producers actually receive for it. If consumers are to benefit, or be prevented from being victimized, there must be a uniform price for such fuels.

The major incentitive that can be offered to reverse this trend is to permit higher field prices for natural gas. The price of natural gas used in interstate commerce is controlled at the wellhead. There has been a growing tendency on the part of producers to sell gas they do find for intrastate commerce when they can. As a result, in an uncontrolled market, the spread between controlled and uncontrolled price is reported to be as much as 10 cents per thousand cubic feet in some cases.

Who will suffer if incentives are not found to encourage discovery of new gas sources? Customers served in intrastate commerce will be first to be affected. Testimony before the Federal Power Commission has indicated there may be major gas shortages during the 1970–71 heating season. If prices are not permitted to rise to at least the intrastate level, new discoveries will continue to find their way to that market even though it may be used for inferior purposes.

Rising concern about quality of the environment will place an added burden on the natural gas industry.

Natural gas is the "cleanest" of all fossil fuels. Upon combustion it produces little or no sulfur oxides or waste solids, and less oxides of nitrogen than coal and oil. We must assure the country of an adequate supply of energy that it needs in the form required; that will least damage our environment—land, air, and water. This will mean a greatly expanded use of gas just at a time when supplies are dwindling.

A principal reason for the shortage is that field prices are so low—that exploration has declined sharply. We must not permit unrealistically low gas prices at the wellhead to aggravate the energy crisis. Adequate gas means warm homes and cleaner air. But more important, many manufacturing industries rely on natural gas for processing. Thus any interruption in the supply can bring shutdowns and loss of work. In some instances, no substitute fuels can be used—gas is essential.

My own State of New Mexico has suffered grievously already as a result of previous penalties leveled at the oil and gas industry. The recent tax reform bill, while significant in many ways, penalized the oil and gas industry in my

State, stifling incentives. Now we have arrived at a point where it is imperative that we allow such incentives to be offered this industry. If not, then the entire Nation will be hurt, and soon.

The Federal Power Commission should act promptly to set a uniform price and allow it to stand at 24 cents per 1,000 cubic feet, a level that will assure the supplies our Nation needs without victimizing consumers. We have already waited too long. Further delays could result in hardships not only to individual customers who cannot be supplied, but to the economy of our entire Nation.

## NATIONAL NEWSPAPER WEEK

Mr. THURMOND. Mr. President, the free press, more than any other institution, is an indication of the personal liberty which the citizens of the United States have under our representative government National Newspaper Week reminds us that the community newspaper, of which there are more than 10,000, has played a vital role in preserving our individual rights. A recent editorial written by Thom H. Billington and published in the Sun-News of Myrtle Beach, S.C., on September 24, 1970, reminds us of this noteworthy event.

I ask unanimous consent that this editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NATIONAL NEWSPAPER WEEK

Very shortly—Oct. 4 to 10—the U.S. will observe National Newspaper Week.

The theme this year will be, "American Newspapers—200 Years of Freedom—1770's to 1970's."

Just to read those words denoting the theme of Newspaper Week should be enough to warm the heart of Mr. Average U.S. Citizen. During the year, editors duly take notice of many worthy and memorable observances. But, they cannot be blamed for calling attention, with a certain degree of pride, as well as humbleness, to their own special Week.

The fact that after 200 years personal liberty under representative government still prevails is due, in no small part, to the "eternal vigilance" of a free press. The community newspaper—and there are over 10,000 of them—is an institution that lends permanence and tangibility to individual rights as nothing else can.

Every nation has its national observances. In most, however, there is no occasion to celebrate a National Newspaper Week. Where there is no free press, the less said about the newspaper, the better.

National Newspaper Week is a heartwarming reminder that we have lived in freedom for 200 years and that the community newspaper has played an important role in preserving that freedom.

## RABBI MORRIS LIEBERMAN

Mr. TYDINGS. Mr. President, last week the Baltimore community suffered the loss of one of its most prominent citizens—Rabbi Morris Lieberman. Spiritual leader of the Baltimore Hebrew Congregation since 1937, Rabbi Lieberman's vitality extended to numerous civic responsibilities in addition to his religious duties.

He was a member of Baltimore's Community Relations Commission; vice president of the board of governors of the United Services Organization; a member of the advisory committee of the Maryland branch of the American Civil Liberties Union; a life member of the NAACP; a member of the national executive board of the Central Conference of American Rabbis; and a past president of the Baltimore Jewish Council.

Perhaps the greatest legacy that Rabbi Lieberman leaves to the Balitmore community is his belief that humans can and must achieve peace in our shrinking, tension-ridden world. In an interview in 1967, he stated:

The world, as it advances, technologically, becomes smaller in human dimension. It is now a neighborhood. In the past, one had an option about loving one's neighbor. Today or tomorrow, we either will love our neighbor or we will bring down the whole of civilization.

Rabbi Lieberman's spirituality will remain an integral part of the Baltimore religious community. I ask unanimous consent that the article commenting on this tragic passing in the Baltimore Sun be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RABBI MORRIS LIEBERMAN IS DEAD AT 61

Rabbi Morris Lieberman, spiritual leader of the Baltimore Hebrew Congregation since 1937 and an active leader in civic affairs, died yesterday afternoon at Sinai Hospital. He was 61.

Rabbi Lieberman became rabbi at the congregation, the first synagogue to be chartered in the state, when its membership consisted of 600 families. At the time of his death its membership had grown to include nearly 1,700 families.

Rabbi Lieberman attributed this growth, somewhat modestly, to an overall trend in America of church-affiliation and to the fact that his was one of the city's first Reform congregations to move from downtown to the suburbs.

OTHER OFFICES LISTED

But many others attributed the rapid growth of his congregation to his intelligence and his dynamic personality, characteristics which were not aimed solely at his congregants but to the entire community.

Besides his religious duties he was a member of the city's Community Relations Commission, vice president of the board of governors of the United Services Organization, and a member of the advisory committee of the state branch of the American Civil Liberties Union.

Born in Cincinnati, he was graduate of the University of Cincinnati and was ordained by the Hebrew Union College in 1934. He served a congregation in Winston-Salem, N.C., before coming to Baltimore.

He served in the Army as chaplain from 1942 to 1946 and participated in the landings at Normandy in 1944. He was discharged with the rank of major.

ACTIVE IN USO

But his activities with the armed forces did not end with World War II. He became active in the USO, and under the auspices of the Army and Air Force he made several trips to military installations in North Africa, England and the Far East between 1953 and 1960.

In 1962 he was presented with the Frank L. Weil Award of the National Jewish Welfare Board for "distinguished contributions to the welfare of Jewish personnel in the United States armed forces."

Despite periods of extremism and conflict Rabbi Lieberman always viewed the future with optimism and calm. On the recent growth of youthful rebellion he once observed that "the freshness and brashness of youth makes re-examination necessary," noting that "our human world isn't good enough to be static."

Above everything else he held fast to the belief that religion was the most important viable force for achieving the unification and advancement of the human race.

In an interview in 1967 he stated: "The world as it advances technologically, becomes smaller in human dimension. It is now a neighborhood. In the past, one had an option about loving one's neighbor. Today or tomorrow, we either will love our neighbor or we will bring down the whole of civilization.

"Living by human values is the indispensable condition for human survival, and religion is the major force to insure it. This means that the need for religious organizations, religious institutions and religious activities is crucial."

Among his other civic affiliations he was vice president of the National Jewish Welfare Board, a life member of the National Association for the Advancement of Colored People, a member of the national executive board of the Central Conference of American Rabbis, and a past president of the Baltimore Jewish Council, he had served as a script writer for the Voice of America.

He is survived by his wife Lillian Lieberman; a daughter, Miss Jean Waldman; a sister, Mrs. Gerald Office, of Englewood, Ohio, and a brother, Dr. Alfred T. Lieberman, of Baltimore.

Funeral services will be held at noon tomorrow at the Baltimore Hebrew Congregation, 7401 Park Heights avenue.

## ELECTRONIC WARFARE—A NEEDED COMMITMENT

Mr. MONTOYA. Mr. President, in recent statements before the Senate I described the role which is currently being played by this Nation's research and development community in pursuit of a scientific fund to be allocated toward the achievement of national technological goals. In these discussions I stressed the fact that to neglect this research and development base can only foster the most malignant form of unilateral disarmament, as well as to break the back of that civilian economy which is the offspring of defense research. To emphasize this issue I would like to address a specific area of our defense that is perhaps more dependent on research and development than any other—that area is electronic warfare.

The State of New Mexico has listed electronic warfare as a major component in its research and development catalog since the earliest days of the missile age. Indeed, a large percentage of this Nation's vital electronic warfare research and development is accomplished at White Sands Missile Range. It is there that the relationships between weapon developments, operations, training, and research are brought into sharp focus.

My personal awareness of electronic warfare and its contributions to the defense of our Nation goes back to the keynote address I made at the first missile electronic warfare technical meeting at White Sands Missile Range in 1967.

In preparing that speech it was necessary to receive high level briefings from the Army, Navy, Air Force, and CIA. It was during these briefings that I realized the astounding impact which electronic warfare has on the defense posture of a nation, its applications to exploit vulnerabilities in weapons systems and its use to obtain vital intelligence information of potential adversaries' capabilities and intentions. Electronic warfare can be used to degrade or negate an entire national or international communications network; or it can be applied for defeat of widely dispersed tactical or strategic weapons. The effect of all these features on national command and control capability is enormous. Even more preponderant is the fundamental effect which electronic warfare considerations must necessarily have upon weapons systems design development, leadtime and life cycle.

Because of this critical importance I resolved to maintain a thorough ongoing knowledge of electronic warfare. Since that date I have been, and will continue to be, a strong advocate of an active, vigorous and aggressive electronic warfare program. This reasoning is based on my fundamental desire that our Nation have a defense capability second to none. I do not say this as a cliche, but as a guiding criteria for my every vote on defense matters. I will not tolerate large expenditures requested under the guise of defense when it is obvious that an area, such as electronic warfare, which necessarily relates to weapons systems effectiveness has, at best, been given only lip service, or what is worse—been completely ignored.

There is, in this period of extreme national and international crisis, a genuine requirement for the most effective allocation of our country's resources. Thus, I sense the need for a firm commitment to electronic warfare, not only by our weapon planners and our Armed Forces, but by those of us in the legislature who grant approval and appropriations to implement this commitment.

It is clearly apparent that the determination of a weapon's combat effectiveness requires performing a most thorough analysis to examine the weapon's true combat limitations in an environment no less hostile than the one for which the weapon was conceived. However, this is not always the case. It has been my experience in recent years to find that the vulnerability considerations for many major weapons system are either minimized in defiance of intelligence analyses, or bureaucratically buried in a graveyard of irresponsible command confusion.

Too often a scenario develops in which the defense planners rush precipitously toward weapons production while the production contractors vigorously defend the planner's deployment decision, regardless of the degree of program readiness. Any criticism of this approach is met with unreasonable abuse and often the removal of loyal civil servants whose only wish is to see their country properly defended and our national resources wisely allocated. Nor are we in the legislature free from such criticism. Loud is the cry that Senator MONTOYA is undermining our defense efforts on certain key votes; but I know of no better way to implement the warnings and recommendations I have made for the last 3 years toward the strengthening of this Nation's defense programs than to withhold my approval of any program which I feel does not meet the true criteria which the weapons planners had outlined.

Those who choose to ignore these critical considerations of weapons vulnerability, for reasons of blindness or self-interest, are the figures to be castigated, since it is these individuals who allow defense efforts to be dangerously threatened by an adversary whose continued gains in this area indicate his consummate understanding of contemporary warfare.

For in modern battle, a weapon not capable of effective delivery is hardly a weapon at all. No less important than considerations for propulsion, guidance, and structural integrity are those of electronic warfare, that is, electronic countermeasures and counter-counter-measures, jamming and penetration aids. Without each of these inherent features it is not possible to consider the weapon as anything more than a numerical bluff in the weapons inventory—effective for "sabre rattling" and peace-talk politics, but of what merit in the serious and costly game of defense?

Upon further examination of the electronic warfare role in modern warfare, it is clearly evident that electronic warfare considerations cannot be attached like so many optional extras upon the already produced vehicle. Rather, they must now be considered as an inherent design feature from the onset of the development cycle. Indeed, there can be no aspect of the weapon that cannot be related to performance in an electronic warfare environment. Truly the medium and the message of modern combat are now permeated by electronic warfare.

My warnings and recommendations are meant to imply those essential steps we must take if we are to come to grips with the facts facing us. The inclusion of electronic warfare in the planning and conduct of defense places a demanding burden on our research and development community and the management of its resources. We must never forget that the edge of effectivity in electronic warfare can only be honed by the minds of our Nation's scientists, engineers, and technical managers. Nor can inexperienced, inept leadership allow these critically important individuals to stand in unemployment lines, as many are now doing, only to be recalled later, when this Nation faces its next defense crisis.

The impetus to develop electronic warfare is drawn from our experiences, both painful and valuable, in the conduct of military and intelligence operations during the past 30 years. In reviewing this accumulated history of the development and implementation of electronic warfare one fact stands out above all—that is the unusually high cost of rebuilding the Nation's electronic warfare capability whenever hostilities break out, and the offhand manner with which the capability is ignored or dismantled when hostilities approach a conclusion and peace is restored. Both sides of this fact begin and end with the research and development of electronic warfare techniques, hardware, and systems. We must plan ahead.

This demand for advanced planning is not a call to an arms race but rather a responsible statement to keep our scientific premiums paid to date. For this is an insurance effort to maintain the effectiveness of the resource investment in our defense structure. Electronic warfare research and development is all the more important because each advantage gained by an opponent must be countered in a sort time frame. When we talk of new missiles or aircraft, tanks, or guns, et cetera, their research and development cycle is measured in 3–10 year periods while the electronic warfare research and development cycle can be as short as 3–6 months and 2–4 orders of magnitude less expensive than a weapon system. Examined in this light, electronic warfare is not only a necessity, but is economically attractive.

In conclusion, I plead for the viability of our Nation and way of life, and that each of my distinguished colleagues carefully weigh my remarks concerning the absolute necessity of an adequately supported and purposeful research and development program designed to protect this Nation against all adversaries. Further, I ask each of you to understand the responsibilities and opportunities electronic warfare has presented us, and with the highest respect for your wisdom, that you recognize world war III as having but one battle which at this very moment is being fought in the laboratories and missile ranges of the leading technological nations of this world.

---

## EDITORIALS ON A SPEECH BY DANIEL WEBSTER AND ON THE MEANING OF THE FLAG

Mr. THURMOND. Mr. President, I think that it is necessary for all of us to pause occasionally and reflect upon those principles and ideals which have made the United States of America a great Nation. Two excellent editorials published in the Beaufort, S.C., Gazette, on Thursday, September 24, 1970, illustrate these ideals. The first, entitled "Nothing New," shows how appropriate today are Daniel Webster's views on those who are "anti-establishment." The second, entitled "The Meaning of the Flag," depicts the symbolism of the flag and its meaning.

Mr. President, I ask unanimous consent that these two editorials be printed in the RECORD.

There being no objection the editorials were ordered to be printed in the RECORD, as follows:

NOTHING NEW

The following words of Daniel Webster uttered in a U.S. Senate Speech on March 12, 1838, should deflate the ego of those who think they have originated something new in their crusade against "the establishment". Said the incomparable Mr. Webster, "There are persons who constantly clamor. They complain of oppression, speculation, and per-

nicious influence of wealth. They cry out loudly against all banks and corporations, and a means by which small capitalists become united in order to produce important and beneficial results. They carry on mad hostility against all established institutions. They would choke the fountain of industry and dry all streams."

Regardless of what they were called in Mr. Webster's day, they had the equivalent or the counterpart of today's campus radicals, communist inciters of violence and all the rest of the unpalatable breed whose chief aim in life is to create turmoil, rather than constructive dissent.

THE MEANING OF THE FLAG

Recently Mr. and Mrs. Bob Dee, publishers of the Greenfield (Missouri) Vedette invited their readers to tell "What My Country's Flag Means to Me." One of their subscribers, Mrs. Maurine Davidson, wrote:

"To me our Flag means America from her humble beginning of brave men and women who gave her birth, to present America in her strength and glory. It is our heritage from those who fought, bled and died to keep us free. It is a lump in my throat and tears of pride and joy every time I hear 'The Star Spangled Banner' or see the flag unfurled. It is anger and pity for anyone who desecrates or fails to defend it. It is thankfulness to God for permitting me to live under its protective broad stripes and bright stars."

One of the youngest readers of the paper, Miss Deann Hargis, age 14, wrote:

"The American Flag is an emblem of a living country for which I have great respect and reverence. It represents the highest ideals of individual liberty, justice and equal opportunity for all. Not only does it represent these, but also freedom, independence, security, protection, education, progress and prosperity. It makes me proud to see that people respect and care as much about the flag as I do by displaying the flag at their homes and business places on holidays. That is just a few of the things the flag means to me."

It's not a bad idea for all of us, from time to time, to stop and consider; just what does my country, and my flag, mean to me? There are very few who will not conclude that we who have been privileged to be born in America are very fortunate, indeed.

## MOTHERS OF VIETNAM'S POLITICAL PRISONERS SEND LETTER TO VICE PRESIDENT AGNEW

Mr. CHURCH. Mr. President, during the recent visit of Vice President AGNEW to Saigon, mothers of political prisoners in South Vietnam sent him a letter outlining the plight of their children. A major reason for addressing the letter to our Vice President was the subsidy we provide the Thieu-Ky regime to maintain these goals. However, these ladies were not permitted to see the Vice President, nor did anyone at the American Embassy accept their letter for delivery to the Vice President or accompanying aide.

For the interest of the Senate and the public, I ask unanimous consent that the letters be printed in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

AMERICAN FRIENDS
SERVICE COMMITTEE,
*APO San Francisco, September 2, 1970.*

Senator FRANK CHURCH,
*Senate Office Building,*
*Washington, D.C.*

DEAR SENATOR CHURCH: Thank you very much for meeting with us in your office and for your kind letter of July 31. We have been in Saigon nearly a month now and are beginning to get acclimatized, but until we have some facility with the language we can feel only partially present.

We thought you might be interested in the enclosed letter from a committee of prisoners' mothers to Vice Pres. Agnew. A group of the ladies went to the U.S. Embassy while Mr. Agnew was there in an attempt to speak with him. However not only were they not admitted into the compound, but the guard on duty would neither accept their letter for delivery to the Vice President nor call someone from the Embassy staff to meet them.

We feel the letter is important for Americans to see, especially because of direct U.S. involvement in the prison system in Vietnam as outlined on page two of the letter, and hope you will find it of some interest.

Yours truly,

MICHAEL AND DIANE JONES.

Mr. SPIRO AGNEW,
*Vice President of the United States of America, c/o the U.S. Embassy, Saigon.*

DEAR MR. VICE PRESIDENT: We know that your visit to Vietnam is connected with the making of important decisions. We also know that you are a father, the head of a family. As a father, you have deep love towards your children and you have experienced moments of anxiety when your children are in danger. As a leader of your country, you have many concerns on the South Vietnamese Government action. It is with this knowledge that we are taking the liberty to write to you this letter.

We are the Mothers of the political prisoners detained in the various prisons of South Vietnam. None of our children is convicted of crime or robbery. All of them are being imprisoned because they have dared speak of Peace and Independence, a most profound desire of all the Vietnamese People after years and years of war. Our children were arrested and barbarously tortured. They have been denied food and drink, even medicine when they are sick. The limited amount of medicine provided to the prisoners by the American aid have been continuously smuggled or stolen by the prisons' authorities. We only learn about the terrible living conditions of our children through statements by recently released prisoners and report made by the U.S. Representatives Anderson and Hawkins after their investigation of Con Son Tiger Cages and the living conditions of the prisoners.

However, up to the present time, we still have not been allowed to visit or keep in touch with our children despite renewed requests. We have no means to send food to them at all. Only one exception has been given to those mothers who were allow to visit their children once on August 25th, 1970 at the Chi Hoa prison. We have witnessed our children's health situation. After continuous beatings, their bodies were swollen; when they were allowed to see us, they could not even walk and had to be helped by two guards. Such is the actual result of our government system of repression.

Most of our children were tried by the Military Field Court, a Court which was held unconstitutional by the Supreme Court. Yet, our children have not been released. Some of them have never been tried at all.

As a father, as a leader, you are coming to Vietnam to understand our people's aspirations for Peace and Justice. We, the Vietnamese Mothers, want to speak out the terrible sufferings of thousands of mothers who have their children being tortured and ill-treated in jail. We wish to directly inform you about the crimes committed under the prison system of South Vietnam. We hope to have privilege of meeting you while you are here.

You would have to agree that the U.S. Government somehow has to be held jointly responsible for the prison system in South Vietnam, since:

The police forces which arrest and repress our children are being paid by the Americans.

The equipment used by the Police to repress, torture and jail our children are part of the U.S. aid. The tear gas, the rockets used to repress them are "made in U.S.A." We actually witnessed the terrible repression being carried out right in front of the U.S. Embassy when we and our foreign friends demonstrated against the prison system on July 11th 1970.

The Phoenix operation, the result of which a great number of "suspected" Vietnamese people have been arbitrarily arrested and imprisoned directly by American authorities in Saigon.

In the military operations U.S. and Allied Forces have arrested and tortured many innocent Vietnamese farmers at the Intelligence Agencies or turned them to the South Vietnamese government for further detention without any "due process of law".

Our children witness the presence of American Advisors at the prisons. They know that more aid is being given to build more and bigger prisons.

Before such evidence it would be hard to deny and just say that the U.S. is not responsible for the prison system of South Vietnam. The role of the American advisors should be to improve the prisoners conditions not merely watch the tortures done to our children who suffer from hunger, thirst, disease, and survive in agony in jail.

We wish to meet you and let you know more specifically about our concern. May we ask you to convey to President Nixon the American Government and the U.S. Congress our requests that urgent improvement on the prison system can be done. Our requests are primarily the following:

1. No citizen shall be arrested without lawful ground.

2. All prisoners should be provided with proper food and drink, and should be given appropriate care when they are sick.

3. The prisoners relatives should be allowed to correspond, visit and send extra supply to the prisoners.

4. The prisoners should be allowed to write to their families.

5. Relatives of prisoners should be immediately reported when the prisoners are arrested.

6. Corruption practice in prison should be immediately abolished so that our children's food rations are not taken away.

7. The present policy of using non-political prisoners (criminals, thieves . . .) to watch political prisoners should be immediately abolished.

8. Our children should be allowed to do some reading in jail for their own culture.

9. The prisoners whose jail terms have expired must be immediately released.

10. Those prisoners who have not been tried should be released or put on further trial by a constitutional, civil court.

11. Those prisoners who were tried by the Military Field Courts should be released or retired by a civil court if they are supposed to be guilty.

12. The old, sick and under-age prisoners should be released.

13. There should be a change in the jail staff system.

14. Tiger cages, Cattle cages, mysterious caves, separate cells, discipline cells and rooms used for inhumane tortures should be abolished, not only at Con Son but also in all the prisons throughout South Vietnam.

15. The "Coolies of the Battle-fields" system used for military prisoners and "released" political prisoners should be abolished.

16. When a prisoner dies, his body should be returned to his family for proper burial.

We also ask you to urge the American authorities to immediately end their acts of cruelty toward political prisoners and instruct them about our above mentioned requests.

In short, we want our children to have enough food, drink and medicine; their physical as well as moral life to be decently dealt with. They are not criminals but young courageous people who dared to stand up and voice for Peace. Peace is the deepest aspiration of all the Vietnamese people. Therefore, our children who are struggling for the cause of Peace and have been arrested and barbarously tortured should be considered as "Peace Heroes."

Hoping that thanks to your responsible and efficient intervention, our children will soon be removed from the present inhuman prison system of South Vietnam, may we convey to your family our best wishes of luck and happiness.

Respectfully yours,

Representatives of the Mothers whose children are being detained in the various prisons throughout South Vietnam, in the Tiger Cages, in the Disciplinary Cells . . . without trial or tried by unconstitutional Courts, or have served their jail-term or have been arrested during military operations (US, V.N. Allied).

## PRESIDENTIAL APPOINTMENTS TO U.S. POSTAL SERVICE

Mr. DOLE. Mr. President, I commend President Nixon on the selection of a distinguished group of men to guide the new U.S. Postal Service.

I am referring, of course, to the President's appointment of nine members to a board of Governors for the new service. These members will be responsible for the overall operation of a modern postal service which will succeed the old Post Office Department.

Two things stand out as one looks over the President's selections. First, there is the assortment of talent from divergent fields. For example, we have a distinguished educator, a legal expert, and an illustrious financier.

Second, one notes that the President has reached into all regions of this Nation to tap these gentlemen for such important and dedicated service to their country and the American public in general.

Working together, this assembled team will tackle the vital task of creating a more efficient and a more effective mail service in the years ahead.

The significance of these appointments and the contributions these men will be making should not go unnoticed today.

I wish them well as they set about improving mail service for America.

I ask unanimous consent that biographical sketches of the appointees be printed in the RECORD.

There being no objection, the sketches were ordered to be printed in the RECORD, as follows:

PRESIDENT NAMES BOARD OF GOVERNORS

Following are biographical sketches of the nine men nominated Friday by President Nixon to serve on the Board of Governors of the U.S. Postal Service:

*Myron Arnold Wright, 59,* is a Houston, Texas, oil executive. Since 1966, he has been Chairman of the Board and chief executive officer of Humble Oil & Refining Company. Mr. Wright received his bachelor of science degree from Oklahoma A&M College in 1933. He held various engineering positions with Carter Oil Co. of Tulsa; Standard Oil Co. of New Jersey; and International Petroleum Co., Ltd. of Coral Gables, Fla., before joining Humble Oil & Refining. Nominated for 9-year term.

*Patrick Eugene Haggerty, 56,* rose from an electronics engineering graduate (Marquette University, 1936) to Chairman and Chief Executive Officer of Texas Instruments of Dallas. He served as a Lieutenant in the U.S. Navy Reserve during World War II. Winner of several industry awards, including the Electronics Industry Association medal of honor (1967), he has been a member of the Texas Academy of Science, council of the National Academy of Engineering, National Alliance of Businessmen, American Association for Advancement of Science and Society of Exploration Geophysicists. Nominated for 8-year term.

*Charles H. Codding, Jr.,* of Foraker, Oklahoma, is the owner and operator of an 18,000-acre cattle ranch, and of Codding Research Company, a firm specializing in cattle breeding. Mr. Codding has been a member of the Oklahoma Board of Agriculture since 1963. He is an active member of the Oklahoma Cattleman's Association. Mr. Codding was born in 1919. Nominated for 7-year term.

*Crocker Nevin, 47,* was graduated with honors from Princeton in 1946 before embarking on a distinguished banking career. He joined Marine Midland Grace Trust Co. of New York in 1952, rising to President in 1966 and Chairman of the Board and Chief Executive Officer in 1968. Mr. Nevin also has been director of CF&I Steel Corp., Crum & Foster, Marine Midland Banks, Inc., and SCM Corp. He served as Lieutenant (j.g.) in the Navy from 1942 to 1946. Nominated for 6-year term.

*George E. Johnson, 42,* is Founder, President and Chief Executive Officer of Johnson Products Company of Chicago. Mr. Johnson's firm, which manufactures hair preparations, had sales totaling $10 million in 1969. He is Chairman of the Board of the Independent Bank of Chicago; Director of the Lincoln National Bank of Miami; Vice-President of the Chicago Urban League. Nominated for 5-year term.

*Andrew David Holt, 66,* recently retired as President of the University of Tennessee at Knoxville, Tennessee, where he still lives. Dr. Holt has a distinguished academic background. A graduate of Emory University with a Masters from Columbia and a Doctorate from Union University, he was President of the University of Tennessee for 11 years beginning in 1959. He is a director of the South Telephone and Telegraph Co.; President of the Southeastern Conference; Chairman of the Executive Council and President of the Southern Association of Colleges and Schools; Chairman of the White House Conference on Education; and a member of the National Commission to Promote Eradication of Adult Illiteracy. Dr. Holt is a 32nd Degree Shriner. Nominated for 4-year term.

*Theodore William Braun, 68,* is a Los Angeles public relations executive with extensive federal service experience. In 1953–1954 he was assistant to the Secretary of the Treasury. He also was a staff member of the Gordon Grav Report to the President on foreign and economic policy in 1950, a member of a special commission on reorganization of the National Security Council in 1953 and a member of the advisory commission to the Secretary of Defense on general military training in 1962. Currently he is president of Braun & Co., and a limited partner of Merrill Lynch, Pierce, Fenner & Smith in Los Angeles. Mr. Braun attended Harvard. Nominated for 3-year term.

*Frederick R. Kappel,* former Chairman of the Board of the American Telephone and Telegraph Company, headed the President's Commission on Postal Organization. The Commission's report, known as the Kappel Report, was the basis for President Nixon's successful efforts to reform the postal service. Mr. Kappel, 68, received degrees from the University of Minnesota, Lehigh University, Knox College and Union College. He holds honorary doctorates from a number of other universities. Mr. Kappel joined the AT&T system as a ground man in Minnesota in 1924 and worked his way through the ranks to become President, Chairman of the Board and Chief Executive Officer of AT&T. He resides in Bronxville, N.Y. Nominated for 2-year term.

*William J. Curtin, 39,* is a practicing attorney in the District of Columbia. Mr. Curtin received a Bachelor of Science Degree from Georgetown University in 1953, a Bachelor of Laws Degree there in 1956, and his Masters in Law from Georgetown in 1957. Mr. Curtin is a member of the law firm of Morgan, Lewis and Bockius of Philadelphia and Washington, D.C. He makes his home in Chevy Chase, Md. Nominated for one-term.

## SENATOR KENNEDY ASKS MODEL DEMONSTRATION COUNTY PROGRAM FOR BERKSHIRE COUNTY

Mr. NELSON. Mr. President, in Pittsfield, Mass., last night, Senator EDWARD KENNEDY delivered a major address on the environment. Speaking at Berkshire Community College in Berkshire County, one of the most beautiful and unspoiled areas of New England, Senator KENNEDY urged that a revitalized county government could become a model or demonstration county for the rest of America in solving the physical, social, economic, and human problems of the environment. With the help of Federal funds and

greater authority from the State, he said, a reorganized and strengthened local government could lead the way for the entire Nation in developing new ways to approach all aspects of the environment.

In his address, Senator KENNEDY challenged the people of Berkshire County to develop new institutions of local government, capable of dealing comprehensively at the regional level with questions of environmental protection and management. He said that the county was the natural entity to solve the problems of the Berkshire region. With the proper blend of Federal financial support, delegation of State authority, and local initiative, Berkshire County could become a laboratory for the Nation in dealing with the overall environment. Given the growing national interest in a "new federalism" and in greater autonomy for local government, the rising concern over the Nation's environment could become the catalyst for shaping a new relationship between Federal, State, and local governments, with the county at the center.

In the course of his address, Senator KENNEDY emphasized that the form of county government he envisaged should have comprehensive jurisdiction not only over the physical and natural resources of the Berkshire area, but also overall the political, social, economic, and other aspects of the region.

Senator KENNEDY said the detailed blueprint of his program would have to be filled in with the cooperation of Federal, State, and local leaders, but he noted three essential elements necessary for the program to succeed:

Imaginative Federal participation, including broad purpose grants to regional government, instead of the narrow categories of Federal programs that currently exist.

Imaginative state participation, including grants of broad new government authority by Massachusetts to Berkshire County; and greater coordination among state agencies in the region.

Imaginative county participation, including new patterns of county government determined and approved by the people of the area.

Senator KENNEDY estimated that at the beginning, it would probably cost no more than about $1 million new Federal dollars a year for several years to launch the basic county demonstration program. He said:

The cost of not taking care of our environment, is no less real because it does not appear on any balance sheet or on any state or local budget. The cost of continuing as we are is the only cost we cannot afford.

Mr. President, I believe that Senator KENNEDY's remarks will be of interest to all who are concerned with the quality of our environment. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR EDWARD M. KENNEDY

It's always a pleasure for me to come to Berkshire County, and I'm especially pleased to be with you again so soon after the magnificent events of this weekend's Foliage Festival. This is the time of the year when all of us who have ever shared the splendid fall beauty of the Berkshires long to return to this part of our Commonwealth that is so unique.

We are twice blessed in Massachusetts. To the East we have the unspoiled landscape of the seashores of Cape Cod. To the West, we have the magnificent beauty of the Berkshires. Indeed, Thoreau's description of Cape Cod applies equally to Berkshire County—"A man may stand here," he said, "and put all America behind him." Oliver Wendell Holmes also put it well when he said a century ago, "The best of all tonics is the Housatonic."

Perhaps the most eloquent testament, though, is from Frances Kemble, the great English actress of the past, who came each summer to Berkshire County for forty years. As she tells us:

"Few spots on earth can boast of a more perfect union of all the elements of natural beauty; there may be scenes of grandeur sublimity or richer and more fertile cultivation, but not many where all the charms of rock and river, woody upland and sunny meadow, bold mountain outlines and sweet valley depths, meet in such harmonious and various combinations. It is an enchanting region."

It is with thoughts like these that I am back with you in Pittsfield, and I am grateful to the County Commissioners for making this fine evening possible.

As the leading officers of the county, they have displayed great dedication and devotion to preserving the lasting beauty of Berkshire County. All of us in Massachusetts are in their debt for their efforts to safeguard this rich heritage of our fathers. They have accounted to us well for their stewardship, and we look to great leadership in the future.

Returning here this evening, after the excitement of yesterday's events, brings home again to me the special sense of responsibility I always feel in Berkshire County. We know that the county is not a scenic island, isolated from the rest of the busy world. It is very much a part of our nation, suffering the pressures of population and industrialization, the highway bulldozers and land use change, and pollution of the water, air and earth.

Experts agree that today, any region within a hundred and fifty miles or so of a great metropolitan center is vulnerable. It feels the impact of unrestrained and unplanned urban and suburban sprawl, heedless highways, pollution, and all the other ills of unregulated growth. Berkshire County itself is vulnerable. The signs of trouble are clear:

Williamstown and North Adams wonder whether to build a single sewage treatment plant to serve the needs of both communities, or to build separate plants to serve the needs of each.

The Hoosic River tells us how much is wrong in the relation between man and his environment. The Hoosic enters Berkshire County as a Class A river, suitable for all forms of recreation and human consumption. After 30 miles, it leaves the County as a Class D river—or at best Class C—unfit for other than limited industrial use.

Here in Pittsfield, the citizens know full well that their own river—the Housatonic—is badly deteriorating also.

In a few short years, as in so many other parts of the nation, the County has seen the loss of many of its elms to the blight of Dutch Elm disease. The possibility is all too real that this magnificent tree will soon be but a Berkshire memory, gone like the American Chestnut Tree from the face of the land.

In Sheffield, as you will know, plans are being made to construct the world's largest hydroelectric pump storage facility. The project has enormous implications for the Berkshire environment, and bears ominous witness to the growing pressure on the county from surrounding metropolitan areas.

And, the lack of adequate low-cost housing in Pittsfield and North Adams is a very real problem for the people of this area, a problem clearly arising out of the serious plight of the economy and the recession into which we have slipped.

Much has been said and written in recent months about the impact of our science and technology—our sheer growth—on the ecology of our planet at every level. The burden is worldwide, nationwide, statewide, but it is most acute in the small environments in which we spend our lives each day.

It is not my intention this evening, however, to reiterate these issues or to underscore the urgency to find solutions. I have not come here to review the substantial body of antipollution and environmental control measures that have been taken in recent years by the Federal Government, the states, and local communities. We know the challenge is serious, but we also know that we are beginning to respond.

Of course, true to our history, the Commonwealth of Massachusetts has pioneered in many of these problems. We have tried to teach America. In large part, we have succeeded. More than a decade ago, legislation was passed to support the Municipal Conservation Commission program, a movement which has now spread throughout the Eastern seaboard. More recently, laws regulating the use of coastal areas and inland wetlands have begun to serve as models for many other parts of the nation.

Berkshire County itself has a long and distinguished history of caring for its natural beauty. The people of the County will enjoy a close relationship with the land, a relationship that is increasingly rare in America today. Because your people have such wealth to save, they are more sensitive than most to the price we have to pay for pollution, the cost of haphazard growth. They know the values we lose through our heedless abuse of nature.

Despite victories already won, despite impressive recent gains, we also know that our current efforts and programs are far from adequate. Sweeping and pervasive change must come before we can gain effective management and control of our environment—we need changes in our laws, changes in our methods of education, changes in the style of our own lives, changes in our ways of thinking about the future. Above all, there must be change in our governmental institutions, in the procedures through which we establish our common goals and determine our public policy.

Some will say it can't be done, that Middle Class America, affluent and content, will be unwilling to accept—much less stimulate—change of the magnitude we need. I do not share this belief.

That is why I have come back to Berkshire County this evening. I have come to challenge the people of the County. I have come to seek their commitment, to enlist their effort in an innovative and difficult program of action that will help us match the goals we have begun to set.

The program I propose reflects my personal conviction that the problems of our environment, overwhelming as they are, can give birth to a new political awakening across the nation, a resurgence of involvement and participation on the part of people and communities throughout the land. In part, it will help to answer the question that so many concerned citizens have been asking wherever I travel in the State—"What can I do? What difference can I make? How can I help things change?" I believe we have the opportunity in Berkshire County to begin to give some answers.

Let us start by analyzing the reason for our failure to meet the problem of deterioration of our environment.

The reason is not lack of public interest

or concern. People everywhere are telling us as clearly as they can that they want action, and action now.

The reason is not lack of resources to meet the challenge. America can afford to put its environmental house in order. NASA put a man on the moon in the decade of the Sixties. Surely, Detroit can take the lead out of its gasoline engines in the decade of the Seventies.

Nor is the reason a lack of understanding or professional skill. America is rich in people and organizations with innovative proposals to meet the crisis of our environment.

No, the heart of the problem lies in the priorities we have set—priorities that are directly expressed in part by the shape of our governmental institutions.

Our heritage of land and water, forests and fields, mountains and beaches has a proud unity. But our government is fragmented. It is divided into national, state and local governments. It is divided further into executive, legislative, and judicial branches.

The separate fragments do not reflect the unity of the environment. Too often, they are simply incapable of answering the demands we have to make. At best, any single governmental structure can respond to the environment only in a piecemeal fashion. At worst, it cannot act at all. The response is usually too weak. Almost always, it is too slow.

Berkshire County is a case in point. One of the most striking facts about this region is its essential physical unity. Bounded by the Taconic Range on the West, and the Berkshire Plateau on the East, the geographic boundaries of Berkshire County closely parallel those of nature. The varied landscapes of the County—its woods and farms, its villages and communities—are woven together by the tributaries in the watersheds of the Hoosic and Housatonic Rivers.

Berkshire County is a single entity of nature, but man has made it into a patchwork of lesser pieces. The natural unity of the County contrasts sharply with the many disjointed, overlapping, and sometimes competitive governmental units, each in control and jealous of some aspect of the Berkshire environment.

For example, it is primarily at the town level that we deal with problems like zoning, land use, water, sewage and solid waste disposal. At the state and Federal level we deal with agriculture and forest management, transportation patterns, and water pollution control. Other critical issues vital to the quality of life, such as housing, economic development, public health, welfare, and other social services are scattered throughout every level of government.

We know, however, that none of these problems are separate or discreet. They are integral parts of the larger question of how we are to manage our human environment.

Berkshire County can take pride in the fact that its leaders have long recognized the need to deal with the environment in a unitary way. For many years, Phillip Ahern, Director of the Berkshire County Development Commission, has guided Berkshire development with a sensitive awareness to the environmental values of the region. In large part, he was responsible for bringing regional planning to this area. Today, Berkshire County can boast an aggressive Regional Planning Commission, representing most of the towns in the County.

Many private groups have joined with public agencies in the interest of the overall environment. Over a hundred years ago, the historic Laurel Hill Association was founded—the oldest civic improvement association in the United States.

Few regions in the nation can claim our high degree of active citizen participation in environmental organizations. Many of these organizations were established long before the environment reached the level of national conscience and became a household issue. To name these groups is to chart the history of our efforts—the Housatonic Watershed Association, the Berkshire Hills Conference, the Berkshire Panel for the Public Environment, and the Natural Resources Council, with its recently established Land Trust.

In this very building—the temporary home of Massachusetts' first community college—a new certificate program has been launched to train environmental technicians. Evening courses are being held this fall to give citizens of the community an opportunity to explore their concern for the environment. In the next few years, when Berkshire Community College moves to its new campus a few miles to the west, the environment of the County will be a major focus of the mission of the college.

And, to the north, at Williams College, we have the Center for Environmental Studies, the first such center to be established at a liberal arts college anywhere in the nation. The primary focus of the center is the County of which it is a part, and the contributions it is making are well known.

These are exciting and important local efforts, but they are often frustrated by the maze of governmental units that stand astride us. Too often, by their very number and complexity, they thwart whatever progress we could make. We must do more—much more—at every level of government to support and build on these important local efforts.

I believe that we must unify the national, state and local agencies of government that deal with the many aspects of our environment. To me, the logical level of government to deal with environmental problems and opportunities is the county. This will be a surprise to those immersed in the politics of the past, since all the textbooks point out that Massachusetts, and New England generally, have a "weak" form of county government.

That may have been true in other days, but it is no longer true today. There is growing interest in Massachusetts and in the nation in strengthening county government, especially in the challenging and complex area of the environment. Recently, our Special Commission to Modernize County Government—a legislative commission of the Commonwealth under the leadership of State Senator Denis McKenna and Representative Paul Cronin—concluded that counties could become the natural entity to solve regional problems. "In this context," the commission report declared, "the county becomes the unit of government that can provide crucial areawide resources and solutions to integral problems, which need not be taken over by state or federal intervention."

As the Special Commission recognized, Berkshire County is an ideal area for regional planning, development and management of the environment. It has a firm identity arising from a long cultural heritage. To a large extent, it already has the right size communities, the right number of people, the right transportation and recreation facilities—all of which are in jeopardy unless we meet the challenge. The county also has newspapers, civic organizations, and leaders who are especially conscious of the problems and opportunities in the county. The traditions of the past are rich, and the ground is fertile for the future.

I propose that just as Berkshire County has pioneered in the past, so it should pioneer again. It should become a model for the nation, a "demonstration" county for the best in planning, development, and management of our physical, social, and human environment.

To succeed, the program will require close cooperation at all levels of government. It will need Federal financial resources, state legislative power, and a reorganized and greatly strengthened Berkshire County government.

The detailed blueprint of the program remains to be filled out, but already we can define the broad outlines of the route we ought to take. Let me briefly suggest three of the essential elements of its structure.

The first element is imaginative Federal participation. The leaders of both political parties in Washington have made clear again and again—whether they use the phrase "the new federalism" or the phrase "strengthening local government"—that they want to turn more of the functions and activities of Washington back to the states and local units. But too often, the Federal Government is baffled and frustrated by the fragmentation, the overlapping jurisdictions, and the conflicting local policies that stifle every attempt at decentralization.

I believe that there will be wide support in Washington, in both the executive and legislative branches, for a bold experiment in regional government, capable of dealing with all the problems of the environment.

The task of the Federal Government is to provide the kind of financial support that will aid and strengthen the demonstration county experiment. Too often, Federal grants are so tightly reined that they rob a local area of the ability to guide development in a way that can be responsive to local values. Our present Federal programs are often so single-minded that it is impossible to carry out comprehensive planning and coordinated development of the sort required for adequate environmental control and management.

Our task at the Federal level is to provide new kinds of assistance for comprehensive planning and development of the environment. We need broad-purpose grants to regional government. We must recognize that we cannot succeed unless we abandon our present pattern of undermining local initiative by uncoordinated, piecemeal funding, lost in the maze of the existing Federal bureaucracy.

The second element we will need is imaginative state participation. Berkshire County itself is a creation of the Commonwealth. It can be weakened or strengthened as the state government determines.

If the demonstration county project is to succeed, Massachusetts must grant Berkshire County new legislative authority to deal with the problems of the environment. Of course, these powers could be conferred for a limited time, for a trial period. They could be revoked if the executive and legislative branches so decided. For now, however, the crucial action by the state must be the enactment of legislation to strengthen and reorganize the county government.

It is not enough, however, for the state merely to strengthen the powers of the county government. The state must also establish new relationships between its own agencies within the region. We need greater regional coordination of state agencies in areas like natural resources, transportation, pollution control, and the development of land for industry, power and housing. State administration on a purely ad hoc basis defeats the goal of managing all the physical and social resources of the region in an integrated way.

The third essential element is the response of Berkshire County to the greater freedom we propose. There must be imaginative county participation. This will be the most innovative and critical step of all. Its exact nature will depend on the people of Berkshire County, working with the executive and legislative branches of the Commonwealth.

The potential range of action is almost infinite. A number of possible alternatives were presented in the study by the Special Commission. You might establish, for example, a new kind of county executive or general manager, whose activities would be closely coordinated with the process of plan-

ning and development. Or, you might create a new public or semi-public corporation under the county commissioners, with legislative and fiscal authority over water, forests, transportation, waste disposal, economic development, and all the other areas of the environment. These new patterns of county government must be closely linked to the activities of state and local agencies, especially in the towns and cities of the county. Indeed, the most difficult—but most important—phase of the experiment will be the sensitive allocation of government authority within the county itself.

The form and power of such a new county government must be answered by you, the people of Berkshire County, but you will have the attention and support of the Commonwealth and the nation. This is a time for boldness, for innovation, for creative experimentation, because the success we achieve here can be a model for all America.

Equally important, this is a program with a price tag we can afford.

In the long run, of course, the cost of the demonstration county program will be small, whatever the price. Any change that leads to a more effective, better organized government will save money for every taxpayer. In many cases, Federal funds are already available to do the job, if only counties like Berkshire County were organized well enough to compete with states and cities to receive existing Federal sums.

We are going to pay, whatever we do. We are going to pay, either through a sensible mechanism, or through an inefficient, inequitable, unresponsive mechanism leading to ever higher costs.

The cost of not taking care of our environment is no less real because it does not appear on any balance sheet or in any state or local budget. The cost of continuing as we are is the only cost we cannot afford. More of the same is not enough, and the sooner we learn this lesson, the sooner we will be on the way to wisdom and real reform.

In the short run, I am confident that a county willing to demonstrate what regional government can really do will receive strong financial support from the Federal Government, because it will encourage a truly efficient use of limited Federal funds. At the beginning, the program I envisage would probably require no more than about one million new Federal dollars a year for several years to launch the basic county demonstration project we need.

What I am proposing, in sum, is a new, creative coalition involving Federal financial resources, state legislative power, and revitalized Berkshire County government. Such a coalition might well be unique in American government, but in the present case it is a wholly natural and appropriate response to a pressing social problem.

Berkshire County has every qualification to serve as a demonstration county. The one resource it does not have is time. We live in an age of relentless change. The only question is whether this beautiful mountainland of our fathers will be the master or the slave of the change we know must come.

I have not been talking about Berkshire County, alone, however. I have also been talking about our state and our nation. For if Berkshire County can be a model demonstration county, the success it achieves, the lessons it learns—and even the setbacks it experiences—will serve as a living example of creative control and management of the environment throughout America.

Together, we can learn to manage change. The only way to make our democracy work is by constant reassessment and experiment and improvement.

This evening, I have offered a concept, not a blueprint, to move us in the direction we must go. To achieve our goal we must find new ways to work within the flexible institutions of our democratic system. Above all, we will need a commitment of us all that rises above any partisan interest. Together, we can move ahead in the best tradition of Berkshire County pioneers.

## NEED TO UPDATE THE RETIREMENT INCOME CREDIT NOW

Mr. WILLIAMS of New Jersey. Mr. President, the retirement income credit was enacted in 1954 to place teachers, policemen, firemen, and other Government annuitants on a substantially equal basis with social security recipients.

However, the maximum amount of computing the credit has not been updated since 1962.

During this same period there have been three urgently needed social security increases.

In all probability, another social security raise will be enacted during this Congress.

As chairman of the Committee on Aging, I have enthusiastically supported these measures to increase social security benefits to a more realistic level.

But, for far too long a time, local, State, and Federal retirees have been overlooked or ignored.

And for too long they have had to struggle with a tax relief measure which is grossly outdated.

Equity in our tax system provides a compelling reason to place these taxpayers on an equal footing with social security beneficiaries.

On September 15, I introduced legislation, S. 4345, to correct this longstanding inequity.

First, my bill would raise the present maximum amount for computing the credit from $1,524 to the same maximum benefit now payable under social security—$2,278.

Second, it would provide for automatic adjustments of the credit, based on increases in social security benefits.

In recent testimony before the Senate Finance Committee, Mr. Ernest Giddings—legislative representative for the National Retired Teachers Association—American Association of Retired Persons and legislative chairman for the National Conference on Public Employee Retirement Systems—presented much hard-hitting and compelling information for modernizing the retirement income credit.

Moreover, he provided additional persuasive reasons for the enactment of my proposal.

Since this measure would be germane as an amendment to the 1970 social security bill, I urge the Finance Committee to incorporate this proposal when it reports out H.R. 17550.

Mr. President, I also commend the testimony of Mr. Giddings to my colleagues and ask unanimius consent that it be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

RETIREMENT INCOME TAX CREDIT HAS NOT BEEN UPDATED SINCE 1964

(By Ernest Giddings)

The retirement income tax credit provision, section 37, of the Internal Revenue Code of 1954, is out of date and has not been updated since 1962. Your committee, the Congress, and spokesmen for the United States Treasury wrote the tax credit into the law fifteen years ago, in lieu of granting the pension of the retired teacher or the public employees the same tax exemption always allowed social security and railroad retirement.

As the law stands today, the tax credit is computed on the base of $1,524. With the present lowest bracket rate of 15%, the maximum tax benefit is $228.10. This maximum benefit was established when your committee updated the tax credit in 1962. It has remained at that figure since. In the meantime, the maximum primary social security benefit has been stepped-up on three occasions and now stands at $2,324.40.

Mr. Chairman, with your cooperation, and with bills introduced by Senator Ribicoff, Senator Williams (of New Jersey), Senator Prouty, and others, you have been on the verge of correcting the retirement credit base on several occasions since 1962, without, however, accomplishing that result.

Part of the responsibility for the delay on these occasions was the proposal by treasury in 1964, and other years, which would have made an about-face in our tax policy, and made social security benefits taxable income.

In the meantime, more than 1,000,000[1] retired teachers, firemen, police, and retirees from the many other retirement systems have been discriminated against, as have those persons who have provided themselves with income in the form of pensions, interest, dividends, and rentals. They have not been permitted the same tax treatment on the retirement income they provided for themselves as that provided to recipients of social security.

It is now our hope that your committee will take action this year to update the retirement income tax credit. Two methods of obtaining that result are possible. One method is to provide that the base figure of $1,524 in the present law be changed to $2,324.40, the figure determined by the staff of your joint committee on internal revenue taxation as the 1970 counterpart of the figure $1,524. which you wrote into the tax code in 1962.

Another method is to provide that the base figure for computing the income tax credit be automatically adjusted whenever social security benefits are increased. The question of which method your committee chooses is not especially critical.

However, it is our sincere hope and recommendation that the committee will agree upon one method and write it into the social security bill now before your committee. In the name of tax equity, and equal tax treatment of all retirement income, this action should be taken by the Congress this year.

In this request to your committee for action on the retirement income tax credit, I am speaking for the National Conference on Public Employee Retirement Systems, as well as for NRTA–AARP. The National Conference on Public Employee Retirement Systems consists of 130 retirement systems located in 34 States. President of the conference is Mr. Westford Robbins, executive secretary of the Massachusetts Association of Contributory Retirement Boards.

The National Council on Teacher Retirement, and the National Education Association have authorized us to say that our several organizations are in complete accord in making this request to your committee.

## LETTER FROM A SERVICEMAN IN VIETNAM

Mr. PELL. Mr. President, from time to time, I receive letters from young Rhode Island men serving in the armed

[1] The 1,000,000 retirees I have mentioned above is substantiated by data supplied by the United States Treasury.

services in South Vietnam. I, and I think most of my colleagues, particularly value these letters written by young men serving their country halfway around the globe from their homes and their loved ones.

The fact that these young men take the time to sit down and write to their Senator, frequently under very difficult conditions, is to me a moving indication of their dedication in our democratic government.

What they write is also frequently informative and helpful.

Mr. President, I recently received such a letter from a Rhode Islander in South Vietnam.

I believe the sincerity of the letter speaks for itself, and I ask that portions of it be printed in the RECORD at the conclusion of my remarks. I would add that I have deleted only the seviceman's name and short passages that might tend to identify him.

This young serviceman's observations are evidence of the troubling questions that arise in the minds of our young servicemen who are called to take part in this semicivil war in a strange land, and the dilemma our Nation and its youth find ourselves in as we, with the best of intentions, try to fulfill what successive administrations have considered an obligation to the Government of South Vietnam.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AUGUST 19, 1970.

DEAR SENATOR: As an American combat troop in Viet Nam, I would like to express my current feelings concerning this conflict. [Please excuse the informality of this letter, for I am in the jungle now, and writing conditions are very poor.]

I recently requested your speech of June 29, 1970, before the U.S. Senate, and found it quite informative. I agree with your expressed views on what I believe to be an "American Tragedy." However, within your speech, you remarked that "Speaking as an American parent, Vietnamization is of course, an improvement over past policies in that it means the substitution of Vietnam fighting soldiers for American fighting Soldiers." This statement is self-evident; however, have you been made aware of the side-effects?

I can only speak as one individual soldier; from what I have seen thus far, the Vietnamization Program has produced many negative effects. The program, since its inception, has brought Americans closer to the Vietnamese people—especially the combat troop. For he is involved in the turn-overs of base camps to the Vietnamese.

Thus far, I have been taken back by the animosity displayed so openly, by American troops toward the Vietnamese people in general—civilians as well as soldiers. Recently, when I returned from the field, I was trucked from the air field to a near-by base. On the way, I saw many things that disturbed me. While passing through a village some G.I.'s threw smoke grenades into civilian places of business—much to the horror of women and young children. Further along the road, a fragmentation grenade was thrown at one farmer's ducks, killing at least ten of them.

Yet another GI threw a concussion grenade into a body of water next to a Vietnamese guard station. Luckily no one was injured.

I talked to some of the fellows who took part in these "games" and told them that acts such as they committed would surely impair the Vietnamization of the Delta. Their reply was simply "Look, we hate all these 'Gooks.' You don't know who to trust down here in the Delta. In the daytime the people are your friends, and at night they are out to kill you." Unfortunately, this statement made sense to me in an odd way. I only saw a few of these isolated events; however, I have a strong impression that most G.I.'s do not have any love or respect for the Vietnamese people.

Because of the nature of our missions, and the number of men *NOT* filling their primary military occupational specialty (P.M.O.S.), I am beginning to suspect that something is amiss. In our own platoon, half of us have M.O.S.'s other than 11B [combat] series. Also, all platoons in the field are instructed to set up "mechanical" ambushes with Claymore mines. Just setting them up is extremely dangerous . . . we had two men hurt yesterday and two others were killed when the V.C. discovered one last week, and turned our ambush into theirs.

Last week I was disturbed when elements of "B" Company were sent out in six men killer teams, one without a qualified medic—one man was simply appointed to act as a medic.

Well, I have gone on more than I had intended. I merely felt that not enough men over here write to their Senators about matters that "Fact Finding Committees" never see or hear of. I am sure that if some of the practices over here were ever disclosed in the States, people would be up in arms.

I hope you do not view this letter as exaggerated. Since I am the only fellow in the ———, I guess you will have to take my word.

Respectfully yours,

——— ———.

## NATIONAL EMPLOY THE PHYSICALLY HANDICAPPED WEEK, 1970

Mr. DOLE. Mr. President, the week of October 4 has been designated by President Nixon as "National Employ the Physically Handicapped Week." A Senate joint resolution established the national observation of this week in 1945. On September 22 of this year, the Senate amended the resolution to include all handicapped workers, not only the physically handicapped, but the mentally handicapped, as well.

For the past 25 years our Nation has been tremendously progressive in the rehabilitation and employment of our disabled citizens. The majority of these preceeding years have been characterized by national prosperity which has been made the goal of restoring the handicapped to usefulness more easily accomplished. The true test of our commitment to aid the disabled, to give them the means to self-sufficiency and dignity, comes during times such as we now experience. When unemployment effects the able-bodied, employers are less inclined to employ and retain handicapped workers. Too frequently the handicapped are categorically "last hired and first fired." However, both motivation and production of most handicapped employees actually exceed that of their able-bodied coworkers. It should be noted that the handicapped do not want special privileges. They simply ask equal consideration with other employees.

Rehabilitation and employment of the handicapped have come a long way in the past quarter century. As we observe the 25th "National Employ the Physically Handicapped Week" commencing this October 4, let us consider the capabilities of all handicapped Americans with a fresh perspective. Let us work to further eliminate all bias and misconception that hinder handicapped individuals from knowing lives of productivity and satisfaction.

## EDITORIAL COMMENT ON HEALTH SECURITY PROGRAM

Mr. KENNEDY. Mr. President, last month, together with 16 other Senators, I introduced S. 4297, the Health Security Act, to establish a program of comprehensive national health insurance, capable of bringing the same high quality health care to every man, woman, and child in the Nation. As I indicated in my statement introducing this legislation, the key to the program—called the Health Security program—is the use of national health insurance as a lever to improve all aspects of health care in the Nation. Only the catalyst of national health insurance, I believe, will enable us to achieve the many basic reforms that are so urgently needed.

Last week, the Committee on Labor and Public Welfare held 2 days of extensive hearings on national health insurance. The issues surrounding the legislation I have introduced were extensively discussed. The movement is gaining momentum, and I look forward to early enactment of such legislation by Congress in the near future.

One sign of the growing debate on national health insurance is the large number of editorials—both pro and con—that appeared on the subject at the time I introduced the proposed Health Security Act last month. Many of these editorials—27 from newspapers in 21 different States—have come to my attention. I believe that they will be of interest to all Members of Congress who are concerned with the quality of health care in America. I ask unanimous consent that they be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

[From the Birmingham (Ala.) News, Aug. 28, 1970]

KENNEDY'S HEALTH INSURANCE

A proposal offered this week by Sen. Edward M. Kennedy (D-Mass.) and others is described broadly as a national health insurance plan. It might be labeled more properly as an omnibus bill which proposes to have the government oversee—and defray a large part of the cost of—a greater part of the medical expenses of all ailing Americans, eliminate Medicare and Medicaid, and put another hefty bite on employers and the vast majority of wage earners by raising Social Security taxes.

In addition, if the Kennedy idea became reality, the socialized health plan would drive the great majority of private health plans out of business, including those financed all or in part by employers for the benefit of their employes.

Sen. Kennedy is suggesting that the federal government intrude itself further into an area in which it already has more than a foot in the door.

Kennedy said all the financing for the plan would be handled under a trust fund similar to Social Security's. The soundness of such a plan is questionable.

The senator and his fellow sponsors are proposing to create turmoil by uprooting

Medicare and Medicaid, neither of which has been in operation long enough to prove its workability. And in the case of Medicaid, Alabama only last year enacted a series of additional excise taxes with which to provide the state's share of financing for that purpose.

Kennedy proposes to do something for Americans they very likely can do much better and at less expense by themselves.

Turning to another welfare program of highly doubtful economic wisdom is not the cure-all answer to the nation's rising health bill.

---

[From the Sacramento (Calif.) Bee Sept. 1, 1970]

NATIONAL HEALTH CARE PROGRAM WOULD MEET LONG FELT NEED IN AMERICA

The introduction of legislation to provide national health insurance for all Americans by 1973 by a bipartisan group of 14 U.S. Senators is a responsive step.

It is indicative of a sensitive ear for a matter of growing concern among an increasing number of citizens, particularly those in their middle years.

Even the 16 million Americans who now are covered by some type of private health insurance are finding the soaring costs of medical care are leaving them unprotected against the financial drain of prolonged hospitalization or catastrophic illness.

In addition there is an intensifying din of criticism directed against a patchwork of systems which is failing to deliver adequate medical care to the nation.

The new legislation, introduced by Sen. Edward M. Kennedy of Massachusetts, would finance the national program in much the same way Social Security and medicare are now funded—through a combination of federal contributions, employer payroll and employee income taxes.

The success and acceptance, along with the demonstrated need, of these two cornerstones in the democratic framework of social benefits should aid in the building of adequate health care for all Americans.

The proposal also recognizes the prime need for thorough reorganization of the nation's present systems for delivering health care. It would set up a $1 billion resources fund to accomplish this before the national health care program was inaugurated.

A health care program linked to Social Security was envisioned by the late President Franklin D. Roosevelt and was sought by President Harry S. Truman 20 years ago. A similar program for Californians was vigorously advocated by Earl Warren, chief justice of the United States, retired, during his tenure as governor. All three were successfully opposed by the powerful voice of organized medicine, which termed any such program unnecessary and undemocratic.

The realities have proved otherwise. No nation which prides itself in a high standard of living and the excellence of its medical profession can allow the needs of basic health care to get beyond the reach of its work force.

---

[From the Wilmington (Del.) News, Sept. 2, 1970]

WHITHER HEALTH INSURANCE?

National health insurance for the entire population of the United States was a concept alien to the American way of life just a few years ago. Yet today it is being discussed widely and it is generally predicted that by the end of the decade not only the very poor and the elderly will have "health security" but also Mr. Average American and his family.

Several proposals in that direction are before Congress, with others promised. By far the most comprehensive plan to reach the legislative hopper to date is the proposed Health Security Act introduced by Sen. Edward M. Kennedy. Democrat of Massachusetts, on behalf of himself and 13 other senators from both sides of the aisle.

This bill is the direct outcome of the year-and-a-half long study conducted by the 100-man Committee for National Health Insurance, founded under the chairmanship of the late Walter Reuther, and having on its roster distinguished physicians, politicians, social scientists, businessmen, etc. What makes the Kennedy bill so significant is that it outlines not only a system of providing nationwide health services, but also sets forth concrete proposals for financing the program and ways of reforming the delivery of health care.

Furthermore, the proposed act is uniquely American in that it endeavors to set up a "working partnership" between the public and private sectors of the economy. There is no talk of nationalizing the medical profession; indeed the bill would retain much of the private enterprise system's flexibility permitting three different routes of compensation for medical expenses: Fee for service (the prevalent American practice); a per capita allowance; a retainer (which can be likened to the burgeoning prepaid medical insurance plans).

While more and more Americans carry some kind of private health insurance (and the very poor and the aged are helped by the government), only 43 per cent of the civilian population has insurance protection to help pay for physicians' visit and preventive medical care. Furthermore in 1968, the latest year for which figures are available, only 36 per cent of consumer expenditures for health care were recovered through insurance coverage. And though insurance coverages are being continuously extended (with premiums rising too, of course), so are costs for health services.

The Health Security Act is scheduled for hearings before the Senate health subcommittee next month. No doubt the discussions and arguments will be lengthy and no measure will be enacted this session or even the next. But at least the whole matter of health care for the American people who are continuously demanding more in that field is being tackled comprehensively instead of by familiar patchwork approach.

Every citizen can—and should—contribute to this national discussion by informing himself of the provisions and letting his congressman know how he feels about them. This type of legislation potentially affects each citizen as recipient or provider of health care—all should play a constructive part in formulating the most equitable plan possible.

---

[From the Washington (D.C.) Post, Aug. 30, 1970]

HEALTH INSURANCE FOR EVERYONE

A legislative proposal is put forward every now and then embodying an idea so natural, so reasonable and so right that one wonders how the country could have floundered along for nearly two hundred years without it. The proposal that the American people finance their inescapable and immense annual bill for medical care through a national system of insurance seems to us just such an idea. It is not, of course, a new proposal. It has been put forward in a variety of forms, and with more or less realism and seriousness, over the past 25 years. The existing Medicare program for elderly citizens embraces an important part of its purpose. The plan sponsored in the United States Senate on Thursday by Senator Kennedy on behalf of a bipartisan group of 15 senators is but the latest expression of this idea. It is unmistakably, we think, an idea whose time has come.

We do not say that the new proposal provides a final answer to the problem of providing health care for the American people. It is, however, a considered, comprehensive plan dealing realistically with the problem and providing realistic means of attaining an essential goal. That goal, as Senator Kennedy expressed it, "is to insure that all persons residing in the nation have the opportunity to receive good health care—without barriers to the care they need, and without the crushing financial burdens that too often accompany the delivery of health services today."

America has medical skills and medical facilities unsurpassed and probably unequaled anywhere on the globe. For the fortunate who can bear the huge cost of obtaining them, these are readily enough available. But the health record in this country is an appalling one for the bulk of its population. "We are devoting an increasing share of our national economic resources to health care," said Senator Kennedy ."The cost is increasing but the quality is declining. Our rates of sickness, disability, and mortality already lag far behind the potential modern health care and the reality of such care in many foreign nations. Our record is getting no better. It may be getting worse."

To let the quality of health care depend upon the affluence of individuals is to belie the concept of equality of opportunity. This country long ago abandoned the notion that the education of children should depend upon the size of their parents' bankroll. It recognized that since education is a key to national security and national progress, good schools should be available to every child. Precisely the same may be said about good health; since it is essential to national well-being, high quality medical care must be made available to everyone in need of it.

The proposal put forward by Senator Kennedy and his associates stems from studies and discussions carried forward for the past year by the Committee of 100 for National Health Insurance organized by the late Walter Reuther, head of the United Automobile Workers Union. No more apt and admirable tribute to his memory could be devised than constructive action on this proposal. It is advanced at this time because it is expected to become an important issue in the next presidential election campaign. So it should be. The time is ripe for national discussion and national resolution of the national health problem.

---

[From the Miami (Fla.) Herald, Aug. 30, 1970]

MAJOR ISSUE FOR TAXPAYERS: NATIONAL HEALTH INSURANCE

Sooner rather than later the American people will confront the issue of national health insurance. A comprehensive nonpartisan bill supported by 15 senators and introduced by Sen. Edward M. Kennedy would establish a "Health Security Program," probably by 1973.

Since President Nixon in his 1968 campaign accepted the principle but said the time wasn't ripe, national health insurance is likely to be an issue in the 1972 Presidential elections.

If that is the case, we suggest a thorough public scrutiny not only of the desirable ends but also literally of the means, or costs.

By mid-1973 Americans who are covered by Social Security payroll deductions—and that means most of them—will be paying 5 per cent of their earnings up to $7,800 a year. The present figure is 4.2 per cent. The tax could well go higher than the projected 5 per cent if history is any guideline.

So to that figure add 2.1 per cent of the first earned $15,000 for health insurance (not counting what the employer pays in either instance) under the Kennedy formula for a total of 7.1 per cent in federal programs.

This is something of a sock. Since the cost of living seems headed for a high plateau, at best, the taxpayer faces significant charges on his income for services, however desirable, which he may never need or never receive personally.

This brings us to some comparisons between 1960 and 1970 which have nothing to do with census figures.

Since 1960, according to the Tax Foundation, a fairly representative $11,000-a-year employe has seen the cost of all government he bears go up to 104 per cent. If he had to pay a state income tax (in Florida he wouldn't) the rate would have risen 161 per cent.

Meanwhile his property tax climbed 108 per cent and he was paying significantly more in sales, use and gasoline taxes.

Perhaps he gets more and better services for the 32 per cent of his income now going for taxes against 23 per cent 10 years ago. And perhaps not, to hear complainers tell it. The point is, it doesn't come free. And especially not in dollars which have shrunk in value from par in 1960 to 77 cents today.

---

[From the Albany (Ga.) Herald, Sept. 1, 1970]

NATIONAL HEALTH INSURANCE?

When Medicare burst upon the American political scene and was finally, after a 20-year effort, enacted into law by Congress for our senior citizens, politico-sociological experts made the point that it would be only a matter of time until a demand was voiced for total health care for Americans of all ages.

That time has arrived.

A bipartisan measure for a national health insurance plan is being introduced in Congress by Senator Edward M. Kennedy, among others, to provide most citizens with the best possible health care at the least possible cost to the individual. What it would cost the United States Treasury, no one is yet prepared to say with any accuracy. Quite probably, even with a program of individual contributions through taxes, such as under Social Security, it will be astronomical.

Still, there is no gainsaying the figures showing that America, for all its affluence, lags behind such nations as the Soviet Union and Sweden in health care for its citizens. We rank 13th among the world nations in the death rate of infants in the first year of life. A boy baby born in America will live five years less than a boy baby born on the same day in Sweden. Even Russian babies have longer life expectancies than American babies.

The country needs more doctors, more nurses, more hospitals, more technicians, more of just about everything that has to do with the establishment and maintenance of good health. But instead of gaining on the problem, we continue at best to hold our own, at worst to slip slightly backward. There are no easy answers. Money alone will not get the job done, obviously. What seems indicated is some combination of more funds without, at one and the same time, destroying the incentives that attract men and women to the health professions in the first place. National health insurance is not the total answer, certainly. Before we plunge into it, seeking some political panacea, long, hard second looks are indicated.

---

[From the Danville (Ill.) Commercial-News, Aug. 28, 1970]

U.S. INSURANCE PLAN—WHO PAYS?

The comprehensive national health insurance program introduced this week by Sen. Edward M. Kennedy, D-Mass., surely will require a great deal of selling before Congress is ready to buy.

The cost suggested is enormous. And the burden, as with all other government "benefits," would fall on the already overtaxed working man and woman.

The Kennedy plan—which is really the plan conceived by the late Walter Reuther of the United Auto Workers—would derive income as follows: 40 per cent from federal general income, 35 per cent from a 3.5 per cent tax on employers' payrolls, and 25 per cent from a 2.1 per cent tax on individual income up to $15,000 annually.

Since all general federal income originates with the individual citizen in some form or other, start out with the assumption that you and you and you will pay 40 per cent of the cost.

And since the tax on employers' payrolls is figured by your employer as a cost of doing business, you can count on his having less profit. Less profit means smaller dividends to stockholders and smaller or less frequent pay increases for employes. So you will contribute substantially to the 35 per cent employers would have to pay.

According to our arithmetic, if you make $200 a week, you would be nicked for $4.20 and your employer would shell out $7. That would amount to $11.20 per week.

Even at half the salary, the tax—direct tax that is—would figure $5.60 a week.

National health care is not all that it should be.

But is the Kennedy plan the answer?

The senator says it would not create a national health service of government-owned facilities and government-employed doctors. Perhaps not. But what government finances, government controls. And we want more than the senator's declarative statement that his system would replace "the large amount of wasteful and inefficient expenditures already being made by private citizens, by employers, by voluntary private agencies, and by federal, state and local governments."

As a matter of decent concern, Americans do not begrudge helping their less fortunate fellows, especially those who are ill. And it is true that illness is becoming too expensive a luxury to be indulged by many except the affluent.

We, however, are not convinced—yet—that government needs to take over everything in the medical field and stick everybody with another tax bill. Not to be flippant, but piling tax upon tax is enough to make a great many Americans sick already.

---

[From the Bloomington (Ind.) Herald-Telephone, Aug. 28, 1970]

ANALYZING BUSINESS OF HEALTH

American business is inextricably involved in the problem of rising health-care costs. Employers pay massive bills for health insurance. Poor health, as it results in lowered efficiency of workers and absenteeism, is an economic debit in business.

But the experience and resources of successful business enterprise can contribute much to the improvement of the nation's system of delivering health-care—in administrative efficiency, in technological procedures, in cost-performance analysis, in use of personnel and in service to customers.

Traditionally, the U.S. Chamber of Commerce has resisted federal involvement in health insurance (except for the elderly) and has encouraged a voluntary, independent approach to insurance and health services. But the expense to business and the limitations for patients resulting from current private-insurance plans have caused the Chamber to reconsider its position. It is launching a big study into the whole subject of health care and its financing.

In other recent studies, economists, medical leaders, insurance experts and government researchers have sought better answers—with agreement, at least, that some major changes are needed to improve the health of Americans not well-served at present. Rashi Fein of Harvard University has described the existing health apparatus as "a highly disorganized, wasteful delivery nonsystem." Speakers at an American Assembly on health noted that recently-developed programs for financing health care, including both private and government insurance, have helped more people but in the process have increased demand for services without increasing the supply.

Interest in national health insurance is growing, but with any new program to put health care within financial reach of all Americans must come also the kinds of reorganization and expansion of services which will make them available as needed.

Congress is expected to take up proposals for national health insurance and other aspects of government health programs early next year. The projected study of the Chamber of Commerce should prove to be a useful contribution on this important issue.

---

[From the Benton (Ky.) Courier, Aug. 25, 1970]

PUBLIC MEDICINE COSTS

Nobody stole anything, but a four-county sample of California's nursing home operations under Medicare showed plenty spent on nothing.

The bungling was due largely to federal bureaucratic overpayments. But the state's eligibility law for nursing home care lacks sharpness, too. So the waste touches the operation in more ways than one.

It's a reminder of past waste and an omen for the future of government medicine. What happened under the poverty war, which bought its gains dearly, could happen too, under national health insurance.

The nursing homes themselves, being small, followed the rules. When a patient died or checked out, the right forms were mailed off. But the Health, Education and Welfare Department kept on coughing out checks on the output end while its input end was trying to absorb news of the change.

Sometimes HEW duplicated itself, paying double on accounts—one check for Medicare, another under the sister program of Medicaid, for the same person.

The confusion touched 10% of the total cases surveyed in just four counties. What giant multiple of the mispayments made in Alameda, Los Angeles, Fresno and Santa Clara counties would express the waste nationwide?

Compared with comprehensive prepaid or tax-credited national health insurance, Medicare is pin money—but the high incidence of waste and bungling found in one sampling suggests what one socialistic mustard seed can grow into if fertilized with the billions public medicine would involve.

---

[From the Boston (Mass.) Globe, Sept. 1, 1970]

ANYONE FOR GOOD HEALTH?

Semi-private rooms in one of Boston's hospitals cost $9 to $11 per day and private rooms $13 to $21 per day when Oscar Ewing then head of what now is the United States Department of Health, Education and Welfare, first urged the adoption of national health insurance legislation in 1947. Costs in the same hospital today are $75 to $85 for semiprivate rooms and $75 to $100 for private with unannounced increases scheduled for Oct 1.

It seems unfair to make the comparison. Day labor is paid about as much per hour now as per day then, a pound of round steak that cost 40 cents then costs $1.15 today, a pound of butter that sold for 49 cents then sells for 83 cents now—and both doctors and hospital patients have to eat.

But the escalation in hospital rates and doctors' fees is at a faster clip now than at any time in that 23-year period. Blue Cross rates, for example, increased 36 percent for an individual last year, 52 percent for a family, they will go up again in some of next year's contracts by 23 and 28 percent, and hospital rates of $500 per day are predicted by the turn of the century. Moreover, an estimated 30 million Americans have no health insurance of any kind, and those who are insured pay an estimated 60 percent of the cost of any illness out of their own pockets.

It is frightening to try to calculate the number of Americans who have died because they could not afford adequate medical care

(available only to the very poor or the very rich) or will die for the same reason—or who, even when they were in a position to pay their normal bills, were or will be driven into bankruptcy by hospital and doctors' fees. This is far from an indictment of all hospitals and doctors. It is an indictment of an inadequate and mis-managed health system whose statistics are horrifying:

Last year, according to Sen. Edward M. Kennedy, Americans spent $63 billion in a search for good health. Yet, our infant mortality rate exceeds the rate in 12 other nations, the death rate of women in child-birth exceeds the rate in six other nations. We trail 17 nations in the life expectancy of males, 10 in the life expectancy of females, 15 in the life expectancy of middle-aged males. Almost one-third of America's young men fail the draft's physical and mental tests. The whole medical system, despite the dedication of most who work in it, is so wobbly that an estimated one-half of our hospitals would collapse were it not for the importation of foreign medical manpower, and at least half a dozen of our 91 medical schools are near closing for lack of funds.

Hence, the comprehensive health insurance program for all Americans which Sen. Kennedy and 14 other senators have introduced in the United States Senate. It would be expensive. It would cost an estimated $40 billion a year. But it is fair to compare this with the $63 billion which Americans and their insurers spent last year, and it would all but eliminate both Medicare and Medicaid. It would be financed through general Federal revenues (40 percent), a 3.5 percent tax on payrolls (35 percent) and a 2.1 percent tax on individual income up to $15,000 a year (25 percent). It is not perfect. It would not cover nursing home or other custodial care, a vital essential; psychiatric and dental care, two other essentials; or certain medicines and appliances.

But it is a good bill. A difficulty in a congressional session drawing to a close is that hearings have not yet been scheduled by the health subcommittee of the Senate Labor and Public Welfare Committee, and its chances of ever getting into, let alone out of, the Senate Finance Committee, which will have to pass on it in the end, are slim indeed.

The Committee of 100 for National Health Insurance is the main driving force behind the bill, but the committee's own main driving force, Walter P. Reuther, is dead. A somewhat similar bill was introduced in the House by Rep. Martha W. Griffiths (D-Mich.) months ago and there have been no hearings on it yet. Similar bills have been introduced in almost every Congress for a quarter of a century and let die after the initial hurrah.

The main trouble is that good health, like weather, is something that everybody talks about but few legislators do anything about. A sobering fact is that national health insurance was a plank in Teddy Roosevelt's third party platform 58 years ago. There has been no dearth of talk in the interim. AMA or no AMA, what is needed now is action.

---

[From the Springfield (Mass.) News, Aug. 28, 1970]

HEALTH INSURANCE DESERVES AIRING

One often hears the ironic comment that the only persons who can afford good medical care are the very rich and the very poor—the first because they have the money to pay for it and the second because welfare picks up the bill.

Senator Kennedy's proposal for a comprehensive national health insurance program is aimed at providing good care for the many in the middle who find soaring medical costs an oppressive burden.

As in the case of medical care for older citizens, national health insurance is an idea whose time will come, but probably not by mid-1973 as hoped by the senator. Financing, with new taxes needed, is a major problem in itself.

Any plan to improve medical services at reasonable cost also has to take into consideration the need for more personnel. Elaborate programs without additional doctors, for example, could merely swamp those available. Heavy bidding for available medical services could even drive costs up in some cases.

But it's none too early to give serious consideration to a national health insurance program and other steps needed to improve medical care available to the American people.

---

[From the Kansas City (Co.) Star, Aug. 31, 1970]

COMPREHENSIVE HEALTH CARE: NO FREE RIDE

Whether the comprehensive national health insurance program as set out originally by the Walter Reuther group and now introduced in the Congress by Sen. Edward Kennedy is the answer for the United States will be debated and pondered over for months to come.

The Massachusetts senator says the program would pay for 70 per cent of all health expenditures in the nation (although not necessarily 70 per cent of everybody's doctor and hospital bills). He says, furthermore, that it could all be paid for with contributions of 40 per cent from the general revenue (which means the money pool that comes from your income tax and other federal payments); 35 percent from an employers' tax and 25 per cent from an individual tax which presumably would be added to Social Security (which, already, will jump to a $452 annual maximum per individual by the end of this decade).

It should seem obvious to anyone connected with hospitals and medicine that large changes are coming over the next few years. People know what can be done to save human life and prevent suffering, and they expect it as a natural right. And who can say that this attitude is wrong? A sick child ought to get proper care whether his parents can pay for it or not. It is easy to say that sick adults ought to have saved their money in days of health and youth to pay for days of sickness and old age. But how many do? And is it less costly to society to pay for the indigent ill and aged than to come up with a humane plan to care for all?

What ought to be recognized is that true health care is going to be expensive. That is because there aren't enough physicians, nurses, and technicians to go around. If this country wants more physicians, nurses and technicians to go around, it will have to pay for them. Already $50 is about the least that a private room can be had for in a hospital and that doesn't include all the laboratory tests that might be necessary and the doctor fees. And hospital labor still is going to raise costs.

If prepaid health care is coming to this country the existing insurance companies that have had experience in the matter can be used as intermediaries, although some say the job could be done more inexpensively. The companies simply will have to realize that they probably will become part of a better system or become extinct.

The insurance people, the medical profession and hospital administrators will have to realize that they exist to help sick people and that sick people do not exist to help them. Most are fully aware of this, but a few of the old-time hardliners are not.

The cost of comprehensive medical insurance is going to be very great. Like any insurance plan, it is a spreading of a risk, so that the unfortunate get help from the fortunate. The general revenue plan and the contribution from employers can reduce the cost pain for the ordinary individual. But in some countries the cost burden has been made more realistic by a national sales tax which is not altogether unfair. That possibility ought to be considered by a Congress which finds it easy to dip into general revenue on appropriations but very hard to raise direct taxes to produce the money.

---

[From the (Nebr.) Lincoln Star, August 31, 1970]

OBSTACLES FACE HEALTH INSURANCE

With the continued introduction to bills on the subject, national health insurance moves ever closer to the American people. It is a concept, in theory, that one can find little argument with.

The program would provide the financial means for good health care on the part of everyone, an objective with which very few could really argue. But when you try to put such a program into effect, a lot of complications arise.

To begin with, the government seemingly cannot be a part to a program over which it does not exercise some control. Thus, the standards and regulations adopted by the government frequently lead to hostility on the part of participants in federal programs.

The government has made red tape so much a part of its existing health insurance plans that those plans have incurred the wrath of many people. Thus, the government is going to have to solve this problem before national health insurance receives widespread acceptance.

Then, there is the problem of abuse. What comes to people automatically and without choice is usually taken for granted or abused. With mandatory national health insurance, people would tend to take advantage, such as going to the hospital or an aspirin simply to get it paid for by the government.

The medical profession could help in this regard but it is poor in the area of policing its patients. This is not its function in life and little should be expected of it toward such an end.

Fundamentally, mandatory national health insurance simply has not yet found the means of substituting itself for the private enterprise system. Perhaps it will or perhaps the faults of the free enterprise system will become so large as to offset the liabilities of such insurance but matters at the moment leave the national program in limbo.

---

[From the Jersey Journal (Jersey City, N.J.), Aug. 29, 1970]

GOOD HEALTH

A bipartisan bill calling for the establishment of a national health insurance plan has been introduced in Congress by 15 senators.

It would cover three quarters of all personal health expenses for people of all ages and would be supported in large part by a trust fund into which would flow special income and payroll taxes. The rest would come from general tax revenues.

The Health Security Act would provide benefits to cover all services required for personal health except long term institutional care, psychiatric and mental care, and some drugs and medical appliances. No fees would be charged. Those who provide the service would be directly compensated by the government.

Particularly valuable is the emphasis on preventive medicine. A weakness of the present Medicare program—in addition to its age limitations—is that, like most private health programs, it helps only those who are sick instead of helping people stay healthy.

This plan is the most sweeping of any yet put before Congress. For this reason it will run into heavy opposition from entrenched medical interests and from others who fight all social legislation. Of course, it will be fairly stamped "socialized medicine." Not even its sponsors seriously expect to see it passed in this session of Congress.

But the Health Security Act—or something closely resembling it—will become law within

a few years because there is no way to meet the health needs of the nation except through massive government intervention.

---

[From the Newark (N.J.) Evening News, Reprinted from AMA News, Aug. 10, 1970]

NHI—NOT A CURE-ALL

Recommendations presented by the Committee for National Health Insurance for a cradle-to-grave medical program can be expected to add new fuel to the current debate over how to solve the high costs and inadequacies of our present health care system. That's all to the good.

As for whether this country is now, or ever will be, ready for a nationalized health service, that's something else.

After more than a year's study, the committee has come up with a proposal for covering doctor, hospital, drug and dental bills, plus limited psychiatric and nursing home care. Financed by payroll taxes on employers and employees, and with 40% of the cost borne out of general federal revenues, the national program would largely eliminate the need for private health insurance coverage.

Walter Reuther, who had served as the committee's chairman, conceded in a speech written just before his recent death that financing and high costs were not the only basic problems in our present health-care system. But he argued that the leverage provided by use of federal funds was required to compel changes needed to remedy the health-care manpower shortage and correct shortcomings in the application of medical services.

Therein lies plenty of room for doubt. The Medicare plan for the elderly and the Medicaid plan for the needy have poured federal billions into the health-care pipeline, but without notable effects in raising the quality or quantity of service available. Instead, one major impact has been skyrocketing costs . . .

The most vital need is to increase the supply of medical and allied personnel available and to make more efficient use of their services.

The federal government certainly can help. Medical education programs should be expanded, group practice by physicians encouraged, disease-preventive services stressed, health maintenance emphasized. Beyond that, government and private groups alike must coordinate efforts to . . . control costs.

The impetus toward federal control of our health-care system has unquestionably been growing. But a federal takeover would not provide a cure-all, any more than the welfare program is eliminating poverty.

---

[From the Long Island (N.Y.) Express, Aug. 29, 1970]

A NEW LOOK AT HEALTH

National health insurance—a program launched by President Truman in 1948 in the face of heavy opposition—is another good idea whose time has come.

Over a 22-year period, old fears and fables connected with government health programs have been eroded by social and economic realities, and new attitudes about how to meet them.

A good bipartisan bill has been introduced in Congress by 15 senators. It would cover three-quarters of all personal health expenses for people of all ages and be supported in large part by a trust fund into which would flow special income and payroll taxes. The rest would come from general tax revenues.

The Health Security Act would provide benefits to cover all services required for personal health except long-term institutional care, psychiatric and dental care, and some drugs and medical appliances. No fees would be charged. Those who provide the service would be directly compensated by the government, either on a fee-for-service, a per-capita or on a retainer basis.

Particularly valuable is the emphasis on preventive medicine. A weakness of the present Medicare program—in addition to its age limitations—is that, like most private health programs, it helps only those who are sick instead of helping them stay healthy in the first place.

Another plus factor is the proposal to establish national standards of performance for professionals and institutions, plus a health security board to see that such standards are followed.

This plan is the most sweeping of any yet put before Congress, including Mr. Truman's eye-opener. For this reason it will run into heavy opposition from entrenched medical interests and others who fight all social legislation. It will, of course, be unfairly stamped as "socialized medicine." Not even its sponsors seriously expect to see it passed in this session of Congress.

But the Health Security Act—or something closely resembling it—will become law within a few years because there is no way to meet the health needs of the nation except through massive government intervention.

The people are ahead of their representatives in facing up to the realities. Sooner or later—sooner, we hope—the politicians will catch up.

---

[From the Ogdensburg (N.Y.), Journal, Sept. 2, 1970]

NATIONAL HEALTH PROGRAM NEEDED; STEP-BY-STEP APPROACH SEEMS WISE

It is predicted that a national health program will be established before the current decade is over. The need for some massive program to relieve the problem of skyrocketing costs, which can deprive a family of its life savings, is very apparent.

A number of programs are under consideration, but the most comprehensive was introduced into Congress last week by Sen. Edward Kennedy and 14 others, mainly Democrats.

The plan, drawing 60 percent of its funds from special income and payroll taxes, would aim partly at reorganizing health care services. Poor organization is blamed by the backers of the plan as being largely responsible for current high costs, which have risen twice as fast as other consumer costs in the past decade.

The plan also would scrap Medicare and Medicaid programs and provide coverage for everyone in the country, regardless of financial need.

Senator Kennedy said the program would have paid about 70 percent of the $53 billion spent for personal health services last year. One difficulty in adopting such a sweeping plan at present, however, is that it would require the government to provide about $10 billion out of general tax funds, which are overdrawn as it is.

A major problem with any such sweeping program, aside from the cost, is control of fees, which often rise sharply as soon as the government is footing the bill. Presumably a potential red tape problem would be resolved by not having to establish a financial need as is required under the Medicaid program.

Certainly a health program of some sort is needed, and the new proposal is the product of the impressive Committee of 100 for National Health Insurance, which includes a cross-section of experts.

Considering the broad sweep of the plan and the question of financing, however, it would probably be wise to move toward a full program in stages as has been done in the similar Social Security program.

---

[From the Tarrytown (N.Y.) News, Aug. 28, 1970]

UNIVERSAL HEALTH INSURANCE

Sen. Edward M. Kennedy, who by coincidence is seeking re-election this fall in Massachusetts, has introduced in Congress blockbuster proposals that would create a comprehensive national health insurance program, with benefits effective in mid-1973.

The program would cover all citizens, without individual limit, over nearly the entire range of health services.

This would be quite a major enterprise, as Sen Kennedy concedes in estimating that, had it been in effect last year, the plan would have cost $37 billion.

And that cost, coupled with the glossing over of serious defects in the proposal, betray this measure for what it is—a blatant political maneuver to corral votes.

It is instead another "give-away" program of disbursing federal funds through a system of double taxation of both individuals and business enterprises.

This is disguised by the airy explanation of Sen. Kennedy and his cosponsors that the money would come from a trust fund similar to that for social security.

Forty per cent of the income would be derived from general federal revenues, 35 per cent of it from a 3.5 per cent tax on employers payrolls and the remaining 25 per cent from a 2.1 per cent tax on individual income up to $15,000 a year.

Not pointed out, however, is that the same taxpayers who are contributing to the 40 per cent of general federal revenues, also are to be tapped again for their payroll contributions. The employers who pay their business taxes, would be hit again as well, with unpredictable economic damage.

Anticipating cries of "socialized medicine," Sen. Kennedy pointed out that the bill would not create a national health service of government-owned facilities and government-employed doctors.

"The program proposes a working partnership between the public and private sectors," he said.

The government, in other words, would amass the revenue and pay the bills. The question is whether such a compromise could be realistically successful.

It would necessarily set up a bureaucracy that, if Medicare and Medicaid are any guide, would immerse doctors and hospitals in a deeper than ever tangle of red tape, rate wrangles and glacial reimbursement. It also would leave unsettled the problem of what would happen to nonprofit or private health care insurers that millions now using may prefer.

And the financing could become a gigantic hurdle.

Where, for instance, could the $15 billion in federal general revenue, under the Kennedy formula, have been found for last year's budget had the plan been in effect? Where indeed, in this year's or next?

In addition, Social Security taxes go to 5 per cent next Jan. 1. That's 5 per cent on employer and 5 per cent on employee. What would the addition of another 3.5 per cent on the employer and 2.1 per cent on the employee do to operating costs and take-home pay? Is there to be no limit on the growing burden of payroll taxes?

In sum, there are many fundamental questions to be asked and answered before the Kennedy proposal can be regarded seriously.

In short, the program proves only that the medical care needs of the nation have come to the point where it has become politically palatable to start making promises about some quick and magical solution.

Hopefully, the next step will be that legislators can be induced to get down to business and develop a solution that gets to the heart of the cause of high costs and inadequate care.

---

[From the Punxsutawney (Pa.) Spirit, Aug. 29, 1970]

FEASIBLE—AS WELL AS LIBERAL

The present advocacy by the American Medical Association and the National Medical Association of a medicredit program

of national health insurance is not a switch in policy. U.S. medicine, now as always, opposes what it considers unworkable plans to extend health care and supports what in its wisdom and experience it believes to be workable plans.

The country is finding that merely pouring out billions of dollars on health care schemes can in no way improve the quality or availability of medical care. The health insurance plan proposed by the Nixon Administration is similar to the proposal which has been urged upon Congress by principal medical spokesmen. The health plan offered by the latter includes a three-point program which "the medical profession hopes to see the nation pursue" in efforts to provide quality health care for everyone as economically as possible.

An AMA spokesman, in describing the medicredit health insurance proposal of the American Medical Association, says, "Under our plan, each low income person or family would receive a certificate for the purchase of a qualified and comprehensive health insurance plan. The protection would be theirs without expense or contribution since the cost of the program would be borne entirely by the federal government." A second phase of the plan, ". . . offers tax credits, on a sliding scale based on the tax liability of a family, for the purchase of qualified health benefits coverage . . . " A third phase of the plan, as proposed by the AMA, ". . . calls for a structured peer review mechanism to insure high quality of care and to prevent abuses of the medicare and medicaid programs."

The doctors have given assurance of the medical profession's cooperation in solving the nation's health care problems. As the nation realizes the solution to these problems must be feasible—as well as liberal—the health care picture will grow immeasurably brighter.

---

[From the Scranton (Pa.) Times, Aug. 29, 1970]

NATIONAL HEALTH INSURANCE

Proposals for a government-sponsored program of health insurances which would cover Americans of all ages have been under discussion for several years. In fact, the bill introduced in Congress yesterday with Sen. Edward M. Kennedy as its chief sponsor is based on the recommendations of the Committee for National Health Insurance created two years ago by the late Walter P. Reuther, president of the United Auto Workers.

Should the measure win approval by Congress and President Nixon it would mean the termination of the existing Medicare and Medicaid programs by bringing the elderly and those under 65 years under a single umbrella of protection. The current Social Security tax on earnings, which this year applied to income up to $7,800, would be replaced by a 2.1 per cent tax on individual incomes up to $15,000. These payments would make up 25 per cent of the money needed to operate the program. Of the balance, 40 per cent would be taken from the general revenues of the federal government and 35 per cent would come from a 3.5 per cent tax on employers' payrolls.

The old cry of the American Medical Association of "socialized medicine," heard so often when organized medicine was fighting the Medicare plan, probably prompted Sen. Kennedy to explain, after introducing the bill, that there is no thought of government-employed doctors and government-owned facilities. "On the contrary," he said, "the program proposes a working partnership between the public and private sectors.

It is widely conceded that something in the nature of a national health insurance program is needed. Whether or not the mechanics of the plan embodied in the Kennedy measure provide the right answer is something that should be determined by the debate which is certain to develop as the backers of the legislation try to move it through Congress.

---

[From the Somerset (Pa.) American, Aug. 22, 1970]

TREMENDOUS CHANGES

Critics are often so busy criticizing that they fail to observe changes in the tides of human affairs basically altering the premises on which their criticism rests.

It has become habitual, among many critics of the American medical system, to view doctors as a recalcitrant group holding itself apart from such harsh problems as rising health care costs and physician and medical facility shortages. The truth is quite different.

The new president of the American Medical Association, Dr. Walter C. Bornemeier, feels that the medical profession and the AMA must do more to tell their story—to explain plans for producing qualified physicians more rapidly, for broader use of nurses in medical practice and for financing health care through tax credits and government supervised insurance programs.

As far as the decade of the 70's is concerned, he notes, ". . . I think this decade . . . will see tremendous changes and I believe we'll have a much better system of medical care. It'll still be a private enterprise, fee-for-service system . . . in 1980 and we'll have enough doctors so that we can take care of everybody, and everybody will have an insurance policy so that they can obtain the medical care that they want. I think the problems of medicine will not be over by 1980 but I think we will have solved a great many of them. And, I think the public is going to be well aware of it . . ."

The simple truth is that many of medicine's critics are beginning to sound out of date. Some of them are guilty of the very charges they have leveled at the medical profession. They are failing to keep up with the times.

---

[From the Providence (R.I.) Journal, Sept. 1, 1970]

NO WILD-EYED DREAM

A program of national health insurance is not about to be written into the books. Even the 15 U.S. senators who favor such a program and have introduced the necessary legislation concede that years of debate will ensue before their idea takes root. Their most hopeful estimate is that national health insurance may come into being sometime "in this decade."

That is a realistic assessment. Important social advances never are achieved quickly or easily in a democratic society. They usually are achieved only after lengthy periods of study, discussion, and impassioned controversy.

For at least two decades, the idea of a national system of social security was dismissed as the wild-eyed dream of radicals on the political fringe. The same can be said for the program of unemployment compensation. Yet these wild-eyed dreams gradually attracted more responsible sponsorship and ultimately were accepted.

The same pattern prevailed in the drive to enact the program we now call Medicare. Years of discussion and debate—during which our own Rep. Aime J. Forand played an important role—and years of fierce hostility on the part of the conservative members of the medical profession preceded the enactment of Medicare.

The sponsors of a national health insurance program are concerned by the mounting evidence that the nation's health needs are not being met fairly, equitably, or efficiently. They are troubled by the shortage of doctors, the soaring costs of medical care, the lack of emphasis on preventive medicine, and the uneven manner in which the available medical services are allocated to various segments of the public.

What they advocate, in brief, is an extension of the Medicare program to embrace the entire population, rather than just those over the age of 65. It would be financed, as are the present social programs, out of special taxes, out of general revenue, or a combination of the two.

It seems fair to say at this point, in mid-1970, that this is an idea whose time has not yet come. But the 15 sponsoring senators have put the ball in motion. They have opened the way for debate and discussion, and they are hopeful, as with Social Security and the other social advances, that the debate and discussion will lead to the day when the public understands and accepts the idea.

---

[From the Yankton (S. Dak.), Press and Dakotan, Aug. 22, 1970]

PLAN MUST BE FEASIBLE, LIBERAL

The present advocacy by the American Medical Association and the National Medical Association of a medicredit program of national health insurance is not a switch in policy. U.S. medicine, now as always, opposes what it considers unworkable plans to extend health care and supports what in its wisdom and experience it believes to be workable plans.

The country is finding that merely pouring out billions of dollars on health care schemes can in no way improve the quality or availability of medical care. The health insurance plan proposed by the Nixon Administration is similar to the proposal which has been urged upon Congress by principal medical spokesmen. The health plan offered by the latter includes a three-point program which "the medical profession hopes to see the nation pursue" in efforts to provide quality health care for everyone as economically as possible.

An AMA spokesman, in describing the medicredit health insurance proposal of the American Medical Association, says, "Under our plan, each low income person or family would receive a certificate for the purchase of a qualified and comprehensive health insurance plan. The protection would be theirs without expense or contribution since the cost of the program would be borne entirely by the federal government." A second phase of the plan, ". . . offers tax credits, on a sliding scale based on the tax liability of a family, for the purchase of qualified health benefits coverage. . . ." A third phase of the plan, as proposed by the AMA, ". . . calls for a structured peer review mechanism to insure high quality of care and to prevent abuses of the medicare and medicaid programs."

The doctors have given assurance of the medical profession's cooperation in solving the nation's health care problems. As the nation realizes the solution to these problems must be feasible—as well as liberal—the health care picture will grow immeasurably brighter.

---

[From the Chattanooga, (Tenn.), News-Free Press, Aug. 28, 1970]

NATIONAL HEALTH INSURANCE

Chances for its passage this session are, hopefully, not bright, but the national health insurance proposal introduced yesterday by Sen. Edward Kennedy and others is quite a disturbing element thrown in on top of a nation already beset by economic burdens and trying to extricate itself with some semblance of self-respect from a costly and frustrating war.

Other plans had already been placed before the Senate, but the new proposal has a difference—the price tag. Kennedy, who proposes that the benefits be effective in mid-1973, estimated the plan would have paid out

$37 billion, based on 1969 figures. Its "trust fund" would be financed by some 40 per cent from federal general revenues, 35 per cent from a 3.5 per cent tax on employers' payrolls and 25 per cent from a 2.1 per cent tax on individual income up to $15,000 per year. All of this would be footed by the already heavily-burdened taxpayer.

The senator said the bill would not establish a national health service of government-owned facilities and government-employed doctors, but would be a "working partnership between the public and private sectors." He said it would replace "the large amount of wasteful and inefficient expenditures already being made by private citizens, by employers, by voluntary private agencies and by federal, state and local governments. Kennedy said the plan is estimated to pay 70 per cent of all health expenditures in the nation, roughly twice the amount now paid by the Medicare and Medicaid programs for elderly and indigent. Those two programs would be scrapped.

Why worry about a plan that has little chance of passage in the near future? Simply this; it shows the thinking of a very influential group of people who are scrambling around with ideas supposedly to help the poor and needy. Granted that medical and hospital costs have soared, for a number of reasons, for everybody. But every time the government meddles with welfare, whether it is with food, medicine or cash, the result has been a big mess that doesn't bring benefits commensurate with cost.

And there is another very important factor to consider: the effect upon those many private health insurance companies that are such a vital part of the nation's economy as well as its over-all health program. If the Kennedy plan, or any other such all-embracing program, were adopted the result might be disastrous. When you deal a body blow to an industry worth billions to the economy, you are, in effect, booby-trapping your own paycheck. Anything that diminishes the free enterprise system diminishes you.

Be careful, Congress. Give thorough study to the problems of health care, but do it for all of us, else we all wind up poor and needy. Then who will pay?

---

[Bristol (Va.) Tennessean, Aug. 28, 1970]

THANKS, NO THANKS

Thanks, but no thanks to Sen. Edward M. Kennedy. We don't want to be included in a national health insurance program covering the entire range of health services.

We also don't want to be subjected to a 3.5 per cent tax on employers' payrolls or a new 2.1 per cent tax on individual income up to $15,000 a year.

We don't want it because we are fed up with a liberal oriented, spend-happy Congress that approaches national problems from only one viewpoint: that total uniformity should be provided for all and those with earning power should completely support those who don't want to provide for themselves.

We don't need Sen. Kennedy's meddling in our personal health protection. We are capable, as are millions of Americans, of providing for our insurance needs and we are willing to work to earn the money to pay for our insurance coverage.

For those who can't or won't work, our government is more and more designed to help them anyway with everything from Medicare and Medicaid to aid for dependent children.

Thanks, but no thanks, Sen. Kennedy.

---

[From the Spokane (Wash.), Spokesman-Review, August 29, 1970]

HEALTH INSURANCE

Legislation to create a comprehensive national health insurance program has been introduced by Sen. Edward M. Kennedy, D-Mass., in his effort to cover all citizens for 70 per cent of all health expenditures.

He said this would pay roughly twice the amount now paid by the Medicare and Medicaid programs for the elderly and indigent, which would be terminated.

It is possible that such a program would provide better service at a lesser cost to the taxpayer than the present programs, but it is a complex subject and should be studied at length.

Under the plan, 40 percent of the revenue needed would come from the federal general fund, 35 per cent of it from a 3.5 per cent tax on employers' payrolls and 25 per cent from a 2.1 per cent tax on individual income up to $15,000 a year.

Since most employes now are covered by some form of health insurance paid for either entirely by an employer or jointly by employer and employe, the cost may actually be less than at present.

But by covering every citizen it may be difficult to determine what such a plan will do as far as medical costs are concerned and whether it may tend to create a national health service of government owner facilities and government-employed doctors.

Summary: Haste may well make waste and the Kennedy plan should be thoroughly studied and opinions from medical experts should be obtained before conclusions are formed.

---

[From the Sheboygan (Wis.) Press, Sept. 1, 1970]

NATIONAL HEALTH PLAN

Senator Edward Kennedy has introduced legislation to create a comprehensive national health insurance program with benefits effective in 1973.

Other sponsors are Senators Ralph Yarborough of Texas, John Cooper of Kentucky, and William Saxbe of Ohio. Senator Yarborough is a Democrat and the other cosponsors are Republicans. This gives the proposed legislation a bi-partisan flavor.

The program would cover all citizens, without individual limit, over the entire range of health services except for certain nursing home care, mental and dental treatment, and certain medicines and equipment. The sponsors estimate that the program would pay 70 per cent of all health expenditures in the nation, about twice the amount currently paid by Medicare and Medicaid programs for the elderly and indigent. Once the new program is in operation, Medicare and Medicaid would be terminated.

In financing the program, 40 per cent would be derived from general revenues, 35 per cent from a 3.5 per cent tax on employers' payrolls, and 25 per cent from a 2.1 per cent tax on individual income up to $15,000 a year. It is estimated that the plan would pay out $37 billion a year.

The program is not intended to create a national health service of government-owned facilities and government-employed doctors. On the contrary, Sen. Kennedy said when he introduced the legislation the program proposes a working partnership between public and private sectors. He said it would replace wasteful and inefficient expenditures already being made by private citizens, employers, voluntary private agencies, and by federal, state and local governments.

No doubt, the program will undergo many changes before passage by Congress. It is possible that it will be rejected. But the proposal reflects growing public concern over the cost of medical care and the feeling that something beyond Medicare and Medicaid is necessary. The August issue of the American Legion Magazine devoted six pages to an article titled, "Better Medical Care at Less Cost Is Possible." It is unlikely that so much space would have been given to the problem if it were not for the great concern felt by Legion officers.

We are not suggesting that the proposed new program be accepted as introduced by the four senators. We are suggesting, however, that some kind of legislation will be approved eventually and that it would be well for the young and old to give it their attention.

---

## PALESTINE: A SEARCH FOR TRUTH

Mr. HATFIELD. Mr. President, in recent weeks public attention has been particularly focused on events taking place in the Middle East. In trying to unravel the complexities of the conflicts there, one is usually faced with an unending list of books, papers, and other reference material which could be read and studied, for one must not only look to current events but also analyze the history of the area in order to begin to get an understanding of the people and the prospects for the future of that troubled land. The Middle East has been a subject of study for many years, and numerous scholars have devoted their lifetimes to the task of separating fact from fiction, truth from falsehood. The magnitude of the problems in the Middle East and the potential threat to world peace make it mandatory for our own self-interest to understand as thoroughly as possible the realities underlying those problems.

This year Public Affairs Press published a book entitled "Palestine: A Search for Truth." Edited by Alan R. Taylor and Richard N. Tetlie, both of whom have a great knowledge of and concern for the Middle East, the book includes articles and addresses by men of diversified backgrounds, but each having an acquired expertise and experience with various aspects of the Middle East. The contributors include the editors, Richard Tetlie and Alan Taylor, Hans Kohn, Martin Buber, Judah L. Magnes, Morris R. Cohen, Erskine B. Childers, Michael Selzer, Anthony Nutting, George F. Hourani, Maxime Rodinson, Lawrence H. deBivort, Albert Hourani, John S. Badeau, E. C. Hodgkin, Elmer Berger, Harry N. Howard, W. T. Mallison, Jr., Edmund R. Hanauer, John Ruedy, and Arnold Toynbee. All of these individuals, it will be noted, have exceptional credentials and reputations in their respective fields, and combined in this book bring the many facets of the Middle East conflict into perspective. I commend this book to Senators and to anyone interested in the Middle East, its history, and its potential consequences for us all, in the hope for greater understanding and an eventual resolution of the problem.

---

## WISCONSIN PRODUCT FEEDS THE WORLD'S POOR

Mr. PROXMIRE. Mr. President, more than miles separate the bustling metropolis of Milwaukee and the remote villages of the Indian subcontinent. They are worlds apart in affluence and customs as well. Yet a product of the Krause Milling Co., of Milwaukee, is at this moment feeding millions of Indian children.

The name of the product is CSM. It is a blend of cornmeal, soy flour, and non-

fat dry milk. It has a high nutritional value, a very low cost, and a high degree of acceptability around the world—even in areas where the people have traditionally lived on rice or wheat.

Now CSM is being considered for use in our Nation's domestic commodity distribution program. Pilot tests in this country have shown that it is cheap and good. In fact it is so good and so nutritious that in the pilot test counties there were many complaints when the pilot program ended and people found that they could not buy CSM in their local stores.

I think that this product is a real breakthrough in our attempt to find an acceptable food for the hungry populations of the world. I believe that Senators will agree with me when they read a well written article on CSM that was published in the Milwaukee Journal. I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HELP FOR THE HUNGRY

(By Jean Otto)

In a remote village in India, a small boy sat on his haunches, cavernous eyes looking up from the food in his fingers.

In Peru, people whose homes and livelihoods were destroyed by an earthquake lined up on a hillside for a daily ration.

In war torn Biafra, starving children listened for planes bringing in loads of food.

In all of these cases, the food was CSM—a mixture of three ingredients grown in the heart of America and then shipped to the world's malnourished. Cornmeal, soy flour and nonfat dried milk. Help for the hungry.

CSM is not necessarily food for the poor people alone, although only the poor are getting it now. Its story is the story of government and private industry cooperating in an effort to end hunger and starvation throughout the world.

One of the leading industries making CSM is Krause Milling Co. of Milwaukee, which participated in early tests abroad and helped develop the low cost, high nutrition food. CSM is purchased by the government under Public Law 480 and sent to ports in about 120 countries around the world.

One of the ships that carried a load of CSM from Milwaukee recently was the Jaladhan, owned by the Scindia Steam Navigation Co., Ltd., of Bombay. Tied up at the Terminal 3 in Milwaukee Harbor, the ship, 9,000 tons deadweight, traveling at 17 knots, was scheduled to reach Bombay 18 days later.

For two days, dock workers and ship's crew moved bags stamped "Bulgar" (wheat) for Bombay and CSM for Madras and Calcutta from the dock to the gaping interior of the ship.

Each of the bags was stamped in red: "Donated by the People of the United States of America." Headed for Madras were 1,252 tons of CSM. Going to Calcutta were another 325½ tons. In 1969, 7% of all the packaged freight leaving Milwaukee Harbor was CSM, said Charles Krause, president of Krause Milling.

In India alone, according to Krause, CSM gets to 175,000 schools and 12 million children every day. Last winter, Krause saw his company's product at the far end of the line.

"In India," he said, "it's amazing to see it move from ship to rail car, to trucks, warehouses, and onto bullock carts. From there, the 50 pound sacks are carried on people's heads to the schools." One headmaster, he said, stores a month's supply in his bedroom to prevent theft, carrying it to school as needed.

HELPS PREVENT ILLNESS

What is valuable about CSM is what it is doing to feed the hungry, to halt nutrition based illnesses such as dreaded and usually fatal kwashiorkor. Since 1966, over 1¼ billion pounds of CSM have been sent to feed the hungry in Africa, Asia and South America. As products go, CSM is almost brand new, its manufacture going back only four years.

But, since 1907, Krause Milling has supplied the food industry—with brewers grits, grits for breakfast foods (Krause is one of the largest of the country's corn millers) and corn flour. The firm also makes an industrial corebinder, used to hold forms together when pouring molten metal, sells crude corn oil and is in the corn hominy feed business. In plants in Milwaukee and St. Joseph, Mo., and in Dodge City, Kans. (where they process sorghum grain only), Krause employs about 325 people.

In 1963, the government, searching for a low cost, high nutrition food that would be acceptable to the hungry of the world, undertook an acceptability study on precooked cornmeal. Ten thousand pounds were donated by industry for testing in food aid programs conducted by voluntary agencies in 16 countries.

In the past, efforts to provide such a food failed because the products, however nutritious, simply didn't appeal to the tastes of the people. The flavor, the texture, adaptability or some other factor went against their eating habits. And no food, however nutrition packed it is, accomplishes anything on a shelf. But processed cornmeal was received enthusiastically, even in countries where rice was the diet staple.

After an additional test with 90,000 pounds in 25 countries in 1965, the government presented the food industry with guidelines for a cereal product. Industry spent $1½ million on research equipment and technology before any sale of CSM was made.

STILL EXPERIMENTING

Krause's first formula called for 70% cornmeal, 15% dried milk and 15% soy flour. It has been changed along the way, so that now there is 64% processed cornmeal; 24% defatted soy flour; 5% nonfat dried milk; 5% refined soy oil and 2% mineral-vitamin premix.

What does this combination do? One-half cup provides an adult with these minimum daily requirements: vitamin A, 31%; vitamin D, 32%; vitamin C, 86%; niacin, 64%; riboflavin, 32%; thiamin, 43%; calcium, 43%; phosphorus, 32%; iodine, 32%, and iron, 120%. All at a cost of less than 8 cents a pound.

SATISFYING WORK

"It's nice to be in business and do something good," said Krause in the company's office at 611 E. Wisconsin Ave, "We hear stories," he said, "of people being able to see at night for the first time. The vitamin A cured their night blindness.

"There are many miracle stories. One Department of Agriculture man in the Bajar famine said it was easy to see which children were eating it."

In some instances, he said, the symptoms of kwashiorkor—bloated bellies and reddish hair—disappeared if the disease was not too far advanced.

EVEN IN RICE COUNTRY

Krause noted that corn is a very popular flavor in South America and Africa, less so in Asia where rice is the staple, "but there is still wide acceptance in Asia. There are significant CSM programs in India, Vietnam, Indonesia, the Philippines and Korea.

"I'm most impressed with the people in volunteer agencies in those countries," Krause said. "They know what they're doing, are businesslike and efficient." CARE, Catholic Relief Service, Church World Service "would be very proud of their people. Each pound (of CSM) is accounted for. The same is true of AID (Agency for International Development)."

In India, Krause said, CSM distribution is limited by Indian states' ability to pay costs of shipping from the port to their own villages.

"I figure we're reaching only 10% of the children who should be getting it," Krause said. "You can see the difference in school attendance where it is served."

Traveling 350 miles by Jeep in northern India, Krause saw Indian children prepare their own lunches, mixing CSM with local spices, including curry, to make tiny balls called peccorah which were then fried in soybean oil. Some schools, he said, have a cook who works one hour a day for 24 days a month for a total salary of $1.

According to Krause, CSM is the mainstay of relief projects in Nigeria and Biafra and the child nutrition program administered by CARE in India. But it is equally acceptable as a food in South and Central America, where the product is easily made into tortillas.

TESTED IN U.S., TOO

Such adaptability is only a start. Krause Milling conducted a four month experiment in four southern counties in three states last winter. About 20,000 persons in Chambers County, Ala.; Vance and Cumberland Counties, N.C., Lake County, Fla., were each given one pound of CSM a month.

Working with local extension services, people in all but Vance County also took part in a nutrition education program. Used as a control, Vance County simply gave its people a recipe book and the CSM.

In reviewing questionnaires after the test, Krause found that even without further instruction people had used the product. The point of the experiment was to find out whether, without education to its use, the product would be used by welfare recipients.

It was.

In fact, E. W. Williams, assistant to the chairman of the board of Krause Milling, said there were many very irate people when the test ended and people could no longer get CSM.

NOT ON MARKET

During the four months they had the food, people learned to use it as filler for meat loaf, to mix it in salisbury steak, to add it to soups and chicken pot pies, to mix it with flour for biscuits, hot breads and coffee cakes, for pancakes, as a hot breakfast cereal, in a chocolate cream dessert and in oatmeal raisin and peanut butter cookies.

They also sprinkled it over salads and thickened gravies with it. People were invited to experiment with recipes of their own and report the results.

CSM is not marketed in the US.

Krause appeared at hearings of the Senate Committee on Agriculture and Forestry on May 23, 1969, pointing out how experiences overseas could be used to immediately improve the nutrition of people here at home. He called—SM a fast and economical way to provide better nutrition to the 12 million Americans who need free food and the 14 million who need partial food assistance.

Krause said that present long range goals of ending hunger and malnutrition and accompanying physical and mental retardation of children could be accomplished in months, at cost levels now being considered for doing only part of the job. He also told the senators that "we believe it can be made available in appropriate packaging for domestic distribution at less than 10 cents a pound.

COULD BE DISTRIBUTED

As soon as survey results are completed, Krause said, he and Williams will talk to representatives of the Food and Nutrition Service of the Department of Agriculture about having CSM added to the list of 22 food commodities distributed by the department. Such foods as canned meats, fruits, fresh vegetables are now on the list. CSM

would be the first convenience food to be so distributed.

About a year ago, when a local television station showed pictures of a ship being loaded with "a high protein food" for shipment to the world's hungry people and mentioned Krause Milling's name, the company was swamped with calls and letters, Williams said.

Welfare recipients wanted to know why it was shipped to hungry people overseas, but was not available in this country. Extension home economists asked about its availability and were so impressed with the samples they received that they introduced it in their instruction program for welfare recipients, even though it can't yet be obtained here.

POOR, AGED CALLED

Low income people who are having trouble stretching their food budgets called and wrote. One mother asked tearfully about "the feasibility of supplementing canned meat dog food with CSM to obtain adequate nutrition for her husband and children," Williams said. The elderly, on small pensions or Social Security, couldn't understand why a product made here and needed here was only available elsewhere.

There were calls also, Williams said, from people who have no income problems, but are concerned with family nutrition.

Williams said that Krause Milling is not geared to marketing its product here, that it has no retail sales outlet. Acceptability of the product in this country was one of the things the company wanted to find out in its Southern test, before proceeding with any plans to market CMS in this country.

The interest is there, Williams said, and "we know this will do the job—and right now. It's a new food concept. You can't treat it like cornmeal or anything else on the market. It doesn't behave that way."

TRIED IN SCHOOLS

CMS was used experimentally last semester in six elementary and secondary school lunchrooms, according to Miss Mary Kelly, a supervising dietitian for the School Food Services Division of the Milwaukee Public School System.

They started with one school, Miss Kelly said, using basic recipes in the booklet, compiled by home economist Mary Ellen Oetzel. They adapted the recipes to quantity cookery. Then they began to substitute CMS in recipes calling for cornmeal. As recipes were worked out, five other schools were brought in, each testing as they went along and eventually comparing recipes.

Thomas J. Farley, director of the Food Service Division of the Milwaukee schools, said that testing is a steady ongoing thing, that until now CMS was meant for use in home cooking and that adapting it to such huge quantities is a problem in production. "What we want to come up with is a nutritious delicious cookie, much better than hollow carbohydrates."

The acid test for any food, he said, is the way it is accepted by the clientele, in this case, the students. So far, he said, approval has been fairly good, but they are still working on it.

Krause said that the company is extremely optimistic after the southern tests. "All reports indicate the product is gaining growing acceptance as people find out what it does," Krause said. "They like it."

## THE FUEL SITUATION THIS WINTER

Mr. HANSEN. Mr. President, there has been a great wave of speculation in recent weeks as to just how serious the U.S. energy crisis is and whether some of the powerplants in the Northeast will be able to obtain sufficient fuel to keep operating during the winter.

President Nixon last month appointed a high-level committee to make an immediate study of the fuel situation and recommend whatever measures it believed to be necessary to prevent any real shortages during the coming winter and, also, to make some long-range projections, for the next 5 years.

This committee, headed by Dr. Paul McCracken, Chairman of the Council of Economic Advisers, today reported on its findings.

In the meantime, I am advised that the petroleum industry has been making plans of its own to see that no one suffers this winter and that all home heating, industrial, and utility needs will be taken care of.

The National Petroleum Council just recently released its own short-term fuel oil outlook and its recommendations at the request of Assistant Secretary of Interior Hollis Dole.

The letter of request indicated that the Department of Interior had been closely monitoring the U.S. energy market for fuel oils since the interruptions in world oil flows beginning in May 1970, and that there had been no clear indication that supplies of residual and other fuel oils, from either domestic refineries or abroad, could meet rising market requirements foreseen. In this light, the Department requested of the National Petroleum Council an appraisal of the prospects for demand and supply of distillate and residual fuel oil for the fall and winter of 1970–71, as well as its views as to general alternatives available to the Government and possible actions which might be taken individually by various segments of the industry to alleviate the situation.

The National Petroleum Council Committee on Fuels was established under the chairmanship of Mr. Warren B. Davis, director, economics, Gulf Oil Corp., and the cochairmanship of the Honorable Hollis M. Dole. The 22 members of the Committee were selected on the basis of their training, experience, and general qualifications to deal with the matters assigned, which included petroleum industry economics, supply and distribution, production, refining, transportation, and marketing.

The time permitted to organize this committee and to prepare this report—20 days—restricted the committee to an analysis of essentially published data available at the time the request was received and severely limited the degree to which data could be thoroughly checked and evaluated. It was impracticable to attempt in depth industrywide surveys to acquire more recent or detailed statistical data or information. Time was sufficient, however, to permit the development of a consensus as to the validity of judgments based on historical data.

The McCracken Committee working with other Government agencies and the oil policy committee headed by Gen. George A. Lincoln, Director of the Office of Emergency Preparedness, undoubtedly used the National Petroleum Council report to good advantage and I am confident that the petroleum and coal industries whose members worked so assiduously on the investigation are fully capable of meeting the energy shortages brought on by events of the past several months in the Middle East and other factors.

It is, indeed, comforting, Mr. President, that we have a petroleum industry that is capable of handling an emergency like the one that has developed largely because of Federal policies—wellhead pricing of natural gas and overdependence on foreign residual oil that is now in tight supply.

I am also confident, Mr. President, that industries as competitive as the petroleum and coal industries will meet the basic energy needs of the Nation and meet them without any unnecessary price increases.

The petroleum industry is, in fact, the only industry capable of providing the energy to make America run. Industry spokesmen will, I am sure, now dispel any doubts about the ability of the industry to provide this energy where and when it is needed and, as it has in the past, provide it as reasonable prices.

I have no doubts that the fuel needs of New England and other parts of the country will be met this winter.

I do hope, though, that the near energy crisis the petroleum industry must now cure will convince some of the detractors of the oil and gas industry that the most dependable source of energy is the energy we control and have ready access to in this hemisphere, and not that produced, no matter how cheaply, in countries whose governments may turn hostile overnight and whose terrorist tactics may next be directed to American oil companies who have developed and still produce most of the foreign oil we import.

Mr. President, it is time for statesmanship on the part of Federal and oil company officials as well as those who have made a political issue out of an impending fuel shortage.

It can and will be handled and I hope some lessons about the future and long-term energy needs of our country will be learned in the process.

Mr. President, I ask unanimous consent that the report on the fuel situation released jointly today by Dr. Paul W. McCracken, Chairman of the Council of Economic Advisers, and Gen. George A. Lincoln, Director of the Office of Emergency Preparedness, be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY PAUL W. MCCRACKEN, CHAIRMAN, COUNCIL OF ECONOMIC ADVISERS, AND GENERAL GEORGE A. LINCOLN, DIRECTOR, OFFICE OF EMERGENCY PREPAREDNESS ON THE FUEL SITUATION FOR THE WINTER OF 1970–71

Last May, in anticipation of the tight electric power supply in some regions of the United States this summer, the Interagency Power and Energy Committee convened by the Office of Emergency Preparedness issued a report which identified the problem areas and suggested measures which the electric utility industry, consumers, and the appropriate agencies of the state and federal government should take to avoid a breakdown in service. The power supply problems in the

East occurred as anticipated but the contingency planning—primarily by the electric power industry itself, but assisted by federal actions—enabled the general public to continue to be served. We have had difficulties this summer, and as recently as last week, but considering the magnitude of the problem and the potential for truly disastrous consequences, the contingency planning has worked well.

We have continued to study the energy supply situation and find that as winter approaches the nation faces a potential shortage in the supplies of natural gas, residual fuel oil and bituminous coal. The potential shortage appears to be more serious in some regions of the country than in others, but no section is completely immune from concern.

The prospect of an energy shortage arises for many reasons. Demand for energy continues to grow more rapidly than in previous years. And the demand for clean fuels to meet air pollution controls has placed extraordinary demands on natural gas and low sulfur oil and coal. Some coal stockpiles are lower than normal and some electric utilities are unable to build up their inventories, in part because of railroad transport deficiencies. A sharp rise in the worldwide demand for residual fuel oil, especially low sulfur oil, and a shortage of oil tankers caused in part by production cutbacks in Libya and interruptions of an oil pipeline in Syria, have contributed to the tightness in U.S. fuel oil supply. Increased demand and inadequate exploration and development for natural gas are contributing to its scarcity. Nuclear power plants under construction as a source of electric power are behind schedule and this results in greater demands for fossil fuels.

To avert the threatened shortages and minimize their impact will require the combined efforts of all those involved in the production, distribution and consumption of fuels—which means industry, labor, consumers, and State and local governments, as well as the Federal Government. Basically, we rely upon the proven adaptability of the American economic system which must respond to the present and prospective demands for fuel by converting to the production of what is most needed and its delivery where it is most needed. The increased national requirements, and the changes in the price structure that arise from them, provide a powerful incentive to this adjustment of supply, which is in fact already taking place. We call upon the petroleum industry, the coal industry, the railroad industry and others, in the light of the national need, to increase the supply of fuels, as is made feasible by economic factors. We also ask the cooperation of the coal miners, the railroad workers and other fuel and transportation workers to help avert a fuel shortage.

While primary responsibility for fuel supply rests with the industry under our private enterprise system, responsible government should take effective action to avert a shortage of so critical a resource.

It must be recognized that solutions in which the government can play the greatest role are more long-term in nature. Those possibilities are under study by the Energy Subcommittee of the Domestic Council. For the moment we have considered what government can effectively do now—this fall—to facilitate supply.

We have concluded that certain actions by the Federal Government can help both to assure the adequacy of supplies and thereby to moderate the increase of prices. We are, therefore taking the following actions which we believe are necessary to give reasonable assurance of the adequacy of fuel supplies this winter. In view of numerous uncertainties, no one can now be sure that these steps will be adequate. We will keep the situation under continuous observation to be prepared with further measures if they appear to be necessary.

(1) Action is being taken to:

a. Continue the importation through calendar year 1971 into the East Coast (District I) of an average of 40,000 barrels per day of No. 2 fuel oil with up to 80,000 barrels per day concentrated in the first quarter heating season.

b. Exempt natural gas liquids from the Canadian crude oil quota limitations. (These natural gas liquids are associated with the production of natural gas which we are importing from Canada.)

c. Permit the importation of liquified petroleum gas from the Western Hemisphere.

d. Permit topping of imported crude oil used for fuel into District I (East Coast) if all of the topping is used for fuel.

e. Permit topping of crude oil imported for fuel overland from Canada and the use of such topping product for fuel or for reexport to Canada.

f. Relax restrictions on viscosity requirements of crude oil used for burning.

g. Permit transportation of oil from Canada by waterway.

(It should be noted that, for all practical purposes there are currently no restrictions on importation of residual oil into District I (the East Coast) or on importation of crude oil for burning into District I and overland from Canada.)

(2) In order to increase the availability of railroad cars for moving coal, the Interstate Commerce Commission has doubled the demurrage charge for all general service and coal hopper cars standing idle in loading or unloading zones. In adition the ICC will take the following actions as conditions require:

a. Divert the use of general service hopper cars from alternative loads to the movement of coal; and

b. Require the return of all hopper cars within a specified period of time.

(3) We will continue to work closely with the electric power industry through the Federal Power Commission along the lines of our program for the summer to assure that interruptions in electric service are minimized. We urge the State and local governments to meet with the utilities in their respective service areas to review contingency plans for meeting loads this winter in those areas of tight supply identified.

(4) We are continuing to urge the consuming public to practice conservation in the use of energy. The Special Assistant to the President for Consumer Affairs will issue suggestions to the public for doing this. Federal agencies will set an example by instituting programs to conserve fuels in federal installations.

(5) We are establishing a Joint Board composed of the Director of the Office of Emergency Preparedness (Chairman), the Secretaries of Interior and Commerce, and the Chairmen of the Council of Economic Advisers, the Council on Environmental Quality, the Interstate Commerce Commission and the Federal Power Commission, to identify emergency problems in fuel supply and fuel transport and coordinate prompt and appropriate remedial action by the responsible federal agencies.

These steps are in addition to a number of measures already taken, or in the process of being prepared for implementation, to use the transportation and power systems more efficiently and respond to local shortages.

Appropriate federal agencies will be meeting with State and local authorities to discuss this winter's problems in detail. We also expect to maintain close contact with the energy industry in order to assist in averting shortages.

We are taking the actions announced today to avert serious shortages. We believe that with the cooperation and initiative of industry, labor, and consumers an energy crisis can be averted. There are certain other measures we have considered. And, if the measures taken today together with the initiatives of industry fail to avert a crisis, we shall not hesitate to resort to any additional actions necessary.

## THE SST AND OUR ENVIRONMENT

Mr. EAGLETON. Mr. President, on Sunday, September 13, 1970, the Senator from Wisconsin (Mr. PROXMIRE) appeared on "ABC's Issues and Answers" with Mr. William Magruder, the Department of Transportation's Director of Supersonic Transport Development.

As I read the transcript of that program, I felt that the program dealt with several of the issues involved in the SST program in a way which would be informative to the Senate.

Much of the discussion during the program involved the possible environmental effects of the SST. I ask unanimous consent that the transcript of that program be printed in the RECORD.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

ISSUES AND ANSWERS

Mr. BERGMAN. Gentlemen, will the SST pollute the earth's atmosphere?

Senator PROXMIRE. Well. we don't know that. There is the real possibility that it may. Some of the outstanding scientists in this country are very emphatic in saying that it will. It could pollute the atmosphere by increasing cloudiness, by increasing smog, by increasing the temperature and most dangerous of all some scientists say it could increase the ultra violet radiation on the planet. It could damage plant and animal and even human life. And of course there is also the noise pollution problem which is serious too.

Mr. MAGRUDER. Well, in answer to that, I would say I don't know who these "some scientists" are, Mr. Bergman. But I have gathered some of the Free World's top scientists in this area to advise the Department of Transportation on these subjects. I have submitted all of these possibilities of pollution to these scientists and to a man they advised the Department of Transportation there is no reason to not proceed, and there is no reason to delay the SST program because of these concerns.

The available data to date indicates no danger of significant pollution of the environment from a fleet of SST's operating in the late 1970's and 1980's. Now there are some needs for more data and we always need that in the scientific community so I have gathered these scientists together in a very significant research program which will cost some $51 million, so that before we go into production—and the government is only talking about investment in two prototypes at this time—and before we go into production we will have the kind of answers that will assure the public of no degradation in the environment. And as a matter of fact at this point in time I know of no scientists anywhere in the Free World who will say there is fear of a serious degradation of the environment from a fleet of SST's.

Senator PROXMIRE. Of course, what Mr. Magruder is saying is that we ought to go ahead and spend $290 million on a gamble because the scientists don't know. The fact is that some of the most eminent scientists in the world met at Williams College only

about a month ago and they expressed their very deep concern that our environment could be polluted. If it is polluted, Mr. Magruder and the people in the Transportation Department say we will scrap the whole thing. Well, that is not much comfort for the taxpayer who will be required to spend $290 million on that this year and that $290 million, incidentally, is about the same amount that we spend this year for the whole country on vocational education.

Mr. MAGRUDER. Let me interrupt for just a moment. You mentioned the MIT conference in Williamstown at Williams College. That has been a very widely misunderstood conference, so much so that the Chairman of that Council wrote me a letter expressing his concern and even anger at the way that college result is.

"That very eminent group of scientists issued a statement clearly saying to me, the Chairman, they had no idea in mind that anybody should or that they would recommend slowing down or cancelling the SST program because of concerns of the environment. We are all concerned. There are many things about the environment that we don't know and should do better. The SST is the outstanding example of an 18-year program from its very inception that has taken the environment into account, starting in 1960."

Senator PROXMIRE. Let me just ask you, Bill. Why are you spending $51 million this year? $51 million is a lot of money for the taxpayer to have to pay. If there weren't some concern on your part about the environment, I am sure you would not ask to spend that amount of money. $51 million is a lot.

Furthermore, even if everything works out and if we find this will not pollute the environment, $290 million this year, $1.3 billion, which is the Transportation Department's estimate, and I think it could go to two or three billion dollars, as you said at the beginning of the program is something which is a frill, something which after all will simply permit people to fly from New York to Paris a little bit faster, or fly over to Tokyo a little bit faster. It seems to me our priorities are badly misplaced when you recognize—let me make just one more point. This year we are going to spend $105 million to combat air pollution, and $290 million on the SST to increase it. Now, does that make any sense?

Mr. MAGRUDER. Yes, I would like to answer that. It makes a lot of sense. I did not have the privilege of voting for our illustrious Senator here today because he comes from a different state than I do. But when I vote, I vote for elected officials that look ahead and I don't know what the people were doing in the 1960's that gave us these problems today that are so serious, and we are concerned about them.

Senator PROXMIRE. We should have looked ahead.

Mr. MAGRUDER. You should have looked ahead. I am glad you said that because I agree with that. The SST is an 18-year look ahead. It has nothing to do with the priorities of the '70's. The SST is going to give this country not less than $22 billion in balance of trade which is going to help us have a healthy economy.

Senator PROXMIRE. The Treasury Department and the Joint Economic Committee both argue that from the standpoint of our balance of payments, this is likely to come out negative. They said that before the President made a decision, then they were free to make their own determination independently. Once the President made his decision, they got back on the team and said "Well, whatever the President said, we will go along with and we will modify our position."

Mr. MAGRUDER. In other words, as long as they say something bad, you agree with them, and as long as they say something good, you don't agree with them.

Senator PROXMIRE. Well, I am certainly going to evaluate what they say in terms of whether they say it when they are free to make a recommendation to the President, but after the President has decided—by our President of the United States, my Secretary of the Treasury would have to agree with me or get out and I think the Secretary of the Treasury recognizes this.

Mr. MAGRUDER. I don't think there is any evidence that the Nixon Administration has put a clamp on anybody and certainly the things that have happened in his cabinet to date indicate that that is a free administration. They speak out. Last year they put in your hands an ad hoc report which was quite critical but some things have changed.

Senator PROXMIRE. It was indeed. The President's decision was a big change.

Mr. MAGRUDER. The President's decision—let's go back on that. Since J.F.K., John Kennedy authorized this program in 1963, there has been 24 appropriations committees and special congressional committees that were not beholden to anybody all approved this program over a period of seven years.

Senator PROXMIRE. Let me point out that what J.F.K. said, what President Kennedy said was we will not under any circumstances spend more than $750 million on the SST.

Mr. MAGRUDER. But that is not all he said.

Senator PROXMIRE. Robert Kennedy, who carried on, of course, for the President so well before he was assassinated, one of the last acts before he was killed was to join me on the floor of the Senate to fight the SST because he said our priorities are wrong. We are spending our money on flying overseas and speeding up the time a little bit when there are so many things to do here on earth and pollute the environment at the same time.

Mr. MAGRUDER. Senator Proxmire, you just said you did not look far enough ahead in the 1960's to U.S. problems in the seventies. The Commerce Department, the Treasury Department, the Council of Economic Advisors, everybody in the government. Have you ever been able to get the government to be completely unified on any one subject as they are on the SST and they are looking ahead to the priorities of the eighties. This is the single biggest revenue, national revenue-earner that the Commerce Department can identify in the eighties.

Senator PROXMIRE. The answer to that is because the President spoke out, they are on the President's team. The independent scientists do not agree with this at all.

Mr. MAGRUDER. The independent scientists do agree with this. I beg your pardon.

Senator PROXMIRE. The position taken by the scientists up at Williams College, the 80 scientists there——

Mr. MAGRUDER. The panel said clearly environmental hazards are not significant enough to delay or to halt the SST, but let me finish. Let's talk about the priorities of the eighties.

Senator PROXMIRE. All that study on research but certainly not going ahead with the prototypes.

Mr. MAGRUDER. In the 1980's this program will give $6.5 billion in national revenues to taxes, the constitutional way to get them. It will pay back everything the government has invested, plus $1 billion in profits—let me finish. It will provide 150,000 jobs. I might add in your state alone almost $500 million worth of business potential on the production potential of the SST, which should be a very happy thing for Wisconsin.

Senator PROXMIRE. There are so many ways we could spend this kind of money and get far more jobs and a far better return. Housing is one. Housing is in desperate straits. Any time you spend $1,300 million you are, of course, going to create jobs. But let's find out——

Mr. MACGRUDER. But housing absorbs revenues and the SST generates revenues in the eighties.

Senator PROXMIRE. Housing is going to generate revenues and generate jobs. We have ten or eleven per cent unemployment in the construction trades now and we need those jobs badly and the President has vetoed a housing bill, but goes ahead with a supersonic transport. It just does not make sense.

Mr. BERGMAN. Gentlemen, let's continue this debate in just a moment. We will be back with more Issues.

* * * * *

Mr. BERGMAN. Gentlemen, you have been debating the merits of the SST program. I wonder from the standpoint of the average citizen, I have heard a lot of comments saying why does the government have to get involved with this? Why not let the airlines develop their own airplane? Mr. Magruder.

Mr. MAGRUDER. Yes, the SST program is an investment on the part of the government. All of the airlines have written me letters not saying they want it but that they need it and the reason they need it is they need productivity about every five to six years to keep their costs down, their revenues up and give the flying public a break on fares.

It is not widely known, but in 27 years the airlines have provided the traveling public, which is over 25 million passengers today, and as a matter of fact it is going to be 50 per cent of our public in the 1980s of whom some ten per cent will be traveling internationally on SST routes. They are traveling today five per cent cheaper than they traveled some 27 years ago primarily because this marvelous industry, the aviation industry and the airlines, have always demanded this more productive, this more efficient means of travel about every five to six years.

Senator PROXMIRE. But why is government money needed?

Mr. MAGRUDER. The reason the government must add some money in here, the SST is faced with a challenge from abroad. The SSTs are not coming; they are already here. Three other nations have invested $4 billion in the SST. This morning I spoke with the chief test pilot of the British Concorde. They will be flying at 1400 miles an hour within the next two weeks. They have already demonstrated 1100 miles an hour. Some 13 nations have anted up money in this country—excuse me—13 airlines, for 122 orders. Those orders have risk money but no single company or consortium of companies can tangle with the economics of financing a supersonic transport. Indeed, in Europe it took France and Britain to do it. If we default on the SST, we will be defaulting on the fleet leader and for the first time in 40 years this country will not be offering a complete family of airplanes to the commercial operators of the world. We are being challenged on a $100 billion business and, make no mistake, if we default—and I have 15 years' experience in this business—if we default on the fleet leader all those other airlines of the Free World will look to other places to buy their equipment. This is many jobs, not just a few jobs, and it is in every state in the United States. There is a lot of money at stake.

Senator PROXMIRE. May I answer that?

To listen to Mr. Magruder, you would think what happened in the last 20 years has been based on government subsidies of commercial aircraft production. The fact is that the reason we are a leader is because the government has not put its bureaucratic hand into subsidizing aircraft production. This would be the first time in which we would depart from that very, very sound principle. As a matter of fact, in the '50's, Senator Monroney got a bill through the Senate that would have had the government subsidizing subsonic jets. Fortunately the House had the wisdom to reject that. The result is that we are dominating world aviation. It is operated on a private enterprise basis and it should continue.

Furthermore, as far as the airlines being willing to do this, for one thing, they are not putting up most of the risk money. The risk money is being put up by Uncle Sugar—might be called Uncle Sap in this case—Uncle Sam is putting up most of it.

Mr. MAGRUDER. What is the percentage?

Senator PROXMIRE. The percentage is that 75 percent to 90 percent of the development costs are being put up by the federal government. Furthermore, the million dollar down payment that the airlines are putting up per plane amounts to only two and a half percent, which is only half of what they are usually required to put up. When the airlines were asked by Senator Case at a hearing only a week or two ago whether they couldn't put up more money, they said "Senator, I wish you would not ask that question," because they don't want to put up more money and they wouldn't. This is an indication of the money they have put up they have put up under pressure from the FAA which grants of course all of the airline routes. It has been put under the circumstances of the federal government risking most of the money and in the situation where we only sell 140 SST's instead of the 500 which they hope to sell, Uncle Sam would lose almost all of his investment and the airlines would make money out of it. In that kind of proposition of course you can get the airlines to put up some.

Mr. PETERSEN. Mr. Magruder, isn't one of your contentions that the government has already paid for the 707s and subsonic airplanes, through other military developments?

Mr. MAGRUDER. Yes, I am not surprised that the Senator, who has not been in aviation, is ignorant of how the 707 and the jets and the previous commercial airplanes got started, but literally the entire commercial jet fleet was an off-the-shelf development from the B–52 program, identical engines, the same 75 ST aluminum, all of the components, all of the aerodynamics came right out of the military program.

In the case of the SST here and abroad that is no longer true, and I know quite a bit about the military airplanes in existence today.

As Dr. Ray Bisplinghoff has said, at the unit of Engineering at MIT, the SST represents the focal point in aviation for the future and our Secretary of Defense, Melvin Laird, recently wrote a letter to the President saying it is essential for the SST to go ahead; that the fallout into the military as well as the national benefits from trade balance, from jobs, from the revenue from taxes, is such that it is essential to go ahead with this program.

I want to make one other point. This is not a subsidy. The Senator used that word rather loosely. Every penny of the investment of the government in the development is going to go back to the Treasury and by the time we sell 500 airplanes, that is a very conservative market estimate. Some estimates are as high as 800 to 1,000 airplanes and the British and French estimate they can sell, without a U.S. SST, over 1200 Concordes. Then the profit to the government directly is not less than a billion dollars, not including the $6.5 billion from taxes, 150,000 direct and indirect jobs and not less than $22 billion in trade balance. This is truly a national effort program which is in the free enterprise system.

Senator PROXMIRE. Now, let me answer why this is not in the free enterprise system, with the government putting its money in.

For one thing, the argument that we would put in, that the Federal Government would put in this development—let me take the first point first, which Mr. Magruder has made.

When he said that you couldn't get fallout from the military experimentation and military expenditures that would benefit the SST, he ignores the fact that the House passed this year $100 million for a supersonic bomber. The Senate put in $50 million for it. We are developing a supersonic bomber. A great deal of the information from that would, of course, be usable in the SST.

Mr. MAGRUDER. Can I prompt you that it is an aluminum airplane that flies at lower speeds than the SST?

Senator PROXMIRE. Sure it is an aluminum airplane, just as the Concorde is an aluminum airplane, but it may well be that they will find further as they have found already with the SST, as the generations progress, which has happened with the SST, they will move into a perhaps different kind of—let me just finish on your argument that you said this is not a subsidy. Let me get back to that.

Some of the economic analyses I have seen is that we will not sell 500 planes; we will sell less. If we sell less, the government will lose money and a lot of it. If we sell 500 planes and it works out perfectly, what does the government get back? You know what the government gets back? They get back their investment with a 4.3 per cent interest, although the government has to pay 7 and 8 per cent for their money now. In other words, the government cannot come out whole on this. No matter what happens, it is going to lose. The contract is a contract which will benefit the airlines. They can make substantial sums, 15 per cent or 20 per cent return, but Uncle Sam cannot get that back.

Mr. MAGRUDER. I notice the Senator is noted as a fairly liberal thinker. I don't think that he would want the United States Government to go into competition on an even-Steven basis with private enterprise.

Senator PROXMIRE. I don't want them to get into this at all.

Mr. MAGRUDER. If you take the payback of a billion dollars in profit and the $6.5 billion in revenue from taxes which is the constitutional way the government gets its revenue, then you will find a very healthy 17 per cent return on investment; not to mention the technical fallout; not to mention the $22 billion in trade balance, and these are the things that are going to under-gird our economy in the eighties so we can take on whatever the priorities of the eighties are.

I hope they are not housing, education, welfare, transportation and pollution.

By the way, speaking of pollution, I would like to say again we have complied with the Act on the environment last week, paragraph 102, which was submitted to Chairman—

Mr. BERGMAN. Mr. Magruder, I think we are getting into a new area and let's make sure we have enough time to cover it.

We will be back in a moment, Senator, with a few more issues and answers.

* * * * *

Mr. BERGMAN. Mr. Magruder, will the SST meet the government's new environmental quality standards?

Mr. MAGRUDER. Yes, it will, Jules. We have recently complied with the Environmental Act by issuing the response to paragraph 102 (c), and I might add that Secretary Volpe has committed me in my job description and has said so publicly, if there is any reason why environmentally, technically, economic or financial resources reasons not to go ahead with the SST—and the facts show that—then we will so advise the Congress and the President. At this moment all of the facts, backed up by labor, 15 million members of labor, backed up by all of the airlines, including foreign airlines, backed up by the entire business community, the National Chamber of Commerce have said for example that the national benefits of the SST looking ahead to the '80's are so overwhelming that we should proceed with this program. Let me assure you we are only talking about two prototypes to prove the feasibility, to assure the public that there will be no environmental degradation. That is why I have done the research program and that is all clearly outlined in our response to the Environmental Act.

Senator PROXMIRE. The trouble is once you get big labor involved, big business involved, profits involved, jobs involved, you get an interest group which has great force. I found this again and again in 13 years in the Senate. The fact is the polls I have seen conducted by a number of Members of Congress, including myself, the polls conducted by public educational television, show that 90 percent of the American people are opposed to the SST. Yet it gets through. The reason it gets through is because these interest groups are organized and they operate and they operate very effectively.

Now let me get back to one other point that was made by Mr. Magruder, in which he said that the federal government is going to get its money back, that it is practically assured. If this is so sure, why in the world don't the airlines and the aircraft manufacturers handle it? The fact is in the production phase far more money is going to be required. This is only $1.3 billion so far with some additional money, a little additional money from the aircraft manufacturers and the airlines. When you get into production it is billions and billions of dollars. They assure us at this stage you wouldn't need federal money.

Mr. MAGRUDER. Would you like me to answer that question?

Senator PROXMIRE. Yes, I sure would.

Mr. MAGRUDER. I have conducted reviews with all of the key people in Wall Street and will be leaving in a week to go to the West Coast to talk to the Bank of America people. We already have the two essentials in the free enterprise system for public sector of financing to step up. We have a willing buyer. They have $81 million and the airlines are on this program and $59 million is risk money. We have a proven product because Secretary Volpe has said this is just a prototype program. We are not talking about going into production. Normally in the U.S. system that would be enough to bring all of the financing to the table that you need. However, at the moment we have a depressed economy in the manufacturing and in the airlines. We must turn that around. So I have met with the labor leaders. I have met with the regulating authorities, I have met with the airlines, the air transport people as well as the manufacturing people. We must do the things to make this country have a healthy air transport industry or we will have a much more serious problem in the '80's than you can foresee now and it is much more serious than just the financing. If we can have a healthy, profit-making air transport manufacturing business by the middle '70's, I have the assurance of most of the financial system with a willing buyer, a proven article and a healthy industry we should have no trouble getting people to step up to the price stand.

Senator PROXMIRE. I say we have had a healthy aircraft industry, an aircraft manufacturing, airline industry; the healthiest in the world. It is far better than these foreign countries where they subsidize their airlines or do virtually all of the work. I say this is a proven system. It works and this is the system we should rely on. To the extent that the marketplace decides that the SST is not commercially viable, the marketplace will say so. We wouldn't build it. To the extent it is, we will go ahead with it. That is the way America succeeded in the past in the airlines industry and the aircraft industry and this is the way we should continue.

Mr. PETERSEN. Is the Senate going to approve the $290 million appropriation to continue with SST development?

Senator PROXMIRE. Roger, this is a very tough one. We have lost and lost by big margins before but we have had a very interesting number of shifts. We have had a

number of conservative Republicans who voted for this who tell me they are going to vote against it and they have said so on the floor. We have had some liberal Democrats who have shifted over. I think the main problem we are up against, in addition to the interest groups which are so forceful and so effective and so well organized, the main problem we are up against is the fact that you have two mighty potent Senators from the State of Washington. You have Senator Magnuson and Senator Jackson. If you want two arguments against the SST, there they are right there in terms of power. I think if we could vote strictly on the merits there is no question in my mind that this has a much lower priority than the law enforcement protection that gets less than $290 million, than vocational education that gets only the same amount, or in air pollution or in any of these other areas.

Mr. MAGRUDER. I would like to say this kind of treatment where we are being advised by our elected officials to look back over our shoulder and not look ahead is probably going to default probably the most important industry, single industry, we have in this country. We have always had government help in the development of our civil transports.

As I pointed out, the jets only got started because of a $2 billion investment in two prototypes on the B–52. We are being challenged from abroad. If we don't have more productive airplanes in the future, we are going to have congestion in the skies.

Mr. BERGMAN. Gentlemen, we could go on for hours, but we are out of time. Thank you very much, Senator Proxmire and Mr. Magruder, for being with us on Issues and Answers.

Mr. EAGLETON. Mr. President, on August 27, 1970, Senator PROXMIRE reviewed the several expressions of concern by administration representatives and informed citizens about the environmental implications of the SST in his statement before the Subcommittee on Transportation of the Senate Appropriations Committee. I ask unanimous consent that this portion of the Senator's statement of August 27 also be printed at this point in the RECORD.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

ENVIRONMENTAL IMPACT—AIR POLLUTION

I turn now to another aspect of potential environmental impact from the SST, that of water vapor and jet contrails in the upper atmosphere. Last year the President's Ad Hoc Committee to Review the SST spoke of possible cloud formation, and even weather modification, from the regular use of 400 SSTs flying 4 flights a day. The Committee warned of "a significant increase in cirrus clouds," and of "a significant increase in the relative humidity from a fleet of SSTs." It also cautioned that these effects could "alter the radiation balance" and possibly affect "the general circulation of atmospheric components."

That was serious enough. It was of concern. But it evidently was not enough to persuade Congress to reconsider development of the SST.

This year, however, the President's top environmental adviser has alerted us to something potentially far worse than the mere formation of a few clouds, or a change in the global weather patterns. Russell Train, Chairman of the newly-formed Council on Environmental Quality, told the Joint Economic Committee earlier this year that the water vapor emitted by the SSTs flying at 60,000 to 70,000 feet "would react so as to destroy some fraction of the ozone in this part of the atmosphere." The effect of destroying the ozone, Chairman Train said, could be "that the shielding capacity of the atmosphere to penetrating and potentially highly dangerous ultraviolet radiation is decreased."

Subsequently, the Committee asked Dr. Gordon MacDonald, also a member of the Environmental Quality Council, about the importance of the protective layer of ozone and what would happen if it were destroyed. Dr. MacDonald's reply was chilling:

"Well, let us suppose that through some other means you stripped the ozone from the atmosphere and exposed the surface to the full force of solar ultraviolet. This would effectively wipe out life, except in the oceans, anything that would be exposed."

Subsequent to the Joint Economic Committee hearings, the Department of Transportation sought to assure the public that there was little to worry about. The Department said that "only" seven percent of the ozone might be destroyed by the SST's, and that in any event, the Department would do research in an effort to control the SST's impact. "Only" seven percent! Is the Department asking us to trade 100 percent protection against ultraviolet radiation which could "effectively wipe out life" for only 93 percent protection? Can *any* project—let alone a project which benefits less than half of one percent of the population—justify toying with the environment in this fashion?

It is hardly any wonder that a group of top scientists and government officials of very considerable prestige who met at Williamstown, Massachusetts this summer to consider environmental problems, expressed great concern over the SST project:

"A feeling of genuine concern has emerged from (our) conclusions. The projected SSTs can have a clearly measurable effect in a large region of the world and quite possibly on a global scale. We must emphasize that we cannot be certain about the magnitude of the various consequences."

Mr. Chairman, how much more do we have to hear? These are responsible individuals who are talking of "altering the radiation balance", of an "effect on a global scale", and who are talking of something which could "effectively wipe out life". Shouldn't these warnings at least put us on notice that we should postpone development until we get some answers to these questions?

Mr. EAGLETON. Mr. President, subsequent to that statement and, indeed, 4 days after the ABC program was aired, the executive committee of the Federation of American Scientists expressed the federation's strong opposition to continue Government expenditures on the SST. On the point of possible upper atmospheric effects, the federation said:

The dangers of pollution of the upper atmosphere, even if in fact quite serious, could not be researched and resolved in a sufficiently decisive fashion to prevent an economically plausible SST from being produced and used. Now is the time to protect the environment.

Mr. President, at one time I took some momentary comfort from the administration's statement that the environmental effects of the SST would be thoroughly investigated the SST program deferred or abandoned if good cause appeared from those investigations. Upon reflection, though, I saw that the environmental stakes involved in this controversy may be so high that a fail-safe philosophy should be followed—that we should not proceed with deployment of a fleet of SST's until the SST is proved to be environmentally safe.

Now I find that a distinguished body of highly qualified scientists believes that the time to protect the upper environment, and indeed the population of the earth, from the potential environmental hazards of the SST is literally now or never—that there is no fail-safe approach to development of the SST.

Mr. President, I ask unanimous consent to have printed in the RECORD the September 17, 1970, statement of the Federation of American Scientists in opposition to continued Government funding of the SST prototype program.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

FEDERATION OPPOSES THE SST

The Federation of American Scientists believes continued Government expenditures on the supersonic transport (SST) are a distortion of our true priorities. Even if the prototype program were successful; even if the business community could then finance the production phase; even if the SST were then found to be economically profitable; even if the SST eventually returned the Government investment; and even if the SST did no harm to the environment; the Federation would still find the project a serious misallocation of Government resources. SST proponents estimate that 10% of our population will be flying internationally in the latter part of the century. Only a well-to-do fraction of these will use the expensive SST to save only a few hours in most cases, and a half-day in others. Meanwhile, the Government is planning to spend almost three times as much on the development of the SST *alone* as it is planning to spend over the next *12 years* for research and development of new modes of mass transit. Tens of millions of persons want to save as much total commuting time *every week or two* as the SST will save the wealthy on one or a few occasions a year. And mass transit is only one of several important urban problems—some of which we may fail to solve only at peril to domestic tranquility.

Further, the SST prototype program is a poor "business" investment for public monies. Since SST is not a high priority project, the same reasons that the Department of Transportation explained were an "insurmountable hurdle" to attracting private funding should preclude Government financing—the long "dry period" before profits, the "considerable technical risk", and the "amount of profit which would finally accrue". Indeed, while private parties might hope to gain a high return for their high risk, the Government return under this contract, even if all goes well, is conceded by the Department of Transportation to be "only a little over 4%". And, under this contract, if things go badly, private parties may make enormous sums while an unreimbursed Government is taking a loss on its investment.

Neither enhanced employment nor an induced balance of payments advantage is a good reason for Governmental support of this program. The employment loss due to cancellation of the prototype stage will be 20,000—negligible among millions of unemployed. The production phase might employ 50,000 workers several years hence. But even this benefit is of uncertain value, since the highly skilled workers in question would already be fully employed if we had returned to full employment by that time; and in this case, the extra demand for their skills would be inflationary. SST expenditures could be better spent in providing jobs in socially more productive areas, and in providing them to the disadvantaged hard-core unemployed who seek jobs almost all of the time.

The balance of payments advantages of the SST are speculative. We do not believe

that policy questions of this kind should be based on balance of payments estimates of periods a decade hence.

The SST is an environmental hazard. No one can doubt that Government rules on noise and on sonic booms will be bent, if necessary, to keep the finished SST aircraft economically viable. Existing testimony already foreshadows a future decision to permit the SST greater "sideline" noise on the grounds that it is less noisy by other measures than present rules permit. And testimony indicates the possibility that the boom might be permitted over "unpopulated" areas in such a way as to admit a growing number of cross-country flights. The dangers of pollution of the upper atmosphere, even if in fact quite serious, could not be researched and resolved in a sufficiently decisive fashion to prevent an economically plausible SST from being produced and used. Now is the time to protect the environment.

The Federation notes that domestic supporters of the SST have used the threat of successful construction of the British Concorde SST in an effort to get Government support, and it is evident that mirror-image pressures have been brought to bear on the British Government by supporters of the Concorde. Our military-industrial complex is now engaging the British in a contest that is as senseless as the arms race and as prone to the same kind of domestic political manipulation. We need not, as last year's Council of Economic Advisers noted, "compete in white elephants". As in the arms race, our failure to go forward with a boondoggle that excites competition might help the other side to get off the hook, relaxing, in turn, the pressures upon ourselves to make a choice that is wrong in any case.

## TOURIST TRAVEL FROM ALASKA TO SIBERIA

Mr. STEVENS. Mr. President, this summer a dramatic people-to-people type of approach toward accomplishing a better understanding between the United States and the Soviet Union began on a private basis. An air bridge between our continents has made possible personal contact between our people—going West—on a scale never before attempted.

Alaskans and other Americans are now going to Siberia on special tourist charter flights inaugurated on June 6, 1970, by Alaska Airlines.

Several enlightening articles have been written by the Americans who have experienced these very special excursions. These include: "Back Door to Russia," by Stanton H. Patty, of the Seattle Times; "Hello, Ivan," an editorial published in the Anchorage Daily Times; "Siberian Adventure Offered Surprises From Start," written by Ron and Barbara Richardson, and published in the Anchorage Daily Times; and "Our New Gateway to Russia," published in the Anchorage Daily Times.

I ask unanimous consent that these items be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

[From the Seattle Times, June 14, 1970]

KHABAROVSK IS BUSY PLACE WITH OVERTONES OF DANGER

(By Stanton H. Patty)

KHABAROVSK, SIBERIA.—This is where Siberia begins, if you are an explorer from the Pacific.

You are in Asia, on the Far Eastern edge of the Soviet Union. This is the land of the Trans-Siberian Railway, the place where the great Amur River passes and journeys on to give Russia a valuable outlet to the Pacific Rim

The place is young and energetic, like a frontier community in Alaska. But many times larger and burgeoning with scores of industrial plants.

It is a focal point of danger, too. Those hazy, blue hills across the river are in Red China.

There have been bloody border clashes between the Russians and Chinese just 35 miles away. Some have been reported; others have not.

A pretty Intourist guide named Irene smiles and says: "Welcome to our town."

From that moment on, you are enveloped in warm hospitality here. Few Americans visit Khabarovsk. Most of the foreign tourists are Japanese, bent on increasing trade with resources-rich Siberia.

An American is a curiosity still. And he is welcome.

Khabarovsk is where the historical first Alaska Airlines flight from Alaska to Siberia ended the other day. But it was a beginning, not an ending.

There were toasts of "enduring friendship" at a banquet the night of the arrival. Vodka and Champagne flowed as the hour grew late.

Ponomova Tubov Ivanovna, the gracious lady submayor of Khabarovsk, greeted the visitors. Charles F. Willis, Jr., Alaska Airlines' board chairman, responded.

"You are pioneers," Mrs. Ivanovna said.

Bert Nordby, an advertising executive from Seattle, strolling in a square, was surrounded by friendly, young Russians wanting to know about America. There were formidable language barriers, but this didn't seem to matter.

Aboard one of the Amur riverboats, a Russian teenager approached Lori Giersdorf, the tall, blond wife of Robert Giersdorf, an Alaska Airlines executive. With an admiring smile, he removed a pin from the lapel of his jacket and pinned it to Mrs. Giersdorf's blouse.

On the pier, other Russians waved to the Americans. Shyly at first, then with enthusiasm.

There was no question about it. Khabarovsk was an open city for the guests from the United States.

This industrial metropolis of 480,000 persons is a youthful city, by Russian standards. It was not founded until 1858, just nine years before the United States purchased Alaska from Czarist Russia.

The Amur itself forms the border between Siberia and Chinese Manchuria before emptying into the Okhotsk Sea further on. And near Khabarovsk, another river, the Ussuri, meets the Amur.

After the revolution of 1917 in which the Communists established the Soviet Union. Japanese troops landed to take over this area. Detachments of American, British and French forces aided, and soon Soviet power was overthrown.

The foreign intervention led to mass executions in Khabarovsk. Two fifths of the population, perhaps 32,000 persons, was slain. Khabarovsk was in ruins. Then in 1922, Soviet control was re-established.

The tour bus from the airport rolls past a monument recalling that episode. But Irene, the Intourist guide who is studying to be an English teacher, politely does not remind the visitors of America's role in that long-ago civil war. Instead, she talks of things like Khabarovsk's many universities and scientific institutes.

Now the tour bus enters the airport and unloads its passengers alongside a twin-jet TU-104 of Aeroflot, the Soviet airline.

Next stop: Irkutsk, in the heartland of Siberia.

Irene waves farewell at the bottom of the ramp.

"I wish you good luck and I hope you enjoy our country," she says.

---

[From the Seattle Times, June 21, 1970]

SIBERIA: WOULD YOU BELIEVE MINI-SKIRTS AND SUNBATHING?

(By Stanton H. Patty)

IRKUTSK, SIBERIA.—The Russian jetliner circled low over the green countryside in the heart of Eastern Siberia.

Fabled Lake Baikal, deepest in the world, was off the left wingtip. Then Irkutsk, modern hub city of the vast region where the caravan of history has left indelible imprints.

Dreaded land of exile, prison camps and freezing temperatures?

Would you believe miniskirts, sunbathing on a scorching June day, cultural theaters and scientific institutes in an electrically charged city almost as large as Seattle?

This is Russia's booming land of the future, where young people set the pace and the hum of industry is theme music.

Irtkutsk is a long way from Moscow—and from most everywhere else. But there is no feeling of isolation here, for the Russians or for visitors.

"We don't feel parted from the rest of the world at all," Segei Merkuriev, deputy governor of the Irkutsk region, told American tourists. "With the help of aviation technology, we consider that we are in the very suburbs of Moscow."

The Americans who traveled to Siberia on the inaugural Alaska Airlines flight from Alaska found another warm welcome awaiting them here. Over and over, the Russians are urging them to see Siberia for themselves and to meet the people.

"There is an old Russian proverb," Merkuriev said, "that says it is better to see once than hear a hundred times.

"You are the first group to travel the road here from Alaska. We wish you a very fruitful visit."

A few of the visitors walked through the sun-dappled park of Kirov Square near their hotel and found the old proverb to the true.

Mrs. Bob Spring of Seattle opened her Russian phrase book and tried to decipher a greeting. Soon she was hemmed in by a tight circle of Russian children giving her a language lesson. Her photographer husband stepped back and focused his cameras on the smiling faces.

Maybe this is what they mean by people-to-people programs.

Another scene: An American went to the little tailor shop in the hotel for some minor repairs to a pair of trousers. After the job was completed, he held out a mixed handful of Russian Kopeks and American coins so the tailor could select the right change for his work.

The tailor selected an American quarter, then reached into his own pocket and produced a worn Kennedy half dollar.

"Kenn-e-dy, Kenn-e-dy," he said with a grin.

Sergei, a representative of Intourist, the Soviet tourism agency, joked with the travelers about American soap and other supplies they had brought along for the trip "behind the Iron Curtain."

There is Communist propaganda everywhere, such as free booklets on the airplanes and in hotel lobbies with titles like "Leninist Standards of Party Life" and "Consistent Peace Policy." In many languages, including English. But never is it "pushed" in a sales way. And Irkutsk, like the rest of Russia, is ablaze with signs and posters commemorating the 100th anniversary this year of Lenin's birth.

During a visit to a technical institute, the scientific director asked barbed questions about America's involvement in Indochina. A lively but cordial debate followed.

Robert Giersdorf, an Alaska Airlines vice president, ended the discussion by telling the Soviet official:

"It is good that we can have such communication. Perhaps, in this way, we can avoid future collisions between our countries."

Today's Irkutsk began in 1651 as an outpost for the collection of tribute, payable in furs, which wilderness tribes were forced to deliver to agents of the czars. Soon Irkutsk became a center for the fur trade. It still is.

It was through Irkutsk and neighboring parts of Siberia that the explorers traveled on their way to the Pacific—and voyages that led to the discovery of Alaska in the 18th Century.

Now the Irkutsk region, an area the size of England and France combined, has a population of 2.4 million persons. The riches include minerals, forest resources and hydroelectric power.

The visitors toured one of the giant power stations here, on the swift Angara River that flows from Lake Baikal 45 miles away, and saw the world's largest dam in the vigorous new frontier city of Bratsk about 450 miles north of Irkutsk.

Back in Irkutsk, they visited ancient churches, admired the few remaining ornate log cabins which today's progress-minded Russians scorn as old fashioned, filed through the Irkutsk fur storehouse, largest in the Soviet Union, where soft sable still is the king of furs, and joined the Russians to enjoy a rollicking circus from Poland.

This is the Iron Curtain, to be sure. But somehow, mainly because of the warmth of the people, Siberia's sinister image seems out of date these days.

That old Russian proverb makes good sense.

[From the Seattle Times, June 22, 1970]

HYDROFOIL SKIMS ACROSS SIBERIA'S INLAND SEA

(By Stanton H. Patty)

LAKE BAIKAL, SIBERIA.—The sleek, white hydrofoil called Raketa (Rocket) gathered speed and flashed toward Lake Baikal, Siberia's wondrous jewel, like a wave-skimming missile.

At 50 miles an hour there was hardly an occasional bump as Raketa headed north from Irkutsk and planed over the sun-sequined water.

The route led from the man-made hydroelectric reservoir known as the Sea of Irkutsk, past timber-clad slopes and Siberian villages with chocolate-colored log cabins, to Baikal itself.

Down in the cabin, passengers stretched out in the aircraft-style seats with snacks of dark bread, cheese and Russian beer. The 12-cylinder diesel engine pushed the 150-foot-long hydrofoil to top speed.

American tourists took turns posing for photographs by the wind-whipped Soviet hammer-and-sickle flag on the stern and training their cameras on the wilderness scenery.

Someone pinned a big gold mock policeman's star on the lapel of Sergei Saltykov, the rotund, good-natured Intourist guide who has become a favorite with the travelers on the first Alaska Airlines tour of Siberia.

"What is this?" Sergei asked with a grin.

"Secret police badge," one American joked.

"How can it be secret when it is there for everyone to see?" Sergei quipped.

Then the hydrofoil rocketed into Baikal, a lake so large the Siberians refer to it as a sea.

Surprising Baikal is the deepest lake in the world—more than a mile in depth at one point. It contains one fifth of all the fresh water on the planet—as much water as all of the Great Lakes combined or the Baltic Sea.

More than 1,800 species of marine life are found in the lake. Three fourths, including an arctic-type seal, are unique to Baikal.

Something like 336 rivers run into the 395-mile-long lake. Only one, the Angara which powers the city of Irkutsk, flows out of Baikal.

Geologists say Baikal had volcanic origins 20 million years ago. But this is an earthquake zone and the cavity still is forming. Long ago the climate here was subtropical. Fossils tell the story. There was a chain of small lakes then. Later came a period of glaciation and Baikal became one great lake.

Nobody knows for sure how the seals (there are about 40,000 in the lake now) got here. Their closest relatives are far away, in the Arctic Ocean. The most probable theory is that they migrated down the Yenisei River from the Arctic, then through the Yenisei's tributary, the Angara, into Baikal. But no seals are found anywhere in the Yenisei. It remains a mystery.

Baikal is cold the year around, with winter ice forming five feet thick. But in midsummer the surface temperature rises to about 56 degrees and some hardy Russians use it as a king-size swimming pool.

First stop on the tour is the Baikal Limnological Institute of the Soviet Academy of Sciences. The institute museum displays the fascinating fauna of remarkable Baikal.

On the opposite shore is a section of track from a previous route of the famed Trans-Siberian Railway. In the early days, they used ferries and icebreakers to span the lake for the rail system.

However, in the time of the Russo-Japanese War, when supplies and men were needed urgently at the front, they even laid railroad tracks across the ice and used horses to pull the rail cars over the ice.

It was picnic weather on the shores of Baikal today. Young Russians sunned themselves on the slopes.

The Americans paused for a lunch in a picturesque village called Listvenichnoye. You don't have to know how to pronounce the name. Just enjoy it.

There was champagne and caviar, and minor-key Russian tunes played on accordions by two music students, with the Americans clapping in tempo.

Sergei, the Intourist man, gave the visitors a lesson in how to drink—vodka—a full glass at a time. The "students" tried gamely to keep up, but Sergei was the undisputed winner.

"I have never been to Alaska, but I want to toast the very sincere people who came here with open hearts and open smiles," Sergei said, raising his glass.

Bob Atwood, a newspaper publisher from Anchorage, raised his glass of vodka and responded:

"To the day we understand each other and no longer fear each other."

There were other toasts, to Russia, to Siberia, to Baikal . . .

Lowell Thomas, the veteran newsman, stood to offer still another:

"To the most exciting land in the world—Alaska!" Thomas said.

The musicians took up another song, with lyrics that say, "Those were the days my friend . . ."

It was a lazy afternoon as the visitors strolled the birch and larch forests high above Baikal to pick bouquets of wildflowers. They waved at the Russians walking through the woods, and the Russians waved back.

Then a bus ride back to Irkutsk through the undulating taiga, the seemingly endless Siberian forest of silvery birches and evergreens.

Yes, this was a day, my friend. The Americans hoped it would never end . . .

[From the Seattle Times, June 28, 1970]

BACK DOOR TO RUSSIA—TASHKENT INDUSTRIAL GIANT WITH COLORFUL HISTORY

(By Stanton H. Patty)

Tashkent is a lovely woman with roses in her hair.

This ancient city of Central Asia is the land of Marco Polo and Genghis Khan. It also is another face of Russia, muscled with industry today, yet still as exotic as its storied past.

This was where the trade routes of silk and gold linking Europe with the Orient crossed; where Arabs, Turks, Mongols and other conquerors carved empires with bloody swords. Now delighted tourists travel the caravan routes of old.

The sun was a flaming red disk low on the desert horizon as the inaugural tour of Alaska Airlines' new Alaska-to-Siberia flight arrived in Tashkent from the robust frontier of Siberia.

Soon the visitors were dining on shishka-bob-like shashlik and other spicy dishes of Middle Asia, with fiery Arab-style music in the background. Fountains and neons glowed against the night sky.

Hard to believe this is the Soviet Union. But it is. Tashkent, capital of Uzbekistan, one of the 15 Soviet republics, is Russia's fourth-largest city with a population of 1.4 million persons.

Uzbekistan has been part of Russia since 1865, when Czarist troops occupied Tashkent. Now more than 100 Soviet nationalities are represented here.

Few of the ancient landmarks remain. In their places are theaters, schools, apartment complexes, monuments dedicated to Communist martyrs and a spectacular new museum all about Lenin.

But the old persists . . . in the seamed, dark-hued features of the Uzbek people with their distinctive skull caps, open-air markets piled with bright-colored fruits and vegetables, occasional mosques, and a few sun-baked clay homes of the old quarter.

The tourist guides are proud, even defensive, about the signs of progress.

Instead of showing off the area where a powerful earthquake left 100,000 persons homeless four years ago, they point to acres of apartment buildings erected by construction teams that poured into Tashkent from all over the Soviet Union after the disaster.

"It is better to take pictures of new buildings than ruins," an Intourist guide declared.

Neither are the city's 14 active Moslem mosques featured on the tour.

"Only the old people are still praying," the guide said.

The summer climate is scorching—up to 115 degrees. But nights are cool. Winter brings snow and freezing temperatures.

Even on days of blistering heat Tashkent has a cool, green feeling. The flowered city is canopied with shade trees and pleasant parks with patio-like refreshment areas. Uzbeks love their trees and enjoy their many recreation parks with holiday spirit.

This is a city of industry, too, with more than 300 factories. Cotton is the main crop. Tashkent's production ranges from colorful textiles to jet airplanes.

The average worker earns the equivalent of $110 a month. He pays about 7 per cent of his wages for an apartment. Television sets cost $250 and up, yet the guide says 95 per cent of the families have television.

Tashkent's charm was displayed for the visitors as they gathered for a leisurely lunch at an outdoor pavilion on an island in Komsomol Lake, a man-made playground in the heart of the city.

"Welcome to sunny Tashkent," the host said.

"We consider your visit a symbol of mutual understanding and friendship. I wish you good luck and good health."

Pretty dancers in spangled costumes right out of the Arabian Nights whirled and dipped. The orchestra, playing flute and mandolin-like Uzbek instruments strange to American ears, set a sultry tempo.

Nearby, young Russians rowed their girl friends across the lake in small boats. Others went swimming to seek relief from the hot sunshine.

The afternoon was an intermission in what for a few hours, seemed like a make-believe land of the past.

That night a few of the Americans decided to detour away from the usual Intourist restaurant and have dinner with the Russians on the rooftop of the hotel.

There were some curious stares at first as the strangers ventured into the open-air restaurant above the city. Soon, however, the stares changed to smiles and waves.

With only a Russian phrase book for help the Americans ordered their meal and settled back to enjoy the evening.

The indigo sky was sequined with stars and a slice of moon, Songbirds chorused and the fountain of Theater Square below glowed with changing colors.

It was easy to see how the poets of old could write such lyrics about exquisite Tashkent, a city with 2,000 years of history and beauty.

---

BACK DOOR TO RUSSIA

(By Stanton H. Patty)

The time machine unwinds for 25 centuries and suddenly you are strolling through the splendors of ancient Samarkand.

Samarkand . . . a dateline that summons up names like Ghenghis Khan, Tamarlane, Alexander the Great and Marco Polo. Samarkand . . . a mosaic of glistening domes, arches and minarets that took their colors from the sun and sky.

This is Central Asia, another facet of the vast Soviet Union that blends more than 100 nationalities. The borders of China's Sinkiang Province and Afghanistan are close by.

Samarkand is on the tour route for passengers on the inaugural series of Alaska-to-Siberia flights of Alaska Airlines.

Militarily, it is a sensitive area. The tourists were instructed to keep cameras and binoculars cased while flying into Samarkand in a four-engine turboprop Ilyushin-18 of Aeroflot, the Soviet airline.

But once in exotic Samarkand itself, politics of this dangerous century soon were swept away by history and enchantment. Buses carried the travelers from one panorama to another in a day when time seemed stilled.

Great empires rose and fell here in this city as old as Rome.

Persian archers, Macedonian phalanxes, Arabian horsemen and Mongol conquerors swept through Samarkand, leaving destruction and ageless monuments. The dust of history still swirls under the blazing sun.

Today's Samarkand, mostly a Moslem city of 800,000 persons, occupies the site of ancient Maracanda. Recent excavations are yielding finds as important as Pompeii.

But it is the indelible imprint of one warrior—Tamarlane—that threads together the vivid tapestry for today's tourists. Samarkand was his capital.

Tamerlane (also known as Timour) mounted his throne here in 1369 and soon his swordsmen were striking into Persia, India and China. He sacked Delhi and captured Baghdad and Damascus. Samarkand was the focal point of his great Asian kingdom.

But this Mongol marauder, descended from Genghis Khan, so they say, was mortal. He died of a fever in 1405 before he could complete his conquest of China.

Now Tamerlane lies in a turquoise-domed tomb here under a slab of dark-green nephrite jade. The Gur-Emir Mausoleum, the structure is called.

The self-styled "Sultan of the World" left his cocky epitaph to be carved on his sarcophagus:

"Were I alive today, mankind would tremble."

Buried near Tamerlane is his grandson, Ulugbek, the scholar, who left another kind of a mark on history.

Back in about 1428, Ulugbek built an observatory in Samarkand and cataloged more than 1,000 stars with amazing accuracy. The observatory site was lost for centuries, but now has been unearthed. The lower part of Ulugbek's marble sextant, shaped like the foundation for an underground escalator, is on view for visitors.

Another architectural treat is the ensemble of tombs and mosques known as Shah-i-Zinda. With its blazing blue domes and intricate tile work, this medley of structures dating to the 12th Century is among the most hallowed of places for Moslems.

Then there are the ruins of the giant Bibi-Khanym Mosque, built for Tamerlane's favorite wife. The stark remains of the mosque seem to be carved from cliffs of glowing rock.

The American tourists found another page from the past in Samarkand's outdoor market. There were curious stares and smiles from the brightly costumed Uzbeks—responding to American smiles as the visitors walked through the bazaar where stands were heaped with fruits and vegetables from nearby farms.

But this ancient center of civilization in the Uzbek Soviet Socialist Republic has more than history going for it.

Samarkand, which will begin its 26th century in September, also is an industrial center with colleges, theaters and blocks of modern apartment buildings.

Intourists, the Soviet tourism agency, soon will open an 11-story hotel here so overnight stays will be possible for foreign visitors. At present, Samarkand is a one-day tour from Tashkent, the Uzbek republic's capital city 45 air-minutes away.

Russia has ruled the area since the 1700s, shortly after the czars occupied the far reaches of Siberia. It was mainly a bloodless takeover.

But then the boastful Tamerlane was not around to contest it.

---

[From the Seattle Times, July 1, 1970]

LENINGRAD ONE OF WORLD'S SHOWCASE CITIES

(By Stanton H. Patty)

If Czar Peter the Great really was great, the lovely city he built on the Baltic Sea is one of the reasons.

It has been called St. Petersburg, Petrograd and now Leningrad. By any name, it is one of the showcase cities of the world. A northern Venice with a Russian accent.

Last night the American tourists in Alaska Airlines' first flight to Siberia were in medieval Moscow. Then they boarded the night train to Leningrad 400 miles to the northwest and discovered a different Russia.

Peter, determined to pull backward Russia into the modern world of the 18th Century, wanted his new capital to be a "window" on the West.

There was just marshland here then in the delta of the Neva River near the Gulf of Finland. Peter built his city on 101 islands laced together by canals and bridges. Then he sprinkled it with opulent palaces, roomy parks, cathedrals and museums.

The result is Leningrad, still a gracious museum-city despite the terrible damage of World War II when a million persons died of starvation here during the 900-day Nazi siege.

German troops stormed within 2.8 miles of the city, but never entered. It was a bitter disappointment for Hitler. He even had invitations printed in advance for a victory ball in Leningrad's Astoria Hotel.

Even the war scars are gone today. Leningrad, a busy seaport and industrial center of 3.9 million persons, is the Soviet Union's second-largest city.

And still a window on the West. More than 1 million tourists, most entering from neighboring Finland, visit here yearly.

It is Peter's Leningrad, as European as Paris or Vienna, they come to see.

The heart of Leningrad still is Palace Square, on the south bank of the Neva. The baroque-style winter palace, permanent residence of the czars until the Communist revolution of 1917, is open for all to visit today as part of the famed Hermitage museum.

"I'll take you to Rembrandt," the Intourist guide said as the visitors climbed the grand staircase of the gilded palace.

She wasn't kidding. For starters, the Heritage has one room filled with 26 canvases by Rembrandt. Other halls feature works by Da Vinci, Rubens, Titian, Van Gogh, Gauguin P and, you name him.

The royal family began collecting the art treasures back in 1764 and built the original Hermitage next door to the Winter Palace in 1839 to house the collection. Now, the string of palaces and the old Hermitage are joined in one incredible museum. There are more than 2.5 million exhibits.

Outside, in the square, is the lofty Alexander Column, a stone spire commemorating the Russians' victory in the war against Napoleon in 1812.

And it was across this 20-acre square that the Communists marched on the Winter Palace on that fateful day in 1917. Nearby, the cruiser Aurora, which fired the first salvo on the czar's palace, is moored as a monument to the revolution.

Then there is Smolny, once a girls' school for the nobility, then headquarters for planning the 1917 uprising. It was here that Lenin worked and where the first decrees of Soviet power were issued.

Peter the Great's first major structure was the Peter and Paul Fortress, begun in 1703 under the czar's personal supervision. But for 200 years the structure on Hare Island had a grim history as a political prison. The dungeons still are there for visitors to see.

The fortress cathedral is the burial place for Peter, Catherine the Great and most of the other royalty dating from Peter's time. The Romanov dynasty lasted more than 300 years, until the chain of events that began here in Leningrad almost 53 years ago.

About 17 miles from Leningrad is Petrodvorets, once the czar's summer palace. It is a symphony of fountains and sculptures in a park setting.

Summertime in Leningrad is the season of the "white nights," a sort of Russian-style midnight-sun festival. This is when the Russians grow lyrical about their exquisite city of the north.

Hydrofoils flash across the breeze-ruffled waters of the Neva. The shady parks are crowded with families. Sunbathers on the beach beside Peter's fortress.

Over it all, an equestrian statue of Peter, now just a bronze cavalier, looks down on the Leningrad that was St. Petersburg.

Leningrad, by any name, had a special meaning for the Alaskans in this tour group that traveled here by way of Siberia more than 4,800 miles to the east.

For it was here that Peter wrote the orders that sent Vitus Bering on his way in a quest that resulted in the discovery of Alaska in 1741.

And it was here in 1867 that another czar, Alexander II, approved the sale of Alaska to America.

This sunny day in Leningrad, old St. Petersburg, seemed a good time to return Bering's visit of long ago.

---

[From the Seattle Times, July 2, 1970]

HAMBURGERS A WELCOME SIGHT AS PLANE HEADS BACK

(By Stanton H. Patty)

The Soviet Aeroflot plane climbed out of hazy Moscow and set a nonstop course for Siberia seven time zones away.

This is the way home, through once-for-

bidden Siberia, for the trailblazing participants in Alaska Airlines' first charter flight between Alaska and the Soviet Union.

They have seen the industrial heartland of Siberia, the exotic bazaars and ancient ruins of Soviet Central Asia, and European Russia from Moscow and Kiev to Leningrad.

They entered through the back door to Russia, at Khabarovsk, in Russia's Far East, and will leave the same way. The door is wide open now for tourism from America's West Coast.

The 4,800-mile flight from Moscow to Khabarovsk slices a path between a scarlet sunset on one side and a rose-gold moonrise on the other . . . across the unbroken taiga of Siberia . . . over logging operations and gold dredges . . . then the great, meandering rivers like Alaska's own Yukon.

It is a hot Saturday in Khabarovsk (pronounced "ha-bar-ofsk") where unpredictable Red China is a close-by neighbor. The city is surging with off-duty Soviet military troops, a reminder that the bear and the dragon are poised in dangerous stances just a few miles away.

But if there is tension in Khabarovsk, it is not apparent. Children are dousing one another in water fights around the fountain in Lenin Square. Thousands of sun-loving Russians are strewn along the recreation-park beach on the Amur River in a Coney Island scene.

This is Siberia, grim land of ice and snow?

Take-off for Alaska is scheduled for tomorrow afternoon. There is one last treat in Khabarovsk tonight for the American visitors.

They have been invited to an amateur musical performance by employes of the diesel factory here. It will be the cast's first appearance before an American audience.

For the tourists who had seen programs ranging from Uzbek folk dances in Tashkent to the Bolshoi Ballet in Moscow, this turned out to be one of the hits of the trip.

The fresh, happy troupe from the diesel plant presented lively folk dancing and choral selections. The tempos were hot and hypnotic.

When it came time to leave the theater, the Americans boarded their buses and soon were ringed by curious Russians.

The visitors waved. The Russians waved back. The visitors smiled. The Russians smiled back. Shyly, at first, then with enthusiasm. It was a spontaneous, lump-in-the-throat moment.

Wonderful what a friendly smile can accomplish . . .

Now it is Sunday and almost the hour to depart for Alaska.

The Alaska Airlines Boeing 707 already is on the field here at Khabarovsk with another tour group from Alaska.

Now is the time for last-minute souvenir shopping, exit visas, money-changing—and a touching farewell to Sergei Saltykov, 39, the Soviet Intourist guide who has endeared himself to the Americans during the criss-crossing of Russia over the past two weeks.

"Yoo-hoo!" the Americans called, summoning Sergei with the high-pitched cry he used to gather his tourists on crowded streets from the Kremlin to storied Samarkand.

There were gifts and kisses for Sergei. The chubby Russian was brimming over with emotion.

"Thank you very much," he said.

"A fortnight ago, I met a lot of tourists who were afraid of me, our weather and of being watched—with a lot of wrong information about our country.

"Now I am with a group of very sincere and grand people. I ask only that you tell the truth when you go home. Please come again . . ."

A few minutes later the souvenir-laden travelers were back aboard their 707. They admired the pretty Alaska stewardesses in their mini-Cossack uniforms and pored over copies of The Seattle Times and Alaska newspapers only one day old.

The jetliner taxied out, the engines thundered, and soon Siberia was 33,000 feet below.

At the controls were Capt. Bill Lund and Capt. Sam Silver, both from the Seattle area—the same pilots who had delivered the inaugural-flight tourists to Siberia two weeks before.

"Just routine," they said of the new Alaska-to-Siberia run.

Welcome home.

The stewardesses moved through the aisle with hamburgers, each crowned with a tiny American flag.

Ask the travelers to name what they missed most while in the Soviet Union and hamburgers would have been near the top of the list. The Stars and Stripes looked great, too.

The 707 sped on toward Alaska, past the international dateline, the craggy island of Attu at the tip of the Aleutian Chain and then over the mountains near Anchorage.

Bob Giersdorf, the airline's vice president for traffic and sales, took over the microphone on the plane's public-address system to say:

"I am very proud of this group. You have pioneered this route and been where only a select, few Americans have visited. You have represented the United States and done it well.

"You have seen and learned a great deal. You have made many new friends. This is not only a new bridge, but a new bridge of understanding. To each of you, a sincere thank you.

"Spaseba (thank you, in Russian)."

The jetliner touched down at Anchorage at 3:09 a.m. in the blue twilight of a Sunday morning.

Flight 727, the first commercial passenger flight between Alaska and Siberia in history, was home.

The round-trip distance from Seattle and back to Seattle for the tour group totaled 27,000 miles—more than the distance around the world.

With a "red carpet" all the way.

Russia's back door is wide open.

---

[From the Anchorage Daily Times, June 6, 1970]

HELLO, IVAN!

An example of how great spans of time are occasionally required to accomplish good things was provided today as an Alaska Airlines Boeing 707 jet left Anchorage International Airport bound for Siberia.

More than a dozen years elapsed between the planting of the seed and the plucking of the fruit, insofar as that flight was concerned.

There is an added bit of enjoyment in this inaugural trip between Alaska and Siberia for those of us at the Times, because the proposal for such a route was first made right here in this corner of the paper.

The time was December 1957—statehood was still more than a year away—when an editorial writer, dreaming a bit about things that might be, proposed that commercial aviation link Alaska with the mysterious Russian territory across the Bering Sea.

Back then, the Times was proposing regularly scheduled air routes between America and Russia by way of Anchorage.

But it is a beginning, and an exciting one, bridging as it does a remarkably historic gap between Alaska's past and its present, while at the same time opening to tourists a spectacular view of a land little known to Americans.

There have been some objections that the schedule of special tourist flights into Russia by way of the Siberian back door represents some kind of underhanded boost to communism, doing business as it is with the Soviet Union.

But there are shortsighted views, overlooking the obvious chink that is opened for better understanding between peoples of the East and West.

Far from working against our own best interests, the opportunity being presented for people of Russia to meet everyday citizens from the United States in areas where American tourists are almost unknown should go a long way toward showing some average Ivans and Natashas what life in a democracy is all about.

The flights between Anchorage and Khabarovsk, and the connections which will take Americans on tours even deeper into Asia and on toward Russia's European approaches provide a great vehicle for good will.

The governments of the two countries had to get together finally to make the flights possible.

But the journeys themselves will involve people, not governments, and that's good.

---

[From the Anchorage Daily Times, July 14, 1970]

SIBERIAN ADVENTURE OFFERED SURPRISES FROM START

(NOTE.—Mr. and Mrs. W. R. Richardson of Seattle tell of their adventures on the inaugural eight-day charter trip to Siberia on Alaska Airlines. Richardson is manager of Crown Zellerbach Corp., Seattle.)

(By Ron and Barbara Richardson)

The sun rose in Anchorage one day and went down over the Amur River the next in Khabarovsk, U.S.S.R., for the 60 Americans on Alaska Airlines inaugural 8-day Siberian excursion.

During most of the eight-hour, 3900-mile flight out of Anchorage, the Boeing 707 raced the sun on even terms. But for the travelers it was the longest day in any year.

Eight Alaskans, from Anchorage, Fairbanks and Juneau, were in the tour group. For them and for the 52 other travelers from 10 states and the District of Columbia, the day that began with an Anchorage wake-up call at 5 a.m. was full of surprises.

As the clouds parted to reveal Hokkaido, northernmost island of Japan with its snow-ringed mountain peaks, the Siberia-bound Americans prepared to make entry on Russian soil. It was 3 p.m. June 21 in Khabarovsk when they stepped off the plane, but a full day's schedule of activity was ahead.

Surprise No. 1: the Americans were not in Siberia at all! Khabarovsk is a part of a rapidly-expanding region now known as the Soviet Far East. The only city in this region now open to western tourists, Khabarovsk (it begins with an "X" in Russian) is European rather than Asian in culture and population.

Surprise No. 2: the weather. It was hot, glorious summer. We quickly cleared customs and at the Centraline Hotel on Lenin Square the bus waited to take the group for a boat ride on the Amur River which a few miles upstream forms a very uneasy border with Red China.

Russian girls in bikinis and miniskirts sunned themselves on beaches as crowded as any in the United States. Rowboats, some with outboard kickers and even a few star-type sailboats cruised by. Picnickers thronged the wooded shores as the two tour boats loaded with Americans cruised up and down the river which most geographers agree is the world's eighth largest.

The passengers looked down into the rusty waters of the Amur (translated "dark") and looked up to see smoke rising from an enormous steam plant. Multi-ruddered barges laden with coal and long rafts of logs passed by.

Then back to the bus for a tour of this city of half a million where the annual population growth requires 11,000 new apartments a year, all seemingly built on the same plan: yellow, pink or blue stucco with white printed Greek columns. Hospitals, seven colleges and institutes, libraries and monuments flashed by. Stops were made for photographs. The pattern for the next seven days was already set.

Stopping in the park on the riverbank, Americans lined up with Russians to buy ice cream cones for 15 kopeks (about 14 cents), each one carefully weighed by serious girl vendors. Russian ice cream cones must weigh 100 grams (three ounces.)

Naturally, the tour included Khabarovsk's huge sports complex—the best in Asiatic Russia—with facilities for 11 different competitive sports. The Lenin Stadium, built in 1956, seats 25,000 for soccer and there are two big skating rinks for Khabarovsk's favorite sport—ice hockey. Quite a few Russians were on the tennis courts. Others streamed on and off the Amur river passenger boats carrying fishing rods or with a soccer ball tucked under an arm.

Back at the hotel for dinner, the weary group climbed off the bus to unpack and search for the coolest clothing in their bags. But the long day was just reaching its climax—the Russian circus at 8. In a one-ring tent, crowded with 2,500 enthusiastic Russians, the Americans found themselves seated side by side in the front row perilously close to the frayed ropes that supported the high wires and other aerial equipment.

It was a good show but at the 10 p.m. intermission all but a handful were glad to board the bus for the trip back to the hotel. The longest day of the year was over. Early tomorrow they would board the big four engine Russian transport for an 1800-mile flight to Irkutsk in the heart of Asia, and seven more active days in Siberia were ahead.

ON TO IRKUTSK

Siberia? To most Americans the word evokes a picture of prisoners marching across a frozen desert. Few of the 60 passengers on the inaugural tour of Siberia escaped questions from friends such as "Why go there?" or "What's there to do?" or the joke about "if you come back . . ." But all 60 did come back.

In their luggage, rolls of American color film recorded the blue waters and white birches along the shores of Lake Baikal—the world's deepest lake. Filmed too, were apartment houses rising in never-ending rows in the middle of the Siberian forest in the 15-year-old planned community surrounding the Bratsk hydro-electric dam. Also recorded were the individual strolls and side-trips made with or without Russian speaking guides.

Angara, Russian for "slick chick," is the clear, cold river that flows out of Lake Baikal northward through the central Siberian city of Irkutsk and then north into the Yenesei, one of the great Russian rivers that empties into the Arctic Ocean.

Daily the Russian-built hydrofoil transports visitors from Europe, Asia, Africa and occasionally North America up the river from Irkutsk through the tiaga, (a forest of red-trunked pine, white birch and larch) to the shores of Lake Baikal. As the boat picked up speed and rose on its foils, the Alaska tour group looked far down to see river bottom through the clear water. Its temperature was reported to be in icy four degree centigrade (about 38 degrees fahrenheit).

Agreed: Only the fjords of Norway, British Columbia and Alaska provide comparable scenery! In bright sunshine, the travelers disembarked an hour out of Irkutsk to snap pictures of the log and plank cabins with their intricately carved, blue-painted shutters and fishermen out on the lake rowing in oddly curved wooden boats.

Inside the Baikal museum they learned as much or as little as they pleased about the lake, fed by 336 rivers, which reaches a depth of 6,200 feet and holds as much water as all five of America's Great Lakes combined. But outside were tiny, fenced gardens where country people in successful "free enterprise" endeavor grow food for their own use or private sale. On the lake fishermen worked hard trying to lure the omul, which most Americans identified as a Siberian steelhead.

Champagne and vodka flowed inside the charming wooden Baikal restaurant. Toasts by Russians and Americans, (a Texas lady wearing a red, white and blue American flag pin offered a toast with milk) preceded a lunch that began with black caviar and black Russian bread. The accordionist played Lara's Theme and Russian and American tunes. A sudden clap of thunder, a 10-minute downpour, then sun again.

Bratsk, 360 miles north of Irkutsk and reached by a propellor-driven Russian plane, is in the taiga too. In 1954, before one of the world's largest hydro-electric plants was built there, the town did not exist. Only 12,000 people were scattered through the present 175 square mile area of the planned townsite of eight communities. Today the population of Bratsk is 175,000 and about 10,000 are added each year, all young people.

Most exciting to the Americans, as they sat in their buses and listened to the Intourist girl guides, was the planned nature of these frontier communities: wide roads, belts of timber, with each self-contained area built around a separate industry and containing houses, apartments, shopping areas, schools, nurseries and recreation buildings known as Palaces of Lenin.

Average age of resident: 32 years. A Russian touch: there is not a single church in any of the eight Bratsk communities.

Buryat tribesmen were original residents of this forest area where Cossack fur traders arrived with guns and horses about the time the Pilgrims landed at Plymouth. "Bratsk" is a mispronunciation of Buryat.

Today's Buryats are the young Russian technicians, well educated, well paid, living in blue or green stained wooden duplexes in the pines or more likely in one of the many four or five-story balconied apartment buildings that march ever deeper into the forest.

Wild flowers and 90-degree heat made the Siberian winter seem illusory, but the bus jolted by a mammoth brick heating plant that generates steam and hot water for the underground system that heats all the houses and apartments of Bratsk nine months of the year.

Alaskans and those from the Pacific Northwest glimpsed familiar sights—logging trucks speeding back to the woods with their trailers hoisted up piggyback and the steel towers of high voltage transmission lines. But the rights-of-way cut through these forests were wide enough for three rows of towers to carry the current from the new Bratsk dam to steel mills and other industrial plants. Under the towers were hundreds of tiny vegetable plots thriving in the hot summer sun just a few feet above the permafrost that underlies Bratsk.

First stop was at the dam, comparable to Washington state's Grand Coulee but 20 years newer. The Intourist interpreter rattled off figures as the chief engineer talked on—biggest in the world until six months ago when the Siberians brought a new dam on the Yenesei (Krasnayaska) into production.

To the Americans, more interesting than the figures were the odds against completing such a project in a land where only 90 days out of 365 temperatures go to 96 degrees in summer and in winter down to −84 degrees Fahrenheit. And even the Supreme Soviet heard about the summer construction problems—"smog flies" said the guide. "You call them mosquitoes."

Padun is the Russian word for the rapids that now lie beneath the Bratsk "sea," and Padun was the name of the picturesque log restaurant in the taiga that serves what one American termed "the best food in Russia." Lunch at the long tables, then off again to the river to board three boats for a trip several miles across the man-made sea. For the hardier, busses waited at the dock bound for the wood cellulose plant—Siberia's largest pulp mill complex located in Bratsk No. 8. (Some of the products are similar to those made at Ketchikan and Sitka.)

ECOLOGY CONCERN

Even in Siberia this is the age of ecology. Nowhere was this concern over the environment more evident to touring Americans from Alaska than in the area around beautiful Lake Baikal in the very heartland of Asiatic Russia.

What happens to water, fish and wildlife first attracted wide Soviet attention six or seven years ago when Russia's young industrial engineers began a pell-mell rush to industrialize Siberia with huge pulp mills, aluminum plants and other resource-processing factories.

Letters from prominent Soviet scientists began appearing in Pravda accusing the Pulp and Paper Industry Planning Committee of "wasting colossal sums of money on pulp and cellulose mills which will use Lake Baikal as an experimental reservoir for an untried water purifying system, inapplicable in such severe climatic conditions."

From what American tourists saw on their visit to Lake Baikal those Russian predictions of "environmental disaster" have not come to pass. The lake, at least those small portions of it Americans saw, is still clear, cold and unspoiled. You can even drink the water.

Presumably it still provides habitat for the 1800 types of fish, animals and plants in its waters and along its shores. The Russians say three-quarters of these are found nowhere else in the world. Certainly Lake Baikal and the 360 rivers and streams that feed into it provide important rest stops and summer nesting areas for many of the migratory birds of Europe, Asia and even Africa.

At the Sibgiprobum in Irkutsk where Russian engineers and scientists are planning and designing the wood products mills for all of Siberia, ecology gets top attention. "We're just as concerned about pollution abatement as you are in the United States," one engineer at the Irkutsk institute said.

"Every mill we build is designed with the local environment in mind. We take advantage of all the research information available from our universities and we observe what is being done to reduce air and water pollution in other parts of the world. A good idea has no international boundaries."

In Russia, just as in the United States, there is often conflict between the men charged with industrial development and those with responsibilities for fish, wildlife or public health. Sometimes these conflicts go all the way to the Council of Ministers in Moscow before they are resolved.

One of the Siberian mills that triggered conservationist concern all over the Soviet Union was built on the Angara River near Irkutsk in 1966. This mill, about the size of somewhat similar Alaskan pulp mills at Ketchikan and Sitka, aroused a storm of criticism when it was built.

The Forest Products Ministry of Moscow postponed the mill's startup until a special investigation had been carried out. Today this Baikal mill uses chemical, biological and mechanical treatment processes for its wastes. Effluents are finally released into the Angara river (which flows out of, not into, the lake).

Most Russian pulp mills try to make use of some of their chemical waste and pulping leftovers by converting them into protein yeast which is used to feed poultry and cattle. The big mill Alaskans saw at Bratsk produces 42,000 tons of yeast a year. It also burns all the bark from its pulpwood logs to create steam and electric power to run the huge cellulose plant, even though one of the world's largest hydro plants is located only a stone's throw away.

Air pollution also concerns the Russians, although at this time their scarcity of auto-

mobiles gives even the largest Siberian cities quite a clean-air edge over similar sized communities in the United States.

"When we plan a new pulp mill," the director of the Irkutsk paper institute said, "we try to avoid population centers. No homes or apartments are permitted within three kilometers (slightly less than two miles) of the mill."

While these green belts may be adequate for new mills, the suburbs of Siberia's burgeoning cities are already beginning to crowd in around some of the older plants.

Already the Russians have their national park enthusiasts. Guides mentioned that much of Lake Baikal either now is or soon will be a national park. There are already many forest preserves across southern Siberia where cutting of timber is strictly controlled.

In a cold country, where heating is a necessity nine months of the year, timber cutting restrictions can lead to "people problems." In the towns and villages around Lake Baikal most homes seemed to have a well-stocked woodpile in the backyard.

Systems may be different but the problems are much the same, is the way one Russian engineer summed up this "age of ecology" for his American audience.

Looking out a hotel window in Irkutsk at a smokestack that was belching black across the sky, or at stray sawlogs bobbing about on the surface of Bratsk Sea, or smelling the "boiled cabbage" odor of a cellulose complex, what he said was believable.

Language barriers did not permit many conversations with the fishermen rowing their boats through a ghost-like early morning fog on the Angara in front of the Trans-Siberian railway station or the hikers with packs on their backs along forest trails around Lake Baikal or the picnickers along the banks of the muddy Amur near Khabarovsk. These people didn't need to talk. You knew they were dedicated conservationists.

RUSSIANS THINK BIG

Like Alaskans, the people of Siberia think big. Nowhere was this more apparent than in the several industrial complexes visited by the Americans on the Alaska Airlines tour to the heart of Asiatic Russia.

For many, the visit to Bratsk was an eye opener. This city is actually eight different cities all called Bratsk—No. 1, No. 2, No. 3, etc. They have been cut out of the Siberian forest in an area of permafrost where winter temperatures drop to minus 84 degrees and soar to 96 degrees in summer. For the visitors from Alaska the 24-hour stay in Bratsk was all "shirt-sleeve" weather.

The heart of this huge industrial complex is one of the world's great hydro-electric plants. The huge dam rises 596 feet and forms a 3.2 mile-long concrete wall that hangs from perpendicular cliffs to block the course of the Angara river on its northward rush from Lake Baikal to the Arctic.

"We generate 4,100,000 kilowatts—that's twice the present size of your Grand Coulee," the young Russian engineer announced proudly. Russians enjoy this numbers game. In a free-wheeling question and answer session with the American tourists they quoted figures on America's big dams that were right out of the latest U.S. Department of Interior report.

"All our equipment is Russian made," the guide explained as she led the Americans through one of the two big powerhouses where a dozen 180,000 Kilowatt capacity generators hummed a symphony of power.

When it comes to hydro plants the Siberians go first class. "This is the only air conditioned building in Siberia," the guide told tourists as they walked through the immaculate powerhouse.

Generally house keeping is not a strong point with Russian industry. The power plant was an exception, with spotless white ceiling, clean black floors, orange generators and a generous use of colorful Siberian marble. Walls of the reception room were of marble mosaic design showing the location of six big dams built or planned for the Angara.

Like our own Bonneville and Tennessee Valley systems, the Siberian power plants are tied together with a network of high voltage transmission lines which carry power across much of Asiatic Russia. Within the next few years, the Americans were told, the Siberian power net will be linked to the power system of European Russia. With nine time zones across the Soviet Union it makes much economic sense to have a transmission system capable of throwing energy where it's needed when it's needed.

With all this electrical energy has come big industry. Just outside Irkutsk one group of Americans spent a morning touring a gigantic aluminum plant where endless rows of potlines used Angara river power to convert bauxite ore from the Ural Mountains into aluminum ingots. Later, in the same plant, they saw aluminum wire and cable extruded like spaghetti.

The jovial manager of the aluminum plant fielded questions from the Americans like a public relations professional. "How many of you are Communists?" he inquired after one exchange. As so often happens the perfect answer didn't come to mind until that evening.

"We should have answered him with this question," reflected a UCLA professor who teaches Russian history, "Are any of your supervisors capitalists?"

The aluminum plant, tourists were told, employs 3,000 workers, about one-third of them women.

In Siberia the Russians expect their guests to work hard just looking at industry. Most of the visitors from Alaska took an hour-long boat ride across the 10-mile wide Bratsk Sea behind the big dam for a look at Russia's largest pulp mill. The Russians called it a cellulose complex.

Started up in 1966, and still less than half completed, this huge wood processing plant today consumes about three million cubic meters of wood a year. Current production is probably about half that figure and accounts for Russia's current wood pulp production.

Most of the equipment was first class, largely of Swedish manufacture. Despite a work force of 8,000 people, maintenance seemed badly neglected. In just four years the big Siberian mill had taken on the appearance of age. Corroding pipelines, crumbling stairway steps, unmarked holes in the floors, dim lighting and an almost total lack of paint spelled poor housekeeping.

About 44 per cent of the mill's work force are women. They do everything from wearing side arms and guarding the gates to hauling heavy logs off clogged conveyor belts. Most were young.

Russian pulp mills, like their counterparts in the United States and Canada, run around the clock seven days a week.

All Bratsk workers get premium pay for living in Siberia. An average worker earns 240 rubles a month. On the exchange rate that's $264 but these comparisons aren't very meaningful. Starting wages for a young engineer at Bratsk is 140 rubles a month. He (or she) can soon boost that to 350. There are 12 extra vacation days a year for Bratsk workers. Add those to the 24 to 30 days a year that are standard vacation time in the U.S.S.R. and the fringe benefits for Siberian employment take on new importance.

NO ICE, JUST HEAT

In frozen Siberia, who would have expected that a main problem would be too much heat and no ice?

Too much heat! Sweaters stayed in the suitcases and coats were a bother to members of the group on Alaska Airlines' Siberian Tour. In Siberia summer temperatures are said to average around 35 degrees Centigrade, which sounds reasonable, but this translates into about 100 degree Fahrenheit.

All across Siberia the American travelers hit 94 degree weather and the farther north they went, the hotter it got! Thunder showers occasionally soaked some unwary tourist, but most of the rain was at night.

"No ice! If you want ice, come to Siberia in the winter," Sergei, the Intourist representative, told complainers. There are no bars in Siberia accessible to tourists. Drinks are served in the hotel dining room and if it's closed, that's too bad. Room service does not exist.

In the dining room in Khabarovsk, the first stop, where the Moscow-bound party had been greeted with buckets of ice, not a cube remained.

On the other hand, the tap water in the hotels of Irkutsk and Bratsk was very cold and tasty. On the restaurant tables there was nearly always cool apple juice labeled "Yablochny Natural." Coffee and tea were hot and good.

Champagne and white wines were refrigerated and vodka is vodka, the group discovered, even at room temperature. The next cube of ice the party saw was on their jet, homeward bound.

To beat the heat, women with suitcases full of long-sleeved wool knits were off to shop for cotton dresses in Urkutsk.

Irkutsk, a town of nearly half a million, has a wide, blocked-off street serving as a shopping mall, but no large department stores such as Gum in Moscow or the 3-story Pasudsy Otdel magazin in Khabarovsk. Those intent on cooling off picked up simple cotton shifts from the rack, priced at about $6. More plentiful than ready-mades were the yard-goods displays. Russian saleswomen were cutting out patterns for customers and in some stores even stitching the seams for them.

Shoppers at the mall found much to see and photograph but little to buy. In the large jewelry store where Russian girls crowded the counter to be measured for wedding rings, nobody understood English. At the delicatessens, sign language (a sneeze) produced snuff instead of pepper, but tomato juice could be obtained by pointing.

For Americans, prices were cheaper and quality higher in the hotels and airports at the "Beriozka," or dollar stores, so called because only American dollars are accepted.

HOTEL AND HAIRCUTS

In a Russian hotel the "house detective" is the lady who sits at a desk by the elevator shaft on your floor and keeps the keys.

Key in hand, obtained via sign language from the lady who guards the second or third floor, the American couple approach their first Siberian hotel room. What awaits the typical traveler on a Siberian tour: a room furnished like a ship's cabin, tiny, twin-bedded, with built-in furniture. Small oriental rugs are under each bed. Clean, comfortable, not fancy.

Every room has a bath, but when the new tenant opens the door he is back 50 years! Intourist people have been so sensitized by American comments and complaints that nobody seems willing to solve the mystery of who designs and manufactures the Victorian plumbing which is installed even in the Tourist Hotel in Bratsk that opened this year.

Tourists must pay for souvenirs in Russian hotels, as Americans found out in a hurry. At Bratsk, the bus was already loaded when the front door opened, "Will the person who had Room 208 please tell the maid where she put the towel?" Red-faced, the girl opened her airline bag. "I've got it wrapped around a bottle of booze," she admitted. When a can opener disappeared at Irkutsk, a ruble was added to the hotel bill.

Curiosity or necessity sent American tourists in many directions:

High school student Doug Peck of Palo Alto was taken home by a young friend he met in the park, but the boy was embarrassed when his parents were afraid to let the American in. He finally persuaded a neighbor to entertain Doug. Another couple hinted so strongly to their Intourist guide that she took them home. Apartments are generally simply furnished and often overcrowded.

To visit a church or synagogue: In Irkutsk, a special visit to a working synagogue was arranged for the Jacob Browns of Cincinnati. Martin Selig of Seattle went along.

For men only: Barbers are usually women and give snappy razor cuts for about 50 cents.

To find out why tourists want to go to Siberia and Russia, all passengers on this summer's charter flights are being asked by Alaska Airlines to fill out a questionnaire. In advance of complete tabulations, an informal poll of the 60 passengers on the returning jet may indicate a trend.

Curiosity? Nine out of ten wanted to know more about Siberia and the U.S.S.R.

Adventure? Nine out of ten could be characterized as adventurous and most of them probably thought it would be fun to be the first Americans to enter Siberia from the west.

Been everywhere? A surprising six out of ten could definitely be classed as experienced travelers. One lady, who admitted having had half a dozen heart attacks, also said she had been to the headwaters of the Amazon last year.

Family or personal reasons? About one in 10 had a parent or spouse born in Russia.

Professional reasons? About one in 10 was a professional writer, photographer or teacher of Russian language or history.

[From the Anchorage Daily Times, June 5, 1970]

NEW ROUTE LINKS ALASKA TO SIBERIA

The fifth spoke in a wheel of international air routes with Anchorage as the hub will come a step closer Saturday when the first flight is made from this city to Siberia.

The flight will open a new chapter in the history of the city that has successfully claimed to be the most air-minded city under the American flag.

Anchorage will become a gateway to Siberia. As such it will on the shortest route between the United States and Russia. It will be the only route that travellers can hop from his homeland into Russia without transiting another foreign land.

It is expected that when service is established on a regular basis, a heavy volume of traffic will come from the Western states to Anchorage on the short route to Russia through Siberia.

Anchorage has enjoyed the economic and cultural benefits of four other air routes that make the city an international crossroads. They are:

1. To Japan with non-stop service to Tokyo, the largest city in the world.

2. To the Lower 48 states, with non-stop service to New York City, the world's second largest city, Chicago and Seattle.

3. To the British Isles with non-stop service to London, the world's third largest city. Also non-stop service to Copenhagen, Amsterdam, Brussels, Hamburg and Paris.

4. To the Hawaiian Islands, almost due south to Honolulu.

The existing routes have provided a basis for many proud claims by the city—air crossroads, most air-minded and such.

They have given Anchorage the distinction of being the only city in the world with scheduled, non-stop air service to the world's three largest cities.

When the Siberian route becomes a permanent reality the city will have additional distinction as the nation's only gateway to Russia.

The Siberian route is still a thing of the future because this summer's operations will be on a charter basis. The U.S. and Soviet governments have approved only 10 flights.

These are considered the forerunners, or proving flights, for permanent operations. Alaska Airlines, which will fly the charters, has applied for permanent route authority with the hope of winning approval for flights direct from Anchorage to Moscow as well as to Siberian cities.

If the Moscow route is approved it will be the first for a U.S. carrier over the North Pole region. All operations in that area are now by European airlines or Japan Air Lines.

The importance of the Siberian route is obvious to longtime residents of Anchorage. It was the local residents who made Anchorage the air-minded city that it is.

From the first beginnings of aviation, Anchorage encouraged bush operators to make this home base. Through the years the city became the hub of the wheel of air routes that extends all the way to Bethel, Nome and Kotzebue as well as to Fairbanks, Juneau and other communities.

When the U.S. planned international air routes over the North Pacific, the people of Anchorage pressed for this city to be the stopping point in Alaska. The Civil Aeronautics Board approved it for more than the city had dreamed of—direct service to Seattle and also the half-way point on an international route from the East Coast to the Orient.

That was the beginning of international operations. The people of Anchorage subsequently made their city so attractive that European airlines came here for refueling and servicing en route over the North Pole to and from the Orient.

Cultural benefits have been an interesting by-product of the aviation business. Each foreign airline has two crews in Anchorage constantly. They also have other ground personnel and service people.

Each crew numbers about 10 persons, which means the city has 160 foreigners living here. They include 20 each for Japan Air Lines, Lufthansa, Scandinavian Airline System, KLM, Air France, Sabena, British Overseas Air Corporation, and Alitalia.

With that many foreigners in Anchorage, languages from far countries are common in public places. And the airline employes participate in skiclubs and other groups, giving Anchorage social activities an interesting cosmopolitan touch that is unique.

The prospect of regular flights to Siberia and Russia open the way for still more interesting visitors, mostly travellers who can stop over, but someday Russian air crews if and when that nation has operations through the Anchorage International Airport.

---

[From the Anchorage Daily Times, June 5, 1970]

COLORFUL KHABAROVSK NOW NEXT DOOR

300-YEAR HISTORY IN SIBERIA

Anchorage will have some interesting new neighbors when the new air route is operated between Alaska and Siberia.

By neighbors is meant anyone who lives in a city one stop by air from Anchorage. That makes them next door jetwise even though they may be distant milewise.

Anchorage already has more interesting neighbors than most cities of the world. All the population of the world's three largest cities are neighbors because they are just the next stop by jet from here.

So are all the people of Copenhagen, Amsterdam, Paris, Hamburg, Brussels and London. They are all "next door" by jet.

The new neighbors will be residents of the ancient city of Khabarovsk where the history and background of the people are different from any of the others.

Khabarovsk dates back more than 300 years. It was started as a fort in 1652 by an explorer the history books list as Y. Khabarov. He lead the first Russians into the forests and swamps of the lower Amur River.

The fort was strategically located where the Amur River and the Ussuri meet. River transportation was important then and still is today.

In 1689 under the treaty of Nerchinsk the Russians abandoned the fort to China, an action which laid the groundwork for China to still lay claim to the area today.

It was almost 200 years later, in 1868, that the Russians returned to colonize the area. The town was founded as Khabarovka and quickly became focus of the entire Russian Far East activity.

The new town was important because of its position on the crossroads of transportation. The Amur swings around northeastward to the sea where Vladivostok is the famous harbor and naval base for the U.S.S.R.

The Trans-Siberian railroad crosses the Amur River at Khabarovsk making that city an important junction on the line that stretches over 3,800 miles from Moscow on the way to Vladivostok.

At one time the entire Soviet Far Eastern territory all the way to the shore of the Bering Strait opposite Alaska's Cape Prince of Wales, was administered from Khabarovsk but the area has been subdivided for administrative purposes in recent years.

At Khabarovsk there are many modern industries. The city's population may be approaching the 400,000 mark now. It was shown as 322,744 in 1959. The people are employed in large-scale engineering and machine building, ship repairing, oil refining (oil from Sakhalin is brought in by river tanker), timber working, furniture making and many light industries producing clothing and foodstuffs.

The city has several educational institutions that teach everything from medicine to railway operation. There are museums and interesting tours with English-speaking guides.

The city is quite different from Alaska. It has industries that give it an atmosphere quite different from Anchorage. But the huge area of 318,000 square miles around it is very similar to Alaska. Khabarovsk is the capital city for the government of the area, known as a krai.

Northern Khabarovsk krai is almost all dense Siberian taiga which looks much like the Alaska timber dominated by spruce and other evergreens. The population is sparse and development minimal.

Most of the population (1,142,535 in 1959) of the krai resides in the south where the economy is developing rapidly. Coal mining, iron ore, Manganese, molybdenum, wolfran, tin and gold are all taken from there.

FEW NEON LIGHTS

One of the things you will miss in Russia is neon lights.

They are not plentiful because business establishments are not merchandizing their things the way stores do in America.

Each store is government owned. It is quite common for the store to have a modest sign—usually painted and unlighted—outside indicating what kind of a store it is. The sign might say "meat". Or it might say "milk". But that's about all.

---

A 1957 EDITORIAL

The idea of tourist flights from Alaska into Siberia was first proposed in an editorial of the Anchorage Daily Times on Dec. 13, 1957, under the caption, "Airlines Should Seek Routes To Siberia."

The editorial writer of that day outlined a route of travel with points of interest that are now scheduled for the 10 charter flights of Alaska Airlines this summer.

The idea was timely because the Soviet travel agency, Intourist, had just announced that foreign tourists for the first time would be allowed to travel into Siberia as far east as Irkutsk on Lake Baikal. The editorial writer pointed out that a flight from Alaska to Irkutsk would connect with the travellers from Europe to Irkutsk.

Alaska Airlines responded to the editorial immediately by announcing its application for such a route was being filed with the Civil Aeronautics Board. The airline said the route would be virtually the same as the one suggested.

For the 13 ensuing years the idea was left in suspension. It required two governments to give approval and apparently neither one was particularly interested. The airline, however, pressed for action whenever appropriate.

As the two nations made approaches for cultural and educational exchanges, the proposal for moving tourists through Alaska into Siberia came alive in the international discussions.

The original airline request was for permission to fly scheduled operations to Irkutsk. The permission granted is less than that. The Soviets have agreed only to 10 charter flights to Khabarovsk, which is north of Vladivostok.

The airline is hopeful, however, that the experience with the 10 charter flights this summer will be such that the proposal for scheduled operations all the way to Moscow from Alaska will be approved.

[From the Anchorage Daily Times, June 5, 1970]

NEW ADVENTURES IN ANCIENT RUSSIA

(By Norma Spring)

For several years Alaska Airlines has been knocking on Russia's back door—Siberia.

There are reasons for feeling neighborly. At the closest point, the Diomede Islands, there are only two miles and the International Dateline separating the Soviet Union and the United States. And down the coast at Nome, home base of the airline's successful summer and winter Arctic tours, it is only about 150 miles to the Siberian mainland.

Whetted by the public interest in their "Shadow of Siberia" routing between Kotzebue and Nome, when passengers have been catching an intriguing glimpse of the misty Soviet mainland, officials periodically renewed their request. Last year, Charles Willis Jr., chairman of the board, and Robert Giersdorf, vice president of sales, took the initiative in a lively people-to-people Alaska-Soviet Union exchange program with tourism-minded Russians.

Russia's Intourist Department not only heard the knock, but now has opened that back door, and also unrolled a big welcome mat. With the blessing of the Civil Aeronautics Board, final approval was granted for Alaska Airlines to make 11 charter flights from Anchorage, 3,800 miles via the Aleutian Island chain to Khabarovsk, in Siberia.

There Aeroflot, the Soviet airline and Intourist, which handles all tourism in the U.S.S.R., lend a helping hand.

Visitors will have a choice of either an eight-day tour of Siberia at $849 or a 15-day comprehensive tour of the U.S.S.R. at $1,249. Both tours are priced from Anchorage, both are "all inclusive," guided and de luxe by all standards.

The first leg of the journey via Alaska Airline's Golden Samovar Service is geared to put visitors definitely in the mood for Russian adventure.

Traveling out the Aleutian Island chain is a rare and unusual experience in itself. The intinerary follows closely the route of those early rugged Russian explorers, but in the opposite direction. But it took them most of a year to cover the same distance under hardship conditions, while a Golden Nugget Jet flies the route in eight hours in luxurious comfort.

The Aleutian Islands are a rocky archipelago dividing the Bering Sea from the Pacific Ocean. Names like Dutch Harbor, bombed by the Japanese in World War II, and Amchitka Island, controversial site of recent nuclear tests, will sound familiar. One of the last U.S. Islands is Shemya, with a modern jet-sized airport. Next the highlight—when the jet crosses the International Dateline into tomorrow, entering Russia and landing at Khabarovsk in mysterious Siberia.

The eight-day tour includes the Siberian cities of Khabarovsk, Irkutsk, Bratsk and Lake Baikal.

Today's Siberia is a far cry from the bleak land of exile under the tsars. It is Russia's vigorous Far East frontier, with extensive virgin timber stands and barely-tapped natural resources, including hydroelectric power on a grand scale.

In fact, this pristine, pioneer land is amazingly like Alaska and so are its people. They seem recharged by the challenge of the past winter, and in summer attack the season's chores with vigor, renewing themselves with outdoor recreation. The countryside flourishes with lakes, streams, flowers, and prolific bird and animal life. These tours will change the image of Siberia.

Khabarovsk is on the Amur River teeming with barges, steamers, fishing boats, tugs, and swimmers. It is the main-eastern depot for the Trans-Siberian Railroad. It is a fine introduction to frontier Russia, a growing giant of 400,000 people as its modern look emerges from the surrounding heavy forest, or taiga.

From Khabarovsk, a modern Aeroflot jet penetrates deep into the heart of wilderness Siberia. Much of the way to Irkutsk it skirts the border of Mongolia. Hopefully, there'll be a glimpse of the legendary Chinese Wall, now 1,200 years old.

Irkutsk is one of the oldest cities in Siberia, and a flourishing one over the centuries, due to its location on the Angara River. It was at the crossroads of trade routes to the Far East, European Russia, and countries to the east. During the 18th Century, explorers and merchants exchanged supplies here before making the long trek on foot or by sled across Siberia eastward to the ocean where they built small ships of green lumber and set sail for Alaska.

Included in the itinerary is a day's trip to nearby Lake Baikal, which is 5,000 feet deep—the deepest in the world—and supports hundreds of species of aquatic life found nowhere else in the world. One of its mysteries is how seals got started and still exist there thousands of miles from the Arctic Ocean.

Bratsk is the newest city. It surrounds the industrial complexes of Siberia's newest and most ambitious project, the world's largest hydro-electric plant, located on the Angara River. When the Bratsk Dam, an hour's flight from Irkutsk, was started about a dozen years ago, the first builders had to make their way from village to village over animal paths through thick forests.

These eight-day tours will depart Anchorage June 20, July 25, Aug. 29 and Sept. 19.

The 15-day tours depart June 6, June 27, July 11, Aug. 1, Aug. 15 and Sept. 15. They include, besides the Siberian frontier, two entirely different faces of Russia.

First is the fascinating European face, as found in Moscow and the optional tour cities: ancient Kiev and 18th century St. Petersburg (now Leningrad) which may be somewhat familiar to visitors.

Russia's heart is in the Kremlin. There, and in the rest of western Russia has been preserved and revered much of the old and the beautiful. It may surprise some to find that the tour includes a very complete visit through the Kremlin: the Armory, the fantastic St. Basil's Cathedral, Lenin's Tomb.

Then there is the exotic and Oriental face, sampled in a visit to Samarkand and Tashkent, in Russia's Central Asia. Both cities, in warm, desert-like country, on the ancient camel-caravan routes are at the crossroads of traffic and history—the meeting place of many cultures since recorded history. Yes, it is most likely you'll see remnants of camel caravans from the nearby mountains. And the graceful, colorful, domed architecture, assorted national dress, old ruins and native markets are a photographer's delight.

Just about everything possible to see in the time allotted has been crammed into these Alaska Airlines pioneer tours.

---

RIDE ON SUBWAY IS THE BEST BUY IN RUSSIA—

One of the most interesting experiences in a visit to Leningrad or Moscow is a ride in the fabulous subway trains.

The Intourist guides usually ignore the subways, so the visitor must do it on his own. Sometimes the guide can be hired at the end of the touring day to accompany one or more visitors on her own time. Some Communists moonlight.

The subway is a thrill from the time one enters the station and goes by escalator to the train level below. Some of the escalators are unusually long. One in Leningrad goes down several hundred feet. The trip takes one minute and 48 seconds, and that's a long time on an escalator.

At the foot of the moving stairway is a subway station that looks like a palace. The floors are marble and clean. The walls are plaster with decorations in white. Light fixtures are crystal chandeliers.

Some walls have painted murals that are delightful.

The Leningrad subway is newer than the Moscow underground and perhaps more beautiful. It has only 14 stations and is about 16 miles long. Each station, however, is magnificent. Its theme reflects the economic or cultural activity at the surface above it.

It is worth while to get off the subway at each station for a stopover until the next train comes, which is never very long. This affords time for an inspection of each station.

Some have beautiful statuary of bronze. Others have it of marble. Other stations are distinguished by beautiful mosaics that tell the story of that part of the city.

The station below a glass works sparkled with crystal and glass. The pillars were covered with cut glass. Special glass light fixtures gave an air of elegance.

A station below the Baltic Sea train station was done in blue and white marble with designs that simulated ocean waves. An artist could not have done better.

Unless the government has changed it, the fare for the ride is five kopecks which is about five cents. It is probably the best buy in all of Russia.

—BUT SHOPPING AT GUMS IS A TEST OF PATIENCE

Do you want to know how the Russian mother shops for her family?

Gums, the biggest department store in Moscow, is a good place to find out. Try to buy a piece of cheese.

First you walk through the crowds, being jostled here and there and sometimes pushed. If it is raining, be prepared because the roof leaks. Some people open umbrellas.

When you find the cheese booth, get in line. Check your watch to appreciate your experience. It takes up to 15 minutes to work your way up to the counter.

The clerk asks what you want. You point, and avoid the problem of language. She weighs the cheese, wraps it and sets it aside. On a small piece of paper she writes the price. She then points toward the cashier's

booth and you can readily understand she means for you to take the paper to that window and pay for the cheese.

Then you check your watch again because you are now in your second line. It takes another 15 minutes to get to the cashier's window. The girl has a huge abacus with huge beads on it. That's her adding machine.

You hand the cashier your slip of paper and a wad of rubles. She takes what she wants and hands you back the rest of your money, and she gives you a receipt.

Then you go back to the cheese counter. And once more you find yourself in line. Check your watch again. You're going to find another 15 minutes is required to get to the clerk who, when you give her the receipt, will hand you the cheese.

Thus it takes mamma 45 minutes to purchase the piece of cheese. Now she can go to another booth and buy bread to go with it.

## PROBLEMS ON THE CAMPUS

Mr. DOLE. Mr. President, in the Sunday Star of September 27, 1970, the Vice President addressed himself to the problems on campus with special attention to the school year just beginning. I think that the article is indeed timely and I commend it to the attention of the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AGNEW: "LET'S RESTORE THE IVORY TOWER ON CAMPUS"

(By SPIRO T. AGNEW)

As another fall comes to the campus, American colleges and universities are being hard-pressed—from within and without—to define the role they will play in our country's future.

No one, it seems is willing to suggest that they return to teaching students to think and to learn. As controversial as that might seem—"non-relevant" would be the term for it in today's vernacular—I herewith propose it.

In other words, let's restore the Ivory Tower and the classical education that has been the bedrock of our civilization. And let's cease the endless pyramiding of irrelevant electives that give the student only "what he wants" and thus ill equip him for the demanding and competitive adult life he is about to enter.

We need more of the mental discipline that produces scholarship and the moral discipline that restores order and allows scholarship to be pursued.

Now, before I am tagged a Neanderthal who would disrupt or destroy the processes of education, or stifle dissent on the part of young people, let me assure the reader that is not my purpose. Please examine the whole argument.

First, some basic beliefs:

I believe that the current generation of young people has demonstrated that it is one of the most "concerned" generations in our history. But, while lauding their compassion and their motives to achieve justice and progress, I disagree wholeheartedly with their methods. I fear that, as far as their college education is concerned, they are losing valuable time.

I also believe that young people should involve themselves in politics and government—but not at the expense of those on the campus who are there to learn and acquire a bona fide education. The serious students of today cannot concentrate for the shouts of "Action Now!"

There is no better way to achieve "Action now" on social and environmental problems than to run for public office or work actively for the election of someone who shares your beliefs. But I do not think that colleges should suspend their classes while this takes place; and students who are so inclined might do well to engage in such activity on their own time, even if it means removing themselves from college and getting a job.

Finally, I believe that the educated person who has had some practical working experience is much better equipped to solve the problems of this society than a classroom of students, no matter how brilliant they may be.

The problem of pollution is far more likely to be solved by the working scientist than by some present-day agitator or his well-intentioned follower from the campus who stridently draws attention to it but offers no solution.

Working with the scientist will be the businessman who, before he began making a profit, studied humanities that now guide him to the realization that there is more to life than profit-making; the government official who won election by gaining the respect and confidence of his constituents instead of screaming obscenities at them; and the worker who builds rather than destroys.

That is who will solve the problem.

I do not mean that there is not a major role to be played by the academic community but its contribution must come from the research laboratory, the classroom and the library, rather than the street. Above all, its contribution must be the education of those who tomorrow must come to grips with these problems and further speed thier solution.

* * * * *

It is in the last-mentioned, real purpose of college that I feel many of our institutions are falling down today. One of the reasons is they have lost sight of the traditional, time-honored purpose of education.

Our colleges and universities have the same responsibility as the many who have preceded them—to build upon the knowledge of mankind accumulated through the centuries, and to pass this on to their students.

It is their duty and their obligation to preserve and broaden the intellectual heritage of our nation and to educate the future leaders of this country and the world.

They cannot fulfill this role—either for the seven million young people now enrolled on our campuses or the millions more who will soon follow—if they retreat from the basic goals of higher education to become emotionally "involved" with government on issues and problems.

Let me examine for a moment the question of "relevance," this modern trend of yielding to student demands for courses that concern themselves with the major political and social issues of the day. Our major universities now offer such subjects as racial conflict, urban problems, alienation of youth, equality of women, and air pollution to name just a few. They are, in effect, courses in current events.

My feelings about these were well expressed by Bayard Rustin, the civil rights pioneer and executive director of the Philip Randolph Institute, when he commended on widely publicized demands for black-oriended subjects and separate cultural centers on campus.

"Everyone knows that education for the Negro is inferior," Mr. Rustin said. "Bring them to the university with the understanding that they must have (the) remedial work they require. The easy way out is to let them have black courses and their own dormitories and give them degrees. . . .

"What in hell are soul courses worth in the real world? No one gives a damn if you've taken soul courses. They want to know if you can do mathematics and write a correct sentence."

The same thing can be said of practically all so-called "relevant" courses which deal only with current problems out of context. The information gained from such courses will be, for the most part, out of date—irrelevant, if you will—before the student gets out of college or soon thereafter.

It should be the purpose of the college course to teach method and character on the basis of factual information accumulated over the centuries.

Most "relevant" courses, as far as I have been able to perceive, do not give the student the historical perspective that is necessary in making sound judgments. Even in those where the historical background is considered, it is being considered for a special purpose. The student is aware of what he is looking for. This is not what I have always understood to be the broadening experience we normally think of as the purpose of higher education.

* * * * *

In the traditional history course the student learned a body of material, the immediate value of which he did not know. And he was able to make independent judgments, one way or the other, because he was not already committed to a particular viewpoint on a current issue.

That is not so in the "relevant" courses. The material is controversial; the student is more often than not a partisan, an advocate. He may learn persuasion—important, to be sure—but he will hardly be in the best position to learn accurate observation and disinterested analysis.

Yet, this is precisely what college should teach. In everything that is read or learned, what matters are the qualities of character and mind that we retain long after the concrete means to their acquisition have vanished.

The mental qualities to which I refer are the ability to observe accurately, analyze appropriately, and propose solutions to problems that are perceived.

These abilities are hard to acquire in any circumstance, almost impossible where the task is impeded by partisan emotions. Emotional commitment to the material at hand is pleasant; it renders the burdens light by stirring our emotions.

But pleasure and ease are not the goals of college courses. They can be useful, indeed, but for a college course they must be regarded not as goals, but as means. The goals toward which such courses should aim are precisely the abilities which I have mentioned. In my opinion, these goals can most effectively be reached by utilizing material that is not exclusively "hot" or currently controversial.

Such a regimen requires discipline precisely because it is not easy. Whether this discipline comes from without or within matters little. But come it must, and I believe it is the college's duty to inspire it and to nurture it.

* * * * *

The modern trend to let students follow their noses, to "do their own thing," is an irresponsible policy in higher education. This used to be what you did in your spare time. It is becoming a part of the curriculum at many institutions. The courses multiply yearly.

What if the student likes nothing but rock music and New Left cinema? If he can find a few others who feel the same way and organize an assault on the administration building, should he be given these courses?

And after a four-year, heavy diet of such courses, are we going to pronounce him Bachelor of Arts and say to all the world, "This is an educated man!"?

I do not want to indicate here that I do not think there are many matters of legitimate concern to students and reforms that are needed in all of our educational institutions. There are. But the "do your own thing" syndrome is the weakest part of the argument. It has no place in a college curriculum.

There are those who will argue that method can be learned on any material. But as I have said, the purpose of college is not only to learn method; it is also to acquire certain traits of character. In this regard, it very clearly matters what the student reads. I, for one, am not ready to substitute Allen Ginsberg for Shakespeare or Milton.

There is a difference between what is historically significant and what is currently "relevant," and it should be reflected in the sense of values we apply to college courses. The time allowed for education is limited and precious. It should be used wisely. And the faculty, not the students, are the best judges of how it should be filled.

As for the character-building aspect of education, all of us want our children to acquaint themselves with the lofty ideals and noble character that are part of our heritage. It inspires them to reach beyond themselves.

I asked a student once why he studied history, and he told me that it gave him hope, it stimulated him to rise above the petty details of his life. When he felt small—a tiny speck in a world of three billion people—he could draw inspiration from the success of the great leaders of our republic and our world, who also overcame a myriad of problems to succeed. And they came across as individual, real men.

The advocates of relevance insist that the current events themselves are of primary importance, rather than the context in which they exist. This is reminiscent of the old professor who demands that we learn all the "footnotes" of Hamlet rather than its timeless message. What place does this emphasis on the acquisition of details for their own sake have in college education?

* * * * *

Problems are not new in the world. They are always changing. What some may see as a big problem today may well be gone tomorrow. The student must concern himself with acquiring that which will serve him for the next 40 or 50 years, right down to the day he dies.

Some of our problems which we think so new and so momentous are as old as man. There was air pollution in the London of Samuel Johnson, and there was noise pollution in the Rome of Juvenal.

While we have added immeasurably to those problems, we also are moving toward conquering them for the first time in history. The country is concerned. Action must follow.

But again I say, if the pollution problem of today is to be solved, it will be solved by those who are educated and experienced, not by those students who have nothing to offer but their concern.

Today's students can look forward to solving problems many years from now which we cannot even imagine—if they prepare themselves now to deal with unforeseen difficulties.

Part of the preparation they will need is breadth of vision. That is what college offers . . . or what it can offer if its students, faculty and administrators disengage from trying to run the country and concentrate on the time-honored task at hand.

---

## STATEMENT BY THE PRESIDENT'S ADVISERS CONCERNING THE CURRENT FUEL SITUATION

Mr. COOPER. Mr. President, I have read with interest the joint statement by Mr. Paul McCracken, Chairman of the President's Council of Economic Advisers, and General George A. Lincoln, Director of the Office of Emergency Preparedness, this morning making a report of action taken by the Interagency Power and Energy Committee convened by the Office of Emergency Preparedness, methods to deal with the Nation's fuel situation for the coming winter.

In addition to recommendations for the importation of additional quantities of fuel oil on the east coast, the report makes certain recommendations dealing with one of the important causes of our present coal shortage—the unavailability of an adequate number of coal cars for loading and transporting coal. That part of the report on fuel relating to our coal supply is encouraging to Members from the coal producing States and others who are cosponsors of Senate Resolution 457.

The report states that, in addition to the Interstate Commerce Commission's action just taken doubling the demurrage charge for all open top hopper cars standing idle in loading or unloading zones, the ICC will take the following additional actions: First, divert the use of general service hopper cars from alternative loads to the movement of coal. I am informed that this would mean that cars presently carrying sand and gravel or ore, for example, could be diverted from that use to the use of loading and transporting coal; Second, direct the ICC to require the return of all hopper cars within a specified period of time.

In my floor statement last Friday, I noted that the ICC had just announced its continuation in effect of service order 1043 which was scheduled to expire on September 30. Service order 1043 requires, in substance, that all coal cars owned by the Louisville and Nashville, the Chesapeake and Ohio, the Norfolk and Western, and other coal carriers, when made empty at an off-line point, be immediately returned empty without intervening loading to the owning railroad. This order has been helpful to the above carriers, particularly to the L. & N., in expediting the return of cars and in reducing the turn-around time. I am very pleased that the ICC will continue this order in effect for another 90 days to December 31. It would seem to me that if the recommendation of the administration would also require a specified period of time for the return of coal cars this procedure would further speed the return of cars to the owning railroads and would aid the availability and supply of cars to these carriers.

Mr. President, I believe that the report and initial recommendations of the President's advisers in dealing with the serious problems that our Nation faces this winter with respect to a fuel shortage, and possible power shortages are important and helpful, and I invite the Senate's attention to this statement.

The honorable Paul McCracken and Gen. George A. Lincoln deserve credit and thanks for the steps taken to immediately ease and more permanently relieve the fuel shortage and, of course, President Nixon deserves our appreciation for setting in motion these necessary steps.

Mr. President, I ask unanimous consent that the statement of the President's advisers and an article appearing in this morning's Wall Street Journal reporting on the double demurrage charges on overdue hopper cars ordered by the ICC be printed in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

STATEMENT BY PAUL W. MCCRACKEN, CHAIRMAN, COUNCIL OF ECONOMIC ADVISERS, AND GEN. GEORGE A. LINCOLN, DIRECTOR, OFFICE OF EMERGENCY PREPAREDNESS ON THE FUEL SITUATION FOR THE WINTER OF 1970–71

Last May, in anticipation of the tight electric power supply in some regions of the United States this summer, the Interagency Power and Energy Committee convened by the Office of Emergency Preparedness issued a report which identified the problem areas and suggested measures which the electric utility industry, consumers, and the appropriate agencies of the state and federal government should take to avoid a breakdown in service. The power supply problems in the East occurred as anticipated but the contingency planning—primarily by the electric power industry itself, but assisted by federal actions—enabled the general public to continue to be served. We have had difficulties this summer, and as recently as last week, but considering the magnitude of the problem and the potential for truly disastrous consequences, the contingency planning has worked well.

We have continued to study the energy supply situation and find that as winter approaches the nation faces a potential shortage in the supplies of natural gas, residual fuel oil and bituminous coal. The potential shortage appears to be more serious in some regions of the country than in others, but no section is completely immune from concern.

The prospect of an energy shortage arises for many reasons. Demand for energy continues to grow more rapidly than in previous years. And the demand for clean fuels to meet air pollution controls has placed extraordinary demands on natural gas and low sulfur oil and coal. Some coal stockpiles are lower than normal and some electric utilities are unable to build up their inventories, in part because of railroad transport deficiencies. A sharp rise in the worldwide demand for residual fuel oil, especially low sulfur oil, and a shortage of oil tankers caused in part by production cutbacks in Libya and interruptions of an oil pipeline in Syria, have contributed to the tightness in U.S. fuel oil supply. Increased demand and inadequate exploration and development for natural gas are contributing to its scarcity. Nuclear power plants under construction as a source of electric power are behind schedule and this results in greater demands for fossil fuel.

To avert the threatened shortages and minimize their impact will require the combined efforts of all those involved in the production, distribution and consumption of fuels—which means industry, labor, consumers, and State and local governments, as well as the Federal Government. Basically, we rely upon the proven adaptability of the American economic system which must respond to the present and prospective demands for fuel by converting to the production of what is most needed and its delivery where it is most needed. The increaesd national requirements, and the changes in the price structure that arise from them, provide a powerful incentive to this adjustment of supply, which is in fact already taking place. We call upon the petroleum industry, the coal industry, the railroad industry and others, in the light of the national need, to increase the supply of fuels, as is made feasible by economic factors. We also ask the cooperation of the coal miners, the railroad workers and other fuel and transportation workers to help avert a fuel shortage.

While primary responsibility for fuel sup-

ply rests with the industry under our private enterprise system, responsible government should take effective action to avert a shortage of so critical a resource.

It must be recognized that solutions in which the government can play the greatest role are more long-term in nature. Those possibilities are under study by the Energy Subcommittee of the Domestic Council. For the moment we have considered what government can effectively do now—this fall—to facilitate supply.

We have concluded that certain actions by the Federal Government can help both assure the adequacy of supplies and thereby to moderate the increase of prices. We are, therefore, taking the following actions which we believe are necessary to give reasonable assurance of the adequacy of fuel supplies this winter. In view of numerous uncertainties, no one can now be sure that these steps will be adequate. We will keep the situation under continuous observation to be prepared with further measures if they appear to be necessary.

(1) Action is being taken to:

a. Continue the importation through calender year 1971 into the East Coast (District I) of an average of 40,000 barrels per day of No. 2 fuel oil with up to 80,000 barrels per day concentrated in the first quarter heating season.

b. Exempt natural gas liquids from the Canadian crude oil quote limitations. (These natural gas liquids are associated with the production of natural gas which we are importing from Canada.)

c. Permit the importation of liquefied petroleum gas from the Western Hemisphere.

d. Permit topping of imported crude oil used for fuel into District I (East Coast) if all of the topping is used for fuel.

e. Permit topping of crude oil imported for fuel overland from Canada and the use of such topping product for fuel or for reexport to Canada.

f. Relax restrictions on viscosity requirements of crude oil used for burning.

g. Permit transportation of oil from Canada by waterway.

(It should be noted that, for all practical purposes there are currently no restrictions on importation of residual oil into District I (the East Coast) or on importation of crude oil for burning into District I and overland from Canada.)

(2) In order to increase the availability of railroad cars for moving coal, the Interstate Commerce Commission has doubled the demurrage charge for all general service and coal hopper cars standing idle in loading or unloading zones. In addition the ICC will take the following actions as conditions require:

a. Divert the use of general service hopper cars from alternative loads to the movement of coal; and

b. Require the return of all hopper cars within a specified period of time.

(3) We will continue to work closely with the electric power industry through the Federal Power Commission along the lines of our program for the summer to assure that interruptions in electric service are minimized. We urge the State and local governments to meet with the utilities in their respective service areas to review contingency plans for meeting loads this winter in those areas of tight supply identified.

(4) We are continuing to urge the consuming public to practice conservation in the use of energy. The Special Assistant to the President for Consumer Affairs will issue suggestions to the public for doing this. Federal agencies will set an example by instituting programs to conserve fuels in federal installations.

(5) We are establishing a Joint Board composed of the Director of the Office of Emergency Preparedness (Chairman), the Secretaries of Interior and Commerce, and the Chairmen of the Council of Economic Advisers, the Council on Environmental Quality, the Interstate Commerce Commission and the Federal Power Commission, to identify emergency problems in fuel supply and fuel transport and coordinate prompt and appropriate remedial action by the responsible federal agencies.

These steps are in addition to a number of measures already taken, or in the process of being prepared for implementation, to use the transportation and power systems more efficiently and respond to local shortages.

Appropriate federal agencies will be meeting with State and local authorities to discuss this winter's problems in detail. We also expect to maintain close contact with the energy industry in order to assist in averting shortages.

We are taking the actions announced today to avert serious shortages. We believe that with the cooperation and initiative of industry, labor, and consumers an energy crisis can be averted. There are certain other measures we have considered. And, if the measures taken today together with the initiatives of industry fail to avert a crisis, we shall not hesitate to resort to any additional actions necessary.

---

ICC To Double Charge on Overdue Hopper Cars in Wake of Shortage

Washington.—The Interstate Commerce Commission moved to ease a shortage of open-top hopper cars for coal shipments by ordering a temporary doubling of the charges shippers pay railroads for holding the cars too long.

The ICC said that starting Thursday all such demurrage charges for these cars beyond the specified "free" time will be doubled. The increase will expire Dec. 1, the commission said.

It said some railroads can't furnish enough of the coal-hauling hopper cars to coal mines because of an "acute" nationwide shortage of the cars. The shortage is impeding the movement of coal for use by electric-power plants at a time when power is in short supply the ICC said. It said the cars are being held beyond free time for loading, unloading or until instructions for movement are received.

Typical normal demurrage charges for the cars include a range of $5 to $15 a day, depending on length of time held by the shipper beyond the 48-hour free time, for general hopper car charges, and $10 a day beyond the 24-hour free time for cars that are part of "unit" trains.

The commission a month ago put off for seven months, until April 1, 1971, a permanent doubling of demurrage penalty charges for all freight cars held beyond the free-time period by shippers. Railroads had requested that increase.

## NAVAL WAR COLLEGE REVIEW ARTICLE ON DUTY, HONOR, COUNTRY

Mr. THURMOND. Mr. President, the U.S. Military Academy at West Point is our oldest service school for the training of career officers for the Army. An essential element in this education is living in the presence of great traditions, perpetuated by suitable memorializations and the occasional appearance of key war leaders. The motto of this great school is duty, honor, country.

One of the most illustrious graduates of West Point was Gen. Douglas MacArthur of the class of 1903. Returning to the Military Academy on May 12, 1962, to accept the Sylvanus Thayer Award in what was his final rollcall, General MacArthur made an impassioned appeal in support of the patriotic values epitomized in three hallowed words: duty, honor, country.

Though not featured in the main news media of our country at the time, as it should have been, the address was recorded and has now become immortal as an inspiration to all charged with the responsibility for the protection of the United States as well as to those to whom it was addressed.

Unfortunately, today there is a tendency to forget the meaning of these values. Some of the news media and entertainment media and many of our public leaders conspire to downgrade not only the meaning but the very importance of these sacred laws. Patriotism is turned upside down and honor inside out. The very concept of duty, and of sacrifice, and of self-restraint has been eradicated from the moral culture to which so many of our young are subjected. But it is not only some of the young who fail to acknowledge these values. The older generation, too, must bear its share of blame for adopting the attitude of the cynic and for allowing themselves to be given over to the easy paths of pleasure and self-seeking.

The tremendous propaganda campaign to downgrade the military and to destroy its place in the public esteem coincides with the general relaxing of the ethical values in our moral culture. It is fitting, therefore, that we come back to the touchstones embodied in duty, honor, country, and say as General MacArthur said in his historic speech:

> The code which those words perpetuate embraces the highest moral laws and will stand the test of any ethics or philosophies ever promulgated for the uplift of mankind. Its requirements are for the things that are right, and its restraints are from the things that are wrong. The soldier, above all other men, is required to practice the greatest act of religious training—sacrifice. In battle and in the face of danger and death, he discloses those divine attributes which his Maker gave when he created man in his own image. No physical courage and no brute instinct can take the place of the Divine help which alone can sustain him. However horrible the incidents of war may be, the soldier who is called upon to offer and to give his life for his country, is the noblest development of mankind.

Mr. President, in those words of General MacArthur we have summed up the answer to the moral degenerates who scream that our military posture is immoral and that our military allies are criminals. At a time when even the thought of victory has been driven from the minds of many, it is useful to reflect upon the great moral truths to which the soldier bears witness. It is highly significant that many of the violent and irrational of the war critics are precisely those who adopt physical habits and behavior which is an affront to all standards of Christian behavior. I cannot believe that such degenerates have developed a code which is superior to that of duty, honor, country.

It is singularly appropriate that the Naval War College Review, for September 1970, has published a research paper

by Maj. Richard A. Behrenhausen, U.S. Army, a 1961 graduate of the Military Academy and a 1970 alumnus of the School of Naval Command and Staff of the Naval War College, in which he analyzes and evaluates General MacArthur's 1962 address.

Mr. President, in order that Major Behrenhausen's scholarly appraisal of the indicated address may be made available to the Nation at large, especially our educational institutions, I ask unanimous consent that his article, "Duty, Honor, Courage," and General MacArthur's May 12, 1962 address by that title be printed in the RECORD at the conclusion of my remarks.

There being no objection, the paper was ordered to be printed in the RECORD, as follows:

DUTY, HONOR, COUNTRY

*(General of the Army Douglas MacArthur was not only a successful military officer, but was also one of his generation's most talented orators. One of his most eloquent speeches was "Duty, Honor, Country"—an impassioned patriotic appeal to the values of the officer corps—delivered at West Point in 1962 on the occasion of his acceptance of the Sylvanus Thayer Award. In the following article the author analyzes and evaluates this address in the light of contemporary standards of rhetorical excellence.)*

(A research paper prepared by Major Richard A. Behrenhausen, U.S. Army, School of Naval Command and Staff.)

MACARTHUR OF WEST POINT

Duty, honor, country: those three hallowed words reverently dictate what you ought to be, what you can be, what you will be.

On 28 February 1962 the U.S. Military Academy announced that General of the Army Douglas MacArthur had been selected to receive the Sylvanus Thayer Award.

The award, first presented in 1958, is named for Sylvanus Thayer, known to generations of cadets as "The Father of the Military Academy." As Academy Superintendent from 1817 to 1833, Thayer instituted academic and military principles "based upon integration of character and knowledge" that remain today virtually unchanged.[1] The award is presented annually to a distinguished U.S. citizen "whose record of service to his country, accomplishments in the national interest, and manner of achievement exemplify outstanding devotion to the principles expressed in the motto of West Point—Duty, Honor, Country." [2]

On 12 May 1962, General MacArthur made his final journey to West Point. On that day he was to be presented with the award—"a handsome gold medal, a beautiful hand-painted scroll, and a citation." [3] It was a perfect day for a parade. A brilliant sunshine highlighted the spring beauty of the Hudson Valley as the Corps formed on "The Plain" in honor of the general. The ancient parade field was surrounded by more than 30,000 spectators who broke into spontaneous applause as the Old Soldier trooped the line once again.[4]

Following the parade, the award presentation was made in the cadet messhall. Maj. Gen. William C. Westmoreland, the Academy Superintendent, opened the program with a few brief remarks. Next, Lt. Gen. Leslie R. Groves, President of the Association of Graduates, recalled some of the highlights of General MacArthur's career. Following these momentary reminiscences, General Groves then read the award citation. At the conclusion of this reading, the audience, which consisted of 70 distinguished military and civilian guests, more than 300 Academy graduates of the entire 2,400 man Corps of Cadets, rose in a standing ovation as the award was presented. Then, speaking from his heart "without reference to notes or script," General MacArthur "delivered the inspiring address which will occupy forever a prominent niche in the history of West Point." [5] (See appendix I.)

This "moving and inspirational farewell speech" [6] would come to be called "Duty, Honor, Country" and would take its place alongside of "Old Soldiers Never Die" as the most famous public address of General MacArthur.

The purpose of this paper is to conduct a rhetorical critique of "Duty, Honor, Country." This criticism will include investigation in the following areas: a brief sketch of the background of General MacArthur and his methods of speech preparation; an examination of the organizational structure of the speech and of the means of proof employed within the speech; an analysis of the style and delivery of the speech; and, finally, an overall evaluation of the effectiveness of "Duty, Honor, Country" as well as an interpretation of its communicative situation.

No attempt will be made to recount in detail the many and varied highlights of the career of Douglas MacArthur. Called "the greatest front line general of the war," [7] his daring exploits with the famous Rainbow Division during World War I are included in even the most basic history texts. Equally as familiar is his rapid rise within Army ranks to Chief of Staff. His subsequent records as Special Military Advisor to the Philippines, Commander in Chief U.S. Army Forces in the Far East, Supreme Commander of the Allied Powers for the occupation of Japan, and Commander in Chief, United Nations Forces in Korea are, again, both well known and well documented. Yet, because a speaker's "background may well contribute to his ultimate product," [8] certain facets of General MacArthur's life and career merit investigation.

Douglas MacArthur was born in his father's Army headquarters at Arsenal Barracks, Little Rock, Ark., on 26 January 1880.[9] If, indeed, "the military officer raised in such a milieu since childhood might be influenced on a particular issue in a very positive way," [10] then most certainly Douglas MacArthur would have been so influenced. Though he would not officially join the Army until his entrance to West Point in 1899, he "was in and of the Regular United States Army from the day of his birth." [11] He was fond of saying "the first recollection I have is the sound of Army bugles." [12] "His first books had to do with soldiering; his playmates were the children of other soldiers on the post, and like young Douglas their first playground was an Army square." [13]

Douglas' father, Arthur MacArthur, a professional soldier of considerable renown,[14] conducted an early education of his son. In addition to the three R's, he instilled in him "a stern sense of obligation." Douglas learned that he must "always do what was right and just" and that his country "was to come first" in his heart.[15] A frequent topic of conversation between father and son during these early years was "the glories of West Point." As far back as he could remember, his father had expounded on the virtues of the Academy. He frequently brought to his home "some recently graduated young shavetail to tell his son of the customs and regulations of the Academy." [16] Many years later his father would say that "he started Douglas toward West Point the day he was born." [17] General MacArthur likewise recorded in his memoirs "always before me was the goal of West Point, the greatest military academy in the world." [18]

Douglas MacArthur achieved "the fulfillment of all my boyish dreams" [19] when he entered West Point on 13 June 1899. As the son of a famous soldier, he was singled out in advance as a target for hazing. He quickly gained the respect of both his classmates and the upperclassmen by meeting a very rough summer camp hazing "like a man, with fortitude and dignity." In fact he emerged from the camp "with flying colors" and "showed himself a true soldier, easily mastering the military training." [20]

With the rigors of summer camp behind him, MacArthur began to pursue "with direct, unwavering purpose his self-set goal of surpassing his classmates." Militarily he progressed from corporal in his 2d year to company first sergeant in his 3d year. In his final year he achieved the peak of West Point military aptitude—First Captain of the Corps of Cadets. Academically he ranked number one his first 2 years, dropped to fourth in his 3d year, but returned to the top his senior year. His final 4 year average of 98.14 was the highest in the history of West Point.[21] Although not an outstanding athlete, he was proficient enough to win a starting position in the outfield of the Army baseball team and twice earned his "A." (He would wear it on his cadet bathrobe until his death in 1964.) [22] He was particularly proud of scoring the winning run against Navy in 1901 by "stretching" a base on balls into a homerun as a result of shoddy fielding by the midshipmen.[23]

Douglas MacArthur, "a tall, slender, handsome cadet, glitteringly immaculate with maroon silk sash, plumed dress hat, glinting sword, and four gold stripes of chevrons" [24] was graduated from West Point on 11 June 1903 as a second lieutenant of Engineers "prepard to live—or to die—in upholding the oath. Duty, Honor, Country." [25] Sixteen years later he would return, as the youngest Superintendent in its history, with the mission to revitalize an Academy that was "forty years behind the times." [26]

"West Point in 1919 was sorely in need of a leader of energy and vision." [27] Due to wartime demands for Army officers, the normal 4-year curriculum had been shortened to 1 year, leaving the institution in a state of disorder and confusion. In Congress and across the Nation the popular opinion seemed to be "Why have a West Point at all?" Critics of the Academy argued if World War I "was the war to end wars, the war to have democracy for all time, why go on training, at great expense, officers who would never have to fight?" [28] As MacArthur noted in his memoirs, "Even the proud spirit of the Academy had flagged." [29]

The new Superintendent lost no time in beginning his "fight for the very life of the Academy." [30] He immediately went to Washington to plead the Academy's case before Congress. He reminded the legislators that "West Point, together with the United States Naval Academy, represents the apothesis of the public school system" and called for "that spirit of generous foresight that has marked the educational system of the nation for the past century." Much to his relief, Congress supported his views and the Academy was returned to a 4-year curriculum.[31]

General MacArthur then turned his attention to the internal problems that were plaguing the Academy. He bluntly asked the Old Guard of traditionalists, "How long are we going on preparing for the war of 1812?" [32] Although frequently opposed by many academic members of this Old Guard, MacArthur was relentless in his purpose—"to change the objective of the United States Military Academy from its hide-bound and traditional lines to the specialized preparation needed for modern soldiering." [33] In 3 short years he completely rehabilitated the Academy's administrative procedures; revitalized its academic, tactical, and physical training; and laid the long-range plans for the expansion of its physical plant and facilities.

Under General MacArthur's leadership the academic departments, formerly "isolated,

Footnotes at end of article.

tight little islands," were drawn together. Instructors were sent to colleges and universities throughout the land to take courses and observe their educational procedures. At West Point, military courses were adapted to modern needs; scientific courses were brought up to date; classical courses were instituted to be used as cultural foundations; and liberal arts courses received new and greater emphasis.[34]

As Superintendent, MacArthur was also responsible for reviving forgotten or ignored Academy traditions. Under his hand the fourth class system was reestablished, but without the brutality of physical hazing. The old customs of the Corps were not changed, instead, "Plebes would learn them in a decent soldierly way, without arrogance or abuse." [35]

MacArthur also eliminated the frivolous world of the cadet summer camp. In its place he substituted a rigorous military training system. Included in the new system was a program of sending cadets to Regular Army posts as a part of their summer training. In this way he insured that the prospective officers would receive training in the handling of modern weapons and would also encounter realistic field experiences.[36]

Cadet physical training was completely revamped during MacArthur's tour as Superintendent. The old program of optional athletic participation by interested cadets was discarded. He directed that every cadet would engage in an active athletic program and thus established West Point's new famous program of intramural athletics.[37]

Douglas MacArthur gave to and demanded from the Corps the highest standards of honor. He felt such standards were "the only solid foundation for a military career." "A code of individual conduct" was established to maintain "the reputation and well-being of the whole." To Douglas MacArthur this code was a West Pointer's "personal responsibility to his mates, to his community, and above all to his country." It was MacArthur's professed view that "In many businesses and professions the welfare of the individual is the chief object, but in the military profession the safety and the honor of the state become paramount." [38]

Douglas MacArthur's aims as Superintendent of West Point are best described in the Academy code which he wrote. This code begins "To hold fast to those policies typified in the motto of the Academy—duty, honor, country." [39] It is not possible to cite here all of his accomplishments and triumphs as Superintendent in support of these aims. It is significant to note, however, that when he departed the banks of the Hudson in 1922 "the new objective of West Point had been firmly established. A new spirit had been instilled that was to grow and thrive—a new spirit that can be positively identified with MacArthur." [40] No graduate of the U.S. Military Academy would challenge William Ganoe's appraisal, "If Sylvanus Thayer was the Father of the Military Academy then MacArthur was its Savior." [41]

Douglas MacArthur did not like to talk extemporaneously. On those few occasions when someone pushed a microphone in front of him, he most likely had already "carefully rehearsed in his own mind just what he would say." MacArthur was most articulate in carefully prepared speeches. His normal working habit was to write out his speeches in longhand on lined legal-sized yellow paper. While writing he would edit and reedit until satisfied that his finished product would contain the message he wished to convey to his listeners.[42] In a foreword to *A Soldier Speaks*, a textbook prepared for use at the Military Academy, Vorin E. Whan noted, "He often wrote his speeches in longhand in order to collect his thoughts, and then delivered them almost verbatim without using his text." [43]

The general seldom introduced his speeches or attempted to embellish them with any "that reminds me" stories. Normally, his speeches were devoid of any humor. On those occasions when he spoke, his speeches were serious.[44]

General MacArthur's speeches were his own. He never used a ghostwriter.[45] His close friend Carl Mydans observed, "No one ever wrote a line for him . . . and no one ever added a word to or deleted one from anything he had written for the public record." Mydans also recalled observing MacArthur "preparing the communiques, a steady, unhesitant flow of words written in pencil on a pad of lined legal-sized paper, as though it had all been written before and was now only being copied." [46]

In preparation for his famous "Old Soldiers Never Die" address to Congress in 1951, General MacArthur followed his normal habits of speech preparation. He worked "through the long day and into the night" honing the speech.[47] Yet, incredibly, "Duty, Honor, Country" does not fit this pattern. It appears to be a remarkable, extemporaneous speech spoken from the heart without any formal preparation. In commenting on the occasion, MacArthur stated simply, "I had no prepared address." [48] Dignitaries who were seated at the head table that day unanimously concur that the speech was delivered "without reference to notes or script." [49] The professional opinion of the editors of the text, *A Soldier Speaks*, that "Duty, Honor, Country" "was delivered extemporaneously and had not been written out by General MacArthur prior to its delivery at West Point" [50] remains unchallenged.

THE SETTING

"The long, gray line has never failed us. Were you to do so, a million ghosts in olive drab, in brown khaki, in blue and gray, would rise from their white crosses, thundering those magic words: duty, honor, country."

West Point is awe inspiring. "It is situated between the lofty Crow's Nest of New York's Bear Mountain and the venerable Storm King Mountain of the Highlands." Flowing below its "noble heights" is the majestic Hudson River, guarded since Revolutionary days by historic Fort Putnam, a familiar haunt of generations of cadets and their ladies.[51]

But the inspiration of West Point is not derived just from its magnificent physical setting or its genuine ascetic beauty. In time, the cadet, exposed to these on a daily basis, comes to regard them more with pride than awe. It is, instead, the incessant, never heard yet never silent, footsteps of the Long Gray Line which stir the heart and quicken the pulse of the cadet. "For West Point is not battlements; not ivy and cloistered halls; not parades; those things are stage-setting." [52] West Point is the joy and despair, the triumph and defeat of that ever-lengthening Long Gray Line.

Cadet parades on "The Plain" seem to be joined by those ubiquitous spirits from another day. The cadet, passing under the long, mournful shadow of Battle Monument which commemorates the Civil War, hears again the rollcall, "Grant, Lee, Jackson, Early, Sheridan, Sherman . . , all present and accounted for, sir!" There is no escape from tradition at West Point. The Long Gray Line is that tradition. The West Point cadet eats in a messhall faithfully guarded by Sylvanus Thayer. He sleeps in the same room, organized in the same manner, as did "Black Jack" Pershing. He studies under the watchful eye of George Patton—who guards the library as a lone sentry, binoculars draped jauntily around his neck, pearl-handled pistols at his side. On those few occasions when the rigors of West Point are momentarily forgotten, the cadet enjoys a limited social life within the confines of staid old Cullum Hall—on whose walls are inscribed the names of every single graduate who has ever given his life in defense of his country.

Although every graduate of the Military Academy is considered a member of the Long Gray Line, few, if any, ever truly join its ranks until their death. Douglas MacArthur was one of those few. Returning to West Point on that lovely spring day, he was not just a graduate, albeit a distinguished one. He was one of "them" Douglas MacArthur was a living part of the tradition of West Point which is so zealously passed to each succeeding fourth class. His portrait stood guard over the stone portals of the gymnasium, saluting each cadet as they passed through or paused to read the maxim he had had carved in the stone:

Upon the fields of friendly strife,
Are sown the seeds that,
Upon other fields, on other days,
Will bear the fruits of victory.

If a cadet stopped to view the long line of official portraits of former Academy Superintendents, one striking figure of a soldier, wearing a crushed cap and proudly displaying the Rainbow Division shoulder patch, seemed to tower above all others. Much of the modern-day lore of West Point is centered about Douglas MacArthur. His deeds and words are legend at West Point and in many cases a part of the "required" tradition. Even the newest cadet knows verbatim the text of his "Beat Navy" telegram of 1949: "From the Far East I send you one single thought, one sole idea—written in red on every beachhead from Australia to Tokyo—there is no substitute for victory."

A ripple of laughter must have passed along the Long Gray Line that day when he began his speech: "As I was leaving the hotel this morning, a doorman asked me, Where are you headed for General?' And when I replied 'West Point ' he remarked 'Beautiful place. Have you ever been there before?' "

In analyzing a speech "to unearth the nature of the occasion is also a task of the critic." [53] Correct identification of the occasion can lead to "influences on the subject, the speaker, and the speaker's purpose." [54] Occasions can be categorized into such types as ceremonial, required, routine, or perhaps spontaneous. But "whatever the occasion it is significant in rhetorical analysis and evaluation." [55]

Although the presentation of the Thayer Award was made to Douglas MacArthur at the end of a day of ceremonies, the occasion was not truly ceremonial. It was more than that; it was parochial. The award, named for "The Father of the Military Academy," was presented to an individual commonly called "The Savior of the Military Academy." The selection of the awardee had been made by a committee of seven distinguished Academy graduates.[56] The actual presentation was made in the historic cadet messhall before an audience of 2,800 cadets and graduates of the Academy. Finally, the award presentation, normally made in early March, was postponed until May in order to include a tradtional Corps review in the occasion. (The first time this had ever been done.) [57] It would have been heresy for General MacArthur to have selected any topic other than West Point for his acceptance speech.

The occasion does not alone "mold the speaker's ideas," so too does the audience. There are four simple categories of audience reaction: completely favorable, completely opposed, apathetic, and uncommitted. "Very seldom, however, can the critic find a pure reaction in any one audience." [58] Audiences

Footnotes at end of article.

neither come from a vacuum nor assemble in one. They come with preestablished systems of values, conditioning their perceptions." [59]

These learned opinions are probably true in the large majority of rhetorical analyses, but they seem somehow out of tune with the audience that was assembled at West Point on 12 May 1962. This was an entirely homogeneous audience, tightly packed in the artfully conceived vacuum that is West Point. Together with the speaker, they formed an integral part of the day's activities. They stood tall and proud as the old general passed by their ranks to the tune of "those treasured chants of World War I . . . 'Tipperary,' 'Smile Awhile,' 'K-K-K-Katy,' and 'My Buddy.' " [60] Then, as the nostalgic sounds of "The Official West Point March" flooded The Plain, General MacArthur stood tall as the cadets passed in review. Later, as the Corps gathered in the messhall for the noon meal, they knew that that withered old man in the dark business suit had once been "the handsomest cadet that ever came into the Academy." [61]

The values which were dominant in that group were obvious. They were the values of "duty, honor, country"—the motto of West Point. Both General MacArthur and his audience shared these same values. Douglas MacArthur's farewell speech was not designed to introduce any new values. It was intended to reinforce the cadets' preestablished values of "duty, honor, country." [62] The effectiveness of "Duty, Honor, Country" in accomplishing this task was significantly increased as a result of the cadet identification with MacArthur.

ORGANIZATION AND MEANS OF PROOF—"DUTY, HONOR, COUNTRY"

"Yours is the profession of arms, the will to win, the sure knowledge that in war there is no substitute for victory, that if you lose, the nation will be destroyed, that the very obsession of your public service must be duty, honor, country."

A well-organized speech should be divided into three distinct parts: introduction, discussion, and conclusion. Each of these parts should fulfill certain specific requirements. [63]

The introduction of the speech should serve to (1) gain attention; (2) present a clear statement of the speaker's purpose; and (3) provide a thesis which suggests the main point of the speech. These three points may be usefully summarized by the terms: attention-getter, orientation, and thesis statement. [64]

The empathy between General MacArthur and his West Point audience was so strong that an attention-getter, as such, probably was not necessary in "Duty, Honor, Country." However, as a speech perfectionist, General MacArthur did choose to use an attention-getting step. The technique he employed was "reference to the occasion." Following his opening anecdote the general began "No human being could fail to be deeply moved by such a tribute as this. . . ." He continued by interpreting the award as "not intended primarily to honor a personality, but to symbolize a great moral code." MacArthur then characterized the code as "an expression of the ethics of the American soldier" while expressing his pride and humility at being thus integrated into such a noble ideal.

The orientation and thesis statement are frequently confused. The orientation should tell the audience what a speaker is going to do while the thesis statement does it. The thesis statement "is the assertion of an idea or an opinion. It is in effect a one-sentence summary, the one statement in your speech which all others support, either directly or indirectly." [65] In "Duty, Honor, Country," General MacArthur reversed the normal speech procedure, by first stating his thesis and then explaining his purpose (orientation).

After completing his reference to the occasion, MacArthur stated his thesis, "Duty, honor, country: those three hallowed words reverently dictate what you ought to be, what you can be, what you will be." Following the statement of his thesis, the general explained the purpose of "Duty, Honor, Country." This orientation was extremely effective, because, despite the general's well-known speech talents, he chose to explain his purpose in a negative manner. "Unhappily, I possess neither that eloquence of diction, that poetry of imagination, nor that brilliance of metaphor to tell you all that they mean." In this manner MacArthur completed his rhetorically sound introduction and proceeded on to the discussion portion of "Duty, Honor, Country."

In examining the discussion or body of a speech, a first consideration is whether or not the speaker supported the idea suggested in the introduction. [66] In "Duty, Honor, Country," General MacArthur never wavered from his initial thesis statement. Four different times within the body of the speech he made specific reference to his thesis. Each time the technique of repetition and restatement was used: [67] "Always for them: duty, honor country . . . the very obsession of your public service must be duty, honor, country. . . . Your guideposts stand out like a tenfold beacon in the night: duty, honor, country . . . thundering those magic words: duty, honor, country."

Although restatement was his primary rhetorical tool in supporting the thesis of "Duty, Honor, Country," MacArthur also effectively employed other means of verbal support. The general was "a conscious speech stylist" who sprinkled his speeches with liberal use of imagery and metaphor. [68] In "Duty, Honor, Country" he made frequent use of both and in one stirring passage combined the two:

"From one end of the world to the other, he has drained deep the chalice of courage. As I listened to those songs, in memory's eye I could see those staggering columns of the First World War, bending under soggy packs on many a weary march, from dripping dusk to drizzling dawn, slogging ankle-deep through the mire of shell-packed roads; to form grimly for the attack, blue-lipped, covered with sludge, and mud, chilled by the wind and rain, driving home to their objective, and, for many, to the judgment seat of God."

The powerful effect of MacArthur's use of metaphor and imagery to create and recreate is unmistakable in that passage and throughout the speech.

An additional technique of verbal support used by General MacArthur in "Duty, Honor, Country" was comparison. Using this technique he explained to the cadets what the words "duty, honor, country" could do for them, ". . . they teach you to be proud and unbending in honest failure, but humble and gentle in success . . ."

To complement his very skillful use of verbal support, MacArthur employed one additional principle of rhetoric within the body of the speech. He began his discussion by immediately refuting any opposing points of view of his thesis. To do this he resorted to parallelism [69] to dispense with "the unbelievers" who might say that duty, honor, country "are but words, but a slogan, but a flamboyant phrase." He further warned, "Every pedant, every demagogue, every cynic, every hypocrite, every troublemaker, and, I am sorry to say, some others of an entirely different character, will try to downgrade them, even to the extent of mockery and ridicule." This identification of a very different view of duty, honor, country was used by MacArthur to begin his discussion. Having thus admitted that some persons might challenge his concept of duty, honor, country, he pushed the thought aside and began his impassioned defense of that concept. Throughout the remainder of his discussion, the general artfully applied a variety of verbal support in reenforcing his thesis statement. As with the introduction, the discussion was a model of rhetorical organization.

"An effective conclusion generally consists of two parts: a summary and a direct indication of how the speech may be used." [70] The conclusion of "Duty, Honor, Country," does not fit the classical mold of "telling them what you told them," but it is effective nonetheless. The start of the conclusion was unmistakable as the general spoke, "The shadows are lengthening for me," as with the discussion, the conclusion is rich in imaginary and metaphor. "I listen vainly, but with thirsty ear, for the witching melody of faint bugles blowing reveille, of far drums beating the long roll. In my dreams I hear again the crash of guns, the rattle of musketry, the strange mournful mutter of the battlefield." As the speech neared its denouement, MacArthur injected a very brief summary by the use of restatement—". . . always I come back to West Point. Always there echoes and re-echoes: duty, honor, country." The aged general then ended with an emotional personal intention, "I want you to know that when I cross the river, my last conscious thoughts will be of the Corps, and the Corps, and the Corps."

It was not necessary for General MacArthur to include in his conclusion how "Duty, Honor, Country," could be put to use by the assembled audience. Throughout the discourse, its usefulness was unmistakable. It would stand, from that moment on, as an eloquent defense of the West Point motto—duty, honor, country. [71]

"Duty, Honor, Country" proved to be an excellent example of how a good speech should be organized. It follows the established pattern of introduction, discussion, and conclusion. Both the introduction and the discussion are models of textbook accuracy in their application of rhetorical principles of organization. While the conclusion deviates somewhat from this type accuracy, it is still superb in its impact and adds to rather than detracts from the overall effectiveness of the speech.

"Whatever end the speaker has in mind, his specific purpose is to speak with persuasive effect toward that end." [72] There are three methods available to a speaker to achieve his specific purpose. These methods are usually referred to as means of proof and are categorized as ethical, logical, and emotional.

"Ethical proof refers to the observable references in a speech that tend to indicate the character and the integrity of the speaker." [73] In employing the techniques of ethical proof, or ethos, the speaker is simply saying "listen to me because of who I am." [74]

Unquestionably MacArthur "enjoyed high ethos with the cadets." [75] To those young men who accepted the rigors of West Point for the sole purpose of embarking on a military career, Douglas MacArthur was the epitome of the military profession.

It would be impossible to say whether West Point or the Army was closer to General MacArthur's heart. "He lived in and for the Army" and "for the abstractions in the West Point motto—Duty, Honor, Country." [76] Most likely he himself could not truly have made such a judgment. He spoke eloquently of both. "No West Pointer had more loudly acclaimed or more forcefully demonstrated his love for his Alma Mater than did Douglas MacArthur." [77] MacArthur was also always lavish in his praise of the soldier, "the noblest development of mankind." [78] In his autobiography he would describe his "faithful men-at-arms" as "the driving soul of Americanism." [79] Such a judgment is not necessary. A cadet is a soldier. A West Point-

Footnotes at end of article.

er's first oath of allegiance is to the Army and his country. When MacArthur spoke of "the soldier" in "Duty, Honor, Country" he was speaking of those in the messhall, those they would lead and those they would follow.

The dominant ethical proof in "Duty, Honor, Country" is credibility of source.[80] The general, whose personal integrity and sincerity were unchallenged by the audience, "was fully aware of ethos factors." [81] He used his credibility throughout the speech, and in this passage it is classic: "In 20 campaigns on a hundred battlefields, around a thousand campfires, I have witnessed that enduring fortitude, that patriotic self-abnegation and that invincible determination which has carved his statute in the hearts of his people."

General MacArthur further strengthened his ethos with the audience by using the ethical appeal of reference to the Deity. He reminded the cadets that in war many drive home not only "to their objective" but "to the judgment seat of God." Later, in describing "the soldier" he spoke these words, "In battle and in the face of danger and death he discloses those divine attributes which his Maker gave when he created man in his own image. No physical courage and no brute instinct can take the place of the divine help, which alone can sustain him."

Emotional proof, "to convince and stimulate through appeals to emotion" [82] is a second means of proof. Here the speaker is saying "listen to me because, as a human being, I share certain motives, certain emotions, certain ambitions, with you." [83] A speech needs emotional appeal if it is to stir its audience. The speaker is able to develop this proof "by using words which refer the hearers to specific emotion or by describing and/or suggesting the emotions, moods, and feelings he wishes his audience to feel." [84]

In "Duty, Honor, Country" both types of emotional proofs are evident. In the introduction MacArthur admitted, "no human being could fail to be deeply moved by such a tribute." Again he struck an early emotional chord with the declaration, "it fills me with an emotion I cannot express." As he described the values of duty, honor, country, MacArthur included the phrase, "a vigor of the emotions." The general also clearly spelled out those emotions he wanted the audience to feel, "they create in your heart the sense of wonder, the unfailing hope of what next, and the joy and inspiration of life."

As discussed earlier, the conclusion of "Duty, Honor, Country" is overwhelming in its emotional impact. When the legendary Old Soldier soliloquized, "My days of old have vanished tone and tint. They have gone glimmering through the dreams of things that were. Their memory is one of wondrous beauty watered by tears and coaxed and caressed by the smiles of yesterday" both he and his audience reached the emotional breaking point. Many in the audience were moved to tears.[85]

"Duty, Honor, Country" was delivered in an emotion-packed atmosphere. It was spoken from the heart and with unabashed sentiment. It would not be a mistake to conclude that every single word of the speech was touched by emotion.

Even though a speech is strong in ethical and emotional proofs, a speaker should not neglect "the logical presentation of facts, using sound modes of support." Such logical support "gives credence to the thesis of the speech" as well as adding to audience acceptance.[86] When a speaker employs logical proof he is telling an audience "listen to me because of what I know." [87] Common types of logical support include events, statistics, examples, comparisons and contrasts, definitions, and testimony.[88]

"Duty, Honor, Country" contains several good examples of logical proof. The general used comparison in defining what duty, honor, country can do, "They teach you . . . to learn to laugh, you never forget how to weep. . . ." Metaphors, short, compressed comparisons, were used throughout the speech by MacArthur. "You are the leaven which binds together the entire fabric of our national system of defense." Also used frequently by General MacArthur were imagery or hypothetical examples. In "Duty, Honor, Country" it is sometimes difficult to determine where imagery ends and empirical evidence begins. Both, however, are examples of logical proof. A final example of MacArthur's use of logical support is his continual definition and redefinition of the concept of duty, honor, country during the speech.

"Duty, Honor, Country" is replete with correct examples of rhetorical means of proof. The speech is primarily ethical and emotional in its appeal, but General MacArthur also effectively interspersed logical proof. The worth and validity of these proofs are exceptional in "Duty, Honor, Country."

Style and evaluation—always victory, always through the bloody haze of their last reverberating shot, the vision of gaunt, ghastly men, reverently following your password of duty, honor, country.

Two additional rhetorical aspects remain to be examined before determining the final evaluation of "Duty, Honor, Country." They are style and delivery.

"Delivery is concerned with two areas of evaluation: voice and bodily action." [89] "Duty, Honor, Country" was delivered in 39 minutes. During a large majority of this time, General MacArthur spoke from behind a lectern making only an infrequent hand gesture.[90] This was his normal speaking pattern. "His voice is never loud but there is a pulse in it that holds the listener far more effectively than heavily accented perorations or gestures. MacArthur never gestures." [91] It should be pointed out that MacArthur did not need to resort to gestures to make his speeches effective for he possessed that great quality of charisma. Although "he grew, eventually, physically, weak, his powers were undiminished, his august presence unmistakable." [92] Even at age 82 he was still capable of producing a "throat-catching sense of excitement." [93]

General MacArthur spoke slowly and deliberately without an accent to mark him as a native of any particular part of the country.[94] His voice had a "low, compelling resonance." [95] The general was twice gassed during World War I. His larynx never recovered from these gassings, and, as a consequence, although its tone was sonorous, his voice had a "curious tremolo, a manner of delivery which those who did not understand the background would wrongly attribute to affectation." [96]

MacArthur's voice was clear and distinct as he began "Duty, Honor, Country." He related the doorman anecdote with a tone of levity. (Such use of humor was extremely uncharacteristic of MacArthur's normal speech pattern.) When the laughter had subsided, however, his voice turned serious. The general now spoke slowly and deliberately without inflection. As he spoke his thesis statement he emphasized the words "duty-honor-country" pausing slightly between each as if for strength.

MacArthur then continued in a slow and deliberate manner. He departed from his monotone when he warned with rising inflection that some "unbelievers will say they are but words." As he continued "pedant," "demagogue," "cynic," "hypocrite," and "troublemaker" all received speaker emphasis. His voice then trailed off, becoming somewhat hoarse and with the words "officer and gentleman."

The general's voice took on renewed vigor as he told the cadets of the troops they would one day command. The phrases, "American man-at-arms," and "that invincible determination" both received powerful emphasis in a resonant, rich voice. Listening to this portion of the speech is like hearing the Douglas MacArthur of an earlier, more glorious day.

When MacArthur began to paint his vivid imagery of "those staggering columns," his voice wavered almost as if he himself was "bending under soggy packs." At this point he appeared to be saving his emphasis for the words, "duty, honor, country." Each time he spoke them his voice was resonant, his enunciation clear. Once, midway through his address he paused, an inexplicable 12-second pause, apparently group for the phrase, "the Divine help." As the general neared the end of the discussion, his voice became strong again and his enunciation particularly clear. Once more, the words, "duty, honor, country" were heavily emphasized and then suddenly in dramatic, whispered tones "Only the dead have seen the end of war."

Pausing once more, "General MacArthur stepped to the side of the lectern, his hand resting on it." [97] After 18 seconds of unearthly silence, he began the emotional conclusion in a low, almost hushed, voice. As Douglas MacArthur uttered the words, "duty, honor, country," for the last time, it was as if he had lovingly caressed each with his voice. Then having pledged his "last conscious thoughts" to "the Corps, and the Corps, and the Corps," General of the Army Douglas MacArthur whispered softly, but with an unmistakable tone of finality, "I bid you farewell."

The delivery of "Duty, Honor, County" was masterful. It was a perfect complement to a well-organized, emotion-packed speech. To have expected anything less than an extremely effective delivery would have been foolish for "MacArthur understood the uses of theater; as he once put it, it is sometimes good to be 'a bit of a ham' in order to convince large audience." [98]

"Style is intrinsically woven to the effect the speaker desires." [99] Definitions of style run the gauntlet from Jonathan Swift's "proper words in proper places" to Buffon's "Style is the man himself." For the purpose of this discourse, style will be defined as an individual's "unique way of using the resources of the English language." [100] However, regardless of its definition, to be effective, a speaker's style must be clear, appropriate, and vivid.[101]

It has been said of Douglas MacArthur that "fancy language came to him as readily as Cherokee to a Cherokee." [102] MacArthur possessed an extraordinary vocabulary. He also had a gift for making impressive phrases into slogans that would be remembered. The MacArthur speeches had "a touch of poetic phraseology and rhythm." [103] In "Duty, Honor, Country" such language and phrases are abundant. "They give you a temper of the will . . . a freshness of the deep springs of life, a temperamental predominance of courage over timidity. . . ."

When the general spoke "there were no 'uhs' or 'ohs' to halt or clog his almost classical sentences, which flowed steadily like a smooth river without the splash or splatter of rapids." [104] Douglas MacArthur enjoyed talking to the degree that he monopolized most conversations. John Gunther referred to him as "an old-fashioned monologist, par excellence." Gunther admitted, however, "I have seldom met anybody who gives such a sense of the richness and flexibility of the English language; he draws out of it—like Winston Churchill—as out of some inexhaustible reservoir." [105]

The MacArthur style, as with the man himself, was not without its critics. Charles Marshall believes "Words often got out of

Footnotes at end of article.

hand." He also writes that MacArthur "was prodigal with such terms as insurmountable, unsurpassed, eternal and supreme—where strong, good, long-lasting and high would have served better." It is Marshall's judgment that "the Byronic streak needed curbing."[106] It should be noted, however, that a style that uses such words as divine, eternal, supreme, et cetera, adds to the ethical appeal of the speech.

Unlike Marshall, most critics of the MacArthur style fail to realize the fact that his style never varied. Whether he was delivering a prepared address or simply engaging in polite conversation it was "always an experience to hear MacArthur talk." Even in his private talks the general was "a spellbinder" who "used archaic words and terms as one might a rare spice—for extraordinary flavor."[107] Tommy Davis, aide and confidant to MacArthur for over a decade, remembers numerous instances of the general's "spontaneous grandiloquence." Once, surprising an unauthorized dalliance, MacArthur ordered, "Eject that strumpet forthwith." Davis recalls on another occasion the general sent a bewildered subordinate scurrying to the dictionary by informing him, "You have given me umbrage."[108] The MacArthur style was very apparent when he "faded away" in his speech to Congress. His critics accused him of "hamming," "but in truth he was simply using the legitimate postures of oratory to express what he himself felt."[109]

The text of "Duty, Honor, Country" illustrates the fact that, indeed, "MacArthur was a conscious speech stylist." Throughout the speech, "imagery, metaphor and elegance of language are pronounced."[110] For many speakers, "the eloquence of a Churchill may not be appropriate."[111] For MacArthur such speech eloquence was both in character and fitting for the occasion. Douglas MacArthur would never have said, "I can still remember the noise of the battlefield." The MacArthur description would be, "In my dreams I hear again the crash of guns, the rattle of musketry, the strange, mournful mutter of the battlefield." That was the MacArthur style. Without it, "Duty, Honor, Country" would have long since been deposited in some forgotten repository of forgettable speeches.

In a critique of "Old Soldiers Never Die," Craig Baird, a noted evaluator of rhetoric, observed that "General Douglas MacArthur will be ranked as one of America's outstanding military orators. . . . He is an orator by temperament, by habit, and by long exercise." Baird also concluded that despite its logical texture, "Old Soldiers Never Die" was primarily personal and ethical.[112] That same comment is entirely applicable to "Duty, Honor, Country." The general's limitations were also essentially the same in both speeches. MacArthur's delivery was sometimes too sonorous. On occasion, his phrasing was more volatile than meaningful.[113] But these few shortcomings did not detract from the manifold skills Douglas MacArthur brought to the lectern on 12 May 1962. Such minor defects could not penetrate the empathy that existed between the general and his audience nor could they break the spell that his manner and eloquence created. "In manner and bearing he went back to principles symbolized by aspiring young men, flashing swords, and the shiver of bugles in the air." A man of eloquence he spoke words like Honor, Courage, and Country without embarrassment."[114]

Many of the thoughts and much of the same verbiage of "Duty, Honor, Country" can be found in earlier MacArthur speeches and communiques. In a 1936 speech in Manila, General MacArthur eulogized "the soldier" in much the same manner and with similar words as he did in "Duty, Honor, Country." At one point the general used the exact same phrase, "I do not know the dignity of his birth, but I do know the glory of his death."[115] This phrase had first appeared in his lexicon during a speech given to the 1935 reunion of the Rainbow Division. It would be used again in posthumously decorating Capt. Colin Kelly in 1941[116] and at Punchbowl National Memorial Cemetery, Honolulu, in 1951 while delivering an address en route to Washington. (Most likely General MacArthur first came upon the words in his wife's hometown of Murfreesboro, Tenn., where they are engraved on a battle memorial.)[117]

MacArthur liked to tug at the strings of emotion by announcing he was in "the twilight" of his life. As early as 1941 he wrote to a friend that he was fortunate to have had a son "in the twilight period of my life." Ten years later the general informed Congress, "I address you with neither rancor nor bitterness in the fading twilight of my life."[118] In "Duty, Honor, Country" he spoke simply, "the twilight is here."

It would be fallacious to expect Douglas MacArthur not to repeat or paraphrase old familiar thoughts and utterances on an occasion so fraught with emotion as was the presentation of the Thayer Award. MacArthur's love and devotion for West Point never wavered. In a 1951 Academy Sesquicentennial message he stated, "And as I near the end of the road, what I felt when I was sworn in on the Plain so long ago, I can still feel and say—that is my greatest honor." Again, in a 1953 address commemorating Founder's Day, MacArthur said, "This anniversary stirs many poignant memories in me—memories which in many respects are common to all graduates of the Military Academy. They take each one back to that ceremony on The Plain at West Point when he entered the military service and dedicated himself to duty, honor, country."[119] His mind must have been flooded with these and many more memories when he accepted the Thayer Award, the highest accolade of his beloved alma mater.

"Duty, Honor, Country" had a profound effect on those who were privileged to hear it. The speech was intended to reenforce cadet values which occasionally become hazy as a result of the strain placed on the cadet by the normal rigors of the military Academy. The organization, style, and delivery of the address were all exceptional. Each in its own way contributed mightily to the extraordinary effectiveness of "Duty, Honor, Country." Douglas MacArthur was eminently successful in imbuing the cadets with renewed and positive determination to devote their lives to the motto of West Point—Duty, Honor, Country.

On 15 October 1969, a Boston television channel simultaneously broadcasted a recording of "Duty, Honor, Country" against a backdrop of the day's Moratorium events. To the casual viewer this may have seemed a rather quixotic gesture done, perhaps, solely for artistic merit. Such is not the case. In evaluating "Duty, Honor, Country" it becomes apparent that Douglas MacArthur was speaking not just to his West Point audience but to all.

In 1962 the United States had not yet become mired in the quagmire of Vietnam, but, as in any peacetime situation, critics of the military were numerous.[120] Answering the old charge of warmonger, General MacArthur sounded "the ominous words of Plato . . . 'Only the dead have seen the end of war.'" Three decades earlier MacArthur had performed his duties as Chief of Staff in a similar climate of public opinion. In 1933 he warned the graduating seniors of West Point, "Pacifist habits do not insure peace nor immunity from national insult or aggression." The general also decried the "unabashed and unsound propaganda" produced by the "muddled thinking" of "peace cranks."[121]

It is not possible to evaluate the effect that "Duty, Honor, Country" had on the 1969 viewing audience. However, its potentially significant effect on an audience of an entirely different bent than the cadets of West Point should not be discounted. This potentially powerful impact has already been demonstrated. Less than one month after his impassioned defense of duty, honor, and country, General of the Army Douglas MacArthur was honored as the "outstanding American military leader" of the 20th century. The selection was made as a result of a vote of 8,000 college students across the nation.[122] The meaningfulness of "Duty, Honor, Country" was not limited solely to West Pointers or even the Army; its effect was felt by all Americans. As such, it stands as a model of rhetorical excellence.

CONCLUSIONS

But in the evening of my memory always I come back to West Point. Always there echoes and re-echoes: duty, honor, country.

Abraham Lincoln, Douglas MacArthur, John Brown, Joseph McCarthy, Mark Anthony, Norman Thomas, Frederick Douglass, Thomas Jefferson—we know these men for their different political, social, and military roles. But . . . they share a similar role, that of the advocate, the man who has a point to make and a desire to persuade his fellow man and hence turns to rhetoric to discover the means of persuasion available to him.[123]

During the course of his distinguished career, "General MacArthur proved to be one of the Army's most articulate spokesmen and one of his generation's most talented orators."[124] "Duty, Honor, Country" did not receive the immediate nationwide publicity or subsequent critical investigations of "Old Soldiers Never Die." This is understandable since one was delivered to the Congress and the Nation, while the other was spoken in the closed atmosphere of the Military Academy. Yet, in retrospect, "Duty, Honor, Country" seems to tower far above "Old Soldiers Never Die."

The hurt was too great when the Old Soldier mounted the congressional rostrum. On that day Douglas MacArthur was a practitioner of the rhetoric of self-defense.[125] The center of his speech was himself. "Rarely indeed have the American people heard a speech so strong in the tone of personal authority."[126] This uncharacteristic devotion to self was not the true Douglas MacArthur. To him devotion to duty was always "of the highest importance."[127] Throughout his lifetime he placed duty, honor, and country above self. "He was required to reach further than one man can reach, to bear the strain of decision, to accept the isolation of comand, to undergo the rigors of living a moral code and personifying the spirit of dedication."[128] His abrupt departure from this creed tempers the worth of "Old Soldiers Never Die."

The converse is true in "Duty, Honor, Country." It too was emotional and ethical. Its tone of personal authority was strong. Yet, that day the center of Douglas MacArthur's speech was not Douglas MacArthur, it was the country he fought for and loved so well. In his eloquent farewell speech, Douglas MacArthur was reminding us all, private citizen or soldier, that it is every man's birthright and obligation to dedicate himself to this Nation, to defend its honor, and to perpetuate its greatness.

Douglas MacArthur was, above all, a patriot. To him, "the highest encomium you can still receive is to be called a patriot, if it means you love your country."[129] Today, when "strange voices are heard across the land, decrying this old and proven concept of patriotism"[130] the true meaning of "Duty, Honor, Country" is more significant than ever before.

In an envoi to the career of General of the Army Douglas MacArthur, William F. Buckley, Jr., wrote:

MacArthur was the last of the great Amer-

Footnotes at end of article.

icans. It isn't at all certain that America is capable of producing another man of MacArthur's cast. Such men spring from the loins of nations in whose blood courage runs: and we are grown anemic. That is why so many have spoken of an age that would die with MacArthur. An age when occasionally, heroes arose, acknowledging as their imperatives the Duty, Honor and Country which MacArthur cherished, but which the nation that rejected him has no stomach for, preferring the adulterated substitutes of the Age of Modulation, approved by the Pure Food and Drug Act, and adorned by the seal of *Good Housekeeping Magazine*.[131]

It was not the purpose of this paper to examine or even comment on the social and political pressures at work in the Nation today. But such is the greatness of "Duty, Honor, Country" that one cannot help but reflect on it as each day's events unfold in this troubled land. From a rhetorical standpoint, "Duty, Honor, Country" will withstand even the most "searching analysis and interpretive acumen,"[132] and emerge as greatness. It exceeds every rhetorical criteria demanded for excellence in speech. But it is more than just an academically superb speech, it is indeed a "credo for all Americans"[133] and in this role may one day achieve its ultimate greatness.

ACCEPTANCE OF SYLVANUS THAYER AWARD MEDAL SPEECH

(By General of the Army Douglas MacArthur)

General Westmoreland, General Groves, distinguished guests, and gentleman of the Corps:

As I was leaving the hotel this morning, a doorman asked me, "Where are you bound for, General?" and when I replied, "West Point," he remarked, "Beautiful place, have you ever been there before?"

No human being could fail to be deeply moved by such a tribute as this. [Thayer Award] Coming from a profession I have served so long, and a people I have loved so well, it fills me with an emotion I cannot express. But this Award is not intended primarily to honor a personality, but to symbolize a great moral code—the code of conduct and chivalry of those who guard this beloved land of culture and ancient descent. That

is the meaning of this medallion. For all eyes and for all time, it is an expression of the ethics of the American soldier. That I should be integrated in this way with so noble an ideal arouses a sense of pride and yet of humility which will be with me always.

Duty—Honor—Country. Those three hallowed words reverently dictate what you ought to be, what you can be, what you will be. They are your rallying points: to build courage when courage seems to fail; to regain faith when there seems to be little cause for faith; to create hope when hope becomes forlorn. Unhappily, I possess neither that eloquence of diction, that poetry of imagination, nor that brilliance of metaphor to tell you all that they mean. The unbelievers will say they are but words, but a slogan, but a flamboyant phrase. Every pedant, every demagogue, every cynic, every hypocrite, every troublemaker, and, I am sorry to say, some others of an entirely different character, will try to downgrade them even to the extent of mockery and ridicule. But these are some of the things they do. They build your basic character, they mold you for your future roles as the custodians of the Nation's defense, they make you strong enough to know when you are weak, and brave enough to face yourself when you are afraid. They teach you to be proud and unbending in honest failure, but humble and gentle in success; not to substitute words for actions, nor to seek the path of comfort, but to face the stress and spur of difficulty and challenge; to learn to stand up in the storm but to have compassion on those who fall; to master yourself before you seek to master others; to have a heart that is clean, a goal that is high; to learn to laugh yet never forget how to weep; to reach into the future yet never neglect the past; to be serious yet never to take yourself too seriously; to be modest so that you will remember the simplicity of true greatness, the open mind of true wisdom, the meekness of true strength. They give you a temper of the will, a quality of the imagination, a vigor of the emotions, a freshness of the deep springs of life, a tempermental predominence of courage over timidity, an appetite for adventure over love of ease. They create in your heart the sense of wonder, the unfailing hope of what next, and the joy and inspiration of life. They teach you in this way to be an officer and a gentleman.

And what sort of soldiers are those you are to lead? Are they reliable, are they brave, are they capable of victory? Their story is known to all of you; it is story of the American man-at-arms. My estimate of him was formed on the battlefield many, many years ago, and has never changed. I regarded him then as I regarded him now—as one of the world's noblest figures, not only as one of the finest military characters but also as one of the most stainless. His name and fame are the birthright of every American citizen. In his youth and strength, his love and loyalty he gave—all that mortality can give. He needs no eulogy from me or from any other man. He has written his own history and written it in red on his enemy's breast. But when I think of his patience under adversity, of his courage under fire, and of his modesty in victory, I am filled with an emotion of admiration I cannot put into words. He belongs to history as furnishing one of the greatest examples of successful patriotism; he belongs to posterity as the instructor of future generations in the principles of liberty and freedom; he belongs to the present, to us, by his virtues and by his achievements. In 20 campaigns, on a hundred battlefields, around a thousand campfires, I have witnessed that enduring fortitude, that patriotic self-abnegation, and that invincible determination which have carved his statue in the hearts of his people. From one end of the world to the other he has drained deep the chalice of courage.

As I listened to those songs of the glee club, in memory's eye I could see those staggering columns of the First World War, bending under soggy packs, on many a weary march from dripping dusk to drizzling dawn, slogging ankle-deep through the mire of shell-shocked roads, to from grimly for the attack, blue-lipped, covered with sludge and mud, chilled by the wind and rain; driving home to their objective, and, for many, to the judgment seat of God. I do not know the dignity of their birth but I do know the glory of their death. They died unquestioning, uncomplaining, with faith in their hearts, and on their lips the hope that we would go on to victory. Always for them Duty—Honor—Country; always their blood and sweat and tears as we sought the way and the light and the truth.

And 20 years after, on the other side of the globe, again the filth of murky foxholes, the stench of ghostly trenches, the slime of dripping dugouts; those boiling suns of relentless heat, those torrential rains of devastating storms; the loneliness and utter desolation of jungle trails, the bitterness of long separation from those they loved and cherished, the deadly pestilence of tropical disease, the horror of stricken areas of war; their resolute and determined defense, their swift and sure attack, their indomitable purpose, their complete and decisive victory—always victory. Always through the bloody haze of their last reverberating shot, the vision of gaunt, ghastly men reverently following your password of duty—honor—country.

The code which those words perpetuate embraces the highest moral laws and will stand the test of any ethics or philosophies ever promulgated for the uplift of mankind. Its requirements are for the things that are right, and its restraints are from the things that are wrong. The soldier, above all other men, is required to practice the greatest act of religious training—sacrifice. In battle and in the face of danger and death, he discloses those divine attributes which his Maker gave when he created man in his own image. No physical courage and no brute instinct can take the place of the Divine help which alone can sustain him. However horrible the incidents of war may be, the soldier who is called upon to offer and to give his life for his country, is the noblest development of mankind.

You now face a new world—a world of change. The thrust into outer space of the satellite, spheres and missiles marked the beginning of another epoch in the long story of mankind—the chapter of the space age. In the five or more billions of years the scientists tell us it has taken to form the earth, in the three or more billion years of development of the human race, there has never been a greater, a more abrupt or staggering evolution. We deal now not with things of this world alone, but with the illimitable distances and as yet unfathomed mysteries of the universe. We are reaching out for a new and boundless frontier. We speak in strange terms: of harnessing the cosmic energy; of making winds and tides work for us; of creating unheard of synthetic materials to supplement or even replace our old standard basics; of purifying sea water for our drink; of mining ocean floors for new fields of wealth and food; of disease preventatives to expand life into the hundreds of years; of controlling weather for a more equitable distribution of heat and cold, of rain and shine; of space ships to the moon; of the primary target in war, no longer limited to the armed forces of an enemy, but instead to include his civil populations; of ultimate conflict between a united human race and the sinister forces of some other planetary galaxy; of such dreams and fantasies as to make life the most exciting of all time.

And through all this welter of change and development, your mission remains fixed, determined, inviolable—it is to win our wars. Everything else in your professional career is but corollary to this vital dedication. All other public purposes, all other public projects, all other public needs, great or small, will find others for their accomplishment; but you are the ones who are trained to fight; yours is the profession of arms—the will to win, the sure knowledge that in war there is no substitute for victory; that if you lose, the nation will be destroyed; that the very obsession of your public services must be Duty—Honor—Country. Others will debate the controversal issues, national and international, which divide men's minds; but serene, calm, aloof, you stand as the nation's war-guardian, as its lifeguard from the raging tides of international conflict, as its gladiator in the area of battle. For a century and a half you have defended, guarded, and protected its hallowed traditions of liberty and freedom, of right and justice. Let civilian voices argue the merits or demerits of our processes of government; whether our strength is being sapped by deficit financing indulged in too long, by Federal paternalism grown too mighty, by power groups grown too arrogant, by politics grown too corrupt, by crime grown too rampant, by morals grown too low, by taxes grown too high, by extremists grown too violent; whether our personal liberties are as thorough and complete as they should be. These great national problems are not for your professional participation or military solution. Your guidepost stands out like a tenfold beacon in the night—Duty—Honor—Country.

You are the leaven which binds together the entire fabric of our national system of defense. From your ranks come the great captains who hold the nation's destiny in their hands the moment the war tocsin sounds. The Long Gray Line has never failed us. Were you to do so, a million ghosts in olive drab, in brown khaki, in blue and gray, would rise from their white crosses thundering those magic words—Duty—Honor—Country.

This does not mean that you are warmongers. On the contrary, the soldier, above all other people, prays for peace, for he must suffer and bear the deepest wounds and scars of war. But always in our ears ring the ominous words of Plato that wisest of all philosophers, "Only the dead have seen the end of war."

The shadows are lengthening for me. The twilight is here. My days of old have vanished tone and tint; they have gone glimmering through the dreams of things that were. Their memory is one of wondrous beauty, watered by tears, coaxed and caressed by the smiles of yesterday. I listen vainly for the witching melody of faint bugles blowing reveille, of far drums beating the long roll. In my dreams I hear again the crash of guns, the rattle of musketry, the strange, mournful mutter of the battlefield.

But in the evening of my memory, always I come back to West Point. Always there echoes and re-echoes Duty—Honor—Country.

Today marks my final roll call with you, but I want you to know that when I cross the river my last conscious thoughts will be of The Corps, and The Corps, and The Corps.

I bid you farewell.

---

## CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded.

EQUAL EMPLOYMENT OPPORTUNITIES ENFORCEMENT ACT

Mr. DOMINICK. Mr. President, the bill for equal employment opportunity has been laid before the Senate and will be the pending business tomorrow. I think that a few preliminary comments in connection with amendments which I intend to offer would be in order at this point.

Mr. President, this bill is designed to put some teeth into the enforcement procedures of the EEOC. It seems to me that this is a good idea. The question is, how do we do it, and to what extent are we going to increase the jurisdiction and the scope of the work of the Commission?

Under the bill as it has been reported by the committee, we are including within the jurisdiction of the EEOC for the first time all Federal employees, which means some 3 million additional people; all State and local employees, which means another 10 million people; and all employers who have, I believe, eight employees. The number had been 25, but I believe the limit has gone down to eight. So any employer who now has eight employees is considered covered by the bill. We know that we have at least 13 million additional people within the jurisdiction, and undoubtedly it is going to be a great deal more than that, probably much closer to 20 million—perhaps even more than that by the time we figure out the all-encompassing jurisdiction of this bill.

As I believe most people know, the Civil Service Commission at the present time has jurisdiction over allegations of discrimination in Federal employment. In most States in our country, anti-discrimination commissions have been set up to take care of problems of State employees and in many cases local employees. What we are doing in this bill—and we might as well be frank about it—is taking jurisdiction away from the Civil Service Commission and putting it in the EEOC so far as the Federal employees are concerned, and we are at least attempting to outlaw all the provisions for enforcement procedures with regard to State and local employees, whether they be of a school district or a sanitary district or any of the State employees or municipal employees of this country. It is a pretty big slice of the apple to try to swallow in one year.

I will be offering amendments which deal with four items in the bill.

The first is the question of how we are going to provide enforcement of cases where the Commission believes that there seems to be at least prima facie evidence of some method of discrimination. Under the present system, we establish a hearing examiner system, and we have to set up a bunch of hearing examiners and different types of administrative procedures to handle the problems. Under the amendment which I will offer, we will simply say that in order to enforce this, they have to go into our existing court system and go through that way.

Under the second amendment, I will simply be prohibiting the employees or the officers or the members of the commission from filing charges. I have said over and over again in committee and in this Chamber that it seems wrong to me to establish in one executive agency the powers of being an investigator, a prosecutor, a judge, and an enforcer. Yet, that is exactly what we are doing over and over again in this particular bill.

Third, I will ask that the Civil Service Commission retain jurisdiction over the equal employment questions of Federal employees. There has been very little complaint as to the job they are doing. I see no reason why we should take 3 million employees and shift the jurisdictional requirements over to the EEOC.

Fourth, on behalf of Senator SMITH of Illinois in particular, and considerable sympathy from myself, I will be moving to exclude State and local employees from coverage by the act, on the ground that I think we might be interfering with State constitutional provisions, and we certainly would be injecting the Federal Government into every State and every municipality in the country.

So at this point I send these four amendments to the desk and ask that they be printed, for further consideration during the debate on the bill tomorrow.

AMENDMENTS NOS. 975 THROUGH 978

The PRESIDING OFFICER. The amendments will be received, printed, and will lie on the table.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, what is the pending business before the Senate?

The PRESIDING OFFICER. The pending business is S. 2453, a bill to further promote equal employment opportunities for American workers.

ADJOURNMENT UNTIL 10 A.M. TOMORROW

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 10 a.m. tomorrow.

The motion was agreed to; and (at 5 o'clock and 59 minutes p.m.) the Senate adjourned until tomorrow, Wednesday, September 30, 1970, at 10 a.m.

# HOUSE OF REPRESENTATIVES—*Tuesday, September 29, 1970*

The House met at 12 o'clock noon.

Rev. James Davidson, Manassas Baptist Church, Manassas, Va., offered the following prayer:

Gracious God, thank You for bringing us to the freshness of this new day.

You understand us profoundly and know how our energies are taxed and our minds often fatigued; that even in the midst of our maturest thoughts we are still children: Encourage us and give us new insight for the business of today. Because in Jesus You became human, You realize the pressures and criticisms that besiege us, throwing us constantly into the valley of decision; so make us men of conviction, leaning toward what is morally right and not merely politically expedient, knowing it is righteousness which exalts a nation.

What we ask for ourselves, we ask for the leaders of the countries of our exciting yet complex world.

Through the strong name of Jesus. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Arrington, one of its clerks, announced that the Senate had passed without amendment a bill of the House of the following title:

H.R. 14373. An act to authorize the Secretary of the Navy to convey to the city of Portsmouth, State of Virginia, certain lands situated within the Crawford urban renewal project (Va–53) in the city of Portsmouth, in exchange for certain lands situated within the proposed Southside neighborhood development project.

The message also announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 752. An act to authorize the conveyance of all right, title, and interest of the United States reserved or retained in certain lands heretofore conveyed to the State of Maine;

S. 2461. An act to amend the Randolph-Sheppard Act for the blind so as to make certain improvements therein, and for other purposes;

S. 3425. An act to amend the Wagner-O'Day Act to extend the provisions thereof to severely handicapped individuals who are not blind, and for other purposes;

S. 3795. An act to amend the Soldiers' and Sailors' Civil Relief Act of 1940, as amended, in order to extend under certain circumstances the expiration date specified in a power of attorney executed by a member of the Armed Forces who is missing in action or held as a prisoner of war; and

S. 4187. An act to authorize the Secretary of the Army to convey certain lands at Fort Ruger Military Reservation, Hawaii, to the State of Hawaii in exchange for certain other lands.

REV. JAMES DAVIDSON

(Mr. SCOTT asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SCOTT. Mr. Speaker, I appreciate the courtesy of the Chaplain of the House today in affording one of my constituents, the Reverend James Davidson, pastor of the Manassas Baptist Church, to open the House with prayer. Reverend Davidson is a new person in our midst, coming to us from Scotland, but some of his congregation have referred to him as another Peter Marshall. I am very glad he can be with us today.

Reverend Davidson was born in Glasgow, Scotland, in 1937. He graduated

from the Baptist Seminary in Bristol, England, and took postgraduate work in Switzerland. His first pastorate in this country was at St. Matthews Church in Louisville, Ky., and he became pastor of the Manassas Baptist Church, a few miles from here, in June of this year.

Again, I welcome him as a guest of the House.

## PERSONAL ANNOUNCEMENT

Mr. DULSKI. Mr. Speaker, I was detained on official business on Monday and missed rollcall votes on two conference reports which I support fully. Had I been present and voting, I would have voted "yea" on rollcalls Nos. 317 and 318.

## HEARINGS ON LOBBYING

(Mr. PRICE of Illinois asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PRICE of Illinois. Mr. Speaker, I take this means of advising Members of the House of Representatives that the Committee on Standards of Official Conduct has rescheduled hearings on lobbying practices for October 1, 7, and 8. The hearings originally scheduled for earlier this month had to be called off because, as I previously reported to you, interested witnesses were unable to appear on those dates.

We now expect to schedule public witnesses for October 1 and to hear Members of the Congress on October 7 and 8. Members desiring to testify or submit statements should advise the committee offices of their intentions.

You will recall that the House on July 8 adopted House Resolution 1031 directing the committee, which I have the honor to chair, to conduct investigations and studies of lobbying activities and campaign financing, and to report our findings and recommendations at the earliest practicable date.

Our committee, in considering the assignment, decided to deal with the two subjects separately, although they are related. Accordingly, we expect to conduct hearings on campaign money after concluding the hearings on lobbying.

## DID THE DEMOCRATS CAUSE THE POWER BROWNOUT?

(Mr. KYL asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and include extraneous matter.)

Mr. KYL. Mr. Speaker, I may have discovered an explanation for the unprecedented heat wave that has caused the latest power brownout. It could be all the hot air being generated by some Members of the majority in this Congress. The most blatant example is the latest charge by one of the wondering troubadours from the other body who claims that somehow President Nixon is to blame for the warm, dry fall that caused water shortages, cutbacks in generating capacity, and a consequent power cutback.

How desperate can a political party become for an issue? Is the party in power now supposed to intervene with the Deity, or be subjected to charges of failure? It has long been my understanding that the weather, disasters, and the forces of nature were considered beyond the ken of any political party to control.

I might note that members of the Democratic Party have always been in the forefront when attempts have been made to halt building of power generating facilities by private industry. Perhaps they may regret this past action, and seek to divert public attention from their record. I am afraid that in search of political wattage they have only short circuited their credibility, and in fact have generated more heat than light.

## WHERE IS THE SOCIAL SECURITY BILL?

(Mr. CONTE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. CONTE. Mr. Speaker, on May 21, 1970, the House passed the social security bill by a vote of 343 to 32. That was more than 4 months ago.

But where is the bill today? It is still in the other body at the mercy of the majority party there.

Is this any way to treat our senior citizens?

Inflation is eating away at their precious savings.

Skyrocketing increases in the cost of living are diluting their social security payments.

And what is the other body doing about it?

This body clearly recognized the urgency of the problem. We passed a good bill providing for a 5-percent increase and a cost-of-living escalator clause.

Now there is talk of an October 15 recess. And the other body continues to move at a snail's pace with no apparent concern for the plight of our senior citizens.

Mr. Speaker, I think the American people should know just what is happening to the social security bill and just who is stalling it.

This bill must be passed before any recess and its effective date should be changed so that it will go into effect upon its passage, for the sake of our senior citizens.

## PRESIDENT NIXON SHOWS COURAGE IN RESISTING PANIC BUTTON TO PUT U.S. ECONOMY IN STRAITJACKET CONTROLS

(Mr. KING asked and was given permission to address the House for 1 minute.)

Mr. KING. Mr. Speaker, President Nixon has shown courage and tenacity in resisting those who would push the panic button and put the U.S. economy in straitjacket controls.

As a result, the economy is laying the groundwork for a decade of solid, sound growth.

The cost-of-living index for August shows the smallest increase in 20 months—and brought the rate of inflation down to 2.4 percent for the month. This, coupled with a cutback in interest rates is positive proof that the Nixon administration's game plan for the economy is working for the American people.

While winding down the Vietnam war, making the transition from a defense-dominated to a forward-looking, peace-based economy, the President has made inroads against inflation. The U.S. economy has shown its basic strength. Productivity is high. Real worker income rose in August. The surtax is gone.

There is still work to be done—the cleanup of air and water, the war against crime, and help for State and local governments. The President needs a cooperative Congress to capitalize on the opportunity to make great progressive gains during the coming decade—a decade which can reflect a better standard of living for all Americans.

## BATTLE CASUALTIES LOWEST SINCE 1966

(Mr. WAMPLER asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WAMPLER. Mr. Speaker, last week, our distinguished colleague from Illinois (Mr. ERLENBORN) spoke to us on the progress of the Nixon administration in ending the war in Vietnam. He referred to the fact that American battlefield deaths the previous week in Vietnam were the second lowest toll in nearly 4 years.

I noticed a few days later that the U.S. military command in Saigon released figures for that week which showed that American battlefield deaths in Vietnam were the lowest since the week of March 5, 1966. Mr. Speaker, I agree with my distinguished colleague from Illinois that this is proof that the President is pursuing a most honorable course in Vietnam.

The President is ending the war. Just as I joined with the overwhelming majority of this body in voting my support for the President's policy in Vietnam on December 2, 1969, I too reaffirm my confidence in the President and his policy.

## COMMENDATION FOR LETTER CARRIER LEONARD EVANS

(Mr. HUNT asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. HUNT. Mr. Speaker, in a world of social security numbers, bank account numbers, employee ID's, and ZIP codes, I have some good news—a nostalgic touch of personal service in the postal field service.

It seems that Mrs. Nels Carson of Phoenix, Ariz., had been waiting anxiously for several weeks for word from her son who is stationed in Vietnam. She would meet her mailman, Leonard Evans, each morning hoping that that would be the day to get her son's letter to reassure her of his safety.

As it turned out, Mr. Evans was sympathetic to Mrs. Carson's plight and in the best of traditions reminiscent of by-

gone days, he phoned her one morning that in sorting the mail he had come across a letter from her son and would have it for her at the start of his route.

Mr. Evans is to be commended for his thoughtfulness and it is reassuring to know that the human factor associated with our every-day affairs can still rise above the impersonalization of the numerical identity by which we are assigned to anonymity.

## RADICAL-LIBERALS SUDDENLY SCRAMBLING TO GET ON RECORD AS HARD-LINE ADVOCATES OF LAW AND ORDER

(Mr. ANDERSON of Illinois asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ANDERSON of Illinois. Mr. Speaker, with the elections only a month away we are being treated to the fascinating spectacle of numbers of radical-liberals suddenly scrambling to get on the record as hard-line advocates of law and order. Some of our greatest advocates of civil license have suddenly seen the political light.

It should be noted, however, that there are still a few holdouts who are holding fast to the radical-liberal dogma. In the National Observer of September 21, Mr. Adlai Stevenson—who once accused the Chicago police of being "storm troopers in blue"—continues an unblemished record by saying, and I quote:

> Violence cannot be tolerated, but the answer is not more law enforcement.

The answer, according to Mr. Stevenson, is leadership that reorders our priorities and pays more attention to the underlying causes of crime.

It is interesting to contrast Mr. Stevenson's prescription for crime fighting with actual experience here in the District of Columbia. Police Chief Jerry Wilson announced last week that the crime rate for August was down 19 percent from the same month a year ago. The basic reason, according to Chief Wilson was, interestingly enough, more police, more law enforcement. One cannot help wondering what the crime rate would have been if the District Police Department had spent the month of August reordering its priorities and searching for the underlying causes of crime.

## DRAMATIC DOWNTURN IN CRIME IS GOOD NEWS TO ALL IN THE NATION'S CAPITAL

(Mr. POFF asked and was given permission to address the House for 1 minute.)

Mr. POFF. Mr. Speaker, the announcement last week by Police Chief Jerry V. Wilson that crime in the District of Columbia had taken a dramatic downturn is good news to all of us who have been concerned by the rising crime rate in the Nation's Capital.

Chief Wilson said that reported crimes in Washington for the month of August dropped to a level 19 percent fewer than for the same month last year. He also noted that this has been the second successive month that the crime rate was below the corresponding month in 1969.

While this decrease is encouraging in itself, I believe the Congress should take notice of the Chief's statement that the Police Department has set its goal as the halving of the crime rate of 1969. This will be a highly commendable record if the objective is obtained.

The Congress has already been instrumental in creating the framework for effective control of the crime problem in this city by passing the administration's District of Columbia crime bill. One of the key provisions of that act is the reform and enlarging of the District court system. The President has acted promptly to send his nominations for the new judgeships to the Congress. It can be hoped that the Congress will respond with equal dispatch in clearing these appointments.

## AMERICAN LOW CASUALTY RATE IN VIETNAM FOR WEEK ENDING SEPTEMBER 19 IS HEARTENING NEWS

(Mr. ARENDS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ARENDS. Mr. Speaker, the announcement by the U.S. military command that the American casualty rate in Vietnam for the week ending September 19 was again at a 4-year low is heartening news. However, I do not believe these statistics alone tell the full story.

While the casualty rate last week was at the lowest point since the spring of 1966, it should be remembered that we now have a much higher troop level in Vietnam than existed in 1966. In April of 1966, there were about 240,000 American troops in Vietnam. Now, despite President Nixon's withdrawal of over 100,000 men, there are still about 395,000 American troops there.

When the present low casualty figures are interpreted in light of these relative troop levels, it is apparent that the effective casualty rate is even lower than it appears. While there may be many reasons for this development, there are at least two conclusions that can be drawn. One is that fewer American soldiers are engaging in heavy combat and that points to the success of the President's Vietnamization program. The second conclusion is that the enemy's capability to inflict casualties has been seriously hampered—an obvious result of the Cambodian operation. Overall, the casualty statistics are empirical proof that the President's plan to end the war is working.

## PERMISSION FOR COMMITTEE ON RULES TO FILE CERTAIN PRIVILEGED REPORTS

Mr. MADDEN. Mr. Speaker, by direction of the Committee on Rules, I ask unanimous consent that the Committee on Rules may have until midnight tonight to file certain privileged reports.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

## PERMISSION FOR COMMITTEE ON PUBLIC WORKS TO FILE A REPORT ON S. 3619

Mr. JONES of Alabama. Mr. Speaker, I ask unanimous consent that the Committee on Public Works may have until midnight tonight to file a report on the bill (S. 3619) to revise and expand Federal programs for relief from effects of major disasters, and for other purposes.

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

There was no objection.

## TO PROVIDE FOR HOLDING DISTRICT COURT FOR THE EASTERN DISTRICT OF NEW YORK AT WESTBURY, N.Y.

Mr. WYDLER. Mr. Speaker, I ask unanimous consent that the Committee on the Judiciary be discharged from further consideration of the bill (H.R. 18126) to amend title 28 of the United States Code to provide for holding district court for the eastern district of New York at Westbury, N.Y., and ask for its immediate consideration.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

The Clerk read the bill, as follows:

H.R. 18126

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the second paragraph of section 112(c) of title 28 of the United States Code is amended to read as follows:

"Court for the Eastern District shall be held at Brooklyn, Mineola, and Westbury."

Mr. WYDLER. Mr. Speaker, H.R. 18126 is a bill vital to the establishment of a branch of the Federal courts in Nassau County. The administration of justice in our Nation requires adequate court facilities conveniently located for both litigants and attorneys. This bill will allow the court to establish itself in quarters in the central area of Nassau County and will allow a branch of the eastern district of New York Federal court to be established in Westbury. The needs of the people of Nassau and Suffolk Counties and all of Long Island will be served. I am asking the immediate consideration of the bill because of the necessity of prompt action. I appreciate the cooperation of the chairman of the Judiciary Committee in dispensing with the necessity for hearings since all parties concerned have not only agreed to such action but are anxious for it to be taken.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

## APPOINTMENT OF CONFEREES ON H.R. 15073, TO AMEND THE FEDERAL DEPOSIT INSURANCE ACT

Mr. PATMAN. Mr. Speaker, pursuant to the provisions of clause 1, rule XX, and by direction of the Committee on Banking and Currency. I move to take from the Speaker's table the bill (H.R. 15073) to amend the Federal Deposit Insurance Act to require insured banks to maintain certain records, to require that certain transactions in U.S. currency be reported to the Department of the Treasury, and for other purposes, with a Senate amendment thereto, disagree to the Senate amendment, and agree to the conference requested by the Senate.

The SPEAKER. The gentleman from Texas (Mr. PATMAN) is recognized for 1 hour on his motion.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. PATMAN. I yield to the gentleman from Iowa

Mr. GROSS. Mr. Speaker, I thank the gentleman for yielding

I assume that this is the bill to which I objected yesterday when the gentleman sought to send it to conference, this being the bill to which the other body attached three ungermane amendments. Is that correct?

Mr. PATMAN. The gentleman is correct.

Mr. GROSS. It would be my hope that the managers on the part of the House would very strenuously oppose the inclusion of these three ungermane amendments in this bill.

Mr. PATMAN. May I say that the gentleman's views will certainly be given consideration.

This is being brought up under what is known as the McCormack rule—Speaker McCORMACK advocated this rule over a period of years and under this rule it permits the committee to meet, a quorum being present, of course, and to instruct the chairman to make the motion to send the bill to conference and notwithstanding an objection having been made.

Mr. GROSS. Mr. Speaker, I thank the gentleman from Texas for yielding to me.

The SPEAKER. The question is on the motion offered by the gentleman from Texas (Mr. PATMAN).

The motion was agreed to.

The SPEAKER. The Chair appoints the following conferees: Mr. PATMAN, Mr. BARRETT, Mrs. SULLIVAN, Mr. REUSS, Mr. WIDNALL, Mrs. DWYER, and Mr. WYLIE.

## PERMISSION TO FILE CONFERENCE REPORT ON H.R. 17575, DEPARTMENTS OF STATE, JUSTICE, AND COMMERCE, THE JUDICIARY AND RELATED AGENCIES APPROPRIATIONS, 1971

Mr. ROONEY of New York. Mr. Speaker, I ask unanimous consent that the managers on the part of the House may have until midnight tonight to file a conference report on the bill (H.R. 17575) making appropriations for the Departments of State, Justice, and Commerce, the judiciary and related agencies for the fiscal year ending June 30, 1971.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

## CONFERENCE REPORT ON H.R. 17123, ARMED SERVICES PROCUREMENT AUTHORIZATION, 1971, AND RESERVE STRENGTHS

Mr. RIVERS. Mr. Speaker, I call up the conference report on the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and ask unanimous consent that the statement of the managers on the part of the House be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of September 28, 1970.)

Mr. RIVERS (during the reading). Mr. Speaker, in view of the fact that the conference report has been printed, I ask unanimous consent that the further reading of the statement of the managers on the part of the House be dispensed with.

The SPEAKER. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

## CALL OF THE HOUSE

Mr. GROSS. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 319]

| | | |
|---|---|---|
| Adair | Conyers | Gray |
| Adams | Coughlin | Green, Pa. |
| Andrews, N. Dak. | Cowger | Hastings |
| | Cramer | Hébert |
| Annunzio | Crane | Jonas |
| Aspinall | Cunningham | Kleppe |
| Baring | Daddario | Landrum |
| Beall, Md. | Dawson | Leggett |
| Betts | de la Garza | Long, La. |
| Biaggi | Dent | McCarthy |
| Boggs | Derwinski | McClory |
| Bolling | Diggs | McClure |
| Brock | Dorn | McKneally |
| Brooks | Dowdy | Macdonald, Mass. |
| Burton, Utah | Edwards, Calif. | |
| Bush | Edwards, La. | MacGregor |
| Button | Farbstein | Martin |
| Cabell | Feighan | Mathias |
| Caffery | Fish | Melcher |
| Casey | Fisher | Miller, Calif. |
| Cederberg | Foreman | Murphy, N.Y. |
| Celler | Friedel | Nedzi |
| Chisholm | Fulton, Tenn. | Olsen |
| Clark | Gaydos | Ottinger |
| Clay | Gilbert | Passman |
| Pirnie | Scheuer | Vander Jagt |
| Pollock | Shipley | Waggonner |
| Powell | Stuckey | Watson |
| Rarick | Symington | Watts |
| Reid, N.Y. | Taft | Weicker |
| Reifel | Taylor | Whitten |
| Robison | Teague, Calif. | Wold |
| Roudebush | Teague, Tex. | Zablocki |
| Ruppe | Tunney | Zwach |

The SPEAKER pro tempore (Mr. EVINS of Tennessee). On this rollcall 329 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

## CONFERENCE REPORT ON H.R. 17123 ARMED SERVICES PROCUREMENT AUTHORIZATION, 1971, AND RESERVE STRENGTHS

The SPEAKER pro tempore. The gentleman from South Carolina (Mr. RIVERS), is recognized for 1 hour.

Mr. RIVERS. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I shall try to give the House as succinctly as possible a synopsis of the action of the conference on H.R. 17123, the military weapons procurement and research and development authorization bill.

I hope the Members will bear with me because this is a long and complex piece of legislation, and there were many items in disagreement.

The bill as presented to the Congress by the President totaled $20,605,489,000. As passed by the Senate, the bill totaled $19,242,889,000.

The bill as agreed to in conference totals $19,929,089,000.

Thus, the final bill is $642,400,000 less than the bill as it passed the House. It is $686,200,000 more than the bill as it passed the Senate.

The final bill is $676,400,000 less than the bill presented to the Congress by the President.

Let me now give a rundown on action taken on major weapons systems on which there was fundamental disagreement.

First, however, I wish to point out that of the reductions from the House bill, $334,800,000 results from a general reduction due to the availability of prior year authorizations.

The House had deleted $334.8 million of new authorizations requested by Defense for various older programs. The Senate not only concurred in denying this request but made an additional cut of $334.8 million on the grounds that the Department of Defense had failed to identify or rejustify various prior year programs for which these amounts had previously been made available.

The Department of Defense was unable to persuade the conferees that the Senate action would adversely affect procurement or research and development. The House conferees, therefore, accepted the Senate's action.

### MAJOR WEAPONS SYSTEMS

#### NAVAL VESSELS

The House included in its bill $152 million for advance procurement for the third *Nimitz* class nuclear-powered aircraft carrier—CVAN–70. The Senate de-

leted these funds. In an unusual move, the administration while asking for the funds in the budget request, stipulated the decision to build the carrier not be made until a study by the National Security Council was completed on future carrier requirements.

It grieved the House conferees to have to recede on the CVAN–70. However, it was virtually impossible to change the mind of adamantine Senate conferees when faced with the absence of the will to make decisions on the part of the administration. The House conferees, therefore, had no choice but to agree to the elimination of the CVAN–70.

The House added $435 million for new ship construction to the Navy in addition to the budget submitted by the President. This additional construction program was identified by the Secretary of Defense as the first priority should additional funds be made available to the Department by Congress.

The House conferees were able to convince the Senate conferees of the necessity for these ships in view of the critical state of our Navy, and the Senate receded.

However, as I have indicated, the President cut out the carrier, which, in my opinion, was a serious mistake. If and when we authorize it—and we must—there will come a time when we shall have to authorize it, make no mistake about it, because whether you like carriers or not, we cannot do without them.

Here is a memo which confirms the need to authorize new nuclear carriers. It speaks for itself and reads as follows:

DEPARTMENT OF THE NAVY,
*Washington, D.C., September 26, 1970.*

Memorandum for Vice Admiral Rickover.

Subject: Policy on nuclear carriers.

1. Mr. Packard has authorized you to take the following position, if asked, in connection with your forthcoming testimony before the House Armed Services Committee:

"It is his policy to support funds for a CVAN in 1973 or 1974. It is his view that, while the number of carriers must be subject to question, at any reduced force level which may become necessary, we nevertheless should aspire to have an all nuclear carrier force."

E. R. ZUMWALT, Jr.

The gentleman from California (Mr. HOLIFIELD) knows what I am talking about. It will cost us at least $100 million more if and when the President makes up his mind and if and when the other body makes up its mind.

The other day the U.S.S. *Kennedy* was ordered to the Mediterranean. The U.S.S. *Kennedy* is McNamara's masterpiece. The U.S.S. *Kennedy* is an oil-burning carrier. The U.S.S. *Kennedy* should have been a nuclear carrier. Because the U.S.S. *Kennedy* had to refuel and had to travel at reduced speed, it took 2 days longer to get to its destination in the Mediterranean.

I have in my possession a memo marked "confidential." I will "deconfidentialize" it and insert it in the RECORD at this point.

The statement is as follows:

SEPTEMBER 29, 1970.

When the oil-fired aircraft carrier *John F. Kennedy* CVA 67 was recently sent from the 2nd fleet to reinforce the 6th fleet in the eastern Mediterranean, she transited about 4000 miles from Roosevelt Roads near Puerto Rico at a speed of advance of about 23 knots. This low speed of advance was necessary to conserve fuel so that a reasonable reserve would be aboard upon arrival. She refueled from the tanker *Truckee* west of the Strait of Sicily.

Had a higher speed been necessary for the transit it would have been necessary to refuel at Gibraltar as she does not carry sufficient black oil for a high speed transit of that distance without refueling. The *Kennedy* burns nearly twice as much fuel per mile steamed at 30 knots as she does at 23 knots.

A nuclear carrier could have made the transit at high speed and arrived 2 days earlier without concern for refueling.

In a real war situation the 2 days could have been decisive in battle and the tanker would have been a vulnerable target and might well have already been sunk when the *Kennedy* arrived. This is another example of the need for nuclear propulsion in our first line surface warships.

As the number of carriers in the fleet is reduced, the increased mobility of nuclear carriers will become even more important.

Mr. Speaker, had the carrier been a nuclear carrier, she could have operated at full speed to the Mediterranean, and had there been a conflict in the Mediterranean, she would have been there 2 days earlier. This is what I am talking about. The *Kennedy* is the newest carrier we have floating today and it is oil burning rather than nuclear powered—it is a disgrace to the Department of Defense—and it carries the name of a great American. It should have been a nuclear-powered carrier.

Mr. HOLIFIELD. Mr. Speaker, will the gentleman yield?

Mr. RIVERS. I yield to the distinguished gentleman from California.

Mr. HOLIFIELD. I want to express my complete accord with the gentleman. At the time the U.S.S. *Kennedy* was planned, the Joint Committee on Atomic Energy did everything it could to make it a nuclear-propelled carrier. We had hearings on the subject. Secretary of Defense McNamara appeared before the committee. His people had told him that it would cost $84 million more to build the *Kennedy* as a nuclear-propelled vessel, but they failed to reveal to him that there was a $30 million core in the nuclear-propulsion engine which would have obviated the need to buy fuel for about 9 years. They also failed to reveal to him, apparently, that it would carry something like 26 percent more planes, which would have given that much more striking power.

When we costed this out for a period of 20 years during the life of the carrier, it came to about $4 million difference in the nuclear-propelled carrier and the conventional one.

When they launched it, on the day they launched the *Kennedy*, I announced at that time they were launching an obsolete carrier.

Mr. RIVERS. That is exactly what happened. That is as factual as it can be. I agree with you. But I do not agree with one thing the chairman of the Joint Committee on Atomic Energy has said. I do not think anyone could have changed Secretary McNamara's mind.

Mr. HOLIFIELD. I do not think he changed it. I said we conclusively proved before him that those factors were not considered, the factors of the life of the fuel, the additional carrying capacity, and other factors. They were not costed into his computation.

Mr. RIVERS. This gives me an opportunity to say that without the backing of the gentleman from California (Mr. HOLIFIELD) and that great Joint Committee, God knows what this country would do. I pray for him every day. What he is doing in the field of nuclear propulsion and nuclear energy will be remembered by future generations. They will thank him for it.

Mr. HOLIFIELD. If the gentleman will yield further—and I thank him for his kind words—I had an opportunity this morning to look at the figures the gentleman stated on the floor last night, and I wish to point out that they are accurate, particularly the figures on the submarine comparison. I paid particular attention to them. There was something like, if I remember, 367 submarines that the Soviets have and 145 that we have. At the end of this year they will have as many nuclear submarines as we have. At the end of 1974 they will have as many underwater missile-launching submarines as we have, and, in addition, they will have about 280 conventional submarines, all built since World War II, and all of our conventional submarines have been built since World War II.

Mr. RIVERS. Mr. Speaker, I thank the gentleman from California. I appreciate his substantiating what I said on the floor.

No one can tell me that the great Committee on Appropriations is not going to rise to its responsibilities. I confidently believe they will do so and will start us on the road to try to catch up with the Soviet Union.

At this point let me refer the Members of this body to my floor speech of yesterday in which I document the problem facing our country. Read pages 33898 to 33902 of the RECORD and I am certain you will begin to better appreciate the critical need for new naval construction.

This additional money will go for one fast submarine, long lead-time procurement for another such submarine, a submarine tender, a destroyer tender, two oceanographic research ships, and landing and service craft.

The House conferees receded on three provisions in the House bill: First, to withhold shipbuilding funds until the National Security Council had finished its study of the CVAN–70; second, to require $600 million of funds authorized for naval vessels to be spent only in naval shipyards; and, third, to require the construction of the new DD–963 class destroyer at facilities of at least two different U.S. shipbuilders.

SAFEGUARD

The funds provided for the procurement of the Safeguard anti-ballistic-missile system are only $10 million below the figures in the House bill. However, there is a change in language which limits the deployment concept.

The House had approved the program

requested by the President which would allow beginning preparation of five sites which would eventually be used to provide a thin-area coverage against the potential Chinese threat.

The Senate bill prohibited work at four of these five sites and, in effect, limited the ABM development to defense of the strategic missile deterrent.

After extensive discussion, the House conferees receded and accepted the Senate position. The Senate conferees were unyielding in their position on Safeguard.

I want to make it clear that in accepting the Senate position on the ABM, the House conferees interpret the language of the bill as not prohibiting follow-on studies of present and future programs to assure the adequate protection of the national command and control function.

INTERNATIONAL FIGHTER

The House bill provided $30 million for an international fighter aircraft so as to provide a relatively inexpensive aircraft to free world forces in Southeast Asia. The Senate had denied the funds for the aircraft.

In conference we were able to convince the Senate of the wisdom of going ahead with this vital program. The Senate not only joined us in providing the funds, but joined our conferees in suggesting and urging the Secretary of Defense to personally resolve whatever remaining problems have prevented the Air Force from going forward on this aircraft.

It is the view of the conferees that the availability of this type of aircraft should, in our national interest, be accomplished as expeditiously as possible—and the Secretary of Defense is expected to share the desire of the conferees that this action be taken without further delay.

CHEYENNE

The Senate had deleted all of the $17.6 million provided in research and development money for the Cheyenne helicopter. Complex technical problems on this aircraft have now been solved and a tremendous weapons system is emerging. The Senate receded and accepted the House position.

B–1

The House provided $100 million in research and development funds for the continued development of the much needed B–1, the advanced manned strategic aircraft. The Senate had reduced this figure to $50 million. The confereees agreed on an authorization of $75 million. The House conferees were very reluctant to see even this reduction in the pace of B–1 development and give fair warning that this stretch might be sowing the seeds of a future cost overrun. The Senate conferees, however, were adamant in their position.

C–5A

While there were no dollar differences in the authorization for the C–5A, the Senate bill contained language which would have prohibited the expenditure of $200 million of the authorization for the aircraft unless the Secretary of Defense submitted a plan for those expenditures to the Armed Services Committees and the committees approved the plan. This action raised serious constitutional questions in requiring that the executive branch come into agreement with specific committees before going forward with a discretionary action. In view of the House reservations, the conferees agreed to amend the Senate language to require the submission of the proper plan of expenditures to the Committees on Armed Services of the House and Senate with the further requirement that none of the $200 million could be obligated or expended until the expiration of 30 days from the date upon which the plan had been submitted to the Congress.

With these changes, the House receded and accepted the Senate position. The House conferees are satisfied that this language will not deter the development of this vitally needed aircraft.

MAJOR ITEMS NOT IN HOUSE BILL

I would now like to discuss briefly several important items which were not included in the bill as first passed by the House but which are in the conference report.

A provision in the conference report expresses, as a statement of policy, the Congress' grave concern over the deepening involvement of the Soviet Union in the Middle East and the clear and present danger to world peace resulting from that involvement and authorizes the furnishing of aircraft and equipment to Israel in order to restore and maintain the military balance in the Middle East.

To furnish Israel the means of providing for its own security, the President is authorized, under this provision, to transfer to Israel, by sale, credit sale, or guaranty, such aircraft, and equipment appropriate to use, maintain, and protect such aircraft, as may be necessary to counteract any past, present, or future increased military assistance provided to other countries of the Middle East.

Such sale, credit sale, or guarantee shall be made on terms and conditions not less favorable than those extended to other countries which receive the same or similar types of aircraft and equipment.

The authority to furnish such aircraft and equipment to Israel shall expire on September 30, 1972.

The provision of aid to Israel originated in the Senate Armed Services Committee. The managers on the part of the House fully concurred in the desire to provide needed help to Israel and the urgency in creating some presidential authority to provide such assistance. Members of the House should understand that without this provision in the conference report, the President would not have the authority to provide material to Israel to the extent that it is required.

The House conferees were concerned about the open ended nature of the Senate provision. The House managers were able to convince the Senate conferees that an expiration date should be provided in the authorization in order that the customary periodic authorization surveillance by the Congress will be maintained. Therefore, the provision was amended in conference to add an expiration date of September 30, 1972.

The Congress and the Armed Services Committees responsible will be required to review the need for possible extension of this authority beyond that date.

This authority is provided with the understanding that the executive branch will provide the Congress and the committees responsible for this authorization a semiannual report on the implementation and utilization.

The conferees from both Houses agreed that the language of the amendment covers, as well as aircraft, the following: ground weapons, such as missiles, tanks, howitzers, armored personnel carriers, ordnance, and related items. It is also the intention of the conferees that the words "equipment appropriate to protect such aircraft" be construed broadly and that these words not be narrowly interpreted by the executive branch as imposing a requirement that only those ground weapons which are to be deployed by Israel in the physical proximity to airfields may be acquired by Israel under the authority in this act.

Mr. Speaker, I consider that section of the bill one of the most important actions the Congress has taken or can take this year to protect freedom in the world. The Israelis have exhibited in magnificent fashion a will to defend their nation and to remain free and independent. They have exhibited a strength of will that we can only wish more of our allies would exhibit.

Let me emphasize that nothing in this provision authorizes the sending of American personnel to the Middle East, and the Israelis have no desire for such assistance. The Israelis fight their own battles.

If I can quote what a great statesman said to our Nation 30 years ago:

Give us the tools and we will do the job.

If we give the Israelis the tools, they will do the job of protecting freedom in the interest of the Western World in the Middle East. They are fighting more than their own battle here. They are resisting the frightening spread of Soviet influence. Also, they are fighting to preserve a vital petroleum resource that supports Western Europe.

Make no mistake about it, an Arab victory over Israel would be a Soviet victory in the Middle East.

I hope the Members of the House can support this addition to the conference report.

Mr. HOLIFIELD. Mr. Speaker, will the gentleman yield?

Mr. RIVERS. Of course I yield to the gentleman from California.

Mr. HOLIFIELD. Seventy-three percent of the oil used in Western Europe comes from the Saudi Arabian and the Middle East oil fields; 80 percent of the oil used in Japan comes from there. When the Straits of Malacca are closed, the oil can be shut off going to Japan, and when the Soviets establish the position they want to establish in the Middle East, they can shut off the oil of Western Europe. If this occurs, economic col-

lapse will occur in both of those countries and will be followed by a political collapse. That is the threat right now in the Middle East, and the Soviets know full well what they are doing by moving in there.

Mr. RIVERS. I thank the gentleman. If you think the Soviets do not have a program, you just reexamine your information. They will control everything, and your Western civilization may be gone, because all of this hangs in the balance.

I want to say that the President knows this. He is not being kidded. I talked to the President about this, and he understands this. I cannot understand why France did not understand it when they held up planes for this country of Israel. I just cannot understand that.

Now, I will go on to explain other actions taken by your conferees.

AUTHORIZATION EXPANSION

This conference report extends the so-called 412 procurement authorization responsibilities of the Committee on Armed Services in two important ways.

It requires that beginning on July 1, 1971, an authorization for the average annual active duty strength of the Armed Forces will be required as a condition precedent to appropriation of funds for personnel. Up to now it has been necessary to authorize appropriations for missiles, planes, ships, tracked combat vehicles, research and development, and personnel strength of the Selected Reserve. As a result of this provision, beginning next year it will be necessary to also authorize the personnel strength of the Armed Forces.

In addition, the requirement for authorization prior to appropriations is extended to naval torpedoes. This extension is consistent with a provision in last year's House bill that was stricken in conference on the insistence of the Senate conferees at that time. Therefore, when the Senate included the requirement in the bill this year, the managers on the part of the House receded.

CONTRACT ANNOUNCEMENTS

The Senate bill included the provision that precludes the Secretary of Defense from furnishing information in advance of any public announcement to any individual concerning the identity or location of a person or corporation receiving a defense contract. Quite simply, this means the Secretary is not supposed to slip the word to a favorite Senator before public announcement of awards of major defense contracts.

I am sure the House will support its managers in going along with the restriction on this activity, since it has been my observation that the beneficiaries in the past of such a practice have been the Members of the other body.

RESEARCH AND DEVELOPMENT

I would now like to run down briefly the conference action on important research and development authorizations.

Both the Senate and House had reduced the research and development budget requests submitted by the Department of Defense.

The Defense Department had asked a total of $7,401,600,000.

The conferees agreed on $7,101,600,000, a reduction of $300,000,000.

The final total is $164,000,000 less than the amount initially approved by the House and $164,100,000 above the amount recommended by the Senate.

ARMY

For the Army, the conferees agreed on a research and development budget of $1,635,600,000. This is $100,300,000 below the Army's request.

As I already mentioned, the conference specified that the full amount requested for the Cheyenne helicopter, $17.6 million, shall be authorized.

On another major system in this category, the Senate had reduced the funds for the Sam–D missile by $15 million. The conference agreed to restore $8.8 million of the Senate reduction. This results in a total authorization for the Sam–D of $83.1 million, $6.2 million below the departmental request.

NAVY AND MARINE CORPS

The conferees agreed on $2,156,300,000 in research and development funds for the Navy and Marine Corps.

This is $56 million below the departmental request.

The conference restored the $5.2 million which the Senate had cut from the F–14 program. The conferees stipulated that the funds restored for the F–14 are to support the development of the advance technology engine and are not to be used for the development of the avionics of the F–14C.

AIR FORCE

For the Air Force, the conferees agreed on a research and development authorization of $2,806,900,000.

This is a reduction of $128,800,000 from the amount requested by the Department of Defense.

I already indicated that the conferees restored $25 million of the $50 million the Senate had cut from the B–1, leaving an authorization of $75 million.

The conference also restored all of the $27 million that the Senate had cut from the Minuteman rebasing account, leaving a total authorization of $77 million. The Senate conferees agreed to this restoration with the understanding that the program would exclude expenditures previously planned for hard-rock development.

The Senate had reduced the F–111 budget by $6.4 million. The conference agreed to restore the full $6.4 million. The Senate had deleted these funds because they had been identified for use on the Aim–7G missile, which was later determined not to be required in fiscal year 1971. The Senate agreed to restoration of funds with the understanding they are going to support the development of the aircraft.

F–111

I want to say a special word here about the F–111 aircraft. The Senate bill contained provisions requiring certification by the Department of Defense on the structural integrity of the F–111 as a prior condition to the obligation of funds. The House conferees were satisfied that this provision would in no way delay the procurement of the aircraft and that, in fact, the Department of Defense had advised the committee that it is prepared to provide the needed certification. The F–111 has gone through the most rigorous testing program that any aircraft was ever subject to. Each aircraft is meeting the tests and has already begun to return to operational status.

The House accepted the Senate provision.

However, I wish to make it unmistakably clear that in agreeing to this provision of the bill the House conferees in no way agree with the statement contained in the initial report of the Senate committee to the effect that this year's procurement will be the final buy for the F–111.

Initially it was determined that six wings of F–111's were required, and nothing has ever been presented to our committee in the way of military information to change the estimate of that requirement. However, the Air Force still believes it needs six wings. The buy was reduced for budgetary reasons.

The present plans are for only four wings, but the procurement authorized by the fiscal year 1971 buy will not even complete the fourth wing. The House managers and the Committee on Armed Services strongly object to any present decision to arbitrarily cut off production of the F–111. We believe the Department of Defense should be prepared to ask for further aircraft if they are called for by military requirements.

This is a truly unique aircraft. Even the Senate committee report says:

No other aircraft in the Air Force inventory can compete with the F–111.

Pilots who fly this airplane say they would rather fly the F–111 than any other airplane in the world.

If it is the best plane we can give them, then I think we should not permit substitution of a lesser aircraft.

INDEPENDENT RESEARCH AND DEVELOPMENT

The conferees spent an awful lot of time determining the proper course of action on one of the very important and very complex aspects of defense procurement, the so-called independent research and development.

Mr. Speaker, I will not take the time of the House to go into detail on this right now.

The conference action is fully spelled out in the statement of the managers.

The Senate bill had provided dollar limitations and, in addition, had contained language restrictions which we feared would have greatly limited the support of basic research which helps not only the military services but has great advantage for domestic development in the country.

Thanks to the vigorous and brilliant leadership of the gentleman from Massachusetts (Mr. PHILBIN) and the gentleman from California (Mr. GUBSER), we were able to get compromise language in the conference report which eliminates the dollar restrictions and eliminates the

handcuffs on basic research while at the same time forcing greater administrative control and surveillance on expenditures in this research area.

OTHER CONFERENCE DECISIONS

Before concluding, let me briefly mention some other decisions the conference made on items which were in dispute:

Southeast Asia funding: The bill contains a provision which has been in this legislation for several years to authorize the use of funds in support of South Vietnamese and other free world forces. The House agreed with the Senate change to specify these funds can be spent "in support of South Vietnamese forces" rather than "in Vietnam." The reason for this is to allow the use of such funds in support of operations like the cleaning out of Cambodian sanctuaries which are not strictly within the borders of South Vietnam but are related to Vietnamization.

The Senate had put a limit on such funding of $2,500,000,000. The House bill had no dollar limit. The conferees agreed to a figure of $2,800,000,000. The sole reason for this increased dollar figure is to provide flexibility to the Department of Defense to program additional money under this authorization if it is found possible to speed up the Vietnamization process. Speeding up Vietnamization, of course, will speed up withdrawal of U.S. troops.

The Senate bill contained language providing additional pay to free world forces in Vietnam in excess of the $65 per month hostile fire pay given to U.S. forces. The House agreed to this provision with an amendment specifying it shall not apply to agreements executed prior to July 1, 1970. The reason for this amendment is simply to avoid reneging on pay agreements made with those Asian countries which have sent troops to Vietnam.

Improved Hawk: The conference agreed on an authorization of $81.4 million for procurement of the Improved Hawk, which represents a restoration of $28.1 million of the $37 million cut by the Senate. The statement of managers directs that the procurement buy for fiscal year 1971 not be consummated on Improved Hawk until the completion of a test program to insure the operational readiness of the missile subject to the approval of the Secretary of Defense.

The House conferees agreed to the deletion of $14.1 million for procurement of Improved Hawk for the Marine Corps. The recently revised procurement program for Improved Hawk is such that money for the Marine Corps procurement, which follows the Army buy, will not be required until fiscal year 1972.

Tanks: The conference agreed to restore $12.1 million for the Army's M60A1E2 tank which had been cut by the Senate. The Army has had a great deal of trouble in the development of this tank. However, the House conferees did not want to cut off the program, which appears now at the point where it can be brought to a successful development. The conference also restored $10.9 million which the Senate had cut from the M60A1 tank program.

Tow: The House bill had initially required a test program of adapting the Shillelagh missile to the ground mode and, if successful, a competitive procurement between Tow and Shillelagh. At the request of the Senate conferees, the House receded from its provisional approval and concurred in the authorization of $106 million for Tow funding after an intensive reevaluation by the Army established that each of these weapons should be continued in its present mode.

Falcon: The Senate eliminated $15 million for the modification of the Air Force Falcon missile. The conferees agreed to restoration of $6 million. This would allow a steady development program on modification of the missile to improve its capabilities.

Maverick: The House had eliminated procurement funds in the amount of $25.3 million for the Maverick. The Senate restored $3.1 million, which is sufficient to retain the terms of a favorable contract while the development proceeds for another year. The House receded.

CBW: The Senate bill included various additional provisions relating to the use or disposal of chemical and biological warfare agents. While the Department of Defense did not object to the main import of the Senate amendment, the House managers persuaded the conferees to amend the language to assure that it would in no way delay or prevent the immediate disposal of CBW agents when such disposal is required as a matter of health and safety.

Mr. Speaker, there are a number of other amendments the Senate had added which we did not consider advisable, and we were able to have them removed in conference. I do not want to take any more time of the House to introduce details. They are explained in the statement of the managers.

This has been a difficult job. There were many items in dispute in the conference. I believe we have done exceptionally well by the House position. We did not get everything we wanted, but we certainly did not come back empty-handed. It was a privilege for me to be chairman of this conference. I wish to express my appreciation to all of the members of the conference committee on both sides of the aisle who worked so diligently in hammering out the agreements in the conference report.

I hope the House will support the conference report.

Mr. Speaker, this is a good conference report. Take my word for it.

We won a pretty good victory in the other body. As I recall this bill went over to the other body on May 6. It came out of there on September 1. They asked for a conference on September 15 and we accommodated them on September 16, the next day. The House had the right for the first time to preside in conference and I presided. It took us 3 days to get this conference report through. Heretofore it had taken us 3 or 4 weeks. We did not listen to a lot of rhetoric. We had fine cooperation from the greatest group of House conferees we have ever had. We did not do so badly. Of course, we had to give and take. However, we brought home more than we left. I am thankful to the members of the Committee on Armed Services. We are your committee. We have striven to leave a good image in the other body as your committee.

We recognize the fact that we are your committee. We have a good committee. We have very little dissent in our committee. Do not believe what you read, if you read that we do not have a good rapport. We are jealous of our good record and we shall continue to try to protect it.

Mr. Speaker, we bring to the House a good conference report today. We want every Member of this body to back us, because the stronger the bill that comes out of this branch or the other branch, the more notice there is to our potential enemies that we are not kidding—that we are determined to rebuild our military strength.

Mr. Speaker, we have in this bill the ingredients to save America and catch up in those areas where we have fallen behind. I commend the conference report to you.

Mr. RANDALL. Mr. Speaker, will the gentleman yield for just a half minute?

Mr. RIVERS. Of course I yield to the distinguished gentleman from Missouri, a member of the committee.

Mr. RANDALL. The conference report is so comprehensive and so good and contains so many things, including for the first time the provisions for Israel, I simply want to ask that the press, after the vote is taken today, note what happened to the doves.

Mr. RIVERS. As long as the light holds out to burn, there is time for the vilest sinner to return. Any time the doves want to come home, we have a roost for them.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. RIVERS. I am happy to yield to my distinguished friend from Iowa.

Mr. GROSS. I would call the gentleman's attention to the language contained in the report which appears on page 30 thereof with reference to premature disclosure of defense contract awards, a provision put in by the other body and accepted by the House.

Would the gentleman address himself to that particular item briefly with an example of what this is designed to do?

Mr. RIVERS. This is one of the best things done by the other body. They put a provision in there whereby they could not announce contracts awarded to contractors. There have been occasions when there appeared in the papers the statement that "Rivers has announced the award of certain contracts." I never have announced one in my life. I do not think the Member of Congress should announce contract awards, because the minute we announce that a particular contractor received an award, the people of America may get the idea that we had something to do with it. We do not have anything to do with it. The contracts are made by the executive branch and out in the field. I feel it is a good provision.

Mr. GROSS. Then we have had some difficulty in the past with the announcement of contract awards.

Mr. RIVERS. This is a good thing, because now you will not see Members of Congress announcing the award of contracts.

Mr. GROSS. No, but I say that in the past we must have had some difficulty, or there must have been some difficulty.

Mr. RIVERS. There must have been. It did not apply to me, because I never have announced one.

Mr. GROSS. I had assumed that.

Mr. RIVERS. And this is a good thing. I have never announced the award of one since I have been in the Congress; I have never announced it in my office, but I have heard that a lot of Members of the other body have announced the awarding of contracts which they had nothing to do with. And so we accepted this proposition and we think it is a good thing.

Mr. GROSS. I thank the gentleman.

Mr. RIVERS. Mr. Chairman, I yield 10 minutes to the distinguished gentleman from Illinois, Mr. ARENDS.

Mr. ARENDS. Mr. Speaker, the conference report that our committee brings to the floor of the House today represents the best efforts of the House managers after long and hard bargaining sessions with the Members of the Senate. It also represents, in my judgment, the minimum program we could provide for the defense of this Nation in the world as we find it today.

Our Chairman, the gentleman from South Carolina (Mr. Rivers), has adequately explained the bill in great detail, and I will try not to be repetitious. However, there are some important matters that I would like to touch on briefly.

ABM

The bill, as finally agreed on by the conferees, includes an amendment originated in the Senate which limits the deployment of the anti-ballistic-missile system to the defense of four sites in an effort to limit the deployment of the system to the strategic missile deterrent. The House bill would have permitted the President to do advance work this year on four other sites—in the Northeast, the Northwest, the Michigan-Ohio area, and the Washington, D.C., area. The additional money involved was only $25 million. However, the development of these sites would have allowed advance work to prepare for area defense should the President later determine that such is required. This area defense would have provided protection against a potential Chinese threat and would have allowed protection for bomber bases and for Washington, D.C. Elimination of this work in the present bill will delay deployment at least 1 year for most of these sites and at least 9 months for the Washington area. It should be understood that we are talking in terms of having the system ready by the late 1970's, when both the Chinese and Soviet threats will be even more dangerous than at the present.

It was, therefore, with great reluctance that the House managers conceded to the Senate position. The Senate conferees were absolutely adamant in not wishing further debate on the ABM.

The House conferees in receding made it clear, as spelled out in the statement of the managers, that nothing in the language of the conference report prohibits follow-on studies of present or future programs designed to provide adequate protection for the national command and control function. It is the belief of the House conferees that adequate protection of our command and control system is essential to the national security, and that nothing should prohibit work designed to insure the survival of this system. The bill as agreed upon will allow a year to further the test and checkout of the ABM system as presently being developed, and further extensions could be authorized next year if such are determined to be required.

ISRAEL

Mr. Speaker, all of us are aware of the deepening crisis in the Middle East, and all of us are aware of the dark and insidious involvement of the Soviet Union in that crisis.

The nation of Israel stands alone against terrible odds in the Middle East and stands not only for Israel but for the interests of the Western World in that cradle and Gethsemane of civilization.

All of us should understand that the Middle East is a powder keg which could set off world war III. If Israel can maintain her military strength, we can retain the military balance in the Middle East and lessen the threat to world peace. But as long as the Soviets are giving so much advanced military equipment to Egypt and other Arab nations, Israel is going to require help, and we must give the President authority to provide that help.

With this understanding, the managers on the part of the House were sympathetic to an amendment on the Senate bill which expressed as a matter of national policy the Congress grave concern with the deepening involvement of the Soviet Union in the Middle East. The House conferees were also in sympathy with the amendment's purpose in authorizing the transfer to Israel of aircraft and other equipment by sale, credit sale, or guarantee, so that giving Israel the means of providing for its own security could restore the military balance in the Middle East.

However, we were concerned about the lack of an expiration date on the amendment as drafted by the Senate. We felt that periodic reexamination by the Congress, as is true of any authorization, was advisable.

Therefore, the conference agreed on an expiration date of September 30, 1972. The Congress and the committees responsible will have an opportunity to review the need for possible extension prior to the expiration date.

As the chairman has, I believe, already pointed out, we express the intention of the conference in the statement of the managers that the amendment, in addition to aircraft, covers ground weapons such as missiles, tanks, howitzers, and similar equipment and provides for the broadest interpretation of the words "equipment appropriate to protect such aircraft." It is our intention that the provision of equipment not be limited to that which would have to be placed in close physical proximity to the aircraft itself.

Mr. Speaker, I think this is one of the most important actions the House will take this year in defense of world peace. I want all the Members of the House to clearly understand that without this amendment in our bill the President does not have adequate authority to provide the help that he may wish to give to Israel.

NAVY

The chairman of the Armed Services Committee has spelled out the provisions of the conference agreement on naval construction, and I will not go into a lot of detail. Simply put, the conference report provides the additional $435 million which the House had included in its bill above the President's request for the construction of naval ships. This is a beginning step to get our Navy back to the level of strength that it simply must have if we are to maintain our position in the world. And I urge the Appropriations Committee in the strongest of terms to take action to fully fund this authorization.

The Secretary of Defense has told our committee that if the money is provided he will be sure that it is spent.

Those of you who have read Chairman RIVERS' magnificent speech yesterday have to be deeply disturbed about the Soviet threat in the world, particularly the Soviet advances in naval power. Those who read the chairman's words—which are irrefutable—must, I believe, in good conscience support this ship construction authorization.

We were unable to prevail upon the Members of the Senate conferees to also support the aircraft carrier which was included in the President's budget, but I believe on balance that we have taken a most important step forward in persuading the Senate to accept the need for modernizing our Navy.

The Members of the House should be aware that this is just the beginning of the program that is needed for modernizing the Navy.

CAMPUS RECRUITING

I want to say a word about one provision of the bill which I think is important as a matter of congressional policy.

The bill as passed by the House contains a provision prohibiting the use of funds authorized by the bill for grants to any institution of higher learning where the Secretary of Defense determines that recruiting personnel of the Armed Forces were being barred from the institution's campus.

Initially, objection was raised to the amendment as something that would cause many problems on campuses or be taken as a threat to academic freedom.

We were able to point out to the Senate conferees that the language of the amendment was actually identical to a law now on the books for NASA.

The Senate conferees agreed to the provision of an amendment making clear that it would apply where the military recruiters are "barred by the policy of

the institution." This will make sure that the amendment will not result in denial of Federal funds to a college or university where neither the students nor the faculty were responsible for denying military recruiters the opportunity to be located on campus.

What the amendment does is prohibit funds being given to an institution where the administration of that institution as a matter policy denies the military recruiters the opportunity to appear on the campus.

This amendment in no way inhibits academic freedom. It in no way inhibits the pursuit of important research by universities. But it does say that we are not going to authorize the expenditure of Defense funds at institutions which are so dead set on opposing our Government that they object to even the sight of military recruiters on campus.

SUMMARY

Mr. Speaker, I do not wish to take any more time because others may wish to speak on the conference report.

I think your conferees have gotten important concessions from the Senate, and I think we have done an outstanding job.

I want to make one final observation. The bill as finally approved by the conference totals $19,929,089,000. This is $676,400,000 less than the bill as it was presented to the Congress by the President. This is true even though in one area—naval construction—the bill is $435,000,000 above the amount recommended by the President. I think these figures spell out as clearly as anything can the depth of our concern for the deterioration of our Navy, and I think they spell out with equal clarity the fact that we have come forth with a very austere bill.

The Secretary of Defense characterized this as a "rock-bottom, bare-boned" Defense budget. We have reduced it below his estimates more than one-half billion dollars at a time when the world is in a terrifyingly unstable condition and at a time when the Soviets are building up their strategic offensive power and their naval power at an unprecedented rate.

This bill is vital to our national survivial, and I hope the program will be supported vigorously by the Members of the House not only today, but during the appropriation process as well.

Mr. RIVERS. Mr. Speaker, I yield 5 minutes to the gentleman from Texas (Mr. WRIGHT).

Mr. WRIGHT. Mr. Speaker, I rise to congratulate the House conferees. They have done an exceptionally skillful and dedicated job in preserving the basic position of the House. Particularly do they deserve our congratulations for having prevailed in insisting upon the House position with respect to future procurement of the F–111, undoubtedly the most modern and most versatile aircraft in our defense arsenal.

The capabilities of this aircraft have been so publicly obfuscated by a plethora of sensational publicity emanating from political charges and counter-charges unrelated to the aircraft's capability, that Chairman Mendel Rivers and the members of the House committee fully deserve our expression of confidence for their unwavering defense of fact in the face of so much highly publicized fallacy and popular fiction.

Particularly should I like to commend and call to the attention of the membership the following language from the statement of the conferees on the part of the House:

The House conferees wish to reiterate that the agreement upon language in the bill in no way reflects agreement with the position stated in the Senate report to the effect that the procurement authorized in the present bill represents the final increment of the F–111 procurement.

It is pointed out that the funds available for the F–111 for fiscal year 1971 will not even complete the fourth wing. The House conferees are unswerving in their belief that four full wings of F–111's should be procured; and it is clear, as the earlier House report indicates, that the Air Force believes six wings are required but such have been precluded for budgetary reasons. The House conferees believe that future decisions should be made in the future, and not made now on an arbitrary basis. A present decision on all future requirements for the F–111 is both unnecessary and unwise.

As the report of the Senate Committee makes clear, "no other aircraft in the Air Force inventory can compete with the F–111." The House conferees, therefore, will not accept the imposition of constraint on future procurement of this aircraft and shall insist that the Department of Defense consider further procurement for fiscal year 1972 if necessary for defense requirements and that no prohibition should be placed on the Air Force in planning studies for a fifth or sixth wing.

This conclusion is fully supported by a letter to the chairman of the Senate Committee on Armed Services written on September 17 by David Packard, Deputy Secretary of Defense. The text of the letter is as follows:

THE SECRETARY OF DEFENSE,
*Washington, D.C., September 17, 1970.*

Hon. JOHN C. STENNIS,
*Chairman, Committee on Armed Services, U.S. Senate*

DEAR MR. CHAIRMAN: In Section 503 of H.R. 17123, as reported by your Committee, specific criteria were prescribed with respect to the obligation of FY 1971 funds for the procurement of F–111 aircraft. I am in full agreement with these criteria and I agreed with the Secretary of the Air Force's actions to have a detailed examination made of the structural integrity of the F–111 aircraft over and above the normal development and test program.

As a result, for the past several months the Air Force has been subjecting the F–111 fleet to a comprehensive structural integrity test program that included static and fatigue testing. Additionally, a proof test and inspection program was designed and implemented to insure that the fleet is free of all defects of the type that caused the loss of the aircraft in December 1969.

The Air Force has now progressed sufficiently through the test program to permit me to conclude from the results obtained that the F–111 fleet will be structurally sound, and that it will indeed perform its intended mission. Attached hereto, as requested, is a detailed report of the entire test program and results to date which provided the basis for my determination. Accordingly, I have approved the program for the procurement of remaining F–111's in FY 1971.

Sincerely,

DAVID PACKARD,
*Deputy.*

As Secretary Packard points out, the structural integrity of this aircraft has been established beyond doubt. In the summary statement analyzing the unprecedented test program to which the F–111 fleet has been subjected, the Department of Defense makes the following additional points:

At this time, there is a high level of confidence that we can expect a 6,000 hour fatigue structure to be attained versus the 4,000 hours in the original requirement. A 6,000 hour F–111 structure would provide 15 years of operation versus the 10 years initially planned. . . .

This unique program of inspections and stress testing of assembled aircraft is accepted as a severe test of the aircraft structure and each successful test increases the confidence that the F–111 fleet is free of structural flaws of the type that caused the loss of the aircraft in December 1969. The program has been demanding and critical of every detail. . . .

There have been no forging defects found in over 100 aircraft inspected and proof tested and in 2800 other forgings inspected. . . .

Some 199 aircraft will have completed the proof test cycle by 1 November 1970, with 120 aircraft returned to the Air Force. All aircraft currently scheduled to be proof tested will be completed by mid-1971. . . .

The results to date of the inspection and proof test program provides the basis for high confidence that the F–111 fleet is free of forging defects. . . .

This review of the status of the structural development of the F–111 system shows that that the static strength of the aircraft is sound and we can expect a 6,000 hour endurance will be attained in fatigue life, thus exceeding contract specifications by 2,000 hours. The results of the inspection proof test of the F–111 aircraft to date show that no forging defects have been found.

The F–111f, soon to be delivered to the Air Force, is the fruition of many years of design and testing and unquestionably combines the very best performance features of all our most modern military aircraft.

The big money already has been spent, and as the House committee pointed out, we now are in a position to secure for the defense of the country the minimum four wings which the Air Force regards as absolutely necessary—or the six full wings which it desires—at a very substantial saving in unit cost.

Beyond this, the country needs for its deterrent strength a great many more of the FB–111, the strategic long-range version. The Air Force now has only 76 of these even though it originally requested 263.

Our aging fleet of B–52's has done yeoman service in keeping the peace, just as the B–36 did in its day. But the subsonic aircraft is obsolescent by modern standards.

The controversy now surrounding the ICBM's and how to protect them—whether to bury them in the middle of a granite mountain, place them on trains, surround each by the deployment

of ABM missiles—demonstrates the limitations upon the usefulness of missiles exclusively as a deterrent posture.

There is no doubt as to our need for missiles, but their application is so limited and inflexible—and so untested and hypothetical in its effectiveness—that we simply cannot afford to put all of our deterrent eggs in the missile basket.

We need bombers too, which can be used subject to the human judgment factor. We cannot expect to have in operation a fleet of B–1's at best before about 1980, and meanwhile the only aircraft which possibly can fill the gap is the advanced FB–111. I congratulate the House conferees on their recognition of this fundamental fact of life as we look to our national defenses.

Mr. GROSS. Mr. Speaker, will the gentleman yield for a question, now that the gentleman from Texas has raised the question of the F–111?

Mr. RIVERS. Certainly I yield to my very distinguished friend, the gentleman from Iowa?

Mr. GROSS. Mr. Speaker, let me ask how much there is in this bill now, since it has been to conference, for the F–111? And is that for the F–111 fighter or the F–111 bomber? I note on page 20 of the report that there is $6.4 million for the F–111. It does not say whether it is for the fighter or the bomber version.

Mr. RIVERS. This is a fighter-bomber we are talking about. It is an interdiction plane, an interdiction attack aircraft, and it has the capability to operate at great speeds at both high and low altitudes. It is the only plane the Air Force has that is capable of on-the-deck all-weather operation. It is the only plane. We have spent a great deal of money on this plane.

Mr. GROSS. Yes, and it has been on the deck for a long time.

Mr. RIVERS. Let me say this to the gentleman. I have had misgivings about this plane. We have spent a great deal of money on it, but it is out of the woods and I am glad it is. This plane has been subjected to more research and to more ways of finding out whether it will fight than any plane in the history of America. It has come through, and I am glad of it.

Mr. GROSS. Is the only money in this bill for this plane the $6.4 million as stated in the conference report?

Mr. RIVERS. This does not end the F–111 program. The plane is working, and it will continue to work.

Mr. GROSS. Is the $6.4 million in the report the money in this bill for the F–111?

Mr. RIVERS. No. The answer is "No." I will read the gentleman what it says:

> The fiscal year budget 1971 request for the F–111 aircraft is $563.3 million. This amount includes $48.2 million for continuing research and development; $283 million for new aircraft procurement; $200.5 for prior over target costs, and $31.6 million for initial spares.

Does that answer the gentleman?

Mr. GROSS. The total is what?

Mr. RIVERS. It is $563.3 million.

Mr. GROSS. So we are going to proceed now with the F–111; is that correct?

Mr. RIVERS. That is right; and it is working.

Mr. GROSS. Despite the fact that Australia is apparently the only country which originally bargained for these planes that is going to go through with the contract?

Mr. RIVERS. I do not know what Australia is going to do, but for the money we have put into this plane thank God we have got a good plane now. I am sure it is going to work.

I was never so surprised in my life as when I went down for the first time to the General Dynamics plant at Fort Worth, Tex., and talked to the Air Force personnel. This plane is loaded, believe me. McNamara put everything on this plane one could put on an airplane. The Air Force and General Dynamics have it working.

Mr. GROSS. Obviously the gentleman from South Carolina has changed his mind about this plane. I hope he is right, because he was not saying this a couple of years ago.

Mr. RIVERS. I surely was not.

Mr. GROSS. No.

Mr. RIVERS. A foolish consistency could be the hobgoblin of a little mind.

I want to congratulate the gentleman for changing his mind at times. I have taken a 180 degree turn on this plane. The gentleman is right. The Navy version of this plane did not work. McNamara cut off the fuselage, changed the aircraft, and it could not work. But the indomitable spirit of the Air Force did not give up on this plane. Thank God it is working. It is the only new plane we have.

Mr. GROSS. I hope the gentleman is right.

Mr. RIVERS. I hope I am right, too, and I believe I am right.

Mr. VANIK. Mr. Speaker, will the gentleman yield?

Mr. RIVERS. I yield to the gentleman from Ohio.

Mr. HOLIFIELD. Mr. Speaker, yesterday our distinguished colleague, the chairman of the House Armed Services Committee, MENDEL RIVERS, delivered a very significant address in this Chamber. He warned us of the growing military might of the Soviet Union, particularly the expansion of its naval forces. He drew comparisons between their growing strength and our complacency. He brought out the unfortunate new development which portends a possible rerunning of the 1962 Cuban missile crisis.

It is with deep regret that I notice the United States and the Soviet Union appear again to be moving toward a possible confrontation. It is particularly unfortunate because both nations realize the dangers inherent in a nuclear war. Both nations are working toward strategic arms limitation at Vienna and Helsinki. However, as the United States is seeking ways and means to pull away from the abyss of nuclear disaster, the Soviet Union is increasing its nuclear offensive capability.

As I said in a speech in Chicago just 2 weeks ago on September 14:

> The Soviet Union has come a long way. Its consumer goods are up. Its people are better dressed and better housed, but still it has not wavered from its desire for world domination, and anyone who believes otherwise should read the speeches of Mr. Breshnev. In 1962 the Soviet Union placed offensive nuclear weapons 90 miles from the United States shores. The Soviet Union attacked its own ally, Czechoslovakia, a scant two years ago when the Czechoslovakians gave some evidence of desiring more freedom. The Soviet Union today has more land-based nuclear missiles than the United States. Its nuclear submarine fleet may surpass the United States in the next few years. Its Navy, once confined to the North Sea, now roams the world. It is "fishing" in the troubled waters of the Middle East.
>
> These are sad and unfortunate facts of life. We must not whet the appetite of those in Communist Governments who view the United States as a "paper tiger." We must maintain our strength or else we invite disaster.

I certainly hope that the leaders of the Soviet Union will weigh very carefully the dangers inherent in what appears to be an aggressive move which can only exacerbate the delicate relationship between our two countries. And—I hope that they do not misjudge the strength and courage of the American people when presented with a clear and present danger.

Mr. WOLFF. Mr. Speaker, when a version of this legislation came before the House last May I voted against it for several reasons. I was concerned about the expansion of the Safeguard anti-ballistic-missile system to new sites. I believed then, and still believe, expansion of this program would be ill advised since there is no assurance that it will enhance our security and the cost is fantastic given the very short odds on its success.

I also objected to the bill at that time because of the lack of controls on cost overruns on several weapons systems and on independent research and development by defense contractors. Moreover, I was fearful that we were being too free in extending support to the Indochina war and in supporting allied efforts that could expand the war which, in fact, should be ended.

Now, I have reviewed the conference report and, while I still have certain reservations about this legislation, I am impressed by the significant improvements made in conference. This is a much better piece of legislation than that offered to us last May and I am prepared to support the conference report for the following reasons:

First, additional deployment of the ABM is specifically prohibited in accordance with the view I expressed last spring;

Second, a new and important section has been added to provide credit sales to Israel of vitally needed military equipment including aircraft. This is a most important addition since it should help maintain peace in the Middle East, encourage success in the peace talks being held at the United Nations, and help offset the dangerous and flagrant violations of the cease-fire by Egypt and the Soviet Union;

Third, specific and detailed controls have been placed on cost overrun payments and on Federal support for independent research and development;

Fourth, amendments prohibit the use

of support funds for Indochina forces to expand the war or to pay third-party nationals unfairly for waging the Vietnamese war;

Fifth, reductions were made in several authorizations for weapons systems whose efficacy has not been proven; and

Sixth, controls were included on the development of delivery systems for chemical and biological warfare.

Mr. Speaker, as one who has opposed certain military funding in the past I feel a special obligation to be responsible, reasonable, and rational in my calls for controls and cutbacks in military spending not related to our national security. Of course I fully support the funds which are, in fact, necessary to insure our security in this troubled world.

This latter point is most important, Mr. Speaker. At stake here is a matter of consistency—when funds are needed, when a crisis develops, when assistance can actually act as a force for peace as in the Middle East—I favor that assistance. I recognize the necessity of thwarting aggression whenever possible; for this is an important priority. It is not only responsible, it is consistent with the position I have held for some time, to vote for this conference report.

The conference report is a significant step in striking a responsible balance in military spending and sets a number of important precedents in controlling wasteful expenditures. To oppose this report out of a shortsighted or blind approach to our needs would be most unwise. Those of us who have taken a position favoring cutbacks in nonessential military spending and for a reordering of priorities have a responsibility to recognize the important advances contained in this conference report and to give it our support.

Mr. YATES. Mr. Speaker, after considerable study and thought, I have decided to vote for this conference report. I voted against the bill when it passed the House because I thought it was bloated with unnecessary and exorbitant military programs. The Senate has corrected many of these, not to the degree I would wish for, but it is difficult to find many bills drafted exactly to my wishes. At best, legislation contains provisions that are distasteful keeping company with provisions that are good.

I believe timing is particularly important today. Tensions in the Middle East have rarely been greater. The death of President Nasser yesterday complicates even more the already complex situation. What moves will the Soviet Union make to aggrandize and make more permanent its favorable position along the Mediterranean Sea? What additional pressures will the U.S.S.R. seek to apply against Israel in concert with extremists in the Arab nations? The area which has been described so frequently as a tinderbox truly warrants that designation today. This bill, containing as it does a provision for long-term credits for sales of military equipment to Israel comes at a particularly appropriate time in reflecting the determination of the Congress that hard-pressed Israel will be given the tangible assistance it needs to survive against the Soviet-Arab missile buildup at the Suez Canal and other potential military threats.

I approve, too, of that part of the conference report which prohibits American funds being used to support troops in Cambodia or Laos. This, I believe, will help prevent any increase or escalation of the Indochina war.

I would have preferred that all funds for the Safeguard ABM be stricken from the bill. I think this system is ineffective, ill conceived, overly expensive, and a waste of taxpayers' funds. It was one of the principal reasons I opposed the bill on its first consideration. The Senate has wisely limited the Safeguard to preventing the expansion of the system beyond their stated purpose of protecting our ICBM sites. Hopefully, the system will be scrapped next year and its funds allocated to a much more constructive purpose.

Mr. BINGHAM. Mr. Speaker, I voted against this bill when it came before the House some months ago. I did so after supporting a number of unsuccessful amendments which would have limited or eliminated a number of the wasteful, provocative, and in some cases totally unnecessary weapons programs contained in this bill. However, after careful consideration and with some hesitancy, I have decided to support the conference report now before the House.

This decision was an extremely difficult one, with major considerations on both sides. It was not made easier by the extensive remarks delivered in this Chamber yesterday by the chairman of the Armed Services Committee, the gentleman from South Carolina (Mr. RIVERS). On the contrary, if this bill actually gave effect to the views on defense and strategic matters expressed by the gentleman from South Carolina, I would have to oppose it. It does not, however. His views are, as is said in the law, obiter dictum.

I am, moreover, impressed with a number of areas in which substantial improvements have been made over the House-passed version as a result of Senate and subsequent conference action. The conference version, for example, deletes the House authorization to expand the Safeguard ABM to a broad, area-defense system. Instead, it contains a somewhat more acceptable, hard-fought Senate compromise that limits deployment of ABM's to two additional sites, and to missile bases rather than population centers.

The $152 million authorized by the House bill to begin building a third nuclear-powered carrier—the CVAN-70—has been omitted. In my judgment, these extraordinarily costly carriers are fast becoming obsolete in view of the development of sophisticated missile systems for which such carriers would, in wartime, be nothing more than sitting ducks. If any more at all are to be built, it should not be until after, as the committee report notes, the National Security Council has completed the major study of the strategic value of carriers that is now underway at the request of the administration.

This conference report, Mr. Speaker, also contains the sole statutory authority for the sale of military equipment, including fighter aircraft, to Israel. The Military Sales Act, ordinarily an alternative source of such authority, has expired as a result of a House-Senate conference deadlock on the matter of the Cooper-Church amendment added by the Senate. The future of that legislation is most uncertain, and it is imperative that the President have full, uninterrupted authority to continue to insure the security of the embattled State of Israel.

Finally, Mr. Speaker, this legislation contains two provisions relating to our involvement in Southeast Asia which were not in the House bill but which were proposed in the Senate by Senator FULBRIGHT. The first prohibits U.S. military assistance funds from being used to support Thai or South Vietnamese troops in Cambodia or Laos. The second provides that payments to troops of our allies fighting in Vietnam not exceed the rate of combat pay given to American troops.

In many respects, this bill does not go nearly as far as, in my judgment, it ought to go in reducing our military hardware expenditures and adopting a less provocative strategic posture. It also contributes to the continuation of the war in Vietnam which is such a tragic mistake. Nevertheless, as I have specified, a number of provisions of this conference bill constitute reasonable and commendable steps in the right direction in comparison to the version that passed the House. On that basis, I intend to vote for it.

Mr. HELSTOSKI. Mr. Speaker, last May 6 this body passed H.R. 17123, authorizing appropriations for fiscal year 1971 for military procurement, research, and development, and for anti-ballistic-missile system construction.

I voted against this bill because I felt that the $20 billion-plus was far in excess of the needed funds for the procurement of weapons for the military.

The Senate worked its will on this bill and arrived at an authorization figure of a billion dollars less than the amount approved by the House, and thus it was placed into the hands of the House-Senate conferees to resolve the differences in the bill.

Today, Mr. Speaker, the result of this conference action is before us. This military authorization measure is less than the bill which passed the House and is less than the bill presented to the Congress by the President.

I am pleased that the military aid for Israel has been broadened to include ground weapons as well as aircraft. These ground weapons include tanks, missiles, howitzers, armored personnel carriers, and ordnance.

It is necessary that these funds be authorized to maintain the balance of power in the Middle East for the half-staffed flag of Egypt now casts a precarious shadow over the entire Middle East, and places the hope for peace under uncertain conditions.

Mr. Speaker, I shall vote for the adoption of the conference report because the conferees have made drastic cuts in the

authorizations for projects which I have strenously opposed for many years.

I am pleased that this measure has reduced a substantial amount of funds to be used in Southeast Asia, a cutback of funds for missile systems, the prohibition of the procurement of chemical and biological warfare delivery systems.

In voting for this conference report, although I am not in complete accord, I am doing so with the knowledge that some of the most objectionable authorization features have been lessened to a great degree, while still authorizing enough funds to maintain our Armed Forces at a level which can preserve our national security.

The savings made under the provisions of this authorization can well be directed to one of our many domestic programs to combat the ills and to provide the necessities for a better life in our own country.

I commend the conferees on their wise judgment in bringing to us a bill that has removed, if only in part, some of the objectionable features of it. This bill is a step in the right direction of reducing military financial commitments, and I feel sure that the House will adopt it by a wider margin than the 326-to-69 vote taken on it last May.

Mr. FRASER. Mr. Speaker, I shall vote for this military procurement authorization without enthusiasm. My vote indicates approval of the roughly $600,000,000 cut this bill represents when compared to the bill we passed May 6. I believe in and support a strong military posture for the United States but I would unhesitatingly vote for much larger cuts than these agreed upon in the conference which produced this bill.

I approve of the decision not to authorize preliminary work on the so-called anti-Chinese phase of the ABM system but I continue to oppose the ABM expansion authorized by this bill.

There are other provisions of this authorization which make it impossible for me to be an outspoken advocate for the bill. But there are also improvements in this bill evident when I compare it to the House authorization I voted against in May.

I applaud the striking from the final authorization the House-approved provision for $152 million to start procurement for CVAN–70, the third nuclear-powered aircraft carrier.

I strongly approve of the amendment which bars our paying "free world assistance funds" for Vietnamese or Thai military operations on behalf of Laos or Cambodia.

I support the amendment not in the House-passed version which will bar in the future our financing overseas allowances to foreign troops that exceed those paid U.S. troops in the same theater.

And, I believe we must accept the Senate decision to establish a more flexible mechanism for providing arms to Israel. This bill now has such a provision. Another effect of this particular amendment will be the lessening of the pressure on conferees who support the Cooper-Church amendment to the Foreign Military Sales Act.

Legislation is always the product of compromise. In the recent past I have ordinarily voted "nay" on defense authorizations because they inevitably fund unneeded and expensive weapons systems. My "yea" vote today does not indicate that I now support these same or similar systems. It merely indicates that this particular compromise has more in its favor than those bills I opposed in the past.

Mr. PRICE of Illinois. Mr. Speaker, I support the adoption of the conference report on H.R. 17123, the military procurement bill for fiscal year 1971 because it contains a very important provision concerning the security of Israel. The provision, title V, section 501, authorizes the transfer of aircraft and supporting equipment to Israel by sales, credit sales, or guarantee in order to maintain that brave nation's integrity.

Included in the Senate-passed version the provision was readily accepted by the House in conference. As one of the conferees strongly in favor of the Senate language, I am pleased to have this opportunity to speak out in its favor.

The Middle East situation has assumed ominous dimensions. Despite the recent cease-fire Israel's security is threatened by the missile buildup. The military balance is askew, and the United States must honor its commitment to Israel by making available to it the necessary military wherewithal to restore that balance. This provision is both an expression of our commitment and a means of helping our Israel friends.

I, therefore, strongly urge my colleagues to vote for the adoption of this conference report.

Mr. ASHLEY. Mr. Speaker, as a Member who voted against a House-passed military procurement bill, I rise to set forth my reasons for casting an affirmative vote on this conference report today.

It will be recalled, Mr. Speaker, that an amendment was offered during House debate on this measure earlier this summer which would have prohibited expenditure of funds in Cambodia after June 30, 1970. The amendment was defeated. In the conference report before us, however, use of funds is prohibited to support Thai or South Vietnamese troops in Cambodia or Laos and payment to troops of U.S. allies fighting in Vietnam may not exceed the rate given to American troops.

A second reason that I am persuaded to vote for the conference report today is that the measure contains the only statutory authority for the sale of military equipment, including aircraft, to Israel. The United States, in my view, has a direct interest in the Middle East and in an Israel that is capable of defending herself from hostile neighbors.

I was very much against the $152 million authorization in the House bill to begin a third nuclear-powered carrier, the CVAN–70. This provision, too, has been deleted from the conference report.

Finally, the measure before us repudiates the House authorized expansion of the Safeguard ABM, instead permitting a more acceptable, hard-fought Senate compromise to limit deployment of ABM's to two additional sites and to missile bases rather than population centers.

Mr. Speaker, I continue to be strongly of the view that far too great a proportion of our resources is being directed to military might and far too little is being directed to our increasingly serious problems here at home. But it would be the height of naivete to deny that a balance must be struck between our domestic needs and the requirements of national security. The conference report before us at this time is a vast improvement over the House bill many of us voted against and, because it at least comes closer to the kind of reasonable balance we seek, I intend to support it.

Mr. PHILBIN. Mr. Speaker, I want to congratulate and commend the chairman for his outstanding remarks and effective work on this vital bill which is of such great import to the security of this Nation and to the free world.

I also commend and thank my esteemed colleagues of the House Armed Services Committee for the great ability, patriotism, discernment, and hard work that they and the outstanding staff of our committee have put into this bill.

I think we are all agreed that in this dangerous world, this Nation must be kept strong in every sense of the word, not only militarily, but economically, financially, socially, spiritually, and in every other way.

There never has been a time when our country has been under greater challenge from abroad, yes, and at home. This Congress must recognize that fact, and do something about it that will insure that the security and safety of this Nation shall be defended and protected as well as that can be done in this nuclear age. We must perform this task, even as we hope, pray, and work for total peace in Vietnam and in the world.

We must recognize the urgency of keeping the homefront secure and ready to cope with any emergency that may eventuate. I cannot emphasize this point too strongly.

One of the most vital sections in this bill is the one that deals with the problems of the Middle East, and the clear and present danger to world peace that exists in that area which cannot be ignored by this country.

It is the unanimous view of the distinguished conference that in order to insure the free, courageous nation of Israel and its gallant people the means of providing for their defense, security, and freedom this Nation must extend appropriate, effective assistance in the form of aircraft and equipment and everything that may be necessary, to enable this great, young, free nation to protect itself against determined aggression and threatened takeover by those powerful forces working to destroy it.

We have provided in this bill that the valuable aid we so willingly extend to Israel would be made on terms and conditions just as favorable as those extended to other countries in the same position, where their freedom, self-determination, and security were in danger

from willful aggressors and determined enemies. Indeed, Israel must be helped in every possible way to protect and defend herself.

It is the considered view of the conference that it is unquestionable that the key to peace in the Middle East depends upon the independence, freedom, and self-determination of Israel threatened by other nations trying to overrun her territory, which are posing aggressive hostilities that could gravely endanger her freedoms, and the influence this brave, young country may be able to wield in helping to establish lasting peace in that part of the world.

It is our judgment that this action is similar to that which we have taken in behalf of other nations, similarly beset by threats of aggression, and is urgently needed at this time, and our decision was unanimous.

I hope and urge that the decision of the House as a whole will likewise be unanimous.

This bill involves very large expenditures, but every effort has been exerted by the committee and the conference to keep expenditures down to minimum limits that conditions in the world require. But we must make sure of the national defense and security.

We believe that the posture of strength and devotion to freedom which this bill represents will be very helpful in holding the line for an effective defense of our Nation as well as assurance to the free world that we propose to stand with firmness and resolution against willful aggressors, whatever their source, and particularly those that would destroy our liberties and those of free peoples of the free world.

At the same time, we must make it very clear that the national policy of this country is for peace, freedom, self-determination, and justice for all peoples, and that we are working with all our hearts toward the realization of these ends in the world.

Let us hope that continued efforts for peace, understanding, and cooperation by all nations to reach the goals of peace, will soon be effective in assuring a peaceful world, organized on the rule of law, where threats, force, aggression, and confiscation of territory and the rights of men be renounced and outlawed, and where peace dwells for all peoples.

Mr. Speaker, I urge the enactment of the bill. It is necessary for our defense and security and deserves the support of every Member of this House.

Mr. VANIK. Mr. Speaker, I am particularly pleased to support section 501 of the conference report on H.R. 17123 which includes the language added by the Senate Committee on Armed Services which authorizes the President to transfer to the state of Israel, by sale, credit sale, or guaranty, such aircraft, and equipment appropriate to use, maintain, and protect such aircraft, as may be necessary to counteract any past, present, or future increased military assistance provided to other countries of the Middle East.

This provision reflects a belated recognition of the deteriorating military balance and the threat to world peace resulting from the critical and intensive involvement and interference of the Soviet Union in the Middle East. The presence of Soviet weapons, equipment, and military personnel constitute an ominous danger. The men of the Soviet and their weapons—are the intruder—and constitute the threat not only to Israel, but to America and to the world.

This language affirms the view that the restoration and subsequent maintenance of the military balance in the Middle East is essential to the security of Israel and to world peace. It recognizes the severe economic burden presently borne by Israel in providing for its own defense. The language further provides that the credit terms upon which authorized arms should be transferred will not be less favorable than the terms extended to other countries receiving the same or similar armaments.

This provision serves notice upon the Soviet Union that the United States can no longer stand by while the Soviets pour armaments and men into the Middle East.

In the past, America has supplied weapons and materiel to nations headed by dictators, monarchs, and military juntas. It is time we take our stand in support of the principles of democracy and freedom of those nations which incorporate these principles as the law of the land.

In the Middle East, Israel is the outpost of democracy and freedom. It is in trouble because it is a free nation—which respects the dignity of the individual man. If these precepts are driven from this rehabilitated cradle of civilization, they will be threatened all over the world. The democracies of this planet must mutually aid and support each other. When one is destroyed—all are threatened.

Mr. Speaker, following is the language of section 501 of title V which so critically affects the future of democracy in the Middle East and in the world:

TITLE V—GENERAL PROVISIONS

SEC. 501. The Congress views with grave concern the deepening involvement of the Soviet Union in the Middle East and the clear and present danger to world peace resulting from such involvement which cannot be ignored by the United States. In order to restore and maintain the military balance in the Middle East, by furnishing to Israel the means of providing for its own security, the President is authorized to transfer to Israel, by sale, credit sale, or guaranty, such aircraft, and equipment appropriate to use, maintain, and protect such aircraft, as may be necessary to counteract any past, present, or future increased military assistance provided to other countries of the Middle East. Any such sale, credit sale, or guaranty shall be made on terms and conditions not less favorable than those extended to other countries which receive the same or similar types of aircraft and equipment. The authority contained in the second sentence of this section shall expire September 30, 1972.

The death yesterday of President Gamal Abdel Nasser has immense and far-reaching implications. We must hope that the new leaders who emerge in Egypt will be a rallying point for agreement within the Arab bloc to seek peace with Israel. Let us hope that new leaders will bring an end to the nationalism of hate, which has characterized so much of the past.

But while we hope, we must also stand on the alert, prepared for any contingency. As a result of Soviet influences in Egypt, the reequipment of the Egyptian Armed Forces, and the uncertain policies of that nation's new leaders, the situation may further deteriorate. It is imperative that the State of Israel be equipped and prepared to defend herself against the sophisticated weapons systems provided by other superpowers.

Section 501 is a long overdue and needed response to the crisis in the Middle East. It is a sign, written on the law books of the Nation, that we support free peoples and true democracies against threat of extinction.

Mr. Speaker, although I voted against original passage of H.R. 17123, the military procurement bill for fiscal year 1971, I believe that the other Chamber and the conferees have made enough improvements in the bill to warrant my support of the bill which has come from the committee of the conference.

I still feel that there are programs in this bill which should not have been authorized. These are programs which have failed to prove themselves, which are wasteful and duplicate existing weapons systems, which are a form of overkill and contribute to the arms race.

Yet, there are significant improvements. The bill as presented to the Congress by the President asked for $20.6 billion. The bill which passed the House provided for about $35 million less than the Pentagon wanted. The bill that passed the Senate provided for $19.2 billion, or nearly $1.4 billion less. The bill reported by the conference committee of Senate and House Members provides for $19.9 billion—thus the difference between the two Chambers was rather evenly compromised.

Among the notable improvements in the final bill over the version that passed the House are the following differences:

First. While both Chambers provide essentially equal amounts of money for the ABM Safeguard system—a system whose rationale and practicability I still question—the Senate version which was finally accepted limits ABM development to several sites and prohibits expansion of this questionable program to four additional sites as proposed by the House.

The limiting of ABM sites not only holds out the promise of saving money but makes negotiations at the SALT talks easier by indicating to the Soviets that we have not irretrievably committed ourselves to a massive ABM system and a further arms race.

Second. The final bill also drops some $152 million provided by the House for construction of the third *Nimitz*-class carrier. There is no need to spend money on this project when the administration itself is not sure it wants it. In an age of increasing powerful submarines and the demonstrated success of the Soviet Styx missile against surface craft, the long-range continuing strategic worth of the carrier must be questioned.

Third. Some controls are placed on the potential payment of $200 million to Lockheed Corp. as a possible compensa-

tion for cost overruns and inefficiencies on the C–5A.

Fourth. In addition, Senate amendments were accepted which provide for more rational and careful disposal of chemical and biological warfare systems.

Mr. COHELAN. Mr. Speaker, today I am voting against the conference report to the military procurement authorization bill. I voted against the House version of this procurement bill because I felt that some of the weapon systems authorized in this legislation had little strategic or political justification. I was hopeful that when this bill returned from conference I could offer my support. However, such is not the case. After analyzing the provisions of this report I can find little justification to support the conference bill.

First, the decision to further deploy the ABM at Whiteman Air Force Base is wrong in my judgment. I cannot subscribe to the bargaining chip theory recently proposed to further justify deployment of the ABM. Since the ABM is not operational, further deployment is inadvisable—at least pending a demonstration of its component's capabilities.

Second, there is another area of strategic weapons theory that the conferees to this bill did not, in my opinion, handle satisfactorily. This is the decision to continue the deployment of the MIRV'ed Minuteman III. I offered the amendment to delete this item from this bill when it was being considered in this Chamber. At that time I pointed out that multiple warheads in our land-based missiles could be interpreted as a quantitative as well as qualitative jump in the nuclear arms race. The continuation of this step will cause nuclear asymmetry and thus assure an end to the present nuclear stalement. While the present stalement is not the ideal solution to the present nuclear threat, it is infinitely preferable to the escalation certain to result from a MIRV'ed ICBM capability.

I was also disappointed that the conference report approved the $435 million for ship construction not requested by the administration, but added by the House. This type of add on at a time when our domestic needs cannot secure adequate funding is but another example of the glaring mismanagement of priorities to which we have become accustomed.

I am further disappointed by the modifications presented in this conference bill. For instance, the changes in the structure of the allied troop supports payments was such that the present agreements will continue thus assuring continuation of the considerable overpayments. I am also disturbed by the rejection of some of the Senate language designed to control the C–5A type overruns.

While I would support adequate military assistance for Israel, I do feel that this urgent matter should be dealt with in separate legislation.

I am hopeful that the Department of Defense appropriation bill for fiscal year 1971 will be more responsive and realistic in relation to our national defense needs. I have consistently supported an adequate defense bill, but that items that I have mentioned here are so important to me that I can only register my protest by withholding support from the conference report as I did on the House-passed version of the military authorization bill earlier this session.

Mr. MONAGAN. Mr. Speaker, I support the conference report on the military procurement bill.

This bill provides the weapons needed for the proper functioning of our military services and it is important that our man in uniform be adequately supplied.

It is worthy of note that this bill reduces the overall authorization by nearly $700 million below the request made to Congress by the President. The reduction came principally in the limitation on the expansion of the ABM system and I approve of the House acceptance of the Senate language which limits the deployment of the Safeguard to specified sites connected with the defense of our strategic missile deterrent. In view of the current SALT talks this limitation is quite appropriate.

I believe that we can continue to look for opportunities to save money in the defense budget and since the instant bill is an authorization bill I feel quite confident that the actual appropriation can be brought in at a figure substantially below this authorization.

Mr. PEPPER. Mr. Speaker, I wish to warmly commend the able chairman of the distinguished Committee on Armed Services for including in section 501 of the conference report and, therefore, in this act, the concern of the Congress over the deepening involvement of the Soviet Union in the Middle East and the clear and present danger to world peace resulting from such involvement, which is a matter of grave import to the United States, and by authorizing the President to transfer to Israel by sale, credit sale, or guaranty, such aircraft and equipment appropriate to use, maintain, and protect such aircraft as may be necessary to counteract any past, present, or future increased military assistance provided to other countries of the Middle East.

It is further provided in this section that any such sale, credit sale, or guaranty shall be on terms and conditions not less favorable than those extended to other countries which require the same or similar type of aircraft and equipment.

Thus, we have come face to face with the threat of Russia's building up the military power of the Arab countries in the Middle East to such an extent that they would dare to enter upon a war determined to destroy the State of Israel and to wipe her people from their ancient land. We are saying in this provision that we will not allow the weakness of Israel to invite such aggression. We are telling Russia and all others who would prepare the enemies of Israel to destroy her that we will not let Israel be destroyed and we will furnish her such aircraft and, I hope, such other weapons as she may need to be sure of her ability not only to ward off and defend herself against any aggression but to possess such strength that she will deter aggression.

I have thought for a long time that we should enter into a solemn agreement with Israel that we would not allow her to be destroyed. This language and this bill will, however, I believe, serve as effective notice to those who would assist and encourage Israel's enemies to make war upon Israel that they will meet superior military might in Israel, and so much of it as may be necessary will be furnished by the United States.

Mr. RIVERS. Mr. Speaker, I yield the remaining time to the distinguished Speaker to close debate.

Mr. McCORMACK. Mr. Speaker and my distinguished colleagues, this conference report is before the House of Representatives at a very important and a very challenging period in the history of the world and in the history of the life of our own country.

I want to congratulate the conferees on the action taken, because this bill represents strength so necessary in this period and in the years that lie ahead. This bill is a recognition of the fact that the law of self-preservation applies to a nation the same as it applies to an individual. Certainly the law of self-preservation applies to our country as well as to any other country, no matter how large or powerful or no matter how small and powerless.

I have repeatedly stated, in and out of the Congress, some pertinent observations I believe we cannot ignore. Only yesterday I made reference to the fact that, on many occasions in the past—and I repeat it again today, because I believe it should be repeated and emphasized as much as possible—up to and including World War II, the Atlantic Ocean was our first line of defense. But it is no longer our first line of defense.

We have to face the realities of life whether we like it or not, because what is involved is not only our Nation of today but the Nation that the next generation or future generations will enjoy. We have the mandate, which is unwritten, from past generations, who built and strengthened our Nation, to preserve this great country of ours, to improve upon it by all the means necessary and to preserve the existence of our institutions of government.

We are very thankful after Pearl Harbor that we had a breathing spell in the sense that the Atlantic was still our first line of defense and that we had the opportunity of building up and marshaling our great resources, industrial, military, and manpower. It took at least 3 years to do that. Then we started the journey toward victory both in Europe and in the Far East.

We had that opportunity then, but we will never have it again. In a few words that no one can deny, if they have a minimum of intellectual honesty, we will never have another opportunity to prepare ourselves after the fact. Our country has to be prepared before the fact. That is a fact of life that faces us. It is not a question of how one might feel on some of the aspects of South Vietnam where we respect the views in disagreement. Everyone should recognize the fact that we will never have an opportunity and that we will not have the opportunity to prepare ourselves after the fact. Anyone with a minimum of in-

telligence, because it requires no great intellectual ability, would know that when the next war starts, if it does, the only thing that might stop it is a strong and powerful America. When the next war starts the enemy will go all out to win the war. They are not going to go out just to win a battle or two and lose the war. They are going to go all out to win the war. That means they will have to destroy America. That means a concentrated attack. The concentrated attack will be on America, if you look ahead. Being practical, they will attack installations around them—maybe, for example, the Soviet Union—but the concentrated attack will be in a matter of minutes upon America in an attempt to destroy our military ability or to destroy it to such an extent that it will destroy our will to fight or a combination of both.

So I say there is nothing brilliant about knowing that. One can project himself into the future on those two facts. One fact is already here. We no longer have an opportunity to prepare ourselves after the fact. We have to be prepared before the fact. That already exists. World War II established that. One does not have to be brilliant to project his mind to the fact that if there is going to be an attack by a potential enemy who exists now, that potential enemy becoming an actual one is going to go all out to win the war and in order to win the war they will have to defeat America. We have heretofore said this. They will have to defeat us militarily or through a destruction of our will or a combination of the two.

I am very glad that the committee accepted certain Senate provisions in relation to the Middle East, and Israel. I want to commend the House conferees. I want to commend the distinguished gentleman from South Carolina (Mr. RIVERS), the chairman of the committee, the distinguished gentleman from Massachusetts (Mr. PHILBIN), the distinguished gentleman from Louisiana (Mr. HÉBERT), the distinguished gentleman from Illinois (Mr. PRICE), the distinguished gentleman from Florida (Mr. BENNETT), the distinguished gentleman from New York (Mr. STRATTON), the distinguished gentleman from Illinois (Mr. ARENDS), the distinguished gentleman from Wisconsin (Mr. O'KONSKI), the distinguished gentleman from Indiana (Mr. BRAY), the distinguished gentleman from California (Mr. BOB WILSON), and the distinguished gentleman from California (Mr. GUBSER).

And, mark what was said in this conference report which will become law. It reflects the recognition of the Congress of the United States as to where the danger is. Not only does it provide the authority for our country through the President to take necessary steps in relation to Israel, but note this language. I have never seen it contained in any bill before, and it is properly there. I quote:

> The Congress views with grave concern the deepening involvement of the Soviet Union in the Middle East and the clear and present danger to world peace resulting from such involvement which cannot be ignored by the United States.

Mr. Speaker, that is a direct statement of policy on the part of the Congress of the United States. This bill when signed by the President becomes a direct statement of policy by both the legislative and executive branches of Government.

I have never seen in my 42 years as a Member of this body language of this kind used in an authorization bill or in an appropriation bill. It is brave language and it is correct language. It states to the Soviet Union that we know who the No. 1 potential enemy is and from where the primary source of danger comes. Further, that the Congress views with grave concern the deepening involvement of the Soviet Union in the Middle East, and so forth, as the bill and the conference report states.

So, my colleagues, let us go forward with vision and courage. Let us face as brave men and women the problems of our country today. Let it not be said that we failed the next and future generations of Americans.

The SPEAKER pro tempore (Mr. EVINS of Tennessee). All time has expired.

Without objection, the previous question is ordered on the conference report.

There was no objection.

The SPEAKER pro tempore. The question is on the conference report.

Mr. RIVERS. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 341, nays 11, not voting 77, as follows:

[Roll No. 320]

So the conference report was agreed to.

The Clerk announced the following pairs:

Mr. Hébert with Mr. Adair.
Mr. Brooks with Mr. Jonas.
Mr. Cabell with Mr. Bush.

Mr. Fulton of Tennessee with Mr. MacGregor.
Mr. Stuckey with Mr. Cramer.
Mr. Friedel with Mr. Weicker.
Mr. Ottinger with Mrs. Chisholm.
Mr. Annunzio with Mr. Taft.
Mr. McCarthy with Mr. Conyers.
Mr. Miller of California with Mr. Robison.
Mr. Shipley with Mr. Andrews of North Dakota.
Mr. Murphy of New York with Mr. Cederberg.
Mr. Edwards of Louisiana with Mr. Crane.
Mr. Zablocki with Mr. Zwach.
Mr. Teague of Texas with Mr. Hastings.
Mr. Adams with Mr. Kleppe.
Mr. Aspinall with Mr. Burton of Utah.
Mr. Blatnik with Mr. Brock.
Mr. Leggett with Mr. Cunningham.
Mr. Celler with Mr. Button.
Mr. Long of Louisiana with Mr. Watson.
Mr. Daddario with Mr. Beall of Maryland.
Mr. Dowdy with Mr. Berry.
Mr. Fisher with Mr. Roudebush.
Mr. Rooney of Pennsylvania with Mr. Pirnie.
Mr. Gray with Mr. Derwinski.
Mr. Rogers of Colorado with Mr. McClure.
Mr. Rees with Mr. Powell.
Mr. Nedzi with Mr. Reifel.
Mr. de la Garza with Mr. Mathias.
Mr. Melcher with Mr. Fish.
Mr. Macdonald of Massachusetts with Mr. McKneally.
Mr. Watts with Mr. Foreman.
Mr. Landrum with Mr. Vander Jagt.
Mr. Stephens with Mr. Martin.
Mr. Olsen with Mr. Tunney.
Mr. Farbstein with Mr. Feighan.
Mr. Symington with Mr. Scheuer.

Mr. ASHLEY changed his vote from "nay" to "yea."

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

## URBAN MASS TRANSPORTATION ASSISTANCE ACT OF 1970

Mr. O'NEILL of Massachusetts. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 1224 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 1224

*Resolved*, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 18185) to provide long-term financing for expanded urban mass transportation programs, and for other purposes. After general debate, which shall be confined to the bill and shall continue not to exceed two hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Banking and Currency, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

The SPEAKER. The gentleman from Massachusetts (Mr. O'NEILL) is recognized for 1 hour.

Mr. O'NEILL of Massachusetts. Mr. Speaker, I yield 30 minutes to the gentleman from Ohio (Mr. LATTA), pending which I yield myself such time as I may consume.

Mr. Speaker, House Resolution 1224 provides an open rule with 2 hours of general debate for consideration of H.R. 18185, the Urban Mass Transportation Assistance Act of 1970.

The purpose of the legislation is to provide long-term financing for expanded urban mass transportation programs. It would permit the Secretary of Transportation to enter into long-term contracts with local communities totaling $5 billion for 5 years to provide grant assistance to local transit agencies. This new authorization would be available until the $5 billion is obligated. Appropriations for the liquidating of obligations incurred would be authorized in aggregate amounts not to exceed $130 million prior to July 1, 1971, $500 million prior to July 1, 1972; $1.15 billion prior to July 1, 1973; $2 billion prior to July 1, 1974; $3 billion prior to July 1, 1975; and not to exceed $5 billion thereafter.

The Secretary would be authorized to make loans for the acquisition of real property upon a determination that the real property is reasonably expected to be required in connection with an urban mass transportation system and that it will be used for that purpose within a reasonable period of time. These loans could be used for rights-of-way, station sites, and related purposes such as parking lots and access roads.

The Secretary would be required to report annually to Congress with respect to outstanding grants or other contractural agreements executed pursuant to the act. Not later than February 1, 1972, he would submit to the Congress additional authorization requests for fiscal years 1976 and 1977.

The bill also contains a provision which broadens the existing air pollution control requirements in the 1964 act to provide that in the planning, designing, and construction of mass transit project financed under the act, special efforts shall be made to preserve the natural beauty of the physical environment. The Secretary of Transportation would be directed to cooperate and consult with the Secretaries of Health, Education, and Welfare, Agriculture, Housing and Urban Development, and Interior, and with the Council on Environmental Quality with regard to each project that may have a substantial impact on the environment.

Capital grants made under the bill may not exceed 12½ percent of the aggregate amount of funds authorized to be obligated except that 15 percent of the aggregate amount of the funds authorized to be obligated may be used by the Secretary without regard to this 12½-percent limitation for grants in States where more than two-thirds of the funds available under the 12½-percent limitation has been obligated.

The bill authorizes the Secretary to conduct a study on the feasibility of providing Federal assistance to help defray the operating costs of mass transportation systems and report his findings to the Congress within 1 year after the date of enactment.

Mr. Speaker, we all know the great importance of this bill. Public transit systems all over the Nation, in major cities, in medium size urban areas, are in disrepair and in economic peril.

The growing problems of our cities are aggravated by the poor public transportation systems. Job opportunities are restricted because of costly and incomplete routes. Traffic congestion is increased because the city dweller and the commuter prefer their own cars to a dilapidated public transportation system. Pollution is aggravated and made more serious by the increasing number of motor vehicles entering and traveling in the cities.

There is not a city of any reasonable size in this Nation that does not need massive improvements and extensions of its public transportation system.

This bill will go a long way toward satisfying that need. It will provide help over one of the biggest hurdles in mass transit systems, and that is money and long-term financing.

This legislation shows the commitment on the part of the Congress to expanding and improving mass transit programs.

The transportation needs of cities and metropolitan areas are great. Large amounts of money, great periods of time, and extensive research must all go into solving the transportation problems of the urban areas of the Nation. This bill is an excellent beginning.

Mr. Speaker, I urge the adoption of the rule in order that H.R. 18185 may be considered.

The SPEAKER. The Chair recognizes the gentleman from Ohio (Mr. LATTA).

Mr. LATTA. Mr. Speaker, I agree with the statements just made by my colleague, the gentleman from Massachusetts (Mr. O'NEILL). However, I wish to take a few moments of the time allotted to me to clear up some misunderstanding which developed in the Committee on Rules yesterday on some of the provisions of this bill—two of them in particular. One of them pertained to the question of the eligibility of communities under 25,000 population.

I am pleased to report that I have investigated the matter of the eligibility of these smaller communities with the Department and have learned that grants have been given to them and such grants can be authorized under this legislation.

I mention this as I have only one city with more than 25,000 in population in my district. But, we have transportation problems insofar as older people are concerned, especially in the larger counties. We do not have public transportation available between many of our smaller communities.

Under the provisions of this bill, such counties would be eligible even though they do not have cities over 25,000. These counties or cities could form a transit authority and apply for a grant under this program.

Second, Mr. Speaker, I would like to point out that neither this bill nor the act of 1964 discriminates against privately owned mass transportation companies in favor of publicly owned systems.

The question was raised yesterday as to whether or not the District of Co-

lumbia transit system would be entitled, since it is privately owned, to assistance under this bill. The answer is "yes," indirectly.

Such grant assistance could be made to the District of Columbia and the District government could then lease the buses to a privately owned company.

This indirect assistance to private companies has been taking place. For example, I have been informed that three grants have been made to the State of New Jersey aggregating over $21 million to assist in providing improved railway commuter operations in the New York metropolitan area. This was done through the State appropriating required local funds to match the Federal grants, and using the total to purchase 80 modern rail commuter cars for lease at nominal rental to the Penn Central Railroad, and relocating tracks to give the Jersey Central Railroad better access to the commuter operation serving Newark.

A similar grant of $26 million was made to the Chicago-South Central Mass Transportation System to enable it to purchase 130 modern double-deck commuter cars for lease at nominal rental to the Illinois Central Railroad.

Mr. Speaker, coming now to H.R. 18185, let me say it is to amend the Urban Mass Transportation Act of 1964.

The bill seeks to insure that in future years substantial Federal assistance will be made available to assist cities in improving their mass transit systems, or to construct subway systems where they are deemed necessary.

The bill empowers the Secretary of Transportation to make loans for the acquisition of real property which is to be used in connection with an urban mass transit system within a 10-year period. Any loan agreement must provide for the beginning of actual construction. If for any reason the real property purchased through Federal assistance funds is not so used, the then current value is to be determined and two-thirds of the appreciation is required to be paid to the Secretary of Transportation.

Any applicant for such Federal assistance is required, prior to such application, to first, hold public hearings on the matter; second, consider the impact of such a transportation system on the economic, social, and environmental factors existing in the local area; and third, insure that plans for the transit system are consistent with official plans from the comprehensive development of the urban area.

The bill also creates another new financial assistance program. The Secretary of Transportation may incur obligations in the form of grant agreements in amounts aggregating up to $5,000,000,000 to finance all programs and activities authorized by the act. This new authorization would remain available until the $5,000,000,000 is obligated. Appropriations are authorized not to exceed $130,000,000 prior to July 1, 1971; $500,000,000 prior to July 1, 1972; $1,150,000,000 prior to July 1, 1973; $2,000,000,000 prior to July 1974; $3,000,000,000 prior to July 1, 1975, and not to exceed $5,000,000,000 thereafter. The Secretary would report annually to the Congress with respect to outstanding grants or other contractual obligations. This new grant program is created to assist local communities in starting as soon as possible the many essential projects which require several years for completion, with the assurance that the Federal assistance will be available to complete the project.

Finally, the bill amends existing law with respect to the percentage of funds which each State may receive from the total amount appropriated. After July 1, 1970, each State may receive up to 12.5 percent for the grants made; this is current law. However, the Secretary retains the right to make grants amounting to 15 percent of the sums authorized. This is to be held by the Secretary to make supplemental grants to States whose prior grants are nearly exhausted. This policy will enable the Secretary to put funds where they can accomplish the most.

There are no minority views nor agency reports.

Mr. Speaker, I reserve the balance of my time.

Mr. O'NEILL of Massachusetts. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

Mr. PATMAN. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 18185) to provide long-term financing for expanded urban mass transportation programs, and for other purposes.

The SPEAKER. The question is on the motion offered by the gentleman from Texas.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 18185, with Mr. McFALL in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from Texas (Mr. PATMAN) will be recognized for 1 hour, and the gentleman from New Jersey (Mr. WIDNALL) will be recognized for 1 hour.

The Chair recognizes the gentleman from Texas.

Mr. PATMAN. Mr. Chairman, I yield myself such time as I may use.

Mr. Chairman, H.R. 18185, the Urban Mass Transportation Assistance Act of 1970, represents a significant national commitment to the development of local urban mass transportation systems through the provision of adequate long-term Federal funding. Past Federal efforts have been an important first step and have provided us with a solid foundation upon which to build. It is now time to make a truly substantial monetary contribution to the task of helping communities develop this essential public service.

The existence of good urban mass transportation is of great importance to every citizen of this country. The critical importance to all urban areas both large and small is obvious. In order for our cities to function effectively as centers of economic activity, people and goods must be able to move quickly and economically in them. In order for our cities to remain habitable, all people must be able to move comfortably and conveniently within them. Our cities must maintain both of these qualities if they are to continue to play their critical role in maintaining the prosperity of this country. Even citizens who live in the rural areas of our Nation must be deeply concerned with the health of our cities and be willing to aid in the solution of their problems.

This bill would authorize the Secretary of Transportation to make loans for the acquisition of real property upon a determination that the real property is reasonably expected to be acquired in connection with an urban mass transportation system and that it will be used for that purpose within a reasonable time. These funds could be used for rights of way, station sites, and related purposes.

The basic new direction of this bill is the provision which authorizes the Secretary of Transportation to enter into contracts in form of grant agreements beginning upon the date of enactment in amounts aggregating up to $5 billion over 5 years to finance all programs and activities authorized by the 1964 Mass Transit Act. This new authorization would be available until the $5 billion is obligated.

H.R. 18185 would also require the Secretary to report annually to Congress with respect to outstanding grants or other contractual agreements executed pursuant to this act. The Secretary would submit to the Congress additional authorization requests for fiscal years 1976 and 1977 not later than February 1, 1972.

The bill also contains a provision which broadens the existing air pollution control requirements in the 1964 act to provide that in the planning, designing, and construction of mass transit projects financed under the act, special efforts shall be made to preserve the natural beauty of the physical environment.

Capital grants made under this bill may not exceed 12½ percent of the aggregate amount of funds authorized to be obligated except that 15 percent of the aggregate amount of the funds authorized to be obligated may be used by the Secretary without regard to this 12½-percent limitation for grants in States where more than two-thirds of the funds available under the 12½-percent limitation has been obligated.

While it is obvious that the problems which constitute the current crisis of the cities are extremely complicated and will not permit simple solutions, an indispensable ingredient of the revitalization of any city is the establishment of a good total urban transportation system. The private automobile will certainly continue to play a significant role in such systems in the future, as the flexibility

and conveniences which it offers for many purposes cannot be equaled. However, the continued addition of more private automobiles and the deterioration of our public transportation systems simply cannot adequately meet this Nation's urban transportation needs. Unless we begin today to bring about a significant reorientation of our urban transportation systems, by making a substantial, long-range commitment of Federal funds to urban mass transportation, the prospects for the health of the cities in the decades ahead are truly discouraging.

There are four particularly significant problem areas in urban transportation and all are worsening rapidly. The first is the totally inadequate mobility of significant segments of our urban population—the poor, the old, the young, and the handicapped. Great numbers of people in each of these groups are either financially or legally barred from driving or having access to a car. These individuals suffer with public transportation service which is often slow, uncomfortable, dirty, inconvenient, and expensive relative to their ability to pay. However, they are captive riders who have no choice but to use the generally undesirable service offered to them. There are two particularly critical examples of this situation. Less than 50 percent of those people in this country with incomes under $3,000 have automobiles. A poor person may often be forced to spend 2 hours and transfer several times going only one way to work on public transportation. The gravity of this situation is significantly increased for an unemployed person who is searching for a job. An old person in need of regular medical attention may similarly find the journey from home to hospital an ordeal if an automobile, which so many of use take for granted, is unavailable. These obvious examples do not even hint at the tragedy of people who feel that a trip across town is such an ordeal that they rarely leave the vicinity of their homes and jobs to take advantage of those benefits which our cities have to offer.

The second major problem is congestion of urban streets and freeways which exacts an enormous toll from that vast majority of the population which is fortunate enough to be able to afford the great expense of owning and maintaining one or more cars. In a very real sense, many of these rush-hour occupants of cars are captive drivers, as there is simply no meaningful alternative form of transportation which they can use. Past studies indicate clearly that many auto users would gladly use public transportation if its quality, availability, and speed could be improved.

Some have argued that transportation users have clearly demonstrated their preference for the car by abandoning public transportation in dramatic numbers during the past three decades. Perhaps in the forties and early fifties, there was some pleasure in owning and driving your car to work. Since 1945, the number of cars in this country has more than tripled and fantastic amounts of public resources have been devoted to expanding and improving our urban roadways to accommodate them. During this same period, mass transportation has received virtually no public financial support, and as a consequence, its quality has declined to the point where a person who can afford a car is not willing to submit himself to the ordeal of riding the bus or a 50-year-old railroad car. The net result is that all cars, buses, trucks, and even pedestrians find it progressively more difficult to move about in our cities throughout the day but particularly in the morning and evening rush hours.

The third major problem with today's urban transportation is the extensive air pollution it causes. Many people are killed by it, the direct costs for cleaning up its daily fallout are enormous, and it can often cast a dreary pall over the activities of daily life in the cities. Over 60 percent of the air pollution in this country and as much as 90 percent in many urban areas is caused by automobiles. I must concede that belching buses appear to be equally guilty in this regard, but in fact a bus which can effectively remove 20 to 30 cars from the roadways twice each day produces less than one twenty-fifth of the amount of the pollution produced by 15 automobiles. In other words, the decrease in transportation-caused air pollution could be more than 96 percent. In addition, the Department of Transportation is currently involved in several developmental projects which show promise of further reducing that pollution which buses do so visibly produce.

The fourth and final major problem is the tremendous consumption of land resources in our urban areas which auto-oriented transportation has required. Not only are scarce and valuable pieces of land devoted to more roads and parking lots, but also, in a great number of instances, people are forced to move from their homes, and communities are sliced in half. While persons are paid fairly for the value of their property when their homes are taken, there is no way of adequately compensating individuals or neighborhoods for the full losses caused by forced dislocation and intrusion.

Over 70 percent of the population of the United States now lives in urban areas. It is expected that by the year 2000, our population will double and that all of this growth will occur in and around our cities. Statisticians also project that the number of cars in this country will double by the end of the century. If we unquestioningly accept such a projection and simply proceed to build the added roads needed to accommodate such numbers, it will surely prove to be a self-fulfilling prophecy. But, in spite of the many benefits of the automobile and the tremendous success of major recent efforts to improve the highway system of this country, the automobile cannot adequately solve the problems of transportation in our cities. There is not a great deal more room in our cities which we can afford to devote to great numbers of additional vehicles which often carry only a single person to and from work and lie idle in downtown parking lots for most of the day. The benefits in trying to add significantly to present highway, roadway, street, and parking resources in our urban centers are severely limited.

The dispersal of people and jobs to suburban areas which America's recent extensive commitment to roadway spending has helped to accelerate, is having the effect of devitalizing our urban centers. Over 50 percent of the area of many of our major cities is now taken up by roadways and parking lots. Let me stress this fact that over one-half of the land area of the large cities of this country is unavailable for housing, parks, office buildings, centers for social and cultural activities, and, most fundamentally, people. At the same time, our cities are becoming dehumanizing prisons for many people who are forced by circumstances beyond their control to continue to live there.

The urban residents of the greatest nation in the world should not be required daily to either struggle with traffic congestion or ride on very low quality public transportation. We must provide decent transportation to those who do not have cars; we must combat pollution; we must provide relief from the pressures on our scarce urban land resources; we must provide frustrated and economically burdened automobile drivers a reasonable alternative; we must relieve congestion and provide balanced urban transportation which permits our urban streets and highways to perform more efficiently for public transportation, for people who still choose to use their cars, and for goods carried in trucks. It is essential that we begin today to bring about a total revitalization of urban mass transportation in this country.

The urban mass transportation industry in this country is currently in very bad condition. The service offered tends to be of extremely low quality and limited scope; companies are operating at deficits; and sources of new capital are very difficult to find. Most mass transportation operations are now caught in a continuing spiral of rising costs, higher fares, loss of ridership, deteriorating service, and increasing operating deficits. There is virtually no indication that real progress will be made in the effort to break out of this vicious circle without massive Federal assistance. The transit industry has been the victim of the American desire for the automobile so that public transportation has not received much new capital and is now operating with old equipment, old ideas, and, all too often, uninspired management operating on the premise that their primary goal is to minimize losses. In recent years, 120 public transportation companies have disappeared, 70 of these being in cities of less than 25,000 population. Ninety additional companies are in significant financial difficulty. At best, this sad financial condition means that fares must be raised causing great hardship to captive riders, and, at worst, it means that vital service may be terminated completely.

In view of the apparent local nature of the problems, some people might wonder why the Federal Government should undertake the vast responsibility of assisting communities in the development of their public transportation service. The first and most significant reason is the Federal interest in keeping the cities

of this country healthy. Good mass transportation is an essential requirement for the health of any city, but the cities simply do not have the financial resources required to revitalize their transit systems. The present financial crisis of the cities is due in significant degree to the fact that the Federal Government takes by far the largest bite out of the individual's tax dollar. It should be noted that close to 80 percent of the people in this country live in our urban areas. In view of this fact and the vital national concern in having prosperous cities, it is not only fair but essential that we assist the cities in financing needed public transportation service.

A second and perhaps less obvious reason is the fundamental Federal interest in building up this local transportation link which will enable other transportation modes to work more effectively. We have devoted huge amounts of Federal money to the development and improvement of our national highway system—$2.2 billion in fiscal year 1970 in urban areas alone against significantly less than $1 billion for urban mass transportation since 1961. We have just undertaken a new commitment to the improvement and expansion of the airport-airway system, and it is to be hoped that the railroads can be revitalized to provide significant intercity transportation to people in the decades ahead. These other modes are generally capable of moving people and goods quickly and efficiently between cities and regions within the country, but in many cases, movement may virtually grind to a halt as the individual or freight approaches a major urban center. Current urban congestion may thus often substantially negate the benefits of airplanes or highways. The airline passenger may often spend more time on the ground getting to the airport and then to his ultimate destination than he does in the air. An automobile driver may move quickly between cities and then become immobilized in traffic jams or totally frustrated in his efforts to find a place to park. Trucks moving vast quantities of goods are similarly stymied. Intercity transportation does not generally have the option of transferring to good public transportation and cannot perform very efficiently upon entering an urban area because most of the local residents have also been forced to use their automobiles and thus clog the roads and parking areas.

The essential feature of the Urban Mass Transportation Assistance Act of 1970 is the provision of substantial long-range financial assistance to improve public transportation in the cities of this country. While the $5 billion to be made available by the bill will be used primarily for the renovation and expansion of the capital facilities and equipment of mass transportation systems, this infusion of new resources can also serve to fully revitalize such systems and the cities that they serve by producing efficiencies and economies of scale into public transportation operations and attracting talented individuals to the industry in sufficient numbers to provide the dynamism to its management which has been disappearing over the past three decades as capital resources deteriorated. Although the basic need for substantial and continuous Federal funding may be clear, I must also stress the compelling urgency dictating its immediate availability. Cities must be enabled not only to halt the current intolerable deterioration of public transportation immediately but also to begin planning for and building major new projects which will take as long as a decade to complete.

This bill was reported out of the Committee on Banking and Currency by a unanimous vote of 34 to 0, and I urge its prompt adoption.

The passage of the Urban Mass Transportation Assistance Act of 1970 today is an essential step toward the saving of our cities, and I seek the support of every Member of this body in attaining this goal.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. PATMAN. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Chairman, where in the report will I find the departmental reports on this bill?

Mr. PATMAN. I do not have the report before me, but there is no question about the agencies' approval. They testified for this bill. There is no doubt about the administration support.

Mr. GROSS. I have read the report, and I do not find a single communication from any department or agency.

Mr. PATMAN. We do not always incorporate the reports of the agencies in our report when they testify before the committee.

Mr. BARRETT. Mr. Chairman, will the gentleman yield?

Mr. PATMAN. I yield to the gentleman from Pennsylvania.

Mr. BARRETT. Mr. Chairman, if the gentleman will look on page 107 of the hearings, he will find Mr. Volpe's report and testimony advocating that the administration wants this type of program.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. PATMAN. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Chairman, of course, that is in the hearings. It is most unusual when we have a report which contains no communication from any department of Government with respect to the legislation. Frankly, I am surprised.

Let me ask the gentlemen this question. Where does the gentleman propose to get the $11,780,000 that would be committed if this bill is approved?

Mr. PATMAN. I think the gentleman is mistaken. The $5 billion is obligated over 5 years. That is the only commitment. There is a policy statement about the need for additional billions in future years, but no commitment.

Mr. GROSS. The bill provides for $130 million in fiscal year 1971.

Mr. PATMAN. Yes.

Mr. GROSS. And in fiscal year 1972 $500 million; in fiscal year 1973, $1,150,000,000; in fiscal year 1974, $2 billion; in fiscal year 1975, $3 billion; and in fiscal year 1976, $5 billion. This adds up, according to my attention, to $11,780,000,000.

I wonder from where it is proposed to get this money in the next 6 years, and what interest rate will be paid. That should be added to this. What interest rate will be paid on that money?

Mr. PATMAN. May I respectfully say to the gentleman, anything above $5 billion cannot be committed. This bill would commit only $5 billion.

Mr. GROSS. Only $5 billion?

Mr. PATMAN. Only $5 billion, for 5 years.

Mr. GROSS. That is small change around here now, is it not; $5 billion?

Mr. PATMAN. In comparison to the overall budget, which is over $200 billion, it is not large, although it is not small change.

Mr. GROSS. What does the gentleman think the interest rate on this borrowed money will amount to?

Mr. PATMAN. It depends, of course, on what the going rate will be. That will be one of the determinations, the going rate in the marketplace on comparable Federal securities.

Personally, I do not think too much of the going rate for things as important as housing for the people. I believe housing should be high on a priority "must" list and the interest rate even fixed at a reasonable level. It should not exceed 5 percent, I would say.

But, of course, in the marketplace the fellow who wants to buy a home is in competition with the speculators, the big corporations, the gambling casinos, the high-interest-rate money lenders, and he does not have much of an opportunity to keep this rate down.

That is the reason why I believe the Government should protect the homeowner, as to buying a home at a reasonable rate of interest. If it were within my power, I would do it.

It is a sad situation today when a person who purchases a $20,000 home must obligate himself to pay, according to traditional terms, $38,000 in interest. In other words, he obligates himself to pay $58,000 for a $20,000 home.

I share the views of the gentleman that we should be careful about interest rates.

Certainly the 55 to 60 million families in this country really compose this country. What we do here that is beneficial to those families will help the country, and what we do obviously deterimental to them will hurt the country.

I believe we should have a very reasonable rate, but we have not approached the time yet when we can say we will have a fixed rate.

Now, interest rates have been going down recently. We have put on a drive to get the big banks to change the prime rate. They raised it to 8½ percent. A 1-percent raise is equal to $15 billion a year of extra burden.

That can be calculated very easily and very quickly by the gentleman, just taking his own pencil and writing on the back of an envelope. He can insert the total public and private debt, which is $1.5 trillion. He can take 1 percent of that, and it is $15 billion.

The interest rates have gone down 1 percent in the last month. That means we are saving $15 billion a year. If we can just reduce the interest rate back to where it was when Mr. Nixon was elected, in November of 1968, it would be 6 percent, and that would save us an additional large sum of money.

Mr. GROSS. Let me ask the gentleman one further question, if he will yield. This is entitled the "Urban Mass Transportation Assistance Act of 1970." What is this going to do for us out in Iowa, this commitment of $11,780,000,000?

Mr. PATMAN. Well, it will be very beneficial to the gentleman. It will enable you to get your product to market. It would not do much good, after all, to get into the Chicago suburbs if you could not get to the main part of the city. We must have transportation in the main part of the city as well as between cities. I think it will be of great help to the gentleman and to his State to provide needed mass transit facilities for your people.

Mr. GROSS. You do not mean they are going to transport agricultural commodities over the subways, do you?

Mr. PATMAN. No; I did not have that in mind.

Mr. BARRETT. Mr. Chairman, will the gentleman yield to me?

Mr. PATMAN. I yield to the gentleman.

Mr. BARRETT. I just want to say to the gentleman from Iowa that this is a bill which concerns the low- and moderate-income people. The people in the city of Waterloo, Iowa, have a grant for approximately $325,000 for mass transportation. This will aid your State and your city of Waterloo just as well as it will every small town and city in the country of under 25,000 population.

Mr. GROSS. Will the gentleman yield further?

Mr. PATMAN. I yield to the gentleman.

Mr. GROSS. The gentleman will have to admit that that is less than a crumb off the table in a bill committing some $11 billion.

Mr. PATMAN. Mr. Chairman, I reserve the remainder of my time.

Mr. WIDNALL. Mr. Chairman, I yield myself such time as I may require.

Mr. Chairman, I am pleased to rise in support of H.R. 18185, the Urban Mass Transportation Assistance Act of 1970, which has been reported favorably and unanimously by the Banking and Currency Committee. A very similar bill, S. 3154, passed the Senate by the overwhelming margin of 84 to 4.

I think these actions, and the degree of unanimity with which they were undertaken are significant barometers of a sense of urgency, not only within this House and the other body, but in the hearts and minds of the public in every part of our Nation. The problems of mobility within our urban and metropolitan areas, not only for the affluent who can afford cars but also for the poor, the young, the old and the physically handicapped, must be solved—now. The problems of strangulation of our cities' streets and the wasteful use of valuable urban land for freeways and parking facilities by an ever increasing flood of automobiles, trucks, and buses must be solved—now. The problems of pollution of the very air we breathe by the exhaust emissions from millions upon millions of internal combustion engines must be solved—now.

I think these actions also reflect a consensus of realism. They reflect recognition that these problems can be solved only, as President Nixon has said if we can "make public transportation an attractive alternative to private car use." This in turn can only be achieved, as the bill now before the House states, by "A Federal commitment for the expenditure of at least $10 billion over a 12-year period to permit confident and continuing local planning and greater flexibility in program administration."

The Federal commitment provided for in this bill is nothing unexpected, nothing precipitous or rash, nothing undertaken without thorough study and substantial experience over a period of years. As many senior Members of the House will recall, I have long had an interest in the subject of urban mass transportation. The Housing Subcommittee of the Banking and Currency Committee has worked on it ever since the modest pilot program of loans, demonstration grants and temporary program of capital loans for urban mass transportation were authorized in the Housing Act of 1961.

The committee was intimately involved in the drafting of the Urban Mass Transportation Act of 1964, which created the mass transportation capital grant program and an ongoing program of research, development, and demonstration projects. It has watched these programs closely as they grew from an initial funding level of $60 million in fiscal year 1965 to the current level of $214 million for fiscal year 1971, and participated in the preparation of the 1966 amendments which created the technical studies planning grant program and the university research and managerial training grant programs.

It is my considered judgment, and that of the committee, that these programs have been and are as successful as could be expected, in view of the limits imposed by the annual appropriation process and the small amounts of funds actually appropriated. They also furnish a solid basis of experience for the long-term and expanded commitment of Federal resources now proposed and I am confident of the long-term success of the program. In fact, I think that the $10 billion 12-year commitment made in the bill is a minimum figure which will probably have to be revised upward after the new "contract authority" program has been in operation for a few years. Even so, I am of opinion that never in the history of this Nation has the Congress had an opportunity to do more to improve the quality of urban living with such a relatively small commitment of less Federal money than is presented by this bill. I urge its immediate passage.

Mr. Chairman, I think it might be useful if I took a few minutes to discuss H.R. 18185, both to the changes which it would make in existing law, and as to the few respects in which it differs from S. 3154 as passed by the Senate.

First. H.R. 18185 would create a new program of short-term loans to States and local public bodies and agencies thereof to finance the acquisition of real property and interests in real property planned for future use in urban mass transportation systems. The acquired real property and interests must be so used, within a period of not more than 10 years following the fiscal year in which the loan was made. When such real property is so used, or on the expiration of the 10-year period, then the loan would be due and payable, including interest at a rate based on the average interest rate being paid by the Government on its borrowings of comparable maturity. If the real property is not used for transit purposes, an appraisal would be made and the borrower would be required, in addition to repaying the loan, to pay the Government a sum equal to two-thirds of any increase in value which has accrued since the loan was made. If a Federal capital grant should be made for a mass transportation project which involves use of such real property, then the grant may include forgiveness of the loan and accrued interest as an item of project cost. S. 3154 contains substantially the same provisions.

Second. H.R. 18185 provides a greatly increased amount and a completely new method of funding the urban mass transportation program. It would authorize the Secretary to enter into obligations for funding of projects in advance of funds actually appropriated to cover the agreements, which he may not now do. This "contract authority" could be exercised by creating obligations up to a total of $5 billion immediately upon enactment of the proposed legislation, but a ceiling is provided on the authority of the Congress to appropriate funds to liquidate such obligations as follows: $130 million in fiscal year 1971; $370 million more in fiscal year 1972 for a total of $500 million; $650 million more in fiscal year 1973 for a total of $1.15 billion; $850 million more in fiscal year 1974 for a total of $2 billion; $1 billion more in fiscal year 1975 for a total of $3 billion; and $2 billion more thereafter for a grand total of $5 billion.

The Secretary would also be required to report annually to the Congress as to the grant commitments he has made and his estimate of future appropriation needs, and, after consultation with State and local public agencies, to submit his requests for authorizations for fiscal years 1976 and succeeding years. The provisions of S. 3154 are quite similar, the major difference being that the Senate version would limit the initial "contract authority" of the Secretary to an aggregate of $3.1 billion, and would limit appropriations for liquidation to an aggregate of $1.68 billion over the first 5 fiscal years.

Third. The bill would amend the 1964 act to make it clear that the local share of "net project cost" in any urban mass transportation project may be furnished in whole or in part from other than public sources, and to remove the re-

quirement that a local public body "demonstrate" its "fiscal inability" to provide the local share from public sources before more than one-half of such share can be provided from public or private transit system funds. The requirement that any public or private transit system funds so used must come from undistributed cash surpluses, funded depreciation or replacement reserves, or new capital, is retained. The provisions of S. 3154 are identical.

Fourth. Requirements are added to the act to provide for opportunity for public hearings at the local level to permit all segments of the public to express their views as to the impact of proposed urban mass transportation projects on community growth and development, mass transportation service, and esthetic and environmental factors. S. 3154 has a similar provision.

Fifth. As stated by our Banking and Currency chairman, the 12½-percent limitation now provided by section 15 for grants in any one State would be left in effect as to the new authorization of funds, but the Secretary's discretionary fund provided for in that section, which is now fixed at $12.5 million, would be changed to a 15-percent limitation based on the amount of authorized contractual obligations.

Finally, the Secretary is directed to carry out a new study of the feasibility and utility of Federal grants to defray operating deficits of mass transportation systems, and the 50 percent emergency capital grant program is continued in effect until July 1, 1972.

Mr. Chairman, this is a good bill. There may be some who may criticize it—who may argue that it provides too little money or too much money—who may say that we should have an urban transportation trust fund or an all-purpose transportation trust fund—who may say that the "contract authority" provisions give too much power to the Secretary and detract from the responsibility of the Congress to control expenditures by the annual appropriations process. But I say to you, that the members of our committee have worked long and hard over it, and it appears to be the most feasible means of dealing with an immediate, urgent national problem. It has languished far too long due to the press of other urgent business, and every day of delay simply increases the cost of what we have to do if our cities are to survive. I repeat—This is a good bill and I urge its immediate passage.

Mr. PATMAN. Mr. Chairman, I yield such time as he may consume to the gentleman from Pennsylvania (Mr. BARRETT).

Mr. BARRETT. Mr. Chairman, this Nation is confronted by a large and growing crisis in urban transportation. While this crisis is of great significance to all segments of the country, its most critical impact is on the citizens of our cities, both large and small. The almost exclusive emphasis in recent decades on increased use of the private automobile to meet new transportation demands in the cities has produced a situation in which all persons—not just those who are poor or old or handicapped or otherwise disadvantaged in our highly individualistic society—are confronted by overwhelming problems of time-consuming congestion, disastrous pollution, inadequate mobility, devastation of the environment, and transportation which is often inordinately expensive. The quality of life for those who live in the cities is severely threatened and the efficiency of transportation of people and goods into the cities from other parts of the country is significantly diminished.

In an effort to meet the critical problems of urban transportation and provide for appropriate Federal participation in their solution, the committee has unanimously reported by a vote of 34 to 0 the Urban Mass Transportation Assistance Act of 1970, which will amend the Urban Mass Transportation Act of 1964 in eight significant ways.

First, $5 billion contract authority—This most significant provision of the bill authorizes the Secretary of Transportation to incur obligations up to $5 billion to finance all of the programs and activities provided for in the 1964 act as well as those additional activities authorized by this act. In addition, this bill states a congressional finding that $10 billion will be needed to improve urban mass transportation in our cities over the period of the next 12 years. There can be no illusions that the money we are authorizing here will provide a final solution to the transportation problems of our cities but it is a significant start which we must make now. The committee believes that $5 billion is a reasonable level of funding for the next 5 years.

Contract authority would empower the Secretary of Transportation to enter into contractual obligations immediately upon the enactment of this bill and the full faith and credit of the U.S. Government would be pledged to honor these obligations. The real benefit of this mechanism is that it provides cities with the necessary long-term assurance that substantial amounts of Federal funds will be forthcoming so that they can confidently undertake the lengthy task of planning, developing, and financing major new public transportation projects.

However, the bill also contains a schedule which provides yearly limitations on the authorizations for appropriations to liquidate the obligations incurred. This schedule will insure that the development of vast new public transportation projects will be orderly. For example, the bill would only authorize new appropriations of $130 million for fiscal year 1971 and this amount would rise at a graduated rate to an aggregate of $3 billion for fiscal year 1975 and $5 billion thereafter. In addition, the Secretary of Transportation would be required to report to the Congress biennially beginning in 1972 to request extensions of the contract authority and any necessary adjustments in the schedule of appropriations for liquidation of obligations. The committee believes that this approach provides the best balance between the urgent need for substantial long-term Federal funding and the possible danger of increasing the size of our urban mass transportation assistance program too rapidly.

Second, advance land acquisition—the bill authorizes loans to local public bodies for the acquisition of land expected to be used for urban mass transportation purposes within a reasonable period. Such land could be used for rights-of-way, station sites, maintenance buildings, parking areas, access roads, and other purposes reasonably related to the building and operation of a well planned mass transportation system. The loans provided for may be used to finance relocation payments as well as the cost of property management pending actual construction of mass transportation facilities on the land. If the land is not used for mass transportation purposes within 10 years, the recipient must not only repay the loan but must also pay to the Secretary, for credit to miscellaneous receipts of the Treasury, two-thirds of any increase in the value of the land. An applicant for such loan assistance must submit a copy of its application to the comprehensive planning agency of the community affected and give it at least 30 days in which to comment on the proposed action.

This new authorization is particularly important because of the general escalation in the cost of land as well as the continuing rapid development of those few vacant parcels of land which still exist in our urban areas. Such development would require greater acquisition costs in the future as well as entailing the displacement of families and businesses which are constructed on vacant land in the interim.

Third, Secretary's discretionary fund—This act and the 1964 act both contain a provision which sets a basic limit of 12½ percent on the amount of the funds authorized pursuant to the mass transportation program which may be expended on projects in any one State. However, this act also provides that 15 percent of the total of the new funds authorized under this act may be used by the Secretary without regard to this limitation.

The basic purpose of the limiting provision is to insure that the benefits of the urban mass transportation program are not unfairly concentrated in a few States. However, the large discretionary fund is essential to give the Secretary the flexibility needed to meet critical urban mass transportation demands in those States where the 12½-percent limitation may be undesirably restrictive. Such leeway can be of particular importance in States which contain more than one major urban center.

Fourth, study of operating subsidies—The only substantial aid provided for cities in the current Federal mass transportation program is capital assistance. That is, matching grants to assist in the acquisition, construction, or improvement of property to be used in a city's urban mass transportation system. The existing act expresses the congressional policy of helping to improve and expand existing systems by enabling cities to acquire new facilities and reflects a conscious congressional choice not to become involved in the actual operations of local transit systems. However, primarily as a result of the deepening financial crisis facing local transportation systems, there has been increasing pressure for

greater Federal involvement in local transit operations through the provision of cash subsidies to defray operating deficits or operating costs generally. Such assistance could have the dual effect of keeping marginal but essential transit operations running while at the same time freeing funds for use in improving the capital position of such systems. However, in addition to a widely felt aversion to greater Federal involvement in, and scrutiny of, the day-to-day affairs of local transit operations, there is a fear that any subsidies based on operating costs may produce inefficiency in operations. An operating subsidy may simply be a treatment of the symptoms without trying to treat the cause and working for its cure.

This bill contains a provision offered by the gentleman from New York (Mr. HALPERN) directing the Secretary to conduct a study of the feasibility of a Federal program of assistance to defray operating costs and report to Congress with his findings and recommendations within a year. Such an effort will provide us with a comprehensive and factual study of the issues involved which will enable us to more intelligently evaluate the possible benefits and disadvantages of such a new program.

Fifth, public hearings—An applicant for a capital grant or loan for a project which may substantially affect a community or its mass transportation service must hold hearings after giving adequate notice unless no party with a significant economic, social, or environmental interest requests a hearing with regard to such project. In addition, the applicant must certify to the Secretary that its proposed project is consistent with official plans for the comprehensive development of the urban area in which it will be located.

The purpose of this provision is to require that an applicant consider all ramifications of a contemplated project, make certain that such project is properly coordinated with other aspects of urban development, and give affected citizens a meaningful opportunity to participate in the decisionmaking process.

Sixth, environmental protection—Section 6 of the bill is designed to insure that in the planning, designing, and construction of all mass transportation projects financed under the act, special efforts will be made to preserve our natural, historical, and cultural resources.

The Secretary will be required to cooperate and consult with the Secretaries of Health, Education, and Welfare, Agriculture, Housing and Urban Development, and Interior, and with the Council on Environmental Quality with regard to any project within their areas of expertise or jurisdiction that might have a substantial impact on the environment. The applicant must fully analyze the environmental impacts of its proposal and possible alternatives to it and submit with its applicant a statement similar to that required by section 102(2)(c) of the Environmental Quality Act of 1969. Before approving any capital grant project, the Secretary must hold hearings at which views of concerned persons can be presented unless he determines that there has been an adequate opportunity for a local hearing for such purpose. He must also determine that the applicant has given adequate consideration to all environmental concerns and, most importantly, that either no adverse environmental effect is likely to result from the project or that there is no feasible and prudent alternative to such impact.

While it is the committee's feeling that any mass transportation legislation is inherently beneficial to the quality of the human environment, in that it provides a desirable alternative to other modes of transportation, and also allows them to operate more efficiently, we feel it is important to provide this added specific protection so that all options and consequences with regard to the environment are adequately evaluated before significant new projects are undertaken.

Seventh, comments of Governors—an applicant for a capital loan or grant will be required to submit a copy of its application to the Governor of any State in which the project will be located if such State has statewide comprehensive transportation planning. In reviewing an application, the Secretary must consider any comments submitted by the Governor within 30 days.

In spite of its very broad State and national significance, the current problem of mass transportation is one which primarily requires local initiative and commitment for its solution. The precise transportation needs of each urban area are different, and undue State or Federal involvement in the details of projects designed to cope with local transportation problems may result in proposed solutions for specific cities which are not really appropriate in the light of their needs.

State and Federal involvement in this critical area should generally be restricted to the granting of financial assistance and in some cases the extension to localities of the broader legal powers required for the establishment of public transportation systems which can effectively service whole urban areas composed of many separate jurisdictions. Although State governments cannot generally be of great help in the formulation of specific projects, we feel that in those cases where a State actually has statewide transportation planning, the Governor should have the opportunity to comment on applications and thus to ensure appropriate coordination of State and local transportation systems.

Eighth, source of local share of project cost—The bill retains the matching grant formula set up under the 1964 act. The Federal share may not exceed two-thirds of that portion of the cost of the proposed project which cannot be financed from revenues of the transit system being aided. However, the bill will remove the present restriction that requires that 50 percent of the local share must come from public sources unless the applicant can demonstrate its fiscal inability to supply such funds. This provision has not worked well as localities are naturally reluctant to officially admit their inability to raise funds. By removing the restriction, the act will allow undistributed cash surpluses, replacement or depreciation funds or reserves available in cash, or new capital of public or private transit systems to be used to provide the entire local share of the project costs. This provision will remove an impediment to the difficult task of raising the local share of the cost of urban mass transportation improvement projects and can facilitate increased private participation in such projects.

Most of the provisions of this bill are refinements and improvements on the basic urban mass transportation program established by the 1964 act. While the committee feels that they are all important additions, the real focus of our attention must be on the vast increase in the Federal financial commitment which the new bill provides. It was clearly demonstrated in the extensive hearings held by the committee on a variety of different bills designed to accomplish this paramount objective that the active support for this nonpartisan legislation is not narrowly confined to representatives of our largest cities and the transit industry. As well as cities of all sizes, persons interested in the welfare of all segments of the population and commerce of this country have expressed an urgent concern for the provision of adequate funding for urban mass transportation. There is no question that the primary direct benefits of this act will go to the cities, but the improved health of our cities produced by better public transportation will generate benefits which will be felt by every resident of this Nation. This act should have the support of every enlightened American citizen.

Mr. Chairman, I urge full support in securing the passage of H.R. 18185, the Urban Mass Transportation Assistance Act of 1970.

The committee came up with this bill and voted it out 34 to 0.

Mr. Chairman, I do hope that in the best interest of everybody in this House that we can terminate the debate immediately and get to the reading of the bill.

Therefore, I ask unanimous consent to revise and extend my remarks and insert the remarks of the gentleman from Indiana (Mr. MADDEN), a member of the Committee on Rules at this point.

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

Mr. MADDEN. Mr. Chairman, the House today should pass, without any important opposition, this legislation, H.R. 18185, which will greatly contribute to solving the terrific traffic congestion problem in all major urban centers in the United States. I realize it is difficult for Members from strictly rural areas to fully comprehend the almost indescribable tangle and congestion and that major metropolitan centers must get immediate traffic relief.

The Calumet region of Indiana is probably the most concentrated industrial center in the United States. It is located across the Illinois line from the city of Chicago. Ninety-five percent of the traffic coming from the east into and through Chicago and Western States

passes through the northwest corner of the State of Indiana. This same statement applies to traffic from west to east. Twelve major railroads also pass through the Calumet region. The Calumet region also has a major rail and interurban line known as the Chicago South Shore & South Bend Railroad. Fifteen or 20 years ago this line carried the major portion of the passenger traffic through this area. In recent years this railroad has completely disregarded passenger service and concentrated almost exclusively on freight traffic. Thousands of commuters from northern Indiana into Chicago are now compelled to use bus transportation which further congests our mass transportation problem.

The Federal Government should take immediate steps to investigate all railroad transportation media throughout the Nation that in recent years has completely disregarded the necessity for providing passenger transportation to the American public. The Federal Government must take a hand in compelling and assisting the railway arteries of this Nation to help relieve the passenger traffic situation by insisting that the railroads utilize their arteries to move passenger traffic congestion. Many thousands of commuters from northern Indiana and Chicago daily would gladly use railroad transportation instead of highway transportation if railway management and Government would cooperate in solving this unfortunate traffic tieup in metropolitan areas throughout the land.

This legislation would permit the Secretary of Transportation to enter into long-term contracts with local communities, totaling $5 billion for a 5-year period to provide and grant assistance to local transit agencies. The traveling public periodically is faced with increased transportation cost and declining quality of equipment and passengers have for a long time been deserting rail traffic entirely. This method of transportation could easily be restored if proper equipment and service were offered the American public.

When this bill was before the Rules Committee yesterday, I called the Members' attention to this deplorable situation which calls for immediate relief. Congressman WIDNALL, the minority leader of the Banking and Currency Committee, in testifying before the Rules Committee yesterday, aptly stated that the transportation industry of America has for years been placing cattle above people in extending transportation service. I agreed with him but also stated that he could add automobiles, steel, and many other commodities which probably bring in more fabulous profits to the railroad companies over the Nation.

This bill passed the Banking and Currency Committee by a unanimous vote and also the rule was reported from our committee yesterday unanimously. I do hope the House enacts this legislation unanimously today.

Mr. HALL. Mr. Chairman, will the gentleman yield for a question.

Mr. BARRETT. I am glad to yield to the gentleman.

Mr. HALL. Mr. Chairman, I appreciate the gentleman yielding and I appreciate his desire for haste. But, I think the way this is being funded or financed, as witness the colloquy up to now, it is unclear to the Members at large who are interested, and especially some of us outside of the committee.

My first question about the bill, H.R. 18185, would be whether in addition to the funding as explained, and set forth in the bill on page 8, there is a provision under section 4(c) authorizing the Secretary to incur obligations, which means in effect he will float bonds in order to fund these procedures?

Mr. BARRETT. Yes.

Mr. HALL. Will the taxpayers then foot the bill for the interest payments on those bonds?

Mr. BARRETT. I think in general the taxpayers always foot the bill for any grant or loan made to any project enacted by the Congress.

Mr. HALL. As usual my friend is forthright and candid in his answer, and I appreciate that.

What provision is there for paying off the principal? Is it presumed that these investments, for which we are borrowing money and voting the bonds to the existing corporate bodies or others, will make enough money that we can pay off the principal of these bonds?

Mr. BARRETT. I am of the opinion that only a local government would issue bonds.

Mr. HALL. This simply, as I understand, voting the bonds would, involve the full faith and credit of the U.S. Government for those that wanted to use this money for expansion, or all of the other benefits allegedly set forth in this bill.

Now in addition you have agreed the taxpayer, or the Federal Treasury, will have to pay interest on those bonds; and further they go for a good length of time.

My question is, How would the principal be paid off?

Mr. BARRETT. It is only the local communities that get the loans or grants for equipment and not to pay off their bonds.

Mr. HALL. There would be no Federal bonds floated by the Secretary of Transportation then in the interest of the local communities? This simply authorizes them to float up to $5 million, I believe it is, on their own so that they can participate?

Mr. BARRETT. The cities, of course, could put up their one-third.

Mr. HALL. I must say that that is very unclear, as it is on the reading of the report or the bill. In the light of the two questions I have asked—one about who pays the interest payments and one as to how would the principal of these floated bonds be paid off, I would like to ask the gentleman, my friend from Pennsylvania—in view of these two questions—would that not be added to the total cost of the legislation?

Mr. BARRETT. The bill in general, from a Federal standpoint, does not authorize the Federal Government to float bonds.

The local government could float the bonds in order to pay off their share of the one-third for their local expenses.

Mr. HALL. This bill authorizes them to do that?

Mr. BARRETT. No; it does not. It is discretionary within the local authorities and if their tax revenues are adequate to do it without floating bonds, it could be done in that way.

Mr. HALL. Within the laws of that particular State?

Mr. BARRETT. Yes, sir.

Mr. HALL. Turning to another subject, if the gentleman will yield further, the gentleman will recall my interest in the basic law, section 13(c). May I ask the gentleman if the International Amalgamated Transit Union still possesses the delegated and de facto veto power over all grants under this section of the act as far as section 13 on labor standards is concerned, or does this bill, H.R. 18185, change that?

Mr. BARRETT. I do not think this bill would change that at all. They have never had a veto power.

Mr. HALL. Mr. Chairman, I submit to the distinguished gentleman that at one time other Members from across the Nation and I submitted an amendment to change 13(c) to remove the veto power which in effect they certainly have, factually and effectively; and one of the examples is the city of Springfield, Mo., which still has pending an application where the International Amalgamated Transit Union, in spite of the fact that the only intent was to increase air conditioning, to provide new buses or rehabilitation of the old buses, with a complete guarantee and a written statement by the public utilities and by the city council to the effect that it would do nothing to enhance the conditions under which the workers would work, still could not get this because there is a law in the State of Missouri that says that public utilities cannot enter into a contract with the union. Yet, because the union decided to use this legislation as a contract for a union agreement, it was because of this I tried to submit the amendment.

At that time the distinguished gentleman and others said they would help us, through compact or otherwise, to secure this aid to enhance the comfort of the riding public, to update the means of city transportation. This is in a city well over 100,000 now.

To date nothing has happened. There has been an administration change in the interim, and still nothing has happened because it is in fact delegated to the agent of the International Amalgamated Transit Workers Union to certify to the Secretary of Labor, who in turn must certify to the Secretary of Housing and Urban Development—Transportation now—before a loan can be granted, that there is no damage done to the working conditions of the laborer or the member of the union. If that is not, in fact, veto power, de facto veto, I just do not know what it is or do not read the English language or understand the effect of this peculiar situation in a very few of the States.

Mr. BARRETT. Mr. Chairman, will the gentleman yield?

Mr. HALL. The gentleman has the time. I appreciate his yielding to me.

Mr. BARRETT. I just want to point out that nobody knows better than the gentleman from Pennsylvania the inexhaustible work the gentleman from Missouri put into this Springfield, Mo., problem with which we have been concerned for many, many years. I am of the opinion that you at that time felt that it was the Secretary of Labor who had the veto power and not the Secretary of Transportation.

Mr. HALL. It is true that since HUD took this over, the basic legislation has changed it over from HUD to Transportation. But section 13(c), as I understand—and I believe the gentleman will agree—still requires that the Secretary of Labor must certify that no damage is done to the working condition of the laborer, and in turn, the Secretary of Labor, regardless whose Secretary it is, has by de facto action passed it on to the International Amalgamated Transit Workers Union, and they hold the strings or they light the fuse, or they snuff it out as to who gets these grants.

Mr. BARRETT. There may be an avenue through which you could go under the pending bill. The Governor would have 30 days to request consideration or to protest anything that is being done in connection with mass transit projects. That provision might give you an opportunity at that time if Springfield is considered for a mass transit grant or a loan. At that time you may have an opportunity to explore the problems you have had heretofore. You might get some relief from that provision.

Mr. HALL. Mr. Chairman, is the gentleman saying that there may be something in this new legislation that will do that?

Mr. BARRETT. Only by filing or having the Governor request consideration to be heard on the objection when a request is filed by any municipality, city, or town in your area.

Mr. HALL. Mr. Chairman, I certainly would appreciate the counsel of the gentleman from Pennsylvania, because through three separate Congresses this problem has been before us, not only for the city of Springfield, Mo., but also for the cities of Memphis, Tenn., Amarillo, Tex.; Yakima, Wash.; as well as many others. I would appreciate the help and guidance, as previously promised, of this gentleman, toward making this legislation work, if it is ever going to work in these areas.

One final question: Does the Bureau of the Budget, in the absence of any departmental reports in the report, have any position on this legislation?

Mr. BARRETT. I am not too sure.

The administration requested originally—and so did the Secretary of Transportation—$3.1 million.

Mr. HALL. But the members of the committee can presume that it is not budgeted, and there are no favorable departmental reports, nor is there the usual disclaimer by Bureau of Budget, or Office of Management, or whatever it is called.

Mr. BARRETT. The favorable report is from the Secretary of Transportation.

Mr. HALL. Can the gentleman show us where that is in the report?

Mr. BARRETT. That is in the hearings. If the gentleman will look on page 107, it is in the testimony.

Mr. HALL. But it is not in the committee report.

Mr. BARRETT. That has the backing of the Secretary of Transportation.

Mr. HALL. In the report?

Mr. BARRETT. It is in the hearings.

Mr. STANTON. Mr. Chairman, will the gentleman yield?

Mr. BARRETT. I yield to the gentleman from Ohio.

Mr. STANTON. Mr. Chairman, I am sure the gentleman from Pennsylvania does not want to mislead the gentleman from Missouri. His question was quite pointed in asking what the administration and the Department and the Bureau of the Budget had to say about the amount of money in this bill. I am sure the gentleman will agree with me that the money desired by the administration as the only amount of money that can be expended efficiently in this period of time was $3.1 billion and not $5.1 billion.

Mr. BARRETT. I thought the gentleman from Pennsylvania made it clear to the gentleman from Missouri.

Mr. HALL. No; the gentleman made it clear as to $80 million.

Mr. HAWKINS. Mr. Chairman, will the gentleman yield?

Mr. BARRETT. I yield to the gentleman from California.

Mr. HAWKINS. Mr. Chairman, I would like to ask a question in regard to the authority of the Department of Transportation with respect to operating grants. In some communities within the cities there are certain rather flexible demonstration transportation programs which have been established. One such program in the Watts area, in my district of Los Angeles, and there is a similar one in East Los Angeles, in the district of Congressman ROYBAL. Under the proposed bill—and also I assume it is the intent of the committee—can such demonstration grants be continued and funded out of the operational grants under the Department of Transportation, provided this bill is passed?

Mr. BARRETT. Yes; at the present time, that can be done.

Mr. HAWKINS. Well, specifically, let me rephrase it another way. Would the nonprofit community-based transit systems and agencies of the State or local bodies be eligible for loans provided the applicants, upon determination of the Secretary of Transportation, have or will have, first, the legal, financial, and technical capacity to carry out the proposed project, and, second, satisfactory continuing control, through operation or lease or otherwise, over the use of the facilities and equipment?

Mr. BARRETT. That is correct.

Mr. WIDNALL. Mr. Chairman, I yield 10 minutes to the gentlewoman from New Jersey (Mrs. DWYER).

Mr. BARRETT. Mr. Chairman, will the gentlewoman yield?

Mrs. DWYER. I am happy to yield to the gentleman from Pennsylvania.

Mr. BARRETT. Mr. Chairman, I just want to take a second or two to commend the gentlewoman from New Jersey, who is one of the most inexhaustible members, male or female, to serve on the Committee on Banking and Currency and also the Housing Subcommittee. We are very fortunate to have the gentlewoman from New Jersey as a Member of this body.

Mrs. DWYER. Thank you very much, Mr. Chairman.

Mr. Chairman, I am happy to rise in support of continued and expanded Federal urban mass transportation financial assistance. This legislation, I believe, will become one of the major achievements of the 91st Congress.

Over more than a decade, and on countless occasions, I have spoken to the House on the vital importance of vastly improved mass transportation not only to New Jersey but to all States which have one of the more rapidly growing metropolitan areas within their boundaries.

If we are to meet this country's future transportation needs head on, then we shall in the next two decades have to double our total existing transportation capacity. To say it another way, we shall have to provide in these coming 20 years as much additional transportation capacity as was provided during the first 200 years of our Nation's history.

And we must do this in conformity with a changing America—an America that is rapidly turning to urban areas. Five years from now, 75 percent of our people will live in metropolitan areas—in other words on 2 percent of the land. Let us narrow it down even more. About half of America will be living in three highly concentrated and continuous urban zones—one extending the full length of the California coast, another along the Chicago-Detroit-Cleveland axis, and the third, of course, is the northeast megalopolis stretching from Richmond, Va., to Portland, Maine.

We have seen the public transportation posture of this Nation deteriorate in the past 20 years. In 1950, there were 1,400 urban transit companies carrying nearly 14 billion passengers. Seventeen years later, 300 of those companies had gone out of business and the number of vehicles in their fleets had dropped from 87,000 to about 56,000. Total passengers dropped to under 7 billion for a 50-percent decrease.

Our bill, Mr. Chairman, will help arrest this decline and put us on the road back to healthy growth for mass transportation service.

There are several reasons, I believe, why we should pass this bill:

First. The Urban Mass Transportation Act was unanimously approved by the Housing Subcommittee in March, and reported—again without dissent—by the full Banking and Currency Committee in June.

Second. A similar bill was approved by the Senate in February by a vote of 84 to 4.

Third. The legislation has the support of the administration.

Fourth. For the first time in the history of the urban mass transportation program, this bill will provide the long-term authority and the funds to enable us to make a visible and substantial im-

pact on the steady decline in public transportation service.

Fifth. Funding the program on a more realistic and long-term basis will help make possible some significant economies; by relieving pressure to build more expensive highways—expensive in term both of money and of scarce land; by enabling more people in more of our crowded urban-suburban areas to move more cheaply and efficiently; and by helping to reduce our dangerously high levels of automotive air pollution.

It is worth noting here, Mr. Chairman, that a recent study in Maryland showed that 80 percent of air pollution in suburban areas is caused by auto exhaust emissions.

There is unquestionably a lot of authority and a lot of money in this bill. But in the case of the mass transportation program, it is long overdue and it is essential.

It is overdue because, up to now, we have put almost all our transportation eggs in one highway basket. The Interstate Highway System alone will have cost us an estimated $60 billion before it is completed. And the most recent national highway needs report estimated a requirement of $320 billion for road construction in the next 15 years.

I suggest, Mr. Chairman, that we can get a great deal more transportation for our money with a genuine Federal commitment to the mass transportation program. This is especially true because mass transit is most needed and is most efficient in precisely those areas where highway construction is most expensive and most disruptive: our heavily populated urban-suburban areas.

The urban mass transportation program is essential because, without it, more and more smaller and middle-size communities are going to lose the last of their public transportation—120 transit companies have disappeared in the last 15 years—and public transportation in larger cities will decline to the point of immediate crisis for lack of capital.

I am very sure that our Nation's needs for Federal financial assistance for urban mass transit in all the 50 States far exceeds the seemingly large figure in our bill. We have received reliable testimony that $17 billion will need to be invested in capital facilities alone during the next decade. Indeed, the needs of just one large metropolitan area—that of New York City environs—alone would consume the $5 billion that the bill before us would make available over the coming 5 years.

Although the role of the Federal Government in support of urban mass transportation began in 1961 with amendments to existing housing legislation, annual Federal expenditures have not exceeded on the average $100 million, where the need in yearly amounts since long before 1961 has been nearly treble that amount. The Urban Mass Transportation Act of 1970 is the most substantial measure undertaken so far to establish parity between needs and actual expenditures.

The commitment of this bill to sustained Federal participation over the coming years of this decade is to a great many its most constructive element. That the projected availability of Federal funds over the next 10 years will serve to rejuvenate local initiative is an important realization of this administration's goal of a vigorous Federal-local partnership.

In its earlier years—and I remember them well—the mass transportation program was a controversial one. This is no longer true. For local officials throughout the country have seen the predictions of crisis come true. They are united now in recognizing the need for substantial Federal assistance and a long-term Federal commitment—not only to save what is left, but to begin to build effective transportation systems for their rapidly growing populations.

The time is late, Mr. Chairman, but the legislation before you can make a significant start in solving what is surely one of the country's most demanding problems.

Mr. PATMAN. Mr. Chairman, I yield such time as he may use to the gentleman from Pennsylvania (Mr. MOORHEAD).

Mr. MOORHEAD. Mr. Chairman, I rise in support of the Urban Mass Transportation Assistance Act of 1970 which provides the Federal commitment to help cities and States build the modern transportation systems to meet tomorrow's needs.

The outcome of this legislation is critical to the survival of every city's urban transportation systems.

If residents of metropolitan areas are to be given a meaningful choice in their mode of transportation, more than $10 billion will have to be spent over the next dozen years to construct new rapid transit systems, modernize existing systems, improve bus transportation, and develop new forms of public transportation.

Current mass transit funding levels are totally inadequate to meet this challenge.

Our obsession with the automobile and expressways has resulted in $16 billion being allocated between 1964 and 1968 for Federal-aid highways, while only about 3 percent of this amount went for mass transit. We have also permitted a 90–10 ratio for Federal-aid highway projects, yet insisted on a two-thirds–one-third approach for mass transit. I have called this method of funding—where we spend about $37 for highways to every $1 for mass transit—highway robbery.

With growing populations and increased automobile use, the capacity of the expressways is reached all too quickly. It is a paradox that we can cross the continent by air in a matter of hours—yet it may take just as long to get from the suburbs to the city and back by our present mode of ground transportation.

Mass transportation is not just a convenience but a necessary utility designed to serve the full needs of the community—to carry peak-hour traffic to business and industrial jobs without congestion, serve other areas of less density easily, and still permit satisfactory personal automobile driving for those who choose to use this mode of transportation.

Clearly, the need is for a balanced transportation system where the automobile, feeder buses, outlying parking provisions, and high speed rapid transit will combine to meet the urgent transportation needs of our cities—especially for the very young, old, poor, and handicapped who must rely upon exclusively public transportation.

While I would have favored the mass transportation trust fund approach financed by earmarking a portion of what is now a declining automobile excise tax specifically for mass transit—and I introduced legislation last year to this effect—nevertheless, I feel that the commitment to the communities inherent in this legislation is a Federal recognition of the gravity of the situation, and will provide the assurance and financing to assist our local communities to develop the transportation plans most suited to their own needs.

Specifically, in Pittsburgh, funding under this legislation will support the early action program of the Port Authority of Allegheny County which features a 10.5-mile elevated transit expressway—TERL—or skybus between Pittsburgh's Golden Triangle and the South Hills area. The area represented in Congress by my good friend from the other side of the aisle, the gentleman from Pennsylvania (Mr. FULTON).

The program also includes plans for two exclusive bus lanes, we call them "patways"—one covering an 8-mile stretch would go from downtown Pittsburgh to Shadyside, East Liberty, Homewood, and Wilkinsburg, ending in Edgewood; the other, would cover a 4½-mile stretch, originating in the Golden Triangle and running out to Overbrook.

We have an example of time saved in a counterpart to this idea in Washington, D.C., where two lanes of a 4-mile stretch on Shirley Highway, reserved exclusively for buses, have saved about 20 minutes for commuters coming from the suburbs to jobs in the District. I understand that this has resulted in a decrease of approximately 400 cars from the road thus far, and has increased bus riders one-third. The early action program is designed to provide efficient, safe, and comfortable rapid transit for more than 900,000 people living in 53 municipalities of Allegheny County, and is sorely needed.

While we do have a desperate need to relieve the congestion in our swollen cities, and the noise and pollution caused by our ever-increasing reliance on the automobile, this is only one side of the present urban highway problem.

Another side is reflected in the fact that highway construction has reached the point in many cities where there is now strong and understandable resistance on the part of our citizens to further wholesale taking of business and residential property. Nowhere is this more of a disaster than in Pittsburgh where residents and small business owners of the East Street Valley, on Pitts-

burgh's North Side, have been involved in a relocation mess for the last 10 years, as a result of the construction of Interstate Highway 79. Urban highways which require such a large amount of densely populated areas cannot be relied upon to facilitate the movement of vehicles and people from place to place involves too high a cost in the disruption of human lives.

We in Pittsburgh are beginning to realize that people are more important than pavement—homes more important than highways.

I am very proud that Pittsburgh, which has become a recognized symbol of progressive change in meeting urban problems and has been host city to four International Conferences on Urban Transportation, was chosen last year by the Department of Transportation, along with five other cities, to participate in a program for designing and implementing improved center city transportation systems, involving local organizations and groups, as well as transportation and research experts in the planning and development process.

The results of these studies in the core city areas are designed to provide the Department of Transportation with the practical information needed to put the right hardware on the streets and on exclusive rights-of-way in these cities, and ultimately across the country. The necessary money for this effort must be authorized here today.

As I see it we have eight metropolitan transportation challenges facing us today: We must achieve equality of access to urban educational, job, and cultural opportunities; improve the quality of transit services; relieve traffic congestion; enhance the efficiency of mass transit equipment and facilities; arrive at more efficient land use; provide cleaner, quieter, more attractive public transportation; provide alternative choices to metropolitan residents of mode and style of living; and find the solution to an orderly improvement of our urgent transportation problems without preempting long-range solutions for the future.

Mr. Chairman, if our cities are to continue to be the centers of banking, business, education, and culture, it is essential that we revitalize the vital arteries of rapid transit.

I am hopeful that the increased level of funding for mass transit in this legislation, the assurances provided by long-term contract authority, along with provisions for loans directly to public authorities, increased public hearings procedures, loans for advanced acquisition of rights-of-way, and an increase in the ceiling limitation for authorizations to states—so important to Pennsylvania—will permit our local communities, cities, and States to make a substantial start toward meeting the great transportation challenge of the 1970's.

Mr. RYAN. Mr. Chairman, the transportation morass which faces this Nation today is indeed a serious one.

Millions of cars clog our streets and highways every day, making rapid and efficient transportation a virtual impossibility.

Those who cannot drive or own cars find the transportation problem even more serious. They not only cannot get around quickly and efficiently, but they also have difficulty getting around at all.

This Nation has poured billions of dollars into a network of highways which have brought too many motor vehicles to the roads and which have crippled transportation as a result.

At the same time, the Nation has turned its back on ailing mass transportation. Mass transportation revenues have severely declined; service has deteriorated; and fares have been increased.

Expenditures for mass transit have been frugal to say the least. Severe funding limitations have made it difficult for present systems to expand and for new systems to be planned and implemented.

The bill before us today, H.R. 18185, the Urban Mass Transportation Assistance Act of 1970, authorizes up to $5 billion to finance programs and activities for mass transportation as provided in the 1964 Urban Mass Transportation Act. The new authorization would be available until the $5 billion is obligated.

This authorization, although far from what is needed, is greater than that provided for in the Senate bill, S. 3154, which limits actual expenditures to $1.86 billion over the next 5 years with a contract authority of $3.1 billion.

Although the House bill is an improvement over the Senate legislation, it still does not adequately deal with the problem. A more realistic expenditure over the next 5 years would be a minimum of $10 billion.

In New York State, the State Metropolitan Transportation Authority has projected that it will need $2.1 billion over the next 7 years.

This illustrated the magnitude of financing necessary to rejuvenate our transportation system through mass transit. It has been estimated that $20 billion would be a conservative estimate of the amount needed to perform this rejuvenation.

It is time to come to grips with this problem. The Federal Government, and only the Federal Government can make the difference. Without the type of Federal support of mass transit that has been given to highway construction in the past, an adequate mass transportation network cannot be built. And if such a network is not built, the country will simply sink deeper into our present transportation morass.

The Federal Government must recognize the financial crisis facing our cities and provide operating subsidies for urban mass transit. I have introduced legislation to help underwrite operating expenses since 1966. My bill, H.R. 47, would amend the Urban Mass Transportation Act of 1964 by providing for grants on a two-thirds, one-third matching basis to go the public transportation authority having broad responsibility for maintenance of commuter transportation.

I object strenuously to arbitrary limitations placed on the amount of funds available under various Federal programs to any one State. I have introduced H.R. 627 which would repeal the arbitrary ceiling of 12½ percent that each State can receive in capital grants. Through a 1966 amendment, the Secretary has a discretionary fund of $12.5 million to use in States which receive grants in excess of two-thirds of the maximum grants under the 12½-percent ceiling.

The House bill changes the discretionary fund from $12.5 million to 15 percent of the amount of authorized contractual obligations. However, this is still putting an unrealistic restraint on States with greater transportation needs, and it should be repealed.

To deal with the severe imbalance between Federal funds for highway construction and funds for mass transit, I have introduced H.R. 48, which would allow a State to elect to use funds from the highway trust fund for the purpose of urban mass transportation. It is essential that there be a balanced transportation system.

The bill before us recognizes the transportation crisis to a greater extent than does the Senate bill, and its obligational authority of $5 billion must be retained. I urge my colleagues to resist any amendments which would reduce it. Congress has the power to begin to rescue our country from the transportation morass and to make the future one in which mobility—and not immobility—will be a way of life.

I am inserting in the RECORD my testimony before the House Banking and Currency Subcommittee on Housing on March 11, when it held hearings on mass transportation legislation:

STATEMENT OF CONGRESSMAN WILLIAM F. RYAN BEFORE THE HOUSE SUBCOMMITTEE ON HOUSING OF THE COMMITTEE ON BANKING AND CURRENCY, MARCH 11, 1970

Mr. Chairman, I am very pleased to have the opportunity to appear today before the Banking and Currency Subcommittee to discuss a matter of national importance—transportation.

I am sure that I do not have to point out to any Members of the Committee how difficult it is, in this day and age, to get from one place to another—especially within a congested city. All of us have experienced the problem of trying to get someplace and being delayed—either by traffic or poor transportation systems.

Many feel that the answer to our transportation problems is the building of new highways. I do not agree.

We presently have plenty of highways. They are virtually interstate parking lots. The number of automobiles on the road has doubled since 1950. At that time, there were about 40 million registered cars; today, that number is about 80 million.

Highways have been built too often through the inner city, displacing businesses and local residents. In the end, people have been uprooted to accommodate the construction of another road which will carry automobiles at a snail's pace.

In addition, highways do not help to solve the mobility problems of those who do not have cars, but who desperately need transportation.

This includes the poor—who cannot afford cars and the handicapped or elderly—who cannot drive or cannot afford vehicles.

Over fifty percent of the people who do not use the automobile to get to work have family incomes below $4,000. To these people, the availability of mass transit is essential.

Transportation is traditionally worse in the ghetto areas. Those who need to get to another part of the city or to a local suburb

often find themselves making several transfers over a long period of time before they get to their destination. Others, who find commuting impossible, do not work.

The lack of transportation is a definite causal factor in the employment rate in these areas.

Recently, the Watts area of Los Angeles had a demonstration project set up to get workers to and from their jobs in other parts of Los Angeles. During a three month period, the number of people using this service increased dramatically—people were, for the first time, able to get to jobs.

An express route has been set up in Washington to facilitate persons in southeast Washington who have jobs in the northwest area, and this has met with similar success.

Thus mass transit, opens up a whole new world for those who cannot or do not own or drive a car.

Another detrimental effect of the highway and the automobile is air pollution. The auto is the primary polluter of the air.

Adequate transportation is important to every aspect of our life—employment, economic needs, and social and recreational needs.

Why then has adequate transportation been ignored?

Why has the demand for highways completely overshadowed the need for clean, efficient, and moderate transportation for all?

Although our nation has become increasingly urbanized, transit revenues have dwindled.

Twenty years ago, approximately 1400 companies were operating transit lines; today, this number is less than 1100.

Twenty years ago, there were 87,000 transit vehicles serving our citizens; today, there are only about 60,000.

The American Transit Association reports that during this 20-year period, both the number of passengers and therefore, passenger revenues were reduced. The number of passengers dwindled from 13.8 billion to 6.6 billion; revenues went from a profit of $66 million annually to a deficit of $160 million. Services were cut back and rates were increased.

The Congress must make a commitment to provide an adequate level of funding for mass transit. While the federal government has spent huge sums of money on the building of highways, it has spent very little on mass transit.

The following table shows the obligation of funds for the Urban Mass Transit Grant Fund as compared with the Highway Trust Fund:

| Year | Highway trust fund | Urban mass transit fund |
|---|---|---|
| 1967 | $3,734,448,000 | $156,925,000 |
| 1968 | 4,171,094,000 | 131,873,000 |
| 1969 | 4,599,283,000 | 134,871,000 |
| 1970 estimate | 3,942,630,000 | 180,000,000 |
| 1971 estimate | 4,810,420,000 | 214,000,000 |

The Senate bill, S. 3154, limits actual expenditures to $1.86 billion over the next five years with a contract authority of $3.1 billion. This is not enough.

Compare the $1.86 billion over five years for mass transit with the $4.5 billion annual expenditure for highways!

Although the Senate bill in its statement of findings states, ". . . that success will require a Federal commitment for the expenditure of at least $10 billion over a 12-year period," this language is not binding in any way. The bill does not provide obligational authority for the additional $6.9 billion.

Many cities are going to need funds to develop new, proposed transit systems as in Atlanta, Baltimore, Los Angeles, Miami, Minneapolis-St. Paul, Pittsburgh, and Washington—funds totalling $17.708 million.

Boston, Chicago, Cleveland, New York, Philadelphia, and San Francisco will need funds to modernize existing facilities or work on already started systems.

The New York State Metropolitan Transportation Authority has estimated that it will require $2.1 billion over the next 7 years.

If New York receives the same percentage of mass transit appropriations as in the past, Federal assistance would be between 20 percent to 25 percent of the cost—a sum beyond the ability of local government to pay.

In testimony before the Senate Committee, Under Secretary of Transportion James Beggs estimated that new and existent transit facilities will need about $10 billion over the next ten years. Other committee witnesses felt the need was $20 billion. With the problem of inflation and rising construction costs, the $20 billion estimate is undoubtedly conservative.

I urge this Committee to provide obligational authority for at least $10 billion over the next five years.

The nation faces a transportation crisis. If it is to be solved, federal assistance is needed not only for the acquisition of capital equipment, but also for subsidization of operating costs.

I have introduced legislation since 1966, which would permit the federal government to underwrite a major portion of the operating expenses of any transportation facility which provides commuter service in an urban area.

The purpose of this legislation, H.R. 47 in the 91st Congress, would be simply to keep our commuter systems working and to put them on a self-sustaining basis.

This bill would amend the Urban Mass Transportation Act of 1964 by providing for grants on a two-thirds, one-third matching basis to go to the public transportation authority having broad responsibilities for maintenance of commuter transportation.

Certainly, we must realize that the cost of transit systems is not limited to construction and other capital improvements. Operating expenses make up a very important part of the costs of a commuter system, and they must be acknowledged.

My bill would erase the artificial line drawn between capital costs and operating costs, making both of them eligible for federal assistance.

Opponents of this approach may say that once the federal government begins to subsidize operating costs, that it will begin to set fares, schedules, and eventually run the commuter line.

This is an extremely weak argument. The purpose of the legislation is to subsidize our transit systems so that they do not continue to die. In the past, subsidies have been attempted through fare increases. But fare increases have reached the limit in most of our cities and still do not cover operating expenses.

Under the Mass Transit Act of 1964, capital grants to any one state can not exceed 12½ percent of the funds authorized, except that under a 1966 amendment to the 1964 Act the Secretary has a discretionary fund of $12.5 million to use in the states which have received grants in excess of two-thirds of the maximum grants under the 12½ percent ceiling.

I have constantly opposed such arbitrary ceilings which have no objective relationship to the actual needs of any single state, and I have introduced H.R. 627 to repeal the limitation.

The limitation ignores the hard fact that certain states with high urban populations need transit funds a great deal more than states which are predominantly rural.

This is an arbitrary limit which does not realistically look at the transportation needs of each state. For this reason alone, it should be repealed.

The original Senate bill would have provided to the Secretary of Transportation—a discretionary fund equal to 15 percent of the total authorization. Unfortunately, that was amended on the Senate floor to 7.5 percent with a limitation to any one state of 15.5 percent.

This limitation does not acknowledge that certain states have greater transportation needs than others. I still feel that a maximum percentage is an artificial barrier and should be repealed. I urge this subcommittee to at least adopt the original Senate language.

I have pointed out the disparity between federal funds for highways and for mass transit. Money in the Federal Highway Trust Fund should be available for other urban transportation. To accomplish this, I have introduced legislation in the past three Congresses.

Mr. bill, H.R. 48, would allow a state to elect to use funds from the Highway Trust Fund for the purposes of urban mass transportation.

This approach will not particularly appeal to those who advocate more highway construction. They argue that revenue from the Highway Trust Fund is collected from those who use the highways, and therefore, it is unfair to use it for mass transit.

Another way to attack the mass transit problem is to create a "trust fund" for mass transportation which would be similar to that which now provides money for highway construction.

I have cosponsored a bill with Congressman Koch, H.R. 10555, which would establish such an urban mass transportation fund.

Under present law the federal share of the net project cost is two-thirds. I believe this should be increased to 90 percent—the same ratio of federal funding as exists for highways. Local governments should not be tempted to select highways over mass transit because the federal government will finance the former to a greater extent.

As the time is growing shorter for us to solve the problems of pollution, so is it growing short for us in the field of transportation.

We have the 747 and in the near future, the SST. But what good will it do to be able to get from one part of the country, or even from abroad, to another part, swiftly by air—when after the plane has landed, it may take almost the same amount of time to get from the airport to the final destination.

We are a country of clogged highways. At rush hour, in large cities and small towns alike, we are immobile.

For those who own cars, transportation is often intolerable.

For those who do not own cars, transportation is often non-existent.

Our citizens should be rescued from this immobility. The right of transportation for all Americans must be secured.

Mr. REUSS. Mr. Chairman, as Members know, I have had my differences with the Department of Transportation, and in particular, with the decision to continue spending on the supersonic transport.

I am especially pleased, therefore, to rise in wholehearted support of H.R. 18185, which commits the Federal Government to a $10 billion 12-year program to improve urban mass transportation in this Nation. I commend Secretary Volpe, Under Secretary Beggs, and Urban Mass Transportation Administrator Carlos Villarreal for coming forward with this bold and much needed program and for their tenacity in seeing it through the Congress.

Urban mass transit has too long been the neglected stepchild under Federal aid programs for transportation. While

we have spent more than $36 billion on highways, we have spent a paltry $795 million on urban transit. While we have steadily paved over our countryside and cities only to reap increased congestion and intolerable pollution, we have watched our urban transit systems decay and die. While we have done our utmost for automobile owners and truckers, we have left the poor, the aged, and handicapped stranded in our urban centers—stranded by transit systems that if operative at all can take them neither safely, nor speedily nor economically, to the jobs and assistance they need.

The Urban Mass Transportation Act of 1964, of which I was proud to be a cosponsor, made a start in meeting our transit crisis. But it failed to provide enough assistance to meet accumulated needs for capital improvements. And it failed to provide local governments with a long-term commitment of support from the Federal Government that would enable them to plan for large-scale transit investments.

H.R. 18185 will go far to provide the funds and the commitment that have been lacking. True, the contract authority it contains is a less iron-clad assurance of long-term funding than the trust fund that I and other Members have supported. But we have the Secretary's promise to come up with a study of a single transportation trust fund within a year—which may well be a better approach than proliferating single-purpose trust funds. In the meantime, cities can start making plans this year on the basis of the 5-year obligational authority provided in H.R. 18185.

True, $10 billion probably will not be enough to get the massive improvement in mass transit that our cities large and small so badly need. But the program we are considering today provides for an infinitely more realistic level of funding than Congress has been willing to contemplate in the past. It is a good base on which to build.

I note also, Mr. Chairman, that this program will permit an expanded research, development, and demonstration effort in urban transportation. If we are to save the centers of our cities and free them of the automobile, if we are to put order in our urban sprawl, if we are to roll back the pollution caused by the internal combustion engine, we must move beyond the bus and rail systems we have at present. The some $500 million that will be allocated to research and development under this program should help to get the new and imaginative solutions to our transit problems that we need.

Section 9 of H.R. 18185, which has been included at my request, is also intended to encourage innovation, and to get industry and Government working together on new transit technology. Specifically, this section directs the Secretary of Transportation in all ways—including the provision of technical assistance—to encourage industries suffering from cutbacks in spending on space, military, and other Federal projects to compete for the capital grants and research and development money provided in this bill.

As we reorder our priorities, as we begin to tackle the domestic problems—including mass transit—that we have too long neglected, we will need to enlist the best our industries have to offer in talent and advanced technology. We can avoid much of the pain of reconversion and get a huge social dividend if we put our giant aerospace and other defense firms to work, starting now, on our housing crisis, our polluted environment, and our outdated and inadequate systems of mass transit.

Section 9 asks for a joint industry-Government effort on mass transit. Other sections of H.R. 18185 provide the necessary wherewithal. I urge Members to give mass transit the fighting chance it deserves for the good of us all, and to support H.R. 18185.

Mr. PHILBIN. Mr. Chairman, this bill is very necessary to many communities and people all over this great Nation.

It represents a real effort to service an urgent national need that this Congress must find some way to meet adequately.

Our American society, extremely complex and intricate as it is, cannot function as to many vital areas without adequate transportation in and between our many urban and urban-related communities.

This bill should relieve many shortcomings and fill many urgent needs and I am pleased to support it wholeheartedly. It is of great importance to the Nation.

Mr. GERALD R. FORD. Mr. Chairman, I endorse the Urban Mass Transportation Assistance Act of 1970 as recommended by President Nixon. The need for this legislation is beyond question. Without revitalized mass transit, the Nation's transportation problems will never be solved. Burgeoning numbers of automobiles and thousands of more miles of concrete are not alone the answer.

I urge the approval of this program in the amount of $3.1 billion, Mr. Chairman. That is the level of investment in mass transit needed for the welfare and vitality of our urban areas and the development of efficient and coordinated mass transportation systems. This legislation has my wholehearted support.

Mr. REID of New York. Mr. Chairman, I rise in strong support of H.R. 18185, the Urban Mass Transportation Assistance Act of 1970.

For the past decade, our cities have been choking on a growing influx of private automobiles which belch air pollution, create traffic jams, and add the blare of honking horns to other urban noises. The public's reliance on the automobile can be attributed in large part to the priorities set by Government spending. For example, in fiscal 1970, the Federal Government provided $2.2 billion for urban highways, while all programs for urban mass transit in the coming year total $214 million—less than one-tenth as much.

The bill before us today would begin to provide the funds which are necessary if we are to have an efficient mass transit system in this country. Specifically, H.R. 18185 would provide for 5-year contract authority for $5 billion for mass transit, compared to the Senate bill's $3.1 billion. Federal grants would cover up to two-thirds of the net cost of a mass transit project; and, while Federal grants would go only to States and local public bodies, nonpublic sources would be authorized to provide the local share of net project costs. This would make it possible for private transit companies to cover all the non-Federal share of net project costs, and relieve the financial burden on local governments.

This legislation would also authorize the Secretary of Transportation to provide 10-year loans for advance acquisition of real property which will be needed for urban mass transportation systems. Acquisition of such property in advance of construction has become increasingly important as urban land becomes a more scarce and valuable resource.

The environment would be protected by H.R. 18185's requirement that local public hearings, stressing a project's impact on the environment, precede obligation of Federal grants.

Commuters in my own district in Westchester County, N.Y., are painfully aware of the need for increased Federal assistance to improve our mass transit system. Regular passengers on the Penn Central's commuter divisions, they have been plagued by a series of fires and breakdowns through the summer, and can look forward only to more of the same when cold weather comes.

The Urban Mass Transportation Administration at DOT has already agreed to provide $28 million for modernization of the railroad's New Haven division once it has been taken over by the States of New York and Connecticut. However, much more Federal money will be needed if the New Haven's riders are to have comfortable, safe, and efficient service—and additional grants will be impossible without this bill.

We must change our transportation priorities and end our reliance on cars if our urban areas are to survive and if our city residents are to get to work on time. Even the amount provided in this bill is pitifully small in relation to both the needs of our commuters and the threat to our urban environment. Therefore, for the sake of my own constituents and for commuters in urban areas all over the country, I urge that my colleagues approve the full funding in the bill reported out by the Banking and Currency Committee, and resist any efforts to reduce the contract level to that approved by the Senate. We cannot begin to develop a balanced transportation system in this country until we provide adequate funding for urban mass transit.

I urge the passage of this bill.

Mr. HALPERN. Mr. Chairman, I am deeply concerned about the condition and future prospects of our urban mass transportation systems generally. For this reason, I rise to express my support for H.R. 18185, the Urban Mass Transportation Assistance Act, which, although I am listed as a cosponsor, is but a first step toward the kind of involvement by the Federal Government that is really necessary if we are to ever solve the problems of transportation in this Nation.

This morning I read in the newspaper that the Census Bureau has released

data showing that one-sixth of this Nation's population lives in the populous megapolis which stretches from Boston through Washington. I and a number of my colleagues in this body represent the people of this megapolis, and we are all worried about the future of surface transportation for our constituents.

The U.S. Chamber of Commerce has polled local chambers throughout the country on the urban transportation situation in their respective communities. In all, 152 cities in 44 States responded. Of these, 41 percent indicated that their transportation problems were either critical or were growing progressively worse. Thus with these poll results, we are forewarned that nearly half of our urban mass transit systems are in trouble or heading directly for it.

These problems are serious for, even though our megapolis on the eastern seaboard is growing ever larger and the metropolitan boundaries of the cities across the land are reaching farther and farther outward, the number of people who are using the mass transit systems are dropping off each year. It is nothing less than incredible that, as population and need increases, actual usage of these systems decreases. And it is no wonder. In my own district in Metropolitan New York, many thousands of people have to go to and from work each day by taking a bus to the subway and the subway to work—or, perhaps, to another bus ride in the city, thereby paying double and even triple fares on just one leg of their commute. And when the fares jumped skyhigh last year, a large number of these commuters chose to take their cars to work rather than pay the exhorbitant commuting rates. In turn, this means the highways and parking lots are more glutted and the air is more polluted by the additional exhaust fumes.

I stated earlier that I thought this bill represented only a first step toward what is ultimately needed by New York City and other metropolitan areas across the Nation. In committee, I urged for adoption of a provision that the Federal Government get into the business of providing operational subsidies in those cities where it is needed in order to reduce already astronomical fares or to maintain fares at their present level. The Secretary of Transportation, despite precedents in the airline industry and maritime industry, insisted such involvement would bring the Government into labor disputes. Virtually every spokesman, who appeared before the committee as a representative of a metropolis, agreed that operational subsidies are a necessity. As a result, this bill contains in section 8 a mandate from the Congress to the Secretary of Transportation, requiring that he come back to us within a year and that he give us a program which will permit the granting of operational subsidies. This does not go as far as I would like, but it is an important first step.

The bill also does not contain any provision for a highway trust fund, out of which our cities could draw the billions of dollars necessary to conduct the kind of program that is needed here. I believe that when we are ready to take this second step, we should provide the funds from this trust fund to the cities on a block-grant basis so that each city can develop the kind of well-balanced system of transportation that is needed for its people. And keep in mind, the kind of money we're talking about runs into the billions—$10 billion in the next decade is a bare-bones minimum, and we will need much, much more before it is over. New York City, alone, is committed to spending over $1 billion in city funds in the next 10 years.

Finally, I still contend that this bill ought to have created incentives for the control of pollution in all modes of transportation. I was pleased that we came out of committee with the environmental protection, but I would have been happier with a bill that included jet plane pollution, auto exhaust pollution, and others.

However, as I stated at the outset, this is merely a first step in a program that, I am sure, will expand. This is going to be a shot in the arm for an industry that is quickly falling behind. In 1968, the industry reported hauling just over 8 billion passengers—a drop of more than 1.7 billion riders in just one decade.

A decline of transit patronage inevitably sets up a vicious cycle of events which contribute to the further deterioration of the transit system. The resulting loss of revenue from shrinking patronage leads to reduced services of poorer quality as well as fare hikes. Such actions, in turn, usually lead to further declines in patronage. If the situation continues, our mass transit systems will be white elephants reserved for the very, very rich.

Thus, our problem is to stop this trend toward less and less, poorer and poorer transit service. In the chamber of commerce poll that I mentioned earlier, 78 percent state that further improvement of their transit systems would depend on additional financing.

Additional financing is precisely what H.R. 18185 will provide. It establishes a Federal commitment of $10 billion for such assistance over the next 12 years and authorizes a total of $5 billion to finance urban transit programs and activities. The $4 billion authorization is graduated into increasing annual increments to enable the program to accelerate over the next few years.

I believe this proposal contains a sufficiently firm commitment by the Federal Government to encourage local governments and transit organizations to enter with confidence into long-term programs needed by most expanding areas. Such complete confidence in the Federal policy and program is the key to the success of this revitalization effort.

Mr. Chairman, I represent Metropolitan New York, which must represent the epitome of transportation needs as it carries out its monumental task of carrying its residents around the city. Each day, New York's teeming subway system—now dirty and antiquated—carries over 4 million riders; its bus system carries over a million more. Over 700,000 cars enter the city's central section daily. These facts demonstrate to me—a layman in this area—that it is perfectly obvious that New York simply must maintain a transit system adequate enough and attractive enough to preserve a broad ratio between the two, and above all to keep the transit system as New York's prime mover.

New York is moving ahead with a substantial program to improve and expand its transportation complex. But fares alone cannot pay for the program, which is expected to cost over $2 billion. To maintain a decent level of services, there must be financial assistance from outside the industry. State bonds will help, but the undertaking is so huge as to be likely without precedent.

The answer to the problem of giving a fresh start to our urban transit systems is H.R. 18185. Without a vigorous shot in the arm from the Federal Government, these transit systems will continue to deteriorate. Now we have, at least, a beginning in our efforts to turn the tide.

Mr. Chairman, with urban transportation in the balance—and with it our cities—I support H.R. 18185. I urge that it be passed by the House.

Mr. ANDERSON of Illinois. Mr. Chairman, the bill which we are considering today is an extraordinary piece of legislation even though its parent act is now 6 years old. For one thing, this bill authorizes a $10 billion Federal expenditure for urban mass transit over a 12-year period. But even more important, for the first time ever we are granting the Secretary of Transportation long-term contractual authority to obligate $3.1 billion for mass transit projects over the first 5 years. The significance of this long-term obligational authority is obvious: it means that cities will now have the assurance that once a project has been approved, funds will be available to carry it to completion. There has been a justifiable reluctance in the past to undertake a project knowing that a funds cutoff could leave the city with nothing more than a hole in the ground.

Mr. Chairman, I want to commend the administration and the Banking and Currency Committee on this bold new departure and long overdue commitment to providing mass transportation systems in our urban areas. When one considers the fact that 70 percent of the 205 million people in this country now live in urban areas, and that, by the turn of the century, 90 percent of the projected 300 million people in the United States will live in urban areas, the need for such mass transit systems becomes readily apparent. Consider further that between 1945 and 1965, the number of automobiles in this country increased from 50 to 75 million, and that by the year 2000 there will be an additional 75 million autos in urban areas alone. Factor into all this the fact that the automobile is responsible for 80 percent of the air pollution in urban areas, not to mention its contribution to traffic congestion.

Mr. Chairman, I have no doubt that we will soon have a pollution-free automobile, but this does nothing to solve the problem of concrete and steel pollution which is strangling our urban areas. It is obvious that we must devote more of our resources to developing

alternate means of transportation which are quicker, safer, and more efficient. The bill which we are considering today will go a long way toward realizing that goal.

H.R. 18185 authorizes Federal aid to urban mass transit systems on a 2-to-1 matching basis; that is, with the Federal Government footing two-thirds of the assistance and the State and local authorities contributing at least one-third of the funds. As with the 1964 act, no more than 12 percent of the total amount available for obligation can go to any one State, but unlike the 1964 act, this bill increases the Secretary's discretionary fund authority from 7.5 to 15 percent. This flexible provision clearly recognizes that the needs of the more urbanized States are greater than those of the more rural States and helps to insure that no one will be left hanging on a limb, or, to use a more accurate metaphor, left stuck with a hole.

Finally, I want to commend the committee on section 6 of the bill which deals with environmental protection. The procedures outlined in this section are totally consistent with the objectives and provisions of the National Environmental Policy Act of 1969 and the Environmental Quality Improvement Act of 1970, and are designed to insure that new projects will not have an adverse impact on the environment.

Mr. Chairman, I enthusiastically urge the passage of this bill as amended by the gentleman from Massachusetts (Mr. BOLAND).

Mr. OTTINGER. Mr. Chairman, I rise in support of the Urban Mass Transportation Assistance Act of 1970, a bill which will go a long way toward revitalizing and upgrading urban transit throughout the United States.

As our central cities become unbearably congested, as the migration to the suburbs creates massive daily traffic jams of city-bound automobiles, our underfinanced rapid transit systems have been deteriorating and operating under the most marginal conditions. Evidence brought out before the Banking and Currency Committee revealed that some 120 transit companies have been liquidated or absorbed since 1954, with possibly another 90 near bankruptcy now. Without capital financing to improve facilities and equipment, the decline of urban transportation in America will continue until we will be totally dependent on the automobile.

Mr. Chairman, massive Federal assistance for rapid transit is obviously called for if we are to prevent the automobile from clogging our highways and making our air unfit to breathe. Yet, the Federal Government, under existing authority of the Urban Mass Transportation Act of 1964, will spend only $214 million in fiscal 1971, compared to $2.2 billion in urban highway expenditures for fiscal 1970. The imbalance is obvious and shows a dangerous neglect of one important element in our present and future transportation requirements.

The bill reported out of committee includes $5 billion in new obligations for improvement of existing transit services and initiation of new projects. Though the capital requirements for an adequate urban public transit system approaches $15 billion for the next decade, we will have the opportunity to continue the programs authorized by H.R. 18185 when the $5 billion is obligated, hopefully by 1975.

Under this legislation, local authorities will be able to plan and develop new transit projects with full confidence in the long-range commitment of the Federal Government. H.R. 18185 includes a new program of loans for the advance acquisition of real property, while continuing the capital grant and loan provisions presently in force to assist in financing the acquisition, construction, reconstruction, and improvement of facilities and equipment used in mass transportation. It also includes important requirements that economic, social, and environmental effects of mass transportation projects must be taken into acount, and guarantees adequate opportunities for public hearings when questions or local controversies arise.

Though I have sponsored legislation to establish a $10 billion mass transit fund, with other significant differences from H.R. 18185, I believe the bill before us deserves our unanimous support for its potential impact on a vital facet of the urban crisis. We should resist any attempts to cut the funds authorized by H.R. 18185, and we should further urge retention of the $5 billion level rather than the $3.1 billion approved by the Senate earlier this year. Much of the equipment and technology of urban mass transit is 30 years behind the times, and with deteriorating service resulting in declining revenues, Congress must act decisively this year to shore up and modernize urban transportation systems and thereby implement our long-range goal of a balanced national transportation system.

Mr. PRICE of Illinois. Mr. Chairman, first came the wheel. Then came another wheel, and another, and another; until today wheels are the heart of this Nation. Without them everything comes to a halt. They carry our food, our mail, and most importantly, our workers. Yet, while these wheels are, and will remain, the heart of the Nation, they are also one of its sorest frustrations. For in the wake of the wheel has come pollution, derelict cars, urban sprawl, and clogged airways, railways, and highways. And like Topsy, the problem just grew.

In a like manner have our cities just grown. Ever increasing proportions of our population now live in the cities and their suburban environs. These people depend on cities that have just grown for their livelihood and on a system of wheels that has just grown to transport them there. I think that it is past time to introduce a modicum of planning into this process.

The need is greatest and most obvious in the area of urban mass transit. Since World War II, as the committee report shows, public transportation has been the victim of a vicious cycle of increasing costs, declining profits and quality, and decreasing traffic. Urban mass transportation today relies to an overwhelming extent on the equipment and techniques of 30 years ago. Why? To a large degree this situation is our responsibility because of our tendency to make most Federal funds available for highway construction and maintenance rather than public transportation.

The urban population continues to grow and more and more people must daily get to and from our cities. If public transportation is inadequate, inconvenient, or of poor quality they will resort to automobiles. And more and more wheels will bring increasing frustration and delay to our citizens. They will bring frustration both to those who must endure traffic tieups 5 miles in length and also to the poor of our cities who cannot afford cars and who must, therefore, pay higher fares for lower quality service because passenger traffic is down.

This problem is so acute that it has spread from the larger urban areas to smaller communities with populations of less than 25,000. The problem exists and cannot be ignored or evaded. I feel that H.R. 18185 represents a realistic and farseeing attempt to deal with it.

In the first place, it places an emphasis on the coordination of mass transit services with the highway system. Coordination is a long overlooked necessity if we are to be able to cope with the enlarging size and complexity of the cities and if we are going to be able to help them define their relationship with their outlying suburbs. Second, it is the express purpose of this bill to create a partnership which permits the local community to exercise the initiative necessary to satisfy its urban mass transportation requirements. The burden is definitely on local participation and solution development. The Federal Government is only a helper. Third, there are safeguards against abuse present in this bill. For example, any party with a significant economic, social, or cultural interest in a transportation project may request a hearing. And any proposed project must make a paramount consideration the social effects of the plan and its impact on the environment. Another provision set up to prevent possible abuses is the section designed to provide program continuity. All projects must be consistent with the comprehensive development of the urban area.

All these factors, I believe, have made for a well balanced piece of legislation. Surely it is not the complete answer. There is no one ultimate, fail-safe answer that will suddenly transform our home-to-office journeys from the Frankenstein's monster we have allowed them to become to the high point of our day. However, H.R. 18185 is a beginning step along a road we have long neglected and I urge my colleagues to support its passage.

Mr. MINISH. Mr. Chairman, in 1945 there were 25 million privately registered automobiles in the United States. By 1965, this figure had grown to 75 million. It has been estimated that, if urban population projections materialize and current rates of auto acquisition continue, there will be 150 million automobiles on our roads by the year 2000.

As the demand for more and better transportation facilities has accelerated, it has been met almost entirely in the

form of increased auto ownership and of new highway construction. In contrast, the urban mass transportation industry has experienced declining patronage and net revenues over the last quarter century. Since World War II, public transportation fares have tripled, while revenue passengers have decreased by two-thirds. As a result, an operating income increase of $149 million in 1945 became a $130 million deficit by 1968 for the public transportation industry.

A further increase in highway investment alone will not cure the congestion problems of our urban areas. Clearly a massive new effort is needed in the area of urban public transportation.

My own State of New Jersey faces one of the Nation's most severe traffic congestion problems, largely due to the fact that it is so overwhelmingly urban and densely populated. A major obstacle to implementation of New Jersey's master plan for transportation is the lack of sufficient funds. In 1968, the State's voters approved a $200 million bond issue to revamp an obsolete commuter rail system, but this amount must be supplemented by Federal participation if the project is to be fully successful.

Mr. Chairman, the Urban Mass Transit Assistance Act of 1970 provides a framework within which to begin to restore a balance to Federal transportation policy. This legislation establishes a program of long-term financing for expanded mass transit assistance, with total spending authority of $5 billion over the next 5 years. The basic 1964 act would be amended to permit the local share of project costs to be met in whole or in part from other public sources. Public hearings would be conducted in order to afford citizens an opportunity to be heard on mass transportation projects affecting their community and applicants would be required to consider the social and environmental impacts of the project. Programs financed under the act must preserve natural beauty and historical assets, and an evaluation of the environmental impact of each project is required.

Mr. Chairman, I urge approval of the Urban Mass Transit Assistance Act of 1970.

Mr. HANNA. Mr. Chairman, it is obvious to me that one of the most pressing problems facing this Nation is the disastrous plight of urban mass transportation. Of special significance is the pressing need for long term financing for the expansion and improvement of urban mass transportation systems. H.R. 18185, the Urban Mass Transportation Assistance Act of 1970, is addressed very appropriately and effectively to this crucial area of concern. I, as one of the bill's sponsors, unhesitatingly support the enactment of this important and very timely legislation.

Today seven out of every 10 people live in urban areas and by the year 2000, 90 percent of the population will live in urban areas. The demand for urban transportation has grown with the expansion of the population and will continue to grow accordingly. Yet, the urban transportation industry has experienced declining patronage and net revenues.

Since 1945 public transportation has been caught in a cycle of increasing costs, declining profits, decreasing quality, and decreasing traffic. From 1965 to the present, public transportation has suffered larger and increasingly serious operating deficits. Many transit companies since 1954 have experienced rate increases of 300 percent with declines in the number of passengers by two-thirds.

Without the essential urban mass transportation program, more and more smaller and middle size communities are going to lose the last of their public transportation. One hundred and twenty transit companies have disappeared in the last 15 years and 90 other companies are in financial difficulty. Public transportation in larger cities is declining to the point of immediate crises for lack of needed funds.

The large amounts of Federal funds which have been made available to support highway expenditures in urban areas, $2.2 billion in fiscal year 1970, compares unfavorably to the very small amount, $214 million for fiscal year 1971, only recently made available for public urban mass transportation. The small amount has affected seriously the decisions made by local governments, local planners, and local voters in the choice between highways and public urban mass transportation as solutions to the urban transportation problem. Public transportation costs must be paid by the user every time he rides a public transportation vehicle. On the other hand, the automobile user does not feel his costs directly when he uses his car. He pays only indirectly by gas tax, highway construction taxes, and the maintenance of his automobile.

Technology and management techniques in urban mass transportation have made limited advances in the last 30 years. In fact, most of urban mass transportation today largely relies on the equipment and techniques developed before World War II. This unfortunate situation has handicapped public transportation's attempts to provide better services, more rapid transit services, and cleaner, more comfortable rides.

A number of factors have contributed in recent years to a climate favorable to new and increased Federal assistance to urban transportation. The difficulties experienced by a great number of the population who cannot afford automobiles or use them readily, the adverse environmental impact of the continued expanded use of the automobile relative to air pollution, and the extreme amount of highway congestion, all have combined to exert pressure on the Federal Government to provide alternative transportation means.

It is clear that if better transportation is provided, the American people will leave their cars to benefit from it and decrease pollution as a main side effect. In Cleveland, for example, a 4-mile rail extension to the Hopkins International Airport is being used by 4,000 passengers a day, twice the number estimated at the time of its opening. Presently, the Cleveland Transit Authority is requesting additional funds to obtain more cars in an effort to expand the program.

During the first months of operation of the new Metroliner, a congressionally approved and supported mass transit experiment, rail passengers between Washington and New York have increased by 72 percent. The high-speed trains were filled to 76-percent capacity during the first 6 months of the experiment.

Given the critical situation that I have outlined above, I must take exception to the amendment that my colleague from Massachusetts has introduced to reduce the amount of funds available in the next 5 years from $5 to $3.1 billion. The proponents of this amendment state that the administration, if given $5 billion for contract authority, will not be able to commit these amounts to a significant number of projects. I disagree with this assumption for the following reasons.

The current level of requests before the Urban Mass Transportation Administration is over $1 billion. This amount far exceeds the $130 million that the Banking and Currency Committee authorizes for appropriation as well as the $214 million appropriated in advance funding for fiscal year 1971. Further, the Administrator of the Urban Mass Transportation Administration estimated that he would be ready to obligate approximately $850 million during fiscal year 1971. Thus, the $1 billion figure does not begin to represent the total needs of the country during fiscal year 1971 and certainly not for the next 5 years.

I would point out, Mr. Speaker, that the past activities of this Congress in this area have not encouraged local commitment to these efforts. With so little funding available, most areas recognized that the chances were slim that they would receive grants. There was, therefore, little if any money and energy expended in the costly process of proposal formulation. The lack of a long-term guarantee has further discouraged the type of commitment that the mass transit field requires to develop viable solutions. Many communities do have plans available for execution. There are hundreds more that are not now in a position to make the plans and submit applications of the size required to meet their transit needs, but who will be if we do provide a significant level of Federal funding. We must bring the level of Federal funding to a point where meaningful transit modernization and construction can be contemplated.

Furthermore, we must consider the provision in the act that limits the amount of money available to each State to 12½ percent of the funds authorized plus a percentage of the remaining funds at the discretion of the Secretary of the Department of Transportation. If the amendment being offered succeeds then programs, such as Bay Area Rapid Transit system, already being built, and the Southern California Rapid Transit District's system, will be seriously inhibited to the detriment of millions of people. It is particularly vital that the original authorization for contract authority not be reduced. The most important requirement is that the money be there for commitment so that communities will know of its availability and be provided with the necessary incentives to formulate plans and make applications.

An additional consideration is the fact that acquisition of real property in advance of construction has become increasingly important as urban land becomes a more and more scarce and valuable resource. Where there is public knowledge of planned mass transportation improvements requiring land acquisition, speculators can and often do, acquire quick possession of key tracts and greatly increase public costs. This is especially true where planned developments involve vacant tracts in urban areas which offer the greatest economy and least displacement if they can be acquired quickly and reserved for later mass transportation development. The funding commitment of this act will enable local public bodies and the Federal Government to achieve great savings in land acquisition costs.

To point out more clearly the direction we in this body must take to alleviate this deplorable situation, I would draw my colleagues' attention to the results of our past efforts, or lack thereof. Over the years, our mass transportation systems have declined significantly in patronage and quality of service, both of which can be attributed to the use of outmoded management techniques and technology. The Federal Government must bear a portion of the responsibility for this unnecessary deterioration.

A recent estimate prepared in an analysis for the UMTA by the Institute of Public Administration sets the 10-year capital requirements for construction at between $28 and $34 billion. These estimates far exceed the $5 billion recommended by the Banking and Currency Committee even though they are based only on what will be required to keep transit ridership constant. More money will be needed if additional riders are to be attracted to public transportation. We must strive to make mass rapid transit more attractive and reduce the use of the private automobile for central city and commuter travel.

We must make the necessary commitment to the Nation's mass transportation systems now for the direct benefit of the urban dweller and workingman in this country. We cannot make this commitment by drastically reducing this authorization.

Mr. PATMAN. Mr. Chairman, we have no further requests for time.

Mr. WIDNALL. We have no further requests for time, Mr. Chairman.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

H.R. 18185

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the Congress finds that the rapid urbanization and the continued dispersal of population and activities within urban areas has made the ability of all citizens to move quickly and at a reasonable cost an urgent national problem; that it is imperative, if efficient, safe, and convenient transportation compatible with soundly planned urban areas is to be achieved, to continue and expand the Urban Mass Transportation Act of 1964; and that success will require a Federal commitment for the expenditure of at least $10,000,000,000 over a twelve-year period to permit confident and continuing local planning, and greater flexibility in program administration. It is the purpose of this Act to create a partnership which permits the local community, through Federal financial assistance, to exercise the initiative necessary to satisfy its urban mass transportation requirements.

SEC. 2. Section 3 of the Urban Mass Transportation Act of 1964, as amended (49 U.S.C. 1602), is amended—

(1) by redesignating subsection (c) as subsection (e); and

(2) by striking out subsections (a) and (b) and inserting in lieu thereof subsections (a), (b), (c), and (d), as follows:

"(a) The Secretary is authorized, in accordance with the provisions of this Act and on such terms and conditions as he may prescribe, to make grants or loans (directly, through the purchase of securities or equipment trust certificates, or otherwise) to assist States and local public bodies and agencies thereof in financing the acquisition, construction, reconstruction, and improvement of facilities and equipment for use, by operation or lease or otherwise, in mass transportation service in urban areas and in coordinating such service with highway and other transportation in such areas. Eligible facilities and equipment may include land (but not public highways), buses and other rolling stock, and other real and personal property needed for an efficient and coordinated mass transportation system. No grant or loan shall be provided under this section unless the Secretary determines that the applicant has or will have—

"(1) the legal, financial, and technical capacity to carry out the proposed project; and

"(2) satisfactory continuing control, through operation or lease or otherwise, over the use of the facilities and equipment.

The Secretary may make loans for real property acquisition pursuant to subsection (b) upon a determination, which shall be in lieu of the preceding determinations, that the real property is reasonably expected to be required in connection with a mass transportation system and that it will be used for that purpose within a reasonable period. No grant or loan funds shall be used for payment of ordinary governmental or nonproject operating expenses. An applicant for assistance under this section for a project located wholly or partly in a State in which there is statewide comprehensive transportation planning shall furnish a copy of its application to the Governor of each State affected concurrently with submission to the Secretary. If, within thirty days thereafter, the Governor submits comments to the Secretary, the Secretary must consider the comments before taking final action on the application.

"(b) The Secretary is authorized to make loans under this section to States or local public bodies and agencies thereof to finance the acquisition of real property and interests in real property for use as rights-of-way, station sites, and related purposes, on urban mass transportation systems, including the net cost of property mnagement and relocation payments made pursuant to section 7. Each loan agreement under this subsection shall provide for actual construction of urban mass transportation facilities on acquired real property within a period not exceeding ten years following the fiscal year in which the agreement is made. Each agreement shall provide that in the event acquired real property or interests in real property are not to be used for the purposes for which acquired, an appraisal of current value will be made at the time of that determination, which shall not be later than ten years following the fiscal year in which the agreement is made. Two-thirds of the increase in value, if any, over the original cost of the real property shall be paid to the Secretary for credit to miscellaneous receipts of the Treasury. Repayment of amounts loaned shall be credited to miscellaneous receipts of the Treasury. A loan made under this subsection shall be repayable within ten years from the date of the loan agreement or on the date a grant agreement for actual construction of facilities on the acquired real property is made, whichever date is earlier. A grant agreement for construction of facilities under this Act may provide for forgiveness of the repayment of the principal and accrued interest on the loan then outstanding in lieu of a cash grant in the amount thus forgiven, which for all purposes shall be considered a part of the grant and of the Federal portion of the cost of the project. An applicant for assistance under this subsection shall furnish a copy of its application to the comprehensive planning agency of the community affected concurrently with submission to the Secretary. If within a period of thirty days thereafter (or, in a case where the comprehensive planning agency of the community (during such thirty-day period) requests more time, within such longer period as the Secretary may determine) the comprehensive planning agency of the community affected submits comments to the Secretary, the Secretary must consider the comments before taking final action on the application.

"(c) No loan shall be made under this section for any project for which a grant is made under this section, except—

"(1) loans may be made for projects as to which grants are made for relocation payments; and

"(2) project grants may be made even though the real property involved in the project has been or will be acquired as a result of a loan under subsection (b).

Interest on loans made under this seciton shall be at a rate not less than (i) a rate determined by the Secretary of the Treasury, taking into consideration the current average market yield on outstanding marketable obligations of the United States with remaining periods to maturity comparable to the average maturities of such loans adjusted to the nearest one-eighth of 1 per centum, plus (ii) an allowance adequate in the judgment of the Secretary of Transportation to cover administrative costs and probable losses under the program. No loans shall be made, including renewals or extensions thereof, and no securities or obligations shall be purchased, which have maturity dates in excess of forty years.

"(d) Any application for a grant or loan under this Act to finance the acquisition, construction, reconstruction, or improvement of facilities or equipment which will substantially affect a community or its mass transportation service shall include a certification that the applicant—

"(1) has afforded an adequate opportunity for public hearings pursuant to adequate prior notice, and has held such hearings unless no one with a significant economic, social, or environmental interest in the matter requests a hearing;

"(2) has considered the economic and social effects of the project and its impact on the environment; and

"(3) has found that the project is consistent with official plans for the comprehensive development of the urban area.

Notice of any hearings under this subsection shall include a concise statement of the proposed project, and shall be published in a newspaper of general circulation in the geographic area to be served. If hearings have been held, a copy of the transcript of the hearings shall be submitted with the application."

SEC. 3. (a) Section 4(a) of the Urban Mass Transportation Act of 1964, as amended (49 U.S.C. 1603(a)), is amended—

(1) by striking out "section 3" in the first sentence and inserting in lieu thereof "subsection (a) of section 3"; and

(2) by striking out the next to the last

sentence and inserting in lieu thereof the following: "Such remainder may be provided in whole or in part from other than public sources and any public or private transit system funds so provided shall be solely from undistributed cash surpluses, replacement or depreciation funds or reserves available in cash, or new capital."

(b) Section 4 of such Act, as amended (49 U.S.C. 1603), is amended by adding at the end thereof the following new subsections:

"(c) To finance the programs and activities, including administrative costs, under this Act, the Secretary is authorized to incur obligations on behalf of the United States in the form of grant agreements or otherwise in amounts aggregating not to exceed $5,000,000,000. This amount (which shall be in addition to any amounts available to finance such programs and activities under other provisions of this Act) shall become available for obligation upon the date of the enactment of this subsection and shall remain available until obligated. There are authorized to be appropriated for liquidation of the obligations incurred under this subsection not to exceed $130,000,000 prior to July 1, 1971, which amount may be increased to not to exceed an aggregate of $500,000,000 prior to July 1, 1972, not to exceed an aggregate of $1,150,000,000 prior to July 1, 1973, not to exceed an aggregate of $2,000,000,000 prior to July 1, 1974, not to exceed an aggregate of $3,000,000,000, prior to July 1, 1975, and not to exceed an aggregate of $5,000,000,000 thereafter. Sums so appropriated shall remain available until expended.

"(d) The Secretary shall report annually to the Congress, after consultation with State and local public agencies, with respect to outstanding grants or other contractual agreements executed pursuant to subsection (c) of this section. To assure program continuity and orderly planning and project development, the Secretary, shall submit to the Congress (1) authorization requests for fiscal years 1976 and 1977 not later than February 1, 1972, (2) authorization requests for fiscal years 1978 and 1979 not later than February 1, 1974, (3) authorization requests for fiscal years 1980 and 1981 not later than February 1, 1976, and (4) an authorization request for fiscal year 1982 not later than February 1, 1978. Such authorization requests shall be designed to meet the Federal commitment specified in the first section of the Urban Mass Transportation Assistance Act of 1970. Concurrenlty with these authorization requests, the Secretary shall also submit his recommendations for any necessary adjustments in the schedule for liquidation of obligations."

SEC. 4. Section 5 of the Urban Mass Transportation Act of 1964, as amended (49 U.S.C. 1604), is amended by striking out the next to the last sentence and inserting in lieu thereof the following: "Such remainder may be provided in whole or in part from other than public sources and any public or private transit system funds so provided shall be solely from undistributed cash surpluses, replacement or depreciation funds or reserves available in cash, or new capital."

SEC. 5. Section 6(c) of the Urban Mass Transportation Act of 1964, as amended (49 U.S.C. 1605), is amended by strikng out "authorization provided in section 4(b)" each place it appears and inserting in lieu thereof "authorizations provided in section 4".

SEC. 6. Section 14 of the Urban Mass Transportation Act of 1964, as amended (49 U.S.C. 1610), is amended to read as follows:

"ENVIRONMENTAL PROTECTION

"SEC. 14. (a) It is hereby declared to be the national policy that special effort shall be made to preserve the natural beauty of the countryside, public park and recreation lands, wildlife and waterfowl refuges, and important historical and cultural assets, in the planning, designing, and construction of urban mass transportation projects for which Federal assistance is provided pursuant to section 3 of this Act. In implementing this policy the Secretary shall cooperate and consult with the Secretaries of Agriculture, Health, Education, and Welfare, Housing and Urban Development, and Interior, and with the Council on Environmental Quality with regard to each project that may have a substantial impact on the environment.

"(b) The Secretary shall review each transcript of hearing submitted pursuant to section 3(d) to assure that an adequate opportunity was afforded for the presentation of views by all parties with a significant economic, social, or environmental interest, and that the project application includes a detailed statement on—

"(1) the environmental impact of the proposed project,

"(2) any adverse environmental effects which cannot be avoided should the proposal be implemented,

"(3) alternatives to the proposed project, and

"(4) any irreversible and irretrievable impact on the environmental which may be involved in the proposed project should it be implemented.

"(c) The Secretary shall not approve any application for assistance under section 3 unless he finds in writing, after a full and complete review of the application and of any hearings held before the State of local public agency pursuant to section 3(d), that (1) adequate opportunity was afforded for the presentation of views by all parties with a significant economic, social, or environmental interest, and fair consideration has been given to the preservation and enhancement of the environment and to the interest of the community in which the project is located, and (2) either no adverse environmental effect is likely to result from such project or there exists no feasible and prudent alternative to such effect and all reasonable steps have been taken to minimize such effect. In any case in which a hearing has not been held before the State or local agency pursuant to section 3(d), or in which the Secretary determines that the record of hearings before the State or local public agency is inadequate to permit him to make the findings required under the preceding sentence, he shall conduct hearings, after giving adequate notice to interested persons, on any environmental issues raised by such application. Findings of the Secretary under this subsection shall be made a matter of public record."

SEC. 7. Section 15 of the Urban Mass Transportation Act of 1964, as amended (49 U.S.C. 1611), is amended to read as follows:

"STATE LIMITATION

"SEC. 15. Grants made under section 3 (other that for relocation payments in accordance with section 7(b)) before July 1, 1970 for projects in any one State shall not exceed in the aggregate 12½ per centum of the aggregate amount of grant funds authorized to be appropriated pursuant to section 4(b); except that the Secretary may, without regard to such limitation, enter into contracts for grants under section 3 aggregating not to exceed $12,500,000 (subject to the total authorization provided in section 4(b)) with local public bodies and agencies in States where more than two-thirds of the maximum grants permitted in the respective State under this section has been obligated. Grants made under section 3 on or after July 1, 1970, for projects in any one State many not exceed in the aggregate 12½ per centum of the aggregate amount of funds authorized to be obligated under section 4(c), except that 15 per centum of the aggregate amount of grant funds authorized to be obligated under section 4(c) may be used by the Secretary, without regard to this limitation, for grants in States where more than two-thirds of the maximum amounts permitted under this section has been obligated. In computing State limitations under this section, grants for relocation payments shall be excluded. Any grant made under section 3 to a local public body or agency in a major metropolitan area which is used in whole or in part to provide or improve urban mass transportation service, pursuant to an interstate compact approved by the Congress, in a neighboring State having within its boundaries population centers within normal commuting distance from such major metropolitan area, shall, for purposes of computing State limitations under this section, be allocated on an equitable basis, in accordance with regulations prescribed by the Secretary, between the State in which such public body or agency is situated and such neighboring State."

SEC. 8. The Secretary of Transportation shall conduct a study of the feasibility of providing Federal assistance to help defray the operating costs of mass transportation companies in urban areas and of any changes in the Urban Mass Transportation Act of 1964 which would be necessary in order to provide such assistance, and shall report his findings and recommendations to the Congress within one year after the date of the enactment of this Act.

SEC. 9. Nothing in this Act shall affect the authority of the Secretary of Housing and Urban Development to make grants, under the authority of sections 6(a), 9, and 11 of the Urban Mass Transportation Act of 1964, as amended (49 U.S.C. 1605(a), 1607a, and 1607c), and Reorganization Plan Numbered 2 of 1968, for projects or activities primarily concerned with the relationship of urban transportation systems to the comprehensively planned development of urban areas, or the role of transportation planning in overall urban planning, out of funds appropriated to him for that purpose.

SEC. 10. This Act may be cited as the "Urban Mass Transportation Assistance Act of 1970".

Mr. PATMAN (during the reading). Mr. Chairman, I ask unanimous consent that the bill be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

COMMITTEE AMENDMENTS

The CHAIRMAN. The Clerk will report the first committee amendment.

The Clerk read as follows:

Committee amendment: Page 8, line 21, strike out ," after consultation with States and local public agencies,".

The committee amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Committee amendment: Page 8, line 25, after "Secretary," insert ", after consultation with States and local public agencies,".

The committee amendment was agreed to.

Mr. KOCH. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count.

Mr. KOCH. Mr. Chairman, I withdraw my point of order.

The CHAIRMAN. The clerk will report the remaining committee amendments.

The Clerk read as follows:

Committee amendments: Page 9, strike out lines 13 and 14 and insert in lieu thereof the following:

"SEC. 4. (a) Section 5 of the Urban Mass Transportation Act of 1964, as amended (49 U.S.C. 1604), is amended by striking out '1971' and inserting in lieu thereof '1972'.

"(b) Section 5 of such Act, as amended (49 U.S.C. 1604), is further amended by".

Page 13, after line 25, insert the following new section:

"SEC. 9. The Secretary of Transportation shall in all ways (including the provision of technical assistance) encourage industries adversely affected by reductions in Federal Government spending on space, military, and other Federal projects to compete for the contracts provided for under sections 3 and 6 of the Urban Mass Transportation Act of 1964 (49 U.S.C. 1602 and 1605), as amended by this Act."

Page 14, line 1, strike out "SEC. 9." and insert in lieu thereof "SEC. 10.".

Page 14, line 12, strike out "SEC. 10." and insert in lieu thereof "SEC. 11.".

The committee amendments were agreed to.

The CHAIRMAN. Are there further amendments?

AMENDMENT OFFERED BY MR. BIAGGI

Mr. BIAGGI. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BIAGGI: Page 13, after line 23, insert the following new section:

"SEC. 8. The Urban Mass Transportation Act of 1964 is further amended by adding at the end thereof the following new section:

"'PLANNING AND DESIGN OF MASS TRANSPORTATION FACILITIES TO MEET SPECIAL NEEDS OF THE ELDERLY AND THE HANDICAPPED

"'SEC. 16. (a) It is hereby declared to be the national policy that elderly and handicapped persons have the same right as other persons to utilize mass transportation facilities and services; that special efforts shall be made in the planning and design of mass transportation facilities and services so that the availability to elderly and handicapped persons of mass transportation which they can effectively utilize will be assured; and that all Federal programs offering assistance in the field of mass transportation (including the programs under this Act) should contain provisions implementing this policy.

"'(b) In addition to the grants and loans otherwise provided for under this Act, the Secretary is authorized to make grants or loans for the specific purpose of assisting States and local public bodies and agencies thereof in providing mass transportation services which are planned, designed, and carried out so as to meet the special needs of elderly and handicapped persons. Grants and loans made under the preceding sentence shall be subject to all of the terms, conditions, requirements, and provisions applicable to grants and loans made under section 3(a), and may be considered for the purposes of all other laws to have been made under such section. Of the total amount of the obligations which the Secretary is authorized to incur on behalf of the United States under the first sentence of section 4(c), 1½ per centum may be set aside and used exclusively to finance the programs and activities authorized by this subsection (including administrative costs).

"'(c) Of any amounts made available to finance research, development, and demonstration projects under section 6 after the date of the enactment of this section, 1½ per centum may be set aside and used exclusively to increase the information and technology which is available to provide improved transportation facilities and services planned and designed to meet the special needs of elderly and handicapped persons.

"'(d) For purposes of this Act, the term "handicapped person" means any individual who, by reason of illness, injury, age, congenital malfunction, or other permanent or temporary incapacity or disability, is unable without special facilities or special planning or design to utilize mass transportation facilities and services as effectively as persons who are not so affected.'"

And renumber the succeeding sections accordingly.

Mr. PATMAN (during the reading). Mr. Chairman, the amendment has been well distributed and understood by the minority as well as the majority. Therefore, I ask unanimous consent that the amendment be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

The CHAIRMAN. The gentleman from New York is recognized for 5 minutes.

Mr. BIAGGI. Mr. Chairman, I rise to offer a very important amendment which is entitled "Planning and Design of Mass Transportation Facilities To Meet the Special Needs of the Elderly and the Handicapped."

This amendment would require all federally assisted mass transit facilities to meet the need of the elderly and the handicapped. The amendment will also permit a portion of the total authorization to be used for loans and grants to existing systems to make modifications in their facilities. Also in order to expand our knowledge in the field of providing transportation services to the elderly and the handicapped, a third provision would set aside a portion of the research funds for this purpose.

The present designs of mass transit systems are such that some 44 million Americans will be excluded from using them. These Americans are elderly citizens, handicapped persons, cardiac patients, accident victims, and many others who are hindered in their movements by age or physical impairment.

Among these 44 million Americans are many veterans of World War II, the Korean conflict, and the Vietnam war who were permanently injured while aiding in the defense of this country. Yet, they return to this land and find public transportation systems impossible or nearly impossible to use.

Also included in these 44 million Americans are persons who are temporarily handicapped due to illness or other impairments. These may be persons with broken legs, arthritic sufferers, pregnant women or recent hospital patients.

I cannot overemphasize the importance of establishing a national policy to aid these elderly and handicapped persons so that they might have the same equal right of access to public transportation facilities that other Americans have.

The United States is one of the few nations of the Western World which does not have such a policy. I sincerely hope my colleagues will share my views that these 44 million Americans can no longer be excluded from public transportation facilities.

On September 8, the President expressed a similar view with regard to our handicapped citizens and urged action along the lines of this amendment. He said:

Isolated from regular contact with society, many of our handicapped citizens lead lives of lonely frustration. Working together, on both public and private levels, we can—and must—insure full lives for them. Together we can topple the environmental barriers which prevent the handicapped from entering buildings or using public transportation; we can welcome back the returning disabled veterans to a life of hope; and we can bring all of our handicapped fellow citizens into the mainstream of American life.

Similarly, Commissioner John B. Martin of HEW's Administration on Aging, talked of the problems faced by the elderly in testimony before the House Subcommittee on Housing which just considered this measure. He said:

Where inadequate income is not an obstacle to the use of mass transit, the older person may nevertheless find it extremely difficult to avail himself of this means of transportation, both because of his declining physical vigor and ability and the accessibility of the service . . . In addition, the design of transportation facilities can constitute almost insuperable barriers to some older persons.

And significantly, he talked about the cost to society of barring these Americans from public facilities:

The lack of access to transportation, for whatever reason, can also result in difficulties in shopping and carrying out other day-to-day activities necessary to assist the older person in maintaining his independence and his ability to remain outside a home for the aged, nursing home or similar institution.

Congress has authorized expenditures to remove barriers for the elderly and the handicapped in other areas. Particularly, my colleague from Florida (Mr. BENNETT) was instrumental in passing legislation that would require the removal of travel barriers from all federally funded buildings. I thank him for earlier indicating his support of my amendment.

The demonstration cities program offers opportunities to obtain Federal funds for the construction of barrier free features in their projects.

The Department of Housing and Urban Development has funds that can be used to pay for barrier-free housing if local people choose.

The Hill-Burton program for the construction of hospitals and health facilities is another source of Federal aid that supports barrier-free construction.

And under the 1968 amendments to the Vocational Rehabilitation Act, States can use their regular formula grants for the removal of architectural barriers.

Thus my amendment would extend this existing policy to mass transportation systems that are federally supported so that such barriers to travel can be removed at the program's inception with very little if any additional costs.

Mr. Chairman, colleagues, we are not talking about appropriating additional funds here. We are not talking about

specialized programs or adding to the Federal bureacracy. We are simply talking about granting equal rights to a large segment of our population to use public facilities with the same ease as everyone else.

Other proposals have been offered that would set up special transportation facilities for the elderly and the handicapped. Others would provide subsidies so that these people could use more expensive services such as taxi cabs or limousines.

However, besides the factor of costs for these programs, they would further serve to segregate the elderly and the handicapped from our society.

This Nation has been insensitive to the needs of these Americans for too long. I think it is time this Congress saw to it that equal rights to transportation facilities are extended to these 44 million citizens. My amendment does that and I hope a majority of my co'leagues will support this effort.

Mr. PATMAN. Mr. Chairman, I think the gentleman's amendment is a very worthy one and should be a part of this bill. I have conferred with my colleagues on the majority side and we are willing to accept the amendment.

Mr. BIAGGI. I thank the gentleman from Texas very much.

Mr. WIDNALL. Mr. Chairman, will the gentleman yield?

Mr. BIAGGI. I am privileged to yield to the distinguished gentleman from New Jersey.

Mr. WIDNALL. Mr. Chairman, I would like to suggest in this connection that insofar as we are concerned on this side if the word "shall" on page 2 is changed to "may." In other words, "may be set aside." This appears in the (b) section and in section (c) where there appears 1½ per centum "may be set aside." With that change it would be agreeable to this side to accept the amendment.

Mr. BIAGGI. Mr. Chairman, in response to the statement of the gentleman from New Jersey the changes which the gentleman has suggested have been made in the amendment if it had been reported in full. Those changes have already been made. I am sorry that I did not get it changed in the copy.

Mr. MATSUNAGA. Mr. Chairman, the amendment offered by my distinguished colleague from New York (Mr. BIAGGI) represents a potentially significant benefit to over 40 million Americans.

At any given time, for one reason or another, about 44 million Americans are unable to use, at least use adequately, the public transportation in their respective communities. Most of these citizens are either elderly, or physically handicapped, or both.

We pride ourselves in our provision for access to most new buildings for the handicapped. It is time we take similar steps on behalf of the handicapped and the elderly who are denied access to mass transit facilities.

As I understand the amendment offered by the gentleman from New York, appropriations of about $75 million would be authorized over a period of years, for grants and loans to improve facilities to meet the mass transit needs of the elderly and the handicapped. Also, at least 1½ percent of the research funds provided by the bill would be channeled into this area.

Even if we measure strictly in balance sheet figures, Mr. Chairman, this amendment is an eminently practical one. The elderly and the handicapped participate in the labor force in significantly lower proportions than the nonhandicapped. A most central reason for this is the unavailability of adequate public transportation to potential jobs. The Department of Transportation has estimated that the minimum economic benefit resulting from eliminating the barriers to mass transit traveling would be over $800 million each year.

This estimate excludes the increased tax revenues that would be generated, lowered welfare payments, and the value of time savings by the handicapped. More importantly, however, we cannot assign a dollar value to the social and psychological benefits that accompany a feeling of self-sufficiency.

Passage of H.R. 18185 will mark the beginning of a significant new chapter of mass transit. Expanded systems, even totally new systems, are in various stages of contemplation and design around the country. The earlier that structural and design changes to effect maximum use by the handicapped are incorporated, the less expenditures and disruption they will cause. Thus, the urgency and timeliness of the pending amendment.

Mr. Chairman, it is time for the Congress to take steps to eliminate the travel barriers in mass transit that further handicap the handicapped.

I urge the adoption of the amendment offered by the gentleman from New York (Mr. BIAGGI).

Mr. PATMAN. Mr. Chairman, we accept the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York (Mr. BIAGGI).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. WIDNALL

Mr. WIDNALL. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. WIDNALL: At the proper place in the bill add the following new section:

"TECHNICAL AMENDMENTS

"SEC. 11. (a) Section 4(b) of the Urban Mass Transportation Act of 1964 is amended by inserting the words "or contract" after the word "grant" in the last sentence thereof.

"(b) Section 6(a) of the Urban Mass Transportation Act of 1964 is amended by inserting the words "grantor" between the word "by" and the word "contract" in the second sentence thereof."

And renumber the present section 11 as section 12.

PARLIAMENTARY INQUIRY

Mr. GROSS. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. GROSS. What is the page number of this amendment? It is not given.

Mr. WIDNALL. It is on the next to the last page of the bill.

Mr. PATMAN. Mr. Chairman, will the gentleman yield to me?

Mr. WIDNALL. Yes; I yield to the gentleman from Texas.

Mr. PATMAN. We have had the privilege of examining this amendment and we are willing to accept the amendment on our side.

Mr. GROSS. Well, Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I think we ought to at least know where the amendment goes in the bill. No page number was given. I have not the faintest idea where the amendment goes in this bill.

I am perfectly willing to suspend the reading of amendments to expedite matters, but I must know what is proposed and to what it applies.

Mr. WIDNALL. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I will yield to the gentleman from New Jersey if the gentleman will tell me the import of the amendment.

Mr. WIDNALL. Mr. Chairman, I would like to propose two technical amendments to this act, designed to correct what I feel were inadvertent omissions in the 1964 act, and which are now causing some administrative difficulty and concern.

First, I propose an amendment to section 6(a) of the 1964 act, which authorizes the Secretary to undertake research, development, and demonstration projects in all phases of urban mass transportation. That section now provides that such projects be undertaken "independently or by contract" and does not specifically authorize such projects to be undertaken by grant.

Some of the older members will recall that the urban mass transit research, development, and demonstration program provided for under section 6(a) is an outgrowth and continuation of a pilot demonstration grant program authorized by the Housing Amendments of 1961. Under that pilot program, all projects were carried out by grant, with cost sharing between the local applicant and the Federal Government, and all applicants had to be local units of government. Under the 1964 act the requirements of a local governmental applicant and of cost sharing were deleted, research and development were added as eligible activities, but the word "grant" was omitted in specifying the means of carrying out research, development, and demonstration projects, the act saying merely that the Secretary may undertake such projects "independently or by contract."

I remember, and the legislative history makes it clear, that there was no intent to remove the power of the Secretary to carry out projects under section 6(a) by grant as well as independently or by contract. Indeed, more than three-fourths of the research, development, and demonstration projects carried on under section 6(a) of the 1964 act have been by grant to local public bodies, with cost sharing between the applicant and the Government. So, in order to remove this ambiguity, my amendment would insert the words "grant or" between the word "by" and the word "contract" in the second sentence of section 6(a).

A similar situation arises under the last

sentence of section 4(b) of the 1964 act, which authorizes the Secretary, without regard for the provisions of section 3648 of the Revised Statutes, to make advance or progress payments on account of any grant made pursuant to the act. No provision is made for such advance or progress payments on projects undertaken by contract. The last sentence of section 4(b) was taken almost verbatim from section 303 of the 1961 act—which did not authorize projects to be undertaken by contract—and the words "or contract" were inadvertently omitted. Advance or progress payments on Federal R.D. & D. contracts are authorized under many statutes, such as DOT's High Speed Ground Transportation Act and HEW's Water Pollution Control Act, and are really a necessity under modern Government procurement practice.

Accordingly, my amendment would amend section 4(b) of the 1964 act by inserting the words "or contract" after the word "grant" in the last sentence.

True, these amendments are minor and of a technical nature, but I think they will contribute to the successful operation of the urban mass transportation program without in any way changing the nature or scope of the program as Congress intended that it be.

I have discussed these amendments with the distinguished chairman of the Banking and Currency Committee, and he advises me that he has no objection to them.

Mr. GROSS. Mr. Chairman, I appreciate the explanation, and I yield back the balance of my time.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New Jersey (Mr. WIDNALL).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. BOLAND

Mr. BOLAND. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BOLAND: Beginning with line 25, page 7, strike out everything through line 19, page 8, and insert in lieu thereof the following:

"(c) To finance grants and loans under sections 3, 7(b), and 9 of this Act, the Secretary is authorized to incur obligations on behalf of the United States in the form of grant agreements or otherwise in amounts aggregating not to exceed $3,100,000,000, less amounts appropriated pursuant to section 12(d) of this Act and the amount appropriated to the Urban Mass Transportation Fund by Public Law 91-168. This amount (which shall be in addition to any amounts available to finance such activities under subsection (b) of this section) shall become available for obligation upon the date of enactment of this subsection and shall remain available until obligated. There are authorized to be appropriated the liquidation of the obligations incurred under this subsection not to exceed $80,000,000 prior to July 1, 1971, which amount may be increased to not to exceed an aggregate of $310,000,000 prior to July 1, 1972; not to exceed an aggregate of $710,000,000 prior to July 1, 1973, not to exceed an aggregate of $1,260,000,000 prior to July 1, 1974, not to exceed an aggregate of $1,860,000,000 prior to July 1, 1975, and not to exceed an aggregate of $3,100,000,000 thereafter. The total amounts appropriated under this subsection and section 12(d) of this Act shall not exceed the limitations in the foregoing schedule. Sums so appropriated shall remain available until expended."

The CHAIRMAN. The Chair recognizes the gentleman from Massachusetts (Mr. BOLAND).

Mr. PATMAN. Mr. Chairman, will the gentleman yield for a clarification?

Mr. BOLAND. I yield to the gentleman.

Mr. PATMAN. How much will this aggregate in all? I heard the different figures, but what would be the aggregate amount?

Mr. BOLAND. The aggregate amount would be $3.1 billion.

This does not change the general overall policy annunciated by the committee of providing $10 billion over the next 12 years for mass transit.

My amendment does provide an aggregate amount of $3.1 billion starting in fiscal year 1971 and running through fiscal year 1975.

I want to compliment the Committee on Banking and Currency, Mr. Chairman, for bringing this bill to the floor. The action that the committee chaired by the distinguished gentleman from Texas has taken and of the chairman of the subcommittee, the gentleman from Pennsylvania (Mr. BARRETT), and the gentleman from New Jersey (Mr. WIDNALL) deserve to be supported by the Members of Congress.

I have a series of amendments, but I will dwell on just this one amendment now.

It is obvious that this committee wrestled with the total amount of money that ought to be appropriated over the next 5 years for urban mass transportation.

A number of bills have been filed in the Congress both on the House side and the Senate side with respect to the amount of money that ought to be expended for mass transportation.

The testimony that was developed by the distinguished gentleman from Pennsylvania (Mr. BARRETT), by his subcommittee and by the Senate and the Committee on Banking and Currency clearly indicates there is a crisis in mass transportation. There is no question about it. I could not agree with this subcommittee more in that this Congress has to provide greater funds at a greater accelerating pace in order to meet the very difficult problems this nation faces in mass transportation.

The distinguished gentleman from Texas, the chairman of this subcommittee, filed the bill, H.R. 6663. That would have provided $1.8 billion over the next 4 years; $300 million for fiscal year 1971, $400 million for fiscal year 1972, $500 million for fiscal year 1973 and $600 million for fiscal year 1974.

The distinguished gentleman from New Jersey (Mr. WIDNALL) who has worked long and hard on mass transportation problems filed the bill, H.R. 13463, which provided for $3.1 billion—$300 million in fiscal year 1971, $462 million in fiscal year 1972, $600 million in fiscal year 1973, $800 million in fiscal year 1974 and $1 billion in fiscal year 1975.

He also filed the bill, H.R. 16261, which provided for $3.1 billion. That bill, I understand, is the administration bill. That bill is identical with Senate bill, S. 3154, which passed the Senate on February 2 of this year by a vote of 82 to 4.

The funding under that bill provides $80 million for fiscal year 1971, $310 million for fiscal year 1972, $710 million for fiscal year 1973 and $1,260 million for fiscal year 1974, and $1,800 million for fiscal year 1975 and not to exceed $3.1 billion thereafter.

The basic intent of my amendment is to provide precisely the financing that is provided in the Widnall bill, H.R. 16261. It provides the same financing in the bill S. 3154 that was passed by the Senate sponsored by Senator WILLIAMS of New Jersey. Efforts were made in the Senate to increase this to $10 billion and the effort failed.

My amendment would decrease from $5 billion to $3.1 billion the total amount of obligational authority in the bill and it makes a corresponding reduction in the schedule of appropriations to liquidate those obligations.

Although my amendment makes a reduction of $1.9 billion, the urban mass transportation administration would still be provided with a substantially increasing program.

Mr. BOLAND. I yield to the gentleman.

Mr. BARRETT. I do think the gentleman should be accurate. The Senate did not offer any amendments to increase it to $5 billion. They offered amendments over there to increase it to $10 billion over 12 years, if asked by the President.

Mr. BOLAND. In response to the gentleman from Pennsylvania, let me say that Senator CRANSTON of California offered an amendment which would have provided a $10 billion obligational authority for the next 12 years instead of $3.1 billion in authority which is funded under the Williams bill.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

(By unanimous consent, Mr. BOLAND was allowed to proceed for 5 additional minutes.)

Mr. BOLAND. An amendment was offered on the Senate floor by the distinguished Senator from New York, Senator GOODELL, which provided, in addition to the $3.1 billion obligational authority for 1975, $6.9 billion in obligational authority for the 7 years beginning in the fiscal year 1976. That amendment was defeated 67 to 16. The Cranston amendment was defeated 62 to 24. There is no question about that. The RECORD clearly shows it.

Mr. Chairman, I have been one of those who have served on the Committee on Appropriations opposed to backdoor financing. That is precisely what you are doing here. We have to meet the tab. There is obligational authority granted for a rate of expenditure of $80 million for the fiscal year 1971, $310 million for fiscal 1972, and so on to $3.1 billion when we have reached the sixth year. But, Mr. Chairman, as the chairman of the Subcommittee on the Department of Transportation, who has listened over the past few years to the justi-

fications for this program, I say there is no question about the fact that we have not been providing the amounts of money necessary to run a good mass transit program. My quarrel is with the amount provided in the committee bill. It is too large at this time. The Department of Transportation indicates that the amount of money provided in the House bill is too much at this time. It prefers the financing carried in S. 3154. There are 125 employees in the Urban Mass Transportation Administration. Clearly the evidence shows that this Department is now not in a position to supervise this huge expenditure over the next 6 years.

We are going to spend the $10 billion in the next 12 years. There is no question about that. The evidence that was adduced by Mr. BARRETT'S subcommittee indicated that perhaps we need $17 billion. Various estimates on what we need with respect to mass transit have run up to $50 billion. But I think the Congress ought to have a lever on the expenditures that are going to be made in this huge area. This is an area that deserves the priority that your committee has given to it, but it is also an area that deserves the oversight of this Congress because we will be spending large amounts of money on mass transit. We are entitled to know what they are getting for it.

The large cities will get, of course, the major share of the money that will be appropriated here, and a great number of smaller cities, those of less than 100,000, and less than 25,000. My objection to the $5 billion is that it is too large at this time, and I sincerely trust, Mr. Chairman, that the $3.1 billion amendment that I have offered will prevail.

Mr. BARRETT. Mr. Chairman, will the gentleman yield?

Mr. BOLAND. I yield to the Chairman.

Mr. BARRETT. The gentleman, I am sure, knows that the city of Springfield, Mass., is getting $425,329 in grant assistance. Does the gentleman consider that accurate and adequate for mass transit improvement in his own city?

Mr. BOLAND. I do not know that they are getting that.

Mr. BARRETT. I am telling you.

Mr. BOLAND. I do not know what we are getting. All I know is Springfield has a private transportation company in the area that is in serious financial difficulty, but this bill does not correct that difficulty.

Mr. BARRETT. I may not get an opportunity again to tell the gentleman. I do want to tell him that every Governor and every mayor in the country wants this bill.

Mr. BOLAND. I do not think there is any question about the fact that every Governor and every mayor in this country wants this bill. I am sure of that. I agree with them. And I want the bill. But I think there comes a point where the amount of money involved ought to be considered by this Congress; $3.1 billion is about what the Department says it can spend over the next 6 years. This program is a huge program. This bill provides a $10 billion commitment over the next 12 years.

I see the gentleman from New York smiling. He would like to have the whole $3.1 billion for New York, and I am sure New York could use it. There are other localities in the United States besides the city of New York, and the taxpayers who are picking up the tab for this bill are located all over the United States.

My only quarrel is with the $5 billion authority provided in the bill, that it is too large at this time. I think we ought to walk before we start to run. This is a program which is not too old. The basic legislation for mass transit passed in 1964. It is now only 6 years later. We have learned some things. The expenditures provided have not been enough. I could not agree more with that, but I submit that $3.1 billion is a substantial amount of money.

Mr. PATMAN. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, the amendment offered by the gentleman is very simple. It will reduce the amount that it will be possible to expend in the next 5 years to $3.1 billion. In other words, the amendment will reduce the bill nearly $2 billion.

Mr. Chairman, I think the $5 billion is really insufficient. We need certainly every dime of that $5 billion. If we were to adopt the amendment as suggested, this bill would go straight to the White House, and there would be no chance to increase it. Our committee worked on this for months. We worked on it much more, I believe, than the other body did. I have a feeling that the judgment of the members of our committee should also be respected. It is our conscientious belief there should be a minimum of $5 billion, and we should not think about reducing it.

The amendment here would reduce the bill nearly $2 billion.

I do not think that should be done at all. I think it would be detrimental. Certainly it would be a reflection on the 34 members of our committee who voted for this $5 billion. There were no votes against it. So on that vote it was unanimous. The members had good reasons for their actions.

The question is, should we agree to reduce the amount voluntarily and cut it down? On the other side, we can let the matter go to conference, which is where it will go and which is where all laws really are made—in the conference—except where Members impetuously adopt an amendment here which forecloses any attempt to increase the amount. Why should we do that and thereby tie our own hands? Let the normal parliamentary procedure prevail here. Let this go to conference, and if the House Members can convince the Senate conferees that the $5 billion should not be reduced and that it can be justified and that it can be paid and that we need the amount, and they agree to it, we will have $5 billion. But if we adopt this amendment, we just absolutely stop it and make it impossible to have any more than that. I think the Members of this Congress should consider the $5 billion. It is a very small amount for this big job over a 5-year period.

The gentleman from Massachusetts suggested that there were several amendments offered to change this amount. I read the RECORD and I found only one amendment that was offered, and that was a $10 billion amendment. That was unrealistic at the time it was offered.

Mr. BOLAND. Mr. Chairman, will the gentleman yield?

Mr. PATMAN. I yield to the gentleman from Massachusetts.

Mr. BOLAND. Mr. Chairman, I do not want to make a point of it, but the fact of the matter is that on February 3, 1970, one was offered.

Mr. PATMAN. Mr. Chairman, I do not yield for that.

Mr. BOLAND. The gentleman made a statement and said only one amendment was offered. The RECORD does not show that. The RECORD clearly shows other amendments were offered.

Mr. PATMAN. That is a small matter.

Mr. BOLAND. Financially it is a large matter.

Mr. PATMAN. I am not willing to spend my time on it. That is my belief. If the gentleman objects, he can just go ahead and change it. But I will say now I only found one amendment. The gentleman referred to several, but that is not such a big thing that we should make decisions on it.

If we go ahead in favor of this amendment, we are inducing a great many Members to say we will get something for sure right now, $3 billion, so let us adopt this. That will be pretty good bait for a person who wants to take that bait, but I do not think many Members of this House want to take that bait, because they would rather have the $5 billion. If we send the matter to conference, I think we will have an absolute cinch—as near a cinch as we can get with the other legislative body—of getting the $5 billion.

So let us not foreclose the opportunity when it is in sight. It is the regular way to legislate. That is the way all laws are made.

Why should we cut ourselves out and deny ourselves the opportunity? Why should we in a few minutes time reduce this wonderful program that needs the money by $1.9 billion, nearly $2 billion. Just because the other body has certain discussion, that is no reason why we should change our minds, when we worked on it.

Our committee was unanimous in insisting on $5 billion. Please do not slap our committee in the face by saying we are going to reduce it arbitrarily.

Mr. STANTON. Mr. Chairman, I rise in support of the amendment.

Mr. Chairman, once again the gentleman from Massachusetts has proved he is one of the most valuable Members of this Congress.

I believe it worthwhile, in backing this amendment, that I repeat just a couple of points which made an impression upon me, as stated by the gentleman from Massachusetts.

First, there is no one in this committee arguing over the difference between $3 and $5 billion, as to the amount of money we are going to spend on mass transportation in this country in the next 5 or 8 or 10 years. No one in this committee, and especially on our Bank-

ing and Currency Committee, fails to realize that with this legislation we are committing ourselves to a program of mass transportation in this country the type of which we have never seen before in the entire history of our country.

What the gentleman from Massachusetts was making clear was that under all the practicalities of the moment the largest amount of money we can come anywhere near to efficiently spending in the immediate future is $3.1 billion.

Second, the gentleman from Massachusetts made the point that under the legislation before us today the Secretary of Transportation will have to come back within 2 years with a written report on the status of this particular program, and we can certainly take a look at it at that time.

Third, another point the gentleman made—and he had figures to support it—was that the Urban Mass Transportation Authority this year, I believe, has only 125 employees, and last year, to administer this program which we are talking about, of $5 billion, they had 60 employees with a total budget of $175 million. I agree wholeheartedly with the gentleman from Massachusetts that from the practical point of view the most expedient amount of money we can utilize in this regard in the next 2 or 3 years is the amount of $3.1 billion. The authority itself is just not geared to handle more.

Certainly we must have learned in this country by now that we can spend millions of dollars on schools and not educate the children of this country, and we can spend billions of dollars on programs and not cure juvenile delinquency. Let us, for once, be very practical. I certainly support the gentleman from Massachusetts.

Mr. BOLAND. Mr. Chairman, will the gentleman yield?

Mr. STANTON. I am happy to yield to the gentleman from Massachusetts.

Mr. BOLAND. I thank the gentleman for yielding. I think, perhaps more importantly, the fact of the matter is that today by this legislation—and no one knows it better than the gentleman from Texas, the distinguished chairman of the committee, or the distinguished chairman of the subcommittee Mr. BARRETT—this Congress and this committee are taking a long step forward in mass transit. Here we are providing for obligational authority that absolutely and completely obligates the Department of Transportation to spend the $3.1 billion over the next 6 years. All they have to do is obligate it. They will come back to the Congress next year, and next year they will ask for $180 million to liquidate the contract authority, and then $310 million in 1972 to liquidate the contract authority.

Mr. STANTON. Absolutely.

Mr. BOLAND. All they will have to do is to come before the Appropriations Committee and say, "This is our contract. This is what we have obligated, and we have to pay the bill."

So in this sense alone we are taking a major step, a giant step forward. I am willing to take it.

I must say that over the years I have looked askance at back-door spending and obligating Federal funds in this manner, whereby Congress does not have an opportunity every year to oversee these programs.

This is a fantastic program. There is no question about it, when you think of the billions that will be spent over the next 12 years—billions that ought to be controlled in some manner by the Congress. You will never have a handle on this program unless you can be sure that the department comes up to justify the contract authority they have entered into.

Mr. BARRETT. Will the gentleman yield to me?

Mr. STANTON. I yield to the gentleman from Pennsylvania.

Mr. BARRETT. I am glad to hear the gentleman from Massachusetts (Mr. BOLAND) say that this is a giant step. We have taken a giant step. We have taken a giant step after we had practically 4 weeks of hearings on many bills. We had numerous mayors in the country and many Governors tell us to take this giant step because we are in a crisis situation in these communities because of the mass transportation system situation. Automobiles are backing up in the small towns and they are depleting the money and equipment necessary for those small transit companies to operate. We are trying to rehabilitate every small town and community and every large city in order to give them adequate transportation. I think the gentleman, if he does not adhere to our committee's judgment, ought to listen to the voices of the mayors and the Governors.

Mr. STANTON. I thank the gentleman for his contribution.

Mr. Chairman, I want to make a final statement, that really, from a practical administrative point of view the amount of money involved, $3.5 billion, is all that we can spend.

Mr. WILLIAMS. Mr. Chairman, I rise in support of the amendment.

Mr. Chairman, the amendment offered by the gentleman from Massachusetts (Mr. BOLAND) is a very simple amendment and a very practical one.

I would not want to think that any Member of this House thought that the only source of funds for building and improving mass transit facilities would be grants from the Federal Government. The fact is that if this money is handled properly, this $3.1 billion, when reflected in additional revenues raised from revenue bonds and State as well as Federal grants, will be much closer to $20 billion.

Do not forget this: When mass transit facilities are constructed they yield revenues. When mass transit systems, existing ones, are updated, revenues increase. So what you can do actually is finance the construction of a mass transit system through the floating of revenue bonds. As one example, in the Philadelphia area, the Southeastern Pennsylvania Transportation Authority purchased the Philadelphia Transportation Co. for $54 million. They raised this money through floating revenue bonds, and those bonds were backed up by the full faith and credit of the city of Philadelphia. Then they bought the Suburban Philadelphia Transportation Co. for another $13.5 million. These bonds were backed by the full faith and credit of Delaware County.

Mr. BARRETT. Will the gentleman yield to me?

Mr. WILLIAMS. I will in just 1 minute, when I am finished.

Now, if SEPTA can get just 20 percent of their investment in the PTC, the Philadelphia Suburban Transportation Co., and the railroad commuter lines in Federal grants, they will be getting $20 million where today they have invested approximately $100 million. With this Federal-State grant money of 20 percent, all of these systems can be upgraded to a point where riders increase and revenues increase, and these revenue bonds will be paid off from the increased revenue.

Every metropolitan area can use exactly the same system. This is a method that should be used. It is a method that will produce the most practical results, and it is a method that will produce the results at the lowest cost to the taxpayers.

Mr. BARRETT. Mr. Chairman, will the gentleman yield to me?

Mr. WILLIAMS. I yield to the gentleman from Pennsylvania.

Mr. BARRETT. I certainly do not want to debate any issues with my colleague, the gentleman from my own State, but I do want to tell you the revenue is not increasing in the fare box but, rather, is decreasing in every city and small town throughout the United States. That is the reason for giving them help.

Let me make this one point clear. You spoke of SEPTA. They got $736,000 in 1970.

Mr. WILLIAMS. It was $736,000. I tell you that is only a pittance in comparison to what SEPTA put out itself.

And let me tell you still further——

Mr. BARRETT. Mr. Chairman, will the gentleman yield further?

Mr. WILLIAMS. Wait until I answer your first point and then I shall yield further to the gentleman.

SEPTA ridership has increased rapidly in the commuter rail service. Also, they have not had the other two properties long enough to effect the necessary improvements in order to increase the revenue. The improvements are being made now. In addition to the drastic increase in ridership on the Philadelphia commuter rail service, you will experience precisely the same thing on the other mass transit properties owned by SEPTA.

Mr. BARRETT. They are decreasing in ridership and therefore their revenue is decreasing.

Mr. WILLIAMS. Is the gentleman saying that the ridership has decreased, that under SEPTA the ridership on commuter rail service has decreased?

Mr. BARRETT. Yes.

Mr. WILLIAMS. Well, the gentleman is wrong. The ridership has increased by 40 percent.

Mr. BARRETT. The testimony we had was that there was a decrease in ridership and that is the reason they need the money. The gentleman is proposing to cut this down to a pittance.

Mr. WILLIAMS. In my remarks I made the statement that SEPTA has invested

$100 million and I said that 20 percent of that sum would be an additional $20 million in Federal and State grants and by using this money for improvements they can increase ridership and increase revenue to retire the revenue bonds.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

(By unanimous consent, Mr. WILLIAMS was allowed to proceed for 2 additional minutes.)

Mr. WILLIAMS. So, I simply want to reiterate this: We do not have to have any comments about mass transit for low- and moderate-income families. The properties I have been speaking of, the transportation properties of the Philadelphia area, are serving some of the wealthiest municipalities in the country.

What is being done in the Philadelphia area can be done all over this Commonwealth through municipal authorities and county authorities facing up to their responsibilities by floating bonds and proceeding with improvements, assisted by Federal and State grants, they can raise the money to retire these revenue bonds.

This will be giving better, faster, and more improved mass transit service to the riding public and getting passengers out of their automobiles.

Mr. MOORHEAD. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I take this time to direct a question to the author of the amendment.

Mr. Chairman, as the gentleman from Massachusetts (Mr. BOLAND) indicates, when the Department of Transportation appropriation bill was reported earlier this year, the Committee on Appropriations provided that not more than $214 million in appropriations could be approved for this fiscal year for urban mass transportation grants under the existing program.

Under the provisions of this bill, whether or not the gentleman's amendment is adopted, we, of course, have a new program with a greater or expanded financial commitment on the part of the Government to assist urban mass transportation systems around the country.

Could the gentleman tell me what steps as the chairman of the Subcommittee on Transportation, he plans to take to provide the additional sums that this bill authorizes for the new urban mass transportation programs?

Mr. BOLAND. Speaking for myself—and I do not intend to speak for the Subcommittee on Appropriations at the present moment—but as the gentleman has indicated, there was no money provided for fiscal 1971 for the Urban Mass Transportation Administration. But the subcommittee that I chaired did put the $214 million in that the gentleman mentioned. The bill now is in the Senate. It has not been reported out by the Subcommittee on Transportation or adopted by the Senate. So the Senate has taken no action.

I am sure that if the Senate provides for additional funding that there will be an agreement by the conferees to take care of the additional funding. If this bill gets by, whether it is for the $80 million which is provided for in 1971 under the amendment that I have offered, or the $130 million that is in the bill offered by the committee, then I am sure that the conferees will agree on an amount which will be acceptable.

I have no objection to spending money for mass transportation. From my own viewpoint I can respond to the gentleman by saying that insofar as I am concerned I would make sure that the amounts of money which will be provided for under either the amendment or the bill from the committee will be adequate.

Mr. MOORHEAD. I thank the gentleman very much.

Mr. BARRETT. Mr. Chairman, will the gentleman yield?

Mr. MOORHEAD. I yield to the gentleman from Pennsylvania.

Mr. BARRETT. Mr. Chairman, I am quite sure the gentleman from Massachusetts knows that if this bill were cut down to the $3.1 billion it may not be necessary to send it to conference to work out anything; there will not be any differences between the Senate bill or this bill, therefore it may not be necessary to go to conference, it may just go to the Senate side and it may be necessary to correct some minor amendments and then be off to the President.

We are asking the gentleman to consider this, and let us work out the bill that will benefit all these cities and small towns.

Mr. BOLAND. Mr. Chairman, if the gentleman will yield further, we are talking about the funding in 1971, I would remind the chairman of the subcommittee.

Mr. BARRETT. We are also talking about this bill.

Mr. BOLAND. If the gentleman will please let me finish my statement, then we can comment on it.

The fact of the matter is, under your own bill it provides only $130 million for fiscal 1971. That is all you provide for. The amendment I have offered provides for $80 million for fiscal year 1971. In the Department of Defense appropriation bill that we passed in the House it provides $214 million for fiscal year 1971, and it was put in at the direction of both the Members on this side and the minority side. So we actually provide more in 1971 than you provide in 1971 under your own bill.

Mr. BARRETT. If the gentleman will yield further to me, the gentleman from Massachusetts is talking about working the differences out in the conference. I am talking to you about working out this bill which may not necessarily go to conference, it may just go on to the Senate side and require perhaps a few minor amendments, and then go to the President.

Mr. YATES. If the gentleman will yield, will the gentleman tell the House what we would be working out in the conference?

Mr. BARRETT. The urban mass transit bill.

Mr. YATES. As I understood what the gentleman said, he opposed the amendment offered by the gentleman from Massachusetts (Mr. BOLAND) on the ground that it might prevent a conference, or to give him the possibility of working out some minor differences. I was asking the gentleman to tell us what those differences were.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BARRETT. Mr. Chairman, I rise in opposition to the amendment, and I do so just briefly to say that the amendment offered by the gentleman from Massachusetts (Mr. BOLAND) literally tells the people in our cities that they will not be able to receive the amount of funds that they all stated they needed in order to improve their mass transportation systems.

We are, as I pointed out before, in a crisis where this is just as important as the housing bill. We have to give aid to these people. Automobiles are choking off the mass transportation systems in all these cities, and we cannot get adequate transportation to poor people to go across the cities for their employment.

For example, in the Naval Hospital and the Veterans Hospital in Philadelphia, the turnover of employment there is tremendous because there is lack of an adequate transportation system.

We need more mass transportation in my city badly. New York needs it badly. The mayor of New York says that what he would get out of this $3.1 billion on the basis we have outlined here today would be about $732,000 and he would not be able to buy enough corn to feed the pigeons in New York City under those conditions.

Mr. PATMAN. Mr. Chairman, will the gentleman yield?

Mr. BARRETT. I yield to the gentleman.

Mr. PATMAN. Is it not a fact that if we were to adopt the Boland amendment and make it $3.1 billion—that would be the same as in the Senate bill and if you were to hold a conference on some other matters, that would not be in the conference? The conferees would have their hands tied. They could not do a thing even though the House conferees were able to convince the Senate conferees that $5 billion should be provided and they would say they were glad to do it. But then they would turn around and under the rules say: "No, we cannot change it one penny." That would successfully tie the hands of the conferees from here on during this Congress, and it would be impossible to get more than $3.1 billion.

So, this is a hand-tying amendment.

Mr. STANTON. Mr. Chairman, will the gentleman yield?

Mr. BARRETT. I yield to the gentleman.

Mr. STANTON. I would like to remind the chairman of the committee that this morning in the full Committee on Banking and Currency we did exactly what you said today you do not want to do and that is agree to go to conference on the bill, including that bill on mass transportation, and passed by the Senate for $3.1 billion.

Mr. BARRETT. Those are different matters that the gentleman is talking about, we were talking only about mass transit matters here.

PARLIAMENTARY INQUIRY

Mr. HANNA. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I take this 5 minutes to propound first a parliamentary inquiry.

The CHAIRMAN. The gentleman will state the parliamentary inquiry.

Mr. HANNA. Mr. Chairman, as I understand the situation, the present circumstances are that the Senate has amended into another piece of legislation a mass transportation bill passed by the Senate that provides $3.1 billion in money for mass transportation.

If that is so and that is in a bill that will go to conference and has this subject matter along with other subject matters in it, I propound this question. Does it make any difference what the decision of this House is relative to this bill as to whether the conferees can bargain above $3.1 billion; or is the situation that the only bargaining the conferees will have regardless of what disposition we make here between $3.1 billion and zero?

The CHAIRMAN. The Chair would inform the gentleman that if he is discussing another bill, which is in conference, then action of the conferees thereon would not affect this bill.

However, if the gentleman is discussing this bill—or a Senate bill amended by the language of this bill—then, of course, it would be a matter of conference.

Mr. HANNA. If the subject matter, however, that is in conference is another bill, then what we decide in this bill would not in any way affect the figures that are in that other bill in the Senate?

The CHAIRMAN. The Chair would repeat that the subject matter of another bill which is in conference would not affect the subject matter in this bill.

Mr. PATMAN. Mr. Chairman, will the gentleman yield so that we may try to get an agreement on the time?

Mr. HANNA. I yield to the gentleman.

Mr. PATMAN. Mr. Chairman, I ask unanimous consent since this has been rather fully discussed that debate on this amendment and all amendments thereto close in 10 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. HANNA. Mr. Chairman, what I would like to say to the House, as to the situation right now, here is the position that the House is in.

If we are going to be bound to go to conference with the Senate with the bill they have passed out having to do with the foreign banks in which they have amended in a nongermane amendment that covers the mass transit bill, then any conference we go to there is going to be a bargaining between $3.1 billion and zero.

If we assume that that is the case, then what should we decide here? My own belief is that we ought to take a stand in the House and say that we are much more concerned about the problems of transportation than the Senate is, and that we are trying to reach a more realistic answer to the problems of the cities and the States than the Senate has done.

In the other event, should we be able to go to conference with the Senate on a singular bill on mass transit, we will be in a position that the House characteristically is in where we have a House bill and they have their Senate bill, and we will bargain between the House and the Senate positions. Therefore, I am not constrained to go along with the amendment because it takes away from the House any bargaining it would otherwise have, and it leaves the House without taking a posture by saying, "We are more concerned about this problem." I am persuaded that in the testimony we had, particularly from San Francisco, that if we pass the bill with only the $3.1 billion in it and with the 12½-percent limitation for any State, with only 15 percent of the total at the discretion of the Secretary of Transportation, the most that California could get as a total would be around $450 million, and that does not leave enough to make the BART program go ahead, and they have already spent $1.2 billion, and the United States has helped them with only 7 percent of that amount.

San Francisco has been 19 years working on an urban and suburban system. Los Angeles has been over 10 years working on its program. What the cities want and what we seek is some realistic contract position over a 3-year period. This gives some sense and real incentive for local matching funds which in this program so far has been predominantly local funds.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. KOCH).

(By unanimous consent, Mr. YATES and Mr. ECKHARDT yielded their time to Mr. KOCH.)

Mr. KOCH. Mr. Chairman, as many of my colleagues know, I am supporting this bill because it is the best kind of bill we can get at this particular time. I am for a trust fund. I do not want to discuss that because the issue today is the level of funding to be authorized. To think in terms of $5 billion to be committed, not this year, not next year, but over a 5-year period by way of contract authority, with not more than $3.1 billion to be actually appropriated in the first 5 years, and to talk about this as an expenditure that we cannot support as our colleague from Massachusetts (Mr. BOLAND) proposes, just make no sense. You know that every year, this year and next year, we are going to be spending $4.5 billion on highways. I do not want to discuss the merits of that. But to think in terms of what this country needs for mass transit and to talk about reducing it from $5 to $3.1 billion simply is not justifiable at this point in time.

Let me tell you why. Some of the cities have already indicated their needs over the next 10 years and they are huge. And let me tell you that this is not a bill for New York City. I know that the gentleman from Massachusetts has alluded to the fact that I kind of smiled when he talked about $3.1 billion as maybe being not adequate. Yes, we would like more money for New York City. But it is not simply for New York City that I make this plea.

Let me tell you what the major cities in this country are asking for: Chicago, $2.2 billion; Baltimore, $1.7 billion; Southern California Rapid Transit District, $2.5 billion; Boston, $784 million; BART, $1.8 billion; New York, $2.1 billion.

That is not all Federal moneys. The fact is that a large proportion of those moneys are going to be paid by the localities.

I include in the RECORD a telegram from Dr. William J. Ronan, who is chairman of the Metropolitan Transportation Authority in New York City. In this telegram Dr. Ronan says he is counting on this bill, and he says that the city and the State of New York have already allocated the moneys for matching funds.

The telegram is as follows:

Hon. EDWARD I. KOCH,
*U.S. House of Representatives,*
*Washington, D.C.:*

The New York Metropolitan Transportation Authority has committed and has underway a rapid transit and commuter rail modernization and expansion program costing over $2 billion 100 million. This Authority will shortly be requesting federal aid for this fully authorized mass transportation program for the New York State sector of the metropolitan area. It has not filed a formal application previously as there was no federal funding for a program of this size.

The local matching funds for this MTA program have already been appropriated or committed by the Governor and Legislature of the State of New York, the Mayor, and the Board of Estimate of the City of New York. The State of New York has already appropriated $600 million in state funds to aid in the subway expansion phase of this program. The City of New York has already committed $800 million in capital funds for this subway program.

The State of New York has also committed $300 million for commuter rail improvements and expansions.

Again, may I emphasize that this Authority's over $2 billion program is fully authorized. This $2 billion 100 million program is also just phase one of a total program of more than $3 billion. More than adequate local matching funds have been appropriated or committed and construction and design of many of the elements of the program are already underway.

WILLIAM J. RONAN,
*Chairman, Metropolitan Transit Authority.*

What will New York State get? Once again, it is not a bill drawn for New York State. The maximum any State could get is 15 percent when you compute the 12½-percent limitation on the States plus additional moneys the Secretary might allocate through his discretionary fund. That is the maximum.

I say to you that if we turn our backs on the needs of mass transit in this Congress on the grounds that we cannot afford it, then we are turning our backs on the critical needs of our fellow citizens all across this country.

Furthermore the Appropriations Committee does not lose control. This is not a trust fund where the Appropriations Committee's role is removed. Every single year, there is going to be oversight on the part of our distinguished colleague, the gentleman from Massachusetts (Mr.

BOLAND). Every single year the appropriations for this program will go before this gentleman's committee and he will have the opportunity to do something, I hope in the direction of strengthening the mass transit program and increasing its budget; it is not a case of there being no oversight. When we consider the need, and the cost of mass transit facilities, it would be incredible at this point in time to reduce the amount from $5 billion to a lesser sum.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. KOCH. I yield to the gentleman from Illinois.

Mr. YATES. Mr. Chairman, the gentleman listed some of the major cities in the country, but is it not true there are cities much smaller which are, nevertheless, seeking funds from the Government to deal with their local transportation problems?

Mr. KOCH. There is no question about it. Every single community in this country that has a mass transit need is covered under this bill. This is not a bill for only the large cities. This is a bill for every urban dweller.

At this point, Mr. Chairman, I would like to give further details justifying my opposition to the amendment offered by the gentleman from Massachusetts (Mr. BOLAND).

The proponents of the amendment being offered today say that the administration, if given an authorization of $5 billion for contract authority and $3 billion for appropriations, will not be able to commit these amounts. I would like to substantiate my disagreement with this premise by discussing the following matters: first, the dollar amount of the applications pending with the Urban Mass Transportation Administration—UMTA; second, the magnitude of the capital requirements of the transit industry; third, the 12½ percent limitation on funds going to any one State; and fourth, today's backlog of transit needs.

PENDING UMTA APPLICATIONS

First, it should be known that Carlos C. Villarreal, Administrator of the Urban Mass Transportation program, appeared before the House Appropriations Committee last April and submitted a list of applications pending before his administration, as of April 1970, which totaled more than $1 billion. This $1 billion far exceeds the $130 million that the Banking and Currency Committee authorizes for appropriation—in addition to the $214 million already appropriated last year in advanced funding—for fiscal year 1971. Furthermore, this $1 billion figure demonstrates that the administration has sufficient applications for commitment under the contract authority provision for the first year; in fact Administrator Villarreal has estimated that he would be ready to obligate approximately $850 million during fiscal year 1971.

POTENTIAL APPLICATIONS AND THE MAGNITUDE OF TRANSIT CAPITAL REQUIREMENTS

Second, and perhaps most important is that this $1 billion figure submitted by UMTA does not begin to represent the total needs of the country during fiscal year 1971 and certainly not for the next 5 years. The UMTA list is necessarily small because so little Federal funding has been available that cities have not been encouraged to prepare applications and submit them. This planning and application is expensive; in the past Federal funds have been so meager and with so little long-term guarantee, that it has not been feasible for many communities to even consider mass transit solutions to local traffic problems and transportation requirements.

Mr. Chairman, those who propose cutting today's bill say that the applications should be pending before an authorization is given. The problem here is that we are faced with the axiomatic question of "What comes first, the chicken or the egg?" If the Congress refuses to make authorizations before applications are submitted, while municipalities wait for an assurance that Federal funds will be available in the future before undertaking to submit an application—we will be stalled forever. While many communities do have plans available for execution even though they have not been submitted to UMTA, there are hundreds more that will not be in the position to make the plans and submit applications of the size required to meet their transit needs if we do not provide a meaningful level of Federal assistance.

I would submit, therefore, that it is incumbent upon us to bring the Federal level of funding to a point which perhaps is most suitably called "a threshold for action"—a point in the funding level which must be reached before transit modernization and construction can be contemplated and a point below which funds are simply insufficient in magnitude for a construction program to be undertaken.

This morning I received a telegram from Dr. William J. Ronan, chairman of the metropolitan transportation authority, setting forth the MAT's immediate capital program. Briefly, Dr. Ronan indicated that the New York City metropolitan area has an authorized $2.1 billion rapid transit and commuter rail modernization program. In 1968 and 1969 the city and State authorized a total of $1.4 billion for this program. Dr. Ronan also said that the MTA will be submitting shortly an application for Federal assistance in excess of $500 million in this program, but has not done so to date "as there was no Federal funding for a program of this size."

Clearly, Mr. Chairman, even though formal applications may not have been submitted to the Department of Transportation, plans are available in many cities for funding and execution.

A few preliminary studies of the transit needs have been made. Last year the Institute of Rapid Transit submitted to Congress a chart entitled "1970–79 Capital Requirements of the Rapid Transit Industry—Preliminary Study." This study included figures for transit needs during the coming decade for just 19 metropolitan systems and came out with a grand total of $17.708 billion. Almost $18 billion, and this does not begin to cover the middle size cities and the many communities that need assistance; it also does not include the annual 10 percent increase that plagues all transportation construction projects.

More recent estimates have been prepared for UMTA by the Institute of Public Administration and place the 10-year requirements at between $28 and $34 billion.

It is important to note that these estimates far exceed the $5 billion recommended by the committee even while they are based only on what will be required to keep transit ridership constant. Even more money will be needed if additional riders are to be attracted to public transportation. And, I would submit, Mr. Chairman, that if the cities are to survive, we must make mass transit more attractive and reduce the use of the private automobile for central city and commuter travel.

STATE LIMITATION

The third important factor that must be considered is the little discussed provision in the mass transportation program that limits the amount of money any one State can receive to no more than approximately 12½ to 15 percent of the funds authorized. This means that even with an authorization of $5 billion for contract authority, the very maximum—using the 15-percent figure—that would be available for commitment by any one State would be $750 million for the entire 5-year period, with actual appropriations during this same period amounting to $450 million—based on the $3 billion appropriation.

This gives some perspective to what the committee's proposed $5 billion program will actually mean to the States.

Should the amendment being offered today succeed, these figures would drop to $465 million for contract authority and $279 million in appropriations—again, for the entire 5-year period.

Again, the metropolitan transit authority will be submitting shortly an application for immediate funding of more than $500 million; and this application will be added to the $139 million application already pending from the city—this is just for New York City without accounting for the needs of the whole State.

Similarly, the State limitation squeezes States like California. Mayor Joseph L. Alioto of San Francisco testified before the Banking and Currency Committee that his city is prepared to execute a contract with UMTA for a $550 million program, almost entirely within the city's limits, supporting a Federal grant of $366 million; and, as he pointed out, this does not begin to mention the needs of the rest of the San Francisco Bay area or the southern California requirements.

Mr. Chairman, these statistics demonstrate that it is particularly important that the authorization for contract authority not be reduced. The total $5 billion sum does not need to be committed during the first year of the program—certainly UMTA's estimate that it can commit $850 milion in the first year is a good start on a $5 billion, 5-year program. The most important requirement is that the money be there for commitment so that communities will know of its availability and be provided with the nec-

essary incentives to forulate plans and make applications for the plans they already have.

TODAY'S BACKLOG OF TRANSIT NEEDS

The fourth consideration that we must address ourselves to is that for too long the Federal Government has ignored the needs of public transportation, and as a result most all mass transit systems have been undermined by a vicious cycle of declining transit patronage, followed by a decline in profits, then a decline in the quality of service, and then an even greater fall-off in passengers. During the past two decades this has resulted in a two-third reduction in transit patronage, and it has meant that most transit systems today are relying on equipment that is 30 years old.

While the Federal Government has subsidized the construction of roads and the construction of airports and the development of the jet aircraft, it has contributed so little to mass transit: barely $1 billion since the urban mass transportation program's founding in 1964.

With demographic projections placing 90 percent of our population in urban areas in the year 2000, it is urgent that we get underway in providing the kind of transportation that is required if our cities and suburbs function efficiently.

Mr. Chairman, in the 1960's we accomplished extraordinary feats in outer space travel while back here on earth we poured a network of roads across the country linking our cities and towns with direct and fast auto travel and providing an economic boom for our rural areas.

Today, I urge that we dedicate the 1970's as the decade of the urban dweller and the working man's transportation—that we make the same commitment that resulted in delivering the astronauts to the moon to providing rapid, convenient, and clean transportation for our commuters. We must advance mass transit technology so that it can fulfill its roll in the Nation's transportation scheme and effectively complement the automobile and airplane.

The CHAIRMAN. The Chair recognizes the gentleman from New Jersey (Mr. HOWARD).

Mr. HOWARD. Mr. Chairman, I urge the rejection of this amendment. We have been spending money for every other mode of transportation. I feel it is long past due that we should consider the urban and suburban dwellers. This Congress has shown it is willing to shell out about $290 million as a beginning for the SST, which will provide for the jetsetters to get from New York to a cocktail party in London in less time than my commuters can get from Asbury Park to New York City to work.

Mr. Chairman, I think we should support the committee, and go to conference with the other body, let each body work its will, rather than have the House now cave in and say we will let the other body work its will on us.

Mr. YATES. Mr. Chairman, will the gentleman yield?

Mr. HOWARD. I yield to the gentleman from Illinois.

Mr. YATES. Mr. Chairman, would the gentleman not agree that even the SST jetsetters will have to wait in line like all other commuters when they get on the ground? Is that not true?

Mr. HOWARD. That is true.

Mr. BINGHAM. Mr. Chairman, will the gentleman yield?

Mr. HOWARD. I yield to the gentleman from New York.

Mr. BINGHAM. Mr. Chairman, I strongly oppose the amendment, offered by the gentleman from Massachusetts and I commend the gentleman from New Jersey for his eloquent statement.

This bill represents a major step forward in the long battle many of us have been conducting to enact something like an adequate program for Federal support of mass transit.

The level of funding is substantially higher than it has been in the past, and the procedure for obligating funds is simplified and streamlined.

It would be a tragedy if the excellent work done by the committee were to be upset in the House by the adoption of the Boland amendment reducing the amount of the 5-year program by almost $2 billion.

Even the committee bill calls for an average annual figure for mass transit of only $1 billion a year. This compares most unfavorably with the sums being spent annually on our highway program—running in the neighborhood of $4.5 to $5 billion a year.

While the committee has done a fine job on this bill and deserves to be supported by the House, I hope the day will come when the House will have a chance to consider a program that would provide a balanced transportation system for this country. Such an approach, I am sure, would result in a great increase in the funding for mass transit and a decrease in the funding for superhighways.

However, pending that bright day we must do the best we can under the present framework. In this case, that course calls for the defeat of the Boland amendment.

Mr. HOWARD. Mr. Chairman, it has been said that we are taking a bold large step for mass transit today. Let us not turn it into a modest tiptoe toward doing something for the urban and suburban commuters in this country.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. HALPERN).

Mr. HALPERN. Mr. Chairman, I rise in strong opposition to this amendment. I do not think the $5 billion provided in this bill is sufficient. I do not think the bill goes far enough toward meeting the ever-growing plight of mass transit systems of the metropolitan areas of this country.

I agree with everything that every mayor who appeared before our committee said, that $10 billion is needed in the next 5 years to meet the minimum needs of mass urban transit. But, Mr. Chairman, the $5 billion provided in the bill is a long step forward. Let us accept the bill as it is, with the $5 billion in it, let it go to conference. Let us consider this as a step in the right direction. But let us not take a step backward, which I think this amendment would do. I trust it will not prevail.

The CHAIRMAN. The Chair recognizes the gentleman from Pennsylvania (Mr. BARRETT).

(Mr. McFALL, at the request of Mr. BARRETT, was granted permission to extend his remarks at this point in the RECORD.)

Mr. McFALL. Mr. Chairman, I rise to express my support for H.R. 18185, the Urban Mass Transportation Assistance Act of 1970, and to give another example of how the Federal urban mass transit program can be used, and has been used in my home State of California to preserve and improve a small privately owned bus system which would otherwise surely have perished, as so many other private mass transit companies have, in all parts of the country.

In October of 1967, the Department of Housing and Urban Development, which at that time managed the program, approved a grant in the amount of $54,733 to the city of Modesto to assist in financing a project consisting of the purchase of four new, modern, air-conditioned transit buses.

Bus service in this city of approximately 55,000 is provided by a private carrier, the Modesto Motor Bus Service. The new buses are owned by the city and leased to the private firm at a nominal rental. The firm serves over 200,000 riders annually.

If this new bus fleet had not been provided, transit service in this city would in all probability have been discontinued. The old fleet was obsolete, worn out, unreliable, and unsafe, and the private operator had no funds to replace them. As is usual in small cities, the bulk of the riders are in the lower income group and include to a large extent the very young, very old, and the handicapped.

For the private operator, the new fleet spelled lower operating costs and also presented the opportunity to attract new riders. This was out of the question with the old buses, whose unattractiveness actually repelled potential riders, and which were patronized only by those who had no alternative.

With the new fleet, transit service in the city presented riders with a "new look" and helped stabilize transit in the community. If this bill is passed, many other communities similarly situated can enjoy the same benefits.

Mr. Chairman, not only does California need this bill, America needs this bill, and I strongly urge its passage.

The CHAIRMAN. The Chair recognizes the gentleman from Massachusetts (Mr. BOLAND).

Mr. BOLAND. Mr. Chairman, one would think we are not providing any money for mass transit. The amendment which I offered provides $3.1 billion for mass transit. If we listen to the gentleman from New Jersey, the $3.1 billion is not a great deal of money. It is a great deal of money in my area of Massachusetts. I do not know about the area in New Jersey which the gentleman represents, but that is a great deal of money in my area.

When the gentleman says we are tiptoeing, I would say as a matter of fact we are taking a giant step. We are providing $3.1 billion. The amendment pro-

vides a reduction of $1.9 billion. That is precisely what the Senate bill does.

Mr. Chairman, no one has worked harder in the field of mass transit than the distinguished Senator from New Jersey (Mr. WILLIAMS), and the gentleman from New Jersey knows it. Let me read from his testimony before the subcommittee chaired by the gentleman from Pennsylvania (Mr. BARRETT). The Senator says, and I direct the attention of the gentleman from New York (Mr. KOCH) to these remarks:

I personally would have preferred the trust fund. However, without full support, without strong support in the Senate, without administration support, passage of such legislation would have been at best highly doubtful. But this bill which was passed by the Senate is an important step forward.

Mr. Chairman, $3.1 billion over the next 5 years is a substantial sum of money.

The CHAIRMAN. The Chair recognizes the gentleman from Texas (Mr. PATMAN).

Mr. PATMAN. Mr. Chairman, if the gentleman had presented the figure at $5 billion, then there would be a difference between the House and Senate figures, and an agreement could be reached on any figure in between, but the gentleman has seen fit to make the figure identical with that of the Senate. Therefore, there would be no way to change it. If the bill goes to conference and some Member suggests, "Let us make it $4 billion" the answer would be, "Oh, no, that is against the rules." And it would be. It would be out of order.

Amendments exactly alike, as between the two Houses, mean there is nothing for the conferees to consider. This would in effect tie the hands of the conferees. If we wanted to have $4 billion we could not do it, because the rules would be against it.

The amendment happens to be exactly the same as the Senate amendment, and therefore there would be no difference in the conference to consider.

I suggest, Mr. Chairman, that we have a vote on this amendment.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. PATMAN. I yield to the gentleman from Texas.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Massachusetts (Mr. BOLAND).

The question was taken; and on a division (demanded by Mr. PATMAN) there were—ayes 64, noes 51.

Mr. PATMAN. Mr. Chairman, I demand tellers.

Tellers were ordered, and the Chairman appointed as tellers Mr. BOLAND and Mr. PATMAN.

The committee again divided, and the tellers reported that there were—ayes 76, noes 52.

So the amendment was agreed to.

AMENDMENT OFFERED BY MR. BOLAND

Mr. BOLAND. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BOLAND: Page 10, strike out lines 3–7 and insert in lieu thereof the following:

"SEC. 5. Section 12(d) of the Urban Mass Transportation Act of 1964 (49 U.S.C. 1608(d) is amended to read as follows: '(d) There are hereby authorized to be appropriated, without fiscal year limitation out of any money in the Treasury not otherwise appropriated, the funds necessary to carry out the functions under this Act.'."

Mr. BOLAND. Mr. Chairman, the purport of this amendment is to fund by direct annual appropriations salaries and expenses, research and development, and demonstration grants. This is what this amendment does. I know of no other Federal program where administrative expenses and research are financed under obligational authority.

Mr. PATMAN. Mr. Chairman, will the gentleman yield to me for a question?

Mr. BOLAND. I yield to the gentleman.

Mr. PATMAN. What are the other amendments the gentleman has, if he does not mind telling me? We are willing on this side to accept this one.

Mr. BOLAND. I appreciate the action of the gentleman from Texas, the chairman of the committee, in accepting this amendment.

It does provide for additional direct appropriations for salaries and expenses and research and demonstration grants, which procedure is followed in every other program of the Government.

Mr. PATMAN. Mr. Chairman, will the gentleman yield?

Mr. BOLAND. I yield to the gentleman from Texas.

Mr. PATMAN. Will the gentleman tell us about the other amendments which he plans to offer?

Mr. BOLAND. This is the only amendment now pending. I have two other amendments which I will offer after we have voted on this amendment.

Mr. BARRETT. Mr. Chairman, will the gentleman yield?

Mr. BOLAND. I yield to the gentleman from Pennsylvania.

Mr. BARRETT. We have had an opportunity to go over your amendments and we see no disagreement on our side.

Mr. PATMAN. Mr. Chairman, will the gentleman yield further?

Mr. BOLAND. Yes, I yield further to the gentleman from Texas.

Mr. PATMAN. If the gentleman will tell us what the other amendments are then perhaps we can expedite the consideration of them.

Mr. BOLAND. I would be delighted to tell the gentleman what they are after we vote on this amendment. I do appreciate the gentleman from Texas accepting this amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Massachusetts (Mr. BOLAND).

The amendment was agreed to.

AMENDMENTS OFFERED BY MR. BOLAND

Mr. BOLAND. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BOLAND: Page 14, after line 23, insert the following new section:

"SEC. 11. Section 5316 of Title 5, United States Code, is amended by inserting the following after paragraph (129): '(130) Deputy Administrator, Urban Mass Transportation Administration, Department of Transportation.'."

Mr. BARRETT. Mr. Chairman, will the gentleman yield?

Mr. BOLAND. I yield to the gentleman.

Mr. BARRETT. The gentleman does have another amendment to offer, does he not?

Mr. BOLAND. Yes. The other amendment is designed to renumber the section.

Mr. PATMAN. Mr. Chairman, if the gentleman will yield further, I wonder if the gentleman would ask unanimous consent to consider them en bloc?

Mr. BOLAND. Mr. Chairman, I ask unanimous consent that this amendment and the other amendment which I have pending at the desk be considered en bloc.

The CHAIRMAN. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

The CHAIRMAN. The Clerk will report the second amendment to be considered en bloc.

The Clerk read as follows:

Page 14, line 24, strike out "SEC. 11." and insert in lieu thereof "SEC. 12.".

Mr. BOLAND. Mr. Chairman, amendment No. 3 provides for a Deputy Administrator for the Urban Mass Transportation Administration.

The Urban Mass Transportation Administration is currently engaged in administering projects that total over $600 million. There are over 100 communities participating in the conduct of these projects. If this bill, increasing the budgetary authorities, becomes law the program will escalate to a level of $850 million in new approvals during fiscal year 1971. This, then, will result in a total responsibility of approximately $1.4 billion in the current fiscal year. Virtually all organizations administering programs of this magnitude have a Deputy Administrator.

The Administrator of the Urban Mass Transportation Administration does have a problem in discharging tremendous responsibilities accruing to an individual who is accountable for administering a Federal program close to $1 billion. Managerial deficiencies within UMTA have been a concern of the current Administrator and in order to provide for a position that can assume some of the responsibilities for the day-to-day operations of this financial program, a Deputy is essential. Demands made on the Administrator require attention to forward planning, creation of program goals and targets, and generally plotting the future of the substantial program of financial assistance. At the present time, this single individual also is required to pay an inordinate amount of attention to the day-to-day operations of the program. The Administrator should be relieved of some of his day-to-day operating responsibilities to enable him to map a logical plan with respect to the overall direction of the program.

Amendment No. 4—This is a technical amendment renumbering section 11.

The last amendment which was read, amendment No. 4, is a technical amendment which just renumbers section 11.

Mr. Chairman, let me review the amendments that I have offered to the pending legislation.

The first of my amendments represents the results of careful review of the UMTA program since its inception from my position as chairman of the Transportation Subcommittee on Appropriations. It would have two effects.

The first and most obvious would be to lower the obligational authority set at $5 billion by the committee to the $3.1 billion established in the other body. While I realize that the need for mass transit facilities in our cities is very large indeed and sympathize with the desire of those who wish to get on with the job as soon as possible, I must point out that our investigation of the program in the Transportation Subcommittee makes it clear that the $3.1 billion requested by the Administration is a completely adequate figure, given the present state of readiness to proceed. This applies not only to UMTA itself which is even now a small agency of less than 125 people, but also to the cities. Their needs are obvious, but their capacity to meet them will have to be built carefully in the years ahead. It would simply not be realistic to ask UMTA to grow rapidly enough to manage prudently such a huge fund. We on the committee are doing our best to see that the agency is given sufficient personnel as quickly as it can absorb them, and I can assure the House that if it becomes apparent that the program is being starved for lack of funds there will be ample opportunity to make whatever adjustments will be necessary. We should keep in mind that we are talking here about a 5-year period with the Administration coming before the Congress for a review of the funding level every 2 years starting in January 1971.

The second amendment is largely technical but represents a sound budgetary concept with which Members of the House are all familiar. The bill as it now stands would establish contract authority for all aspects of the UMTA program, including the salaries of the employees and the money earmarked for research and demonstrations. The justification for the contract authority has always been the needs of the cities to make long-term plans and commitments on the assurance that the Federal funds will be there. Such needs obviously do not include salaries and expenses money, and research programs by their very nature should not require long-range funding. For this reason, I am proposing to amend the bill to limit the use of contract authority to capital grant and loan, relocation grant, and technical studies grant activities. All other aspects of the UMTA program would be subjected to the annual appropriations process and would give not only the Appropriations Committee but the Congress as a whole an opportunity to monitor the progress of this program consistent with our constitutional obligations. The language of the amendment accomplishes this by listing the relevant sections of the bill as exceptions from the contract authority provision. It makes clear that amounts appropriated for these activities so excepted will be charged against the total figure of $3.1 billion so that the obligational level established by the bill will not be changed.

My third amendment authorizes the administration to establish the position of Deputy Administrator for UMTA at the executive level V. I am informed that the Civil Service Commission and the Office of Management and Budget desire this additional authorization because there are no such positions now available in the executive pool. I think it is obvious that if we proceed to pass this bill and establish a funding level of the magnitude called for we must attract the finest management talent possible. When one considers that there were less than 60 people in the organization only 18 months ago, it is easy to understand why the management demands are changing enough to justify this additional position.

Mr. Chairman, let me emphasize that my support of this bill is not a general endorsement of long-term contractual authority as a financing mechanism. The report on the fiscal year 1971 Department of Transportation appropriation bill—House report No. 91–1115—states:

> The committee does not favor the granting of long term contractual authority by substantive legislation.

Urban mass transportation is a program which the committee should continue to review to assess its relative priority with other programs in the budget.

Mr. PATMAN. Mr. Chairman, our side will accept those amendments. We are acquainted with them. We are willing to accept them.

Mr. WIDNALL. Mr. Chairman, we will accept the amendments.

The CHAIRMAN. The question is on the amendments offered by the gentleman from Massachusetts.

The amendments were agreed to.

AMENDMENT OFFERED BY MR. KOCH

Mr. KOCH. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. KOCH: Page 14, insert after line 23 the following:

"SEC. 11. (a) The Secretary of Transportation is authorized and directed to make a comprehensive study of the needs of intercity and intracity mass transportation for the next fifteen years. Such study shall be made in cooperation with State and local public bodies and agencies thereof providing mass transportation service and shall include but not be limited to type and estimated cost of mass transportation development and other considerations as the Secretary may deem advisable.

"(b) In formulating the needs study, the Secretary shall take into consideration alternative modes of transportation and provide relative cost estimates of mass transit projects and alternative modes of transportation.

"(c) The Secretary shall submit a report of his findings to the Congress not later than January 1, 1972."

Redesignate section 11 as section 12.

Mr. KOCH. Mr. Chairman, what I would like to do with this amendment is to bring some parity to our programs involving mass transit, and to do something for mass transit which is already being done for the highways and for the airports.

What do I mean by that? It is this: that there ought to be a comprehensive study of the country's mass transit needs. There is no such study mandated in our bill today. We already have had a study of our highway needs for the next 15 years, and a second report is due in 1972 under the Federal Aid to Highways Act of 1968. In addition, under the Airport and Airways Development Act of 1970, which we recently passed, there is a mandate to the Secretary of Transportation to submit an airport development plan and the estimated cost of airport development for the next 10-year period.

What this amendment would do would be to mandate a similar long-range, comprehensive study for mass transit. It does not appropriate funds for mass transit. It simply says:

> Let us have the facts relative to the needs of mass transit, as we already have said we must have with regard to highways and airports.

Mr. BINGHAM. Mr. Chairman, will the gentleman yield?

Mr. KOCH. I yield to the gentleman from New York.

Mr. BINGHAM. Mr. Chairman, I thank the gentleman for yielding, and I want to commend the gentleman for offering his amendment. I think it is a most constructive move. It seems to me that any step that will indicate the magnitude of the problem we face in mass transit, and will move us toward the day when we balance the transportation needs in this country and have some rationale for deciding whether we are going to spend our transportation dollars on highways or on mass transit, is a constructive move.

Mr. Chairman, I hope that the amendment will be adopted.

Mr. KOCH. Mr. Chairman, I thank the gentleman.

Mr. BARRETT. Mr. Chairman, will the gentleman yield?

Mr. KOCH. I yield to the gentleman from Pennsylvania.

Mr. BARRETT. Mr. Chairman, I just want to really commend the gentleman on his oratory. I have observed the gentleman each time he has appeared before our committee, and he does work exhaustively, and I would hope the Committee would give his amendment every consideration.

The CHAIRMAN. The time of the gentleman has expired.

Mr. WIDNALL. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I have watched very carefully the record of the gentleman from New York (Mr. KOCH) ever since he became a Member of the House, and I wish to say that he is a very earnest Member, and is very sincere about what he is trying to do. I feel, however, that what the gentleman is attempting to do now is already being done, and this would only compound the action which is presently being taken.

The President has directed the Secretary of Transportation to conduct a study and report on the long-term needs of all phases of transportation, including urban mass transit needs. Putting this language into the law would just add, as I said before, a compounding study to that that is already being conducted. The

study will be completed in 1972. Therefore I believe that the amendment should be defeated.

Mr. PATMAN. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I wonder if it is time to decide if we can have an agreement on a final vote?

Mr. Chairman, I ask unanimous consent that all debate on this amendment and on the bill, and all amendments thereto, close in 10 minutes.

Mr. WEICKER. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

Mr. PATMAN. Mr. Chairman, I move that all debate on the bill and all amendments thereto close in 10 minutes.

The CHAIRMAN. The question is on the motion offered by the gentleman from Texas.

The motion was rejected.

Mr. PATMAN. Mr. Chairman, I ask unanimous consent that all debate on the bill and all amendments thereto close in 15 minutes.

PARLIAMENTARY INQUIRY

Mr. STANTON. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state the parliamentary inquiry.

Mr. STANTON. Mr. Chairman, how many amendments are pending at the desk?

The CHAIRMAN. There are two amendments at the desk at the present time.

Is there objection to the request of the gentleman from Texas (Mr. PATMAN)?

Mr. HUNT. Mr. Chairman, I object.

Mr. PATMAN. Mr. Chairman, I ask unanimous consent that all debate on the bill and all amendments thereto close in 20 minutes.

Mr. WIDNALL. I think it could be settled before 20 minutes, if the pending amendments could be taken up. I do not think they are particularly controversial.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas (Mr. PATMAN)?

There was no objection.

The CHAIRMAN. The Chair has noted the names of the Members standing at the time the unanimous-consent request was granted limiting the time to 20 minutes.

Does any Member whose name has been noted by the Chair desire to speak on the amendment offered by the gentleman from New York (Mr. KOCH)? If not, the Chair will put the question on that amendment.

The question on the amendment offered by the gentleman from New York (Mr. KOCH).

The question was taken; and on a division (demanded by Mr. KOCH) there were—ayes 30, noes 47.

So the amendment was rejected.

AMENDMENT OFFERED BY MR. WEICKER

Mr. WEICKER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. WEICKER: At the beginning of page 14 insert a new section 9 and renumber the subsequent sections:

"SEC. 9. The Secretary of Transportation shall conduct a complete study of the costs, benefits, and methods of acquisition, operation, and maintenance by the Federal Government of all railroad tracks, rights-of-way, signal and train control systems, and other fixed facilities. Such study to be submitted to the Congress within one year after the date of the enactment of this Act, shall include but not be limited to the following:

"(1) appropriate methods of Government acquisition, whether by eminent domain or by voluntary sale, and the type of property interest (fee simple, easement, or otherwise) to be acquired;

"(2) the capital cost of Government acquisition, including consideration of compensation to the railroad companies by Government assumption of bonded indebtedness related to the initial financing of facilities, and of State and local property taxes now assessed against rail carriers by virtue of their ownership of facilities;

"(3) the relationship of the Government interest in rights-of-way to the continued ownership and development by present owners of property not needed for railroad transportation, including air rights;

"(4) modes of operation by the Government of signal and train control systems, including the authority to determine rights of trains as between passenger and freight trains and as between trains of different carriers using the same line of track;

"(5) the need for and feasibility of Government acquisition of such fixed facilities as yards, terminals, and stations in addition to tracks and signal systems, and the mode of operation by the Government of those facilities;

"(6) establishment of regular maintenance and capital improvement programs to assure uniform, high standard track and to facilitate faster, more dependable service for both passengers and freight;

"(7) establishment of standards governing the size, weight, and design of locomotives and cars which may be safely and expeditiously operated over given lines of track;

"(8) funding of maintenance and capital improvement programs by means of a railroad trust fund, to be financed by user charges to rail carriers;

"(9) assessment of such user charges against rail passenger carriers on an incremental basis on the assumption that well-maintained track, signal and train control systems, and other fixed facilities would be required for freight service even if no passenger service were provided;

"(10) the need for supplements to the trust fund by appropriations from the general fund of the Treasury, in view of the urgent need for modernization of rail facilities and the continuing substantial outlays from the general fund for other kinds of transportation facilities;

"(11) extension of franchises to existing and new carriers, both passenger and freight, over given lines of track not now operated by them, to provide better service and more competition and to allow for the fullest possible utilization of the most favorable and efficient routes;

"(12) a rationalization of the existing rail plant to promote more efficient utilization, reduce the overall need for maintenance and capital improvement funds, and facilitate urban and metropolitan redevelopment."

Mr. PATMAN (during the reading). Mr. Chairman, I think the amendment has been read sufficiently to indicate that the amendment is not germane to the bill. I ask unanimous consent that further reading of the amendment be dispensed with and that it be printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. PATMAN. Mr. Chairman, I make the point of order that the amendment is not germane to the bill.

The CHAIRMAN. The gentleman will state his point of order.

Mr. PATMAN. The amendment relates to a type of transportation that is not under the Secretary of Transportation. The railroads are not under the Secretary of Transportation. They are not included in the bill. Therefore the amendment is not germane.

The CHAIRMAN. Does the gentleman from Connecticut desire to be heard on the point of order?

Mr. WEICKER. Mr. Chairman, I rise in opposition to the point of order, and I point out that it is relevant to section 8 of the bill, which states as follows:

SEC. 8. The Secretary of Transportation shall conduct a study of the feasibility of providing Federal assistance to help defray the operating costs of mass transportation companies in urban areas and of any changes in the Urban Mass Transportation Act of 1964 which would be necessary in order to provide such assistance, and shall report his findings and recommendations to the Congress within one year after the date of the enactment of this Act.

I think the subject matter of the amendment is very definitely part of this bill. What we are talking about is maintenance of rights-of-way as a system to study. There is no point in duplicating effort. If the Secretary can study one phase, he can study them both at the same time.

The CHAIRMAN (Mr. MCFALL). The Chair is prepared to rule. The amendment authorizes and directs the Secretary of Transportation to make a study of costs, benefits, and methods of acquisition, operation, and maintenance by the Federal Government of all railroad tracks, rights-of-way, et cetera, matter within the jurisdiction of the Committee on Interstate and Foreign Commerce. The bill reported by the Committee on Banking and Currency, H.R. 18185, relates to the financing of urban mass transportation. The amendment does go beyond the scope of the pending bill and is not germane. Therefore, the Chair sustains the point of order.

Are there further amendments to be offered? Are there further requests for time? If not, under the rule, the Committee rises.

Accordingly, the Committee rose; and the Speaker having resumed the chair, Mr. MCFALL, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 18185), to provide long-term financing for expanded urban mass transportation programs, and for other purposes, pursuant to House Resolution 1224, he reported the bill back to the House with sundry amendments adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

Is a separate vote demanded on any amendment?

Mr. PATMAN. Mr. Speaker, I demand a separate vote on the so-called Boland amendment to subsection (c), commenc-

ing at the bottom of page 7, and extending through line 19 on page 8.

The SPEAKER. Is a separate vote demanded on any other amendment? If not, the Chair will put them en gros.

The amendments were agreed to.

The SPEAKER. The Clerk will report the amendment on which a separate vote has been demanded.

The Clerk read as follows:

Amendment: Beginning with line 25, page 7, strike out everything through line 19, page 8, and insert in lieu thereof the following:

"(c) To finance grants and loans under sections 3, 7(b), and 9 of this Act, the Secretary is authorized to incur obligations on behalf of the United States in the form of grant agreements or otherwise in amounts aggregating not to exceed $3,100,000,000, less amounts appropriated pursuant to section 12(d) of this Act and the amount appropriated to the Urban Mass Transportation Fund by Public Law 91-168. This amount (which shall be in addition to any amounts available to finance such activities under subsection (b) of this section) shall become available for obligation upon the date of enactment of this subsection and shall remain available until obligated. There are authorized to be appropriated for liquidation of the obligations incurred under this subsection not to exceed $80,000,000 prior to July 1, 1971, which amount may be increased to not to exceed an aggregate of $310,000,000 prior to July 1, 1972, not to exceed an aggregate of $710,000,000 prior to July 1, 1973, not to exceed an aggregate of $1,260,000,000 prior to July 1, 1974, not to exceed an aggregate of $1,860,000,000 prior to July 1, 1975, and not to exceed an aggregate of $3,100,000,000 thereafter. The total amounts appropriated under this subsection and section 12(d) of this Act shall not exceed the limitations in the foregoing schedule. Sums so appropriated shall remain available until expended."

Mr. PATMAN (during the reading). Mr. Speaker, I ask unanimous consent that further reading of the amendment be dispensed with and that it be printed in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The SPEAKER. The question is on the amendment.

The question was taken; and the Speaker being in doubt, the House divided, and there were—ayes 55, noes 40.

Mr. PATMAN. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 199, nays 146, not voting 84, as follows:

[Roll No. 321]

Mr. Aspinall with Mr. Wold.
Mr. Leggett with Mr. Conable.
Mr. Celler with Mr. Button.
Mr. Long of Louisiana with Mr. Kleppe.
Mr. Daddario with Mr. Pirnie.
Mr. Albert with Mr. Cederberg.
Mr. Dowdy with Mr. Burton of Utah.
Mr. Fisher with Mr. Brock.
Mr. Nedzi with Mr. Fish.
Mr. de la Garza with Mr. Watson.
Mr. Melcher with Mr. Roudebush.
Mr. Watts with Mr. Derwinski.
Mr. Olsen with Mr. Vander Jagt.
Mr. Farbstein with Mr. Reifel.
Mr. Green of Pennsylvania with Mr. Mathias.
Mr. Feighan with Mr. Cunningham.
Mr. Tunney with Mr. Powell.
Mr. Stuckey with Mr. Martin.
Mr. Hays with Mr. Foreman.
Mr. Gilbert with Mr. Betts.
Mr. Madden with Mr. Bray.
Mr. McMillan with Mr. Harsha.
Mr. Whitten with Mr. Mizell.
Mr. Macdonald of Massachusetts with Mr. McClory.
Mr. Abbitt with Mr. Lujan.
Mr. Fallon with Mr. King.
Mr. Scheuer with Mr. Dawson.

Mr. SISK changed his vote from "yea" to "nay."

Mr. STAGGERS changed his vote from "nay" to "yea."

The result of the vote was announced as above recorded.

The doors were opened.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the

third time.

The SPEAKER. The question is on the passage of the bill.

Mr. HALL. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 328, nays 16, not voting 86, as follows:

[Roll No. 322]

So the bill was passed.

The Clerk announced the following pairs:

Mr. Hébert with Mr. Adair.
Mr. Brooks with Mr. Jonas.
Mr. Annunzio with Mr. MacGregor.
Mr. Cabell with Mr. Bush.
Mr. Fulton of Tennessee with Mr. Cramer.
Mr. Friedel with Mr. Taft.
Mr. Ottinger with Mrs. Chisholm.
Mr. McCarthy with Mr. Conyers.
Mr. Miller of California with Mr. McKneally.
Mr. Shipley with Mr. Andrews of North Dakota.
Mr. Murphy of New York with Mr. Robison.
Mr. Edwards of Louisiana with Mr. Crane.
Mr. Zablocki with Mr. Zwach.
Mr. Teague of Texas with Mr. Lloyd.
Mr. Landrum with Mr. Meskill.
Mr. Aspinall with Mr. Betts.
Mr. Leggett with Mr. Bow.
Mr. Celler with Mr. Button.
Mr. Long of Louisiana with Mr. Kleppe.
Mr. Daddrio with Mr. Pirnie.
Mr. Albert with Mr. Cederberg.
Mr. Dowdy with Mr. Burton of Utah.
Mr. Fisher with Mr. Brock.
Mr. Nedzi with Mr. Fish.
Mr. de la Garza with Mr. Watson.
Mr. Melcher with Mr. Roudebush.
Mr. Watts with Mr. Derwinski.
Mr. Olsen with Mr. Vander Jagt.
Mr. Farbstein with Mr. Reifel.
Mr. Green of Pennsylvania with Mr. Mathias.
Mr. Feighan with Mr. Cunningham.
Mr. Tunney with Mr. Powell.
Mr. Hays with Mr. Martin.
Mr. Madden with Mr. Foreman.
Mr. Fallon with Mr. Bray.
Mr. Pepper with Mr. Conable.
Mr. Abbitt with Mr. Lujan.
Mr. King with Mr. McClory.
Mr. Scheuer with Mr. Harsha.
Mr. Macdonald of Massachusetts with Mr. Wold.
Mr. McMillan with Mr. Nelsen.
Mr. Whitten with Mr. Mizell.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

Mr. PATMAN. Mr. Speaker, I ask unanimous consent for the immediate consideration of the bill S. 3154, to provide long-term financing for expanded urban mass transportation programs, and for other purposes.

The Clerk read the title of the Senate bill.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The Clerk read the Senate bill, as follows:

S. 3154

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the Congress finds that the rapid urbanization and the continued dispersal of population and activities within urban areas has made the ability of all citizens to move quickly and at a reasonable cost an urgent national problem; that new directions in the Federal assistance programs for urban mass transportation are imperative if efficient, safe, and convenient transportation compatible with soundly planned urban areas is to be achieved; and that success will require a Federal commitment for the expenditure of at least $10,000,000,000 over a twelve-year period to permit confident and continuing local planning, and greater flexibility in program administration. It is the purpose of this Act to create a partnership which permits the local community, through Federal financial assistance, to exercise the initiative necessary to satisfy its urban mass transportation requirements.

SEC. 2. Section 3 of the Urban Mass Transportation Act of 1964, as amended (49 U.S.C. 1602), is amended by—

(1) redesignating subsection (e) as subsection (e); and

(2) striking out subsections (a) and (b) and inserting in lieu thereof subsections (a), (b), (c), and (d), as follows:

"(a) The Secretary is authorized, in accordance with the provisions of this Act and on such terms and conditions as he may prescribe, to make grants or loans (directly, through the purchase of securities or equipment trust certificates, or otherwise) to assist States and local public bodies and agencies thereof in financing the acquisition, construction, reconstruction, and improvement of facilities and equipment for use, by operation or lease or otherwise, in mass transportation service in urban areas and in coordinating such service with highway and other transportation in such areas. Eligible facilities and equipment may include land (but not public highways), buses and other rolling stock, and other real and personal property needed for an efficient and coordinated mass transportation system. No grant or loan shall be provided under this section unless the Secretary determines that the applicant has or will have—

"(1) the legal, financial, and technical capacity to carry out the proposed project; and

"(2) satisfactory continuing control, through operation or lease or otherwise, over the use of the facilities and equipment.

The Secretary may make loans for real property acquisition pursuant to subsection (b) upon a determination, which shall be in lieu of the preceding determinations, that the real property is reasonably expected to be required in connection with a mass transportation system and that it will be used for that purpose within a reasonable period. No grant or loan funds shall be used for payment of ordinary governmental or nonproject operating expenses. An applicant for assistance under this section shall furnish a copy of its application to the Governor of each State affected concurrently, with submission to the Secretary. If, within 30 days thereafter, the Governor submits comments to the Secretary, the Secretary must consider the comments before taking final action on the application.

"(b) The Secretary is authorized to make loans under this section to States or local public bodies and agencies thereof to finance the acquisition of real property and interests in real property for use as rights-of-way, station sites, and related purposes, on urban mass transportation systems, including the net cost of property management and relocation payments made pursuant to section 7. Each loan agreement under this subsection shall provide for actual construction of urban mass transportation facilities on acquired real property within a period not exceeding ten years following the fiscal year in which the agreement is made. Each agreement shall provide that in the event acquired real property or interests in real property are not to be used for the purposes for which acquired, an appraisal of current value will be made at the time of that determination, which shall not be later than ten years following the fiscal year in which the agreement is made. Two-thirds of the increase in value, if any, over the original cost of the real property shall be paid to the Secretary for credit to miscellaneous receipts of the Treasury. Repayment of amounts loaned shall be credited to miscellaneous receipts of the Treasury. A loan made under this subsection shall be repayable within ten years from the date of the loan agreement or on the date a grant agreement for actual construction of facilities on the acquired real property is made, whichever date is earlier. An applicant for assistance under this subsection shall furnish a copy of its application to the comprehensive planning agency of the community affected concurrently with submission to the Secretary. If within thirty days thereafter the comprehensive planning agency of the community affected submits comments to the Secretary, the Secretary must consider the comments before taking final action on the application.

"(c) No loan shall be made under this section for any project for which a grant is made under this section, except—

"(1) loans may be made for projects as to which grants are made for relocation payments; and

"(2) project grants may be made even though the real property involved in the project has been or will be acquired as a result of a loan under subsection (b).

Interest on loans made under this section shall be at a rate not less than (i) a rate determined by the Secretary of the Treasury, taking into consideration the current average market yield on outstanding marketable obligations of the United States with remaining periods to maturity comparable to the average maturies of such loans adjusted to the nearest one-eighth of 1 per centum plus (ii) an allowance adequate in the judgment of the Secretary of Transportation to cover administrative costs and probable losses under the program. No loans shall be made, including renewals or extensions thereof, and no securities or obligations shall be purchased which have maturity dates in excess of forty years.

"(d) Any State or local public body or agency thereof which makes applications for a grant or loan under this Act to finance the acquisition, construction, reconstruction, or improvement of facilities or equipment which will substantially affect a community or its mass transportation service shall certify to the Secretary that it has held public hearings, has afforded adequate notice of such hearings, has considered the economic and social effects of the project for which applications for financial assistance is made and its impact on the environment, and has found that the project is consistent with any plans for the comprehensive development of the urban area. The notice required by this subsection shall include a concise statement of the proposal for which the application is made and may be published in a newspaper of general circulation in the State or locality to be served, and shall be published in the Federal Register, and for the purpose of this sentence the Administrator of the General Services Administration shall accept and publish any such notice. Hearings need not be held if opportunity for such hearings is provided through adequate notice, and no one with a significant economic, social or environmental interest in the matter requests a hearing. If hearings have been held, a copy of the transcript of the hearings shall be submitted with the certification."

SEC. 3. (a) Subsection 4(a) of the Urban Mass Transportation Act of 1964, as amended (49 U.S.C. 1603(a)), is amended by—

(1) striking out "section 3" in the first sentence and inserting in lieu thereof "subsection (a) of section 3"; and

(2) striking out the next to the last sentence and inserting in lieu thereof the following: "Such remainder may be provided in whole or in part from other than public sources and any public or private transit system funds so provided shall be solely from undistributed cash surpluses, replacement or depreciation funds or reserves available in cash, or new capital."

(b) Section 4 of the Urban Mass Transportation Act of 1964, as amended (49 U.S.C. 1603), is amended by adding at the end thereof the following new subsections:

"(c) To finance the programs and activities, including administrative costs, under this Act, the Secretary is authorized to incur obligations in the form of grant agreements or otherwise in amounts aggregating not to exceed $3,100,000,000. This amount shall become available for obligation upon the effective date of this subsection and shall remain available until obligated. There are authorized to be appropriated for liquidation of the obligations incurred under this subsection not to exceed $80,000,000 prior to July 1, 1971, which amount may be increased to not to exceed an aggregate of $310,000,000 prior to July 1, 1972, not to exceed an aggregate of $710,000,000 prior to July 1, 1973, not to exceed an aggregate of $1,260,000,000 prior to July 1, 1974, not to exceed an aggregate of $1,860,000,000 prior to July 1, 1975, and not to exceed an aggregate of $3,100,000,000 thereafter. Sums so appropriated shall remain available until expended.

"(d) The Secretary shall report annually to the Congress, after consultation with State and local public agencies, with respect to outstanding grants or other contractual agreements executed pursuant to subsection (c) of this section. To assure program continuity and orderly planning and project development, the Secretary shall submit to the Congress (1) authorization requests for fiscal years 1976 and 1977 not later than February 1, 1972, (2) authorization requests for fiscal years 1978 and 1979 not later than February 1, 1974, (3) authorization requests for fiscal years 1980 and 1981 not later than February 1, 1976, and (4) an authorization request for fiscal year 1982 not later than February 1, 1978. Such authorization requests shall be designed to meet the Federal commitment specified in the first section of the Urban Mass Transportation Assistance Act of 1969. Concurrently with these authorization requests, the Secretary shall also submit his recommendations for any necessary adjustments in the schedule for liquidation of obligations."

SEC. 4. Section 5 of the Urban Mass Transportation Act of 1964, as amended (49 U.S.C. 1604), is amended by striking out the next to the last sentence and inserting in lieu thereof the following sentence: "Such remainder may be provided in whole or in part from other than public sources and any public or private transit system funds so provided shall be solely from undistributed cash surpluses, replacement or depreciation funds or reserves available in cash, or new capital."

SEC. 5. Section 14 of the Urban Mass Transportation Act of 1964, as amended (49 U.S.C. 1610), is amended to read as follows:

"ENVIRONMENTAL PROTECTION

"SEC. 14. (a) It is hereby declared to be the national policy that urban mass transportation projects for which Federal financial assistance is provided pursuant to section 3 shall provide for the protection and enhancement of the natural resources and the quality of environment of the Nation. In implementing this policy the Secretary shall consult with the Secretaries of Health, Education, and Welfare, Housing and Urban Development, and Interior and with the National Environmental Quality Council with regard to each such project that may have a substantial impact on natural resources including, but not limited to water and air quality, peace and tranquility, and fish and wildlife, natural, scenic and recreational assets, and other factors affecting the environment.

"(b) The Secretary shall review each transcript of hearing submitted pursuant to section 3(d) to assure that an adequate opportunity was afforded for the presentation of views by all parties with a significant economic, social or environmental interest and that the environmental considerations identified at the hearing have been adequately dealt with in the project application. The Secretary shall not grant financial assistance under section 3 for any project unless he is satisfied that fair consideration has been given to the preservation and enhancement of the environment and to the interest of the community in which the project is located.

"(c) If opposition to any application for assistance under section 3 is raised in the hearing before the State or local public agency, or in any communication to the Secretary, on the grounds that the environment would be adversely affected by the project to which the application relates, the Secretary shall not approve the application, unless he finds in writing after a full and complete review of the record of such hearing and of the application, that (1) no adverse environmental effect is likely to result from such project, or (2) there exists no feasible and prudent alternative to such effect and all reasonable steps have been taken to minimize such effect. In any case in which the Secretary determines that the record of the hearing before the State or local public agency is inadequate to permit him to make the findings required under the preceding sentence, he shall conduct a hearing, including adequate notice to interested persons, on the environmental issue raised by such application. Findings of the

Secretary under this subsection shall be made a matter of public record."

SEC. 6. Section 15 of the Urban Mass Transportation Act of 1964, as amended (49 U.S.C. 1611), is amended to read as follows:

"STATE LIMITATION

"SEC. 15. Grants made under section 3 (other than for relocation payments in accordance with section 7(b)) before July 1, 1970, for projects in any one State shall not exceed in the aggregate 12½ per centum of the aggregate amount of grant funds authorized to be appropriated pursuant to section 4(b); except that the Secretary may, without regard to such limitation, enter into contracts for grants under section 3 aggregating not to exceed $12,500,000 (subject to the total authorization provided in section 4(b)) with local public bodies and agencies in States where more than two-thirds of the maximum grants permitted in the respective State under this section has been obligated. Grants made on or after July 1, 1970, under section 3 for projects in any one State may not exceed in the aggregate 12½ per centum of the aggregate amount of funds authorized to be obligated under subsection 4(c), except that 1½ per centum of the aggregate amount of grant funds authorized to be obligated under subsection 4(c) may be used by the Secretary, without regard to this limitation, for grants in States where more than two-thirds of the maximum amounts permitted under this section has been obligated and except that an additional 6 per centum of the aggregate amount of grant funds authorized to be obligated under subsection 4(c) may be used by the Secretary for grants in States where more than two-thirds of the maximum amounts permitted under this section has been obligated, where the Secretary shall determine that the utilization of these funds in this manner shall better accomplish the purposes of this Act and shall not prejudice or delay pending projects of other States, but in no case shall any State receive more than 25 per centum of the additional grant funds made available under this exception. In computing State limitations under this section, grants for relocation payments shall be excluded. Any grant made under section 3 to a local public body or agency in a major metropolitan area which is used in whole or part to provide or improve urban mass transportation service, pursuant to an interstate compact approved by the Congress, in a neighboring State having within its boundaries population centers within normal commuting distance from such major metropolitan area, shall, for purposes of computing State limitations under this section, be allocated on an equitable basis, in accordance with regulations prescribed by the Secretary, between the State in which such public body or agency is situated and such neighboring State."

SEC. 7. Nothing in this Act shall affect the authority of the Secretary of Housing and Urban Development to make grants, under the authority of section 6(a), 9, and 11 of the Urban Mass Transportation Act of 1964, as amended (49 U.S.C. 1605(a), 1607a, and 1607(c), and Reorganization Plan Numbered 2 of 1968, for projects or activities primarily concerned with the relationship of urban transportation systems to the comprehensively planned development of urban areas, or the role of transportation planning in overall urban planning, out of funds appropriated to him for that purpose.

SEC. 8. This Act may be cited as the "Urban Mass Transportation Assisance Act of 1969".

MOTION OFFERED BY MR. PATMAN

Mr. PATMAN. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. PATMAN moves to strike out all after the enacting clause of S. 3154 and substitute in lieu thereof the provisions of H.R. 18185, as passed, as follows:

That the Congress finds that the rapid urbanization and the continued dispersal of population and activities within urban areas has made the ability of all citizens to move quickly and at a reasonable cost an urgent national problem; that it is imperative, if efficient, safe, and convenient transportation compatible with soundly planned urban areas is to be achieved, to continue and expand the Urban Mass Transportation Act of 1964; and that success will require a Federal commitment for the expenditure of at least $10,000,000,000 over a twelve-year period to permit confident and continuing local planning, and greater flexibility in program administration. It is the purpose of this Act to create a partnership which permits the local community, through Federal financial assistance, to exercise the initiative necessary to satisfy its urban mass transportation requirements.

SEC. 2. Section 3 of the Urban Mass Transportation Act of 1964, as amended (49 U.S.C. 1602), is amended—

(1) by redesignating subsection (c) as subsection (e); and

(2) by striking out subsections (a) and (b) and inserting in lieu thereof subsections (a), (b), (c), and (d), as follows:

"(a) The Secretary is authorized, in accordance with the provisions of this Act and on such terms and conditions as he may prescribe, to make grants or loans (directly, through the purchase of securities or equipment trust certificates, or otherwise) to assist States and local public bodies and agencies thereof in financing the acquisition, construction, reconstruction, and improvement of facilities and equipment for use, by operation or lease or otherwise, in mass transportation service in urban areas and in coordinating such service with highway and other transportation in such areas. Eligible facilities and equipment may include land (but not public highways), buses and other rolling stock, and other real and personal property needed for an efficient and coordinated mass transportation system. No grant or loan shall be provided under this section unless the Secretary determines that the applicant has or will have—

"(1) the legal, financial, and technical capacity to carry out the proposed project; and

"(2) satisfactory continuing control, through operation or lease or otherwise, over the use of the facilities and equipment.

The Secretary may make loans for real property acquisition pursuant to subsection (b) upon a determination, which shall be in lieu of the preceding determinations, that the real property is reasonably expected to be required in connection with a mass transportation system and that it will be used for that purpose within a reasonable period. No grant or loan funds shall be used for payment of ordinary governmental or nonproject operating expenses. An applicant for assistance under this section for a project located wholly or partly in a State in which there is a statewide comprehensive transportation planning shall furnish a copy of its application to the Governor of each State affected concurrently with submission to the Secretary. If, within thirty days thereafter, the Governor submits comments to the Secretary, the Secretary must consider the comments before taking final action on the application.

"(b) The Secretary is authorized to make loans under this section to States or local public bodies and agencies thereof to finance the acquisition of real property and interests in real property for use as rights-of-way, station sites, and related purposes, on urban mass transportation systems, including the net cost of property management and relocation payments made pursuant to section 7. Each loan agreement under this subsection shall provide for actual construction of urban mass transportation facilities on acquired real property within a period not exceeding ten years following the fiscal year in which the agreement is made. Each agreement shall provide that in the event acquired real property or interests in real property are not to be used for the purposes for which acquired, an appraisal of current value will be made at the time of that determination, which shall not be later than ten years following the fiscal year in which the agreement is made. Two-thirds of the increase in value, if any, over the original cost of the real property shall be paid to the Secretary for credit to miscellaneous receipts of the Treasury. Repayment of amounts loaned shall be credited to miscellaneous receipts of the Treasury. A loan made under this subsection shall be repayable within ten years from the date of the loan agreement or on the date a grant agreement for actual construction of facilities on the acquired real property is made, whichever date is earlier. A grant agreement for construction of facilities under this Act may provide for forgiveness of the repayment of the principal and accrued interest on the loan then outstanding in lieu of a cash grant in the amount thus forgiven, which for all purposes shall be considered a part of the grant and of the Federal portion of the cost of the project. An applicant for assistance under this subsection shall furnish a copy of its application to the comprehensive planning agency of the community affected concurrently with submission to the Secretary. If within a period of thirty days thereafter (or, in a case where the comprehensive planning agency of the community (during such thirty-day period) requests more time, within such longer period as the Secretary may determine) the comprehensive planning agency of the community affected submits comments to the Secretary, the Secretary must consider the comments before taking final action on the application.

"(c) No loan shall be made under this section for any project for which a grant is made under this section, except—

"(1) loans may be made for projects as to which grants are made for relocation payments; and

"(2) project grants may be made even though the real property involved in the project has been or will be acquired as a result of a loan under subsection (b). Interest on loans made under this section shall be at a rate not less than (i) a rate determined by the Secretary of the Treasury, taking into consideration the current average market yield on outstanding marketable obligations of the United States with remaining periods to maturity comparable to the average maturities of such loans adjusted to the nearest one-eighth of 1 per centum, plus (ii) an allowance adequate in the judgment of the Secretary of Transportation to cover administrative costs and probable losses under the program. No loans shall be made, including renewals or extensions thereof, and no securities or obligations shall be purchased, which have maturity dates in excess of forty years.

"(d) Any application for a grant or loan under this Act to finance the acquisition, construction, reconstruction, or improvement of facilities or equipment which will substantially affect a community or its mass transportation service shall include a certification that the applicant—

"(1) has afforded an adequate opportunity for public hearings pursuant to adequate prior notice, and has held such hearings

unless no one with a significant economic, social, or environmental interest in the matter requests a hearing;

"(2) has considered the economic and social effects of the project and its impact on the environment; and

"(3) has found that the project is consistent with official plans for the comprehensive development of the urban area.

Notice of any hearings under this subsection shall include a concise statement of the proposed project, and shall be published in a newspaper of general circulation in the geographic area to be served. If hearings have been held, a copy of the transcript of the hearings shall be submitted with the application."

SEC. 3. (a) Section 4(a) of the Urban Mass Transportation Act of 1964, as amended (49 U.S.C. 1603(a)), is amended—

(1) by striking out "section 3" in the first sentence and inserting in lieu thereof "subsection (a) of section 3"; and

(2) by striking out the next to the last sentence and inserting in lieu thereof the following: "Such remainder may be provided in whole or in part from other than public sources and any public or private transit system funds so provided shall be solely from undistributed cash surpluses, replacement or depreciation funds or reserves available in cash, or new capital."

(b) Section 4 of such Act, as amended (49 U.S.C. 1603), is amended by adding at the end thereof the following new subsections:

"(c) To finance grants and loans under sections 3, 7(b), and 9 of this Act, the Secretary is authorized to incur obligations on behalf of the United States in the form of grant agreements or otherwise in amounts aggregating not to exceed $3,100,000,000, less amounts appropriated pursuant to section 12 (d) of this Act and the amount appropriated to the Urban Mass Transportation Fund by Public Law 91-168. This amount (which shall be in addition to any amounts available to finance such activities under subsection (b) of this section) shall become available for obligation upon the date of enactment of this subsection and shall remain available until obligated. There are authorized to be appropriated for liquidation of the obligations incurred under this subsection not to exceed $80,000,000 prior to July 1, 1971, which amount may be increased to not to exceed in aggregate of $310,000,000 prior to July 1, 1972, not to exceed an aggregate of $710,000,000 prior to July 1, 1973, not to exceed an aggregate of $1,260,000,000 prior to July 1, 1974, not to exceed an aggregate of $1,860,000,000 prior to July 1, 1975, and not to exceed an aggregate of $3,100,000,000 thereafter. The total amounts appropriated under this subsection and section 12(d) of this Act shall not exceed the limitations in the foregoing schedule. Sums so appropriated shall remain available until expended.

"(d) The Secretary shall report annually to the Congress with respect to outstanding grants or other contractual agreements executed pursuant to subsection (c) of this section. To assure program continuity and orderly planning and project development, the Secretary, after consultation with State and local public agencies, shall submit to the Congress (1) authorization requests for fiscal years 1976 and 1977 not later than February 1, 1972, (2) authorization requests for fiscal years 1978 and 1979 not later than February 1, 1974, (3) authorization requests for fiscal years 1980 and 1981 not later than February 1, 1976, and (4) an authorization request for fiscal year 1982 not later than February 1, 1978. Such authorization requests shall be designed to meet the Federal commitment specified in the first section of the Urban Mass Transportation Assistance Act of 1970. Concurrently with these authorization requests, the Secretary shall also submit his recommendations for any necessary adjustments in the schedule for liquidation of obligations."

SEC. 4. (a) Section 5 of the Urban Mass Transportation Act of 1964, as amended (49 U.S.C. 1604), is amended by striking out "1971" and inserting in lieu thereof "1972".

(b) Section 5 of such Act, as amended (49 U.S.C. 1604), is further amended by striking out the next to the last sentence and inserting in lieu thereof the following: "Such remainder may be provided in whole or in part from other than public sources and any public or private transit system funds so provided shall be solely from undistributed cash surpluses, replacement or depreciation funds or reserves available in cash, or new capital."

SEC. 5. Section 12(d) of the Urban Mass Transportation Act of 1964 (49 U.S.C. 1608 (d)) is amended to read as follows: "(d) There are hereby authorized to be appropriated, without fiscal year limitation out of any money in the Treasury not otherwise appropriated, the funds necessary to carry out the functions under this Act.

SEC. 6. Section 14 of the Urban Mass Transportation Act of 1964, as amended (49 U.S.C. 1610), is amended to read as follows:

"ENVIRONMENTAL PROTECTION

"SEC. 14. (a) It is hereby declared to be the national policy that special effort shall be made to preserve the natural beauty of the countryside, public park and recreation lands, wildlife and waterfowl refuges, and important historical and cultural assets, in the planning, designing, and construction of urban mass transportation projects for which Federal assistance is provided pursuant to section 3 of this Act. In implementing this policy the Secretary shall cooperate and consult with the Secretaries of Agriculture, Health, Education, and Welfare, Housing and Urban Development, and Interior, and with the Council on Environmental Quality with regard to each project that may have a substantial impact on the environment.

"(b) The Secretary shall review each transcript of hearing submitted pursuant to section 3(d) to assure that an adequate opportunity was afforded for the presentation of views by all parties with a significant economic, social, or environmental interest, and that the project application includes a detailed statement on—

"(1) the environmental impact of the proposed project,

"(2) any adverse environmental effects which cannot be avoided should the proposal be implemented,

(3) alternatives to the proposed project, and

"(4) any irreversible and irretrievable impact on the environment which may be involved in the proposed project should it be implemented.

"(c) The Secretary shall not approve any application for assistance under section 3 unless he finds in writing, after a full and complete review of the application and of any hearings held before the State of local public agency pursuant to section 3(d), that (1) adequate opportunity was afforded for the presentation of views by all parties with a significant economic, social, or environmental interest, and fair consideration has been given to the preservation and enhancement of the environment and to the interest of the community in which the project is located, and (2) either no adverse environmental effect is likely to result from such project, or there exists no feasible and prudent alternative to such effect and all reasonable steps have been taken to minimize such effect. In any case in which a hearing has not been held before the State or local agency pursuant to section 3(d), or in which the Secretary determines that the record of hearings before the State or local public agency is inadequate to permit him to make the findings required under the preceding sentence, he shall conduct hearings, after giving adequate notice to interested persons, on any environmental issues raised by such application. Findings of the Secretary under this subsection shall be made a matter of public record."

SEC. 7. Section 15 of the Urban Mass Transportation Act of 1964, as amended (49 U.S.C. 1611), is amended to read as follows:

"STATE LIMITATION

"SEC. 15. Grants made under section 3 (other than for relocation payments in accordance with section 7(b)) before July 1, 1970, for projects in any one State shall not exceed in the aggregate 12½ per centum of the aggregate amount of grant funds authorized to be appropriated pursuant to section 4(b); except that the Secretary may, without regard to such limitation, enter into contracts for grants under section 3 aggregating not to exceed $12,500,000 (subject to the total authorization provided in section 4(b)) with local public bodies and agencies in States where more than two-thirds of the maximum grants permitted in the respective State under this section has been obligated. Grants made under section 3 on or after July 1, 1970, for projects in any one State may not exceed in the aggregate 12½ per centum of the aggregate amount of funds authorized to be obligated under section 4 (c), except that 15 per centum of the aggregate amount of grant funds authorized to be obligated under section 4(c) may be used by the Secretary, without regard to this limitation, for grants in States where more than two-thirds of the maximum amounts permitted under this section has been obligated. In computing State limitations under this section, grants for relocation payments shall be excluded. Any grant made under section 3 to a local public body or agency in a major metropolitan area which is used in whole or in part to provide or improve urban mass transportation service, pursuant to an interstate compact approved by the Congress, in a neighboring State having within its boundaries population centers within normal commuting distance from such major metropolitan area, shall, for purposes of computing State limitations under this section, be allocated on an equitable basis, in accordance with regulations prescribed by the Secretary, between the State in which such public body or agency is situated and such neighboring State."

SEC. 8. The Urban Mass Transportation Act of 1964 is further amended by adding at the end thereof the following new section:

"PLANNING AND DESIGN OF MASS TRANSPORTATION FACILITIES TO MEET SPECIAL NEEDS OF THE ELDERLY AND THE HANDICAPPED

"SEC. 16. (a) It is hereby declared to be the national policy that elderly and handicapped persons have the same right as other persons to utilize mass transportation facilities and services; that special efforts shall be made in the planning and design of mass transportation facilities and services so that the availability to elderly and handicapped persons of mass transportation which they can effectively utilize will be assured; and that all Federal programs offering assistance in the field of mass transportation (including the programs under this Act) should contain provisions implementing this policy.

"(b) In addition to the grants and loans otherwise provided for under this Act, the Secretary is authorized to make grants or loans for the specific purpose of assisting States and local public bodies and agencies thereof in providing mass transportation services which are planned, designed, and carried out so as to meet the special needs of elderly and handicapped persons. Grants and loans made under the preceding sentence shall be subject to all of the terms, conditions, requirements, and provisions ap-

plicable to grants and loans made under section 3(a), and shall be considered for the purposes of all other laws to have been made under such section. Of the total amount of the obligations which the Secretary is authorized to incur on behalf of the United States under the first sentence of section 4(c), 1½ per centum may be set aside and used exclusively to finance the programs and activities authorized by this subsection (including administrative costs).

"(c) Of any amounts made available to finance research, development, and demonstration projects under section 6 after the date of the enactment of this section, 1½ per centum may be set aside and used exclusively to increase the information and technology which is available to provide improved transportation facilities and services planned and designed to meet the special needs of elderly and handicapped persons.

"(d) For purposes of this Act, the term 'handicapped person' means any individual who, by reason of illness, injury, age, congenital malfunction, or other permanent or temporary incapacity or disability, is unable without special facilities or special planning or design to utilize mass transportation facilities and services as effectively as persons who are not so affected."

And renumber the succeeding sections accordingly.

SEC. 9. The Secretary of Transportation shall conduct a study of the feasibility of providing Federal assistance to help defray the operating costs of mass transportation companies in urban areas and of any changes in the Urban Mass Transportation Act of 1964 which would be necessary in order to provide such assistance, and shall report his findings and recommendations to the Congress within one year after the date of the enactment of this Act.

SEC. 10. The Secretary of Transportation shall in all ways (including the provision of technical assistance) encourage industries adversely affected by reductions in Federal Government spending on space, military, and other Federal projects to compete for the contracts provided for under sections 3 and 6 of the Urban Mass Transportation Act of 1964 (49 U.S.C. 1602 and 1605), as amended by this Act.

SEC. 11. Nothing in this Act shall affect the authority of the Secretary of Housing and Urban Development to make grants, under the authority of sections 6(a), 9, and 11 of the Urban Mass Transportation Act of 1964, as amended (49 U.S.C. 1605(a), 1607a, and 1607c), and Reorganization Plan Numbered 2 of 1968, for projects or activities primarily concerned with the relationship of urban transportation systems to the comprehensively planned development of urban areas, or the role of transportation planning in overall urban planning, out of funds appropriated to him for that purpose.

SEC. 12. Section 5316 of title 5, United States Code, is amended by inserting the following after paragraph (1929): "(130) Deputy Administrator, Urban Mass Transportation Administration, Department of Transportation."

SEC. 13. (a) Section 4(b) of the Urban Mass Transportation Act of 1964 is amended by inserting the words "or contract" after the word "grant" in the last sentence thereof.

(b) Section 6(a) of the Urban Mass Transportation Act of 1964 is amended by inserting the words "grant or" between the word "by" and the word "contract" in the second sentence thereof.

SEC. 14. This Act may be cited as the "Urban Mass Transportation Assistance Act of 1970".

The motion was agreed to.

The Senate bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

A similar House bill (H.R. 18185) was laid on the table.

Mr. PATMAN. Mr. Speaker, I ask unanimous consent that the Clerk may make any necessary corrections in punctuation, section numbers, and cross references in the engrossment of the amendment of the House to the bill, S. 3154.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

## GENERAL LEAVE TO EXTEND

Mr. PATMAN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks, and to include extraneous material, on the bill just passed.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

## PROVIDING FOR CONSIDERATION OF H.R. 17538, HIGH-SPEED GROUND TRANSPORTATION EXTENSION

Mr. O'NEILL of Massachusetts. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 1223 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 1223

*Resolved*, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 17538) to extend for one year the Act of September 30, 1965, relating to high-speed ground transportation, and for other purposes. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interstate and Foreign Commerce, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

## DAVID STARR WINS CONSERVATION AWARD

(Mr. ADDABBO asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. ADDABBO. Mr. Speaker, the Long Island Press is one of the Nation's leading daily papers and has long advocated stronger Federal, State, and local measures to preserve our natural resources. Last week, Mr. David Starr, editor of the Long Island Press, received the highest honor given to the mass media by the New York State Conservation Council.

I congratulate Dave Starr on this achievement and commend him for the outstanding leadership he has provided for a more effective conservation policy over the years. He is no newcomer to the environmental field having warned the readers of the Long Island Press for many years of the constant threat to their valuable recreational resources.

Mr. Speaker, the following article about Mr. Starr and the award he received appeared in the September 25 edition of the Long Island Press and I insert the text of the article at this point in the RECORD:

PRESS EDITOR STARR WINS HIGHEST CONSERVATION AWARD

MONTICELLO, N.Y.—David Starr, editor of the Long Island Press, last night was awarded the highest honor given annually to the mass media by the 350,000 member New York State Conservation Council.

He is the first newspaper editor to receive the award from the 37-year-old council.

This is the second year in a row that The Press has won a conservation award from the council, which represents clubs and conservation-sportsmen's federations in all 50 counties of the state.

Thomas Macres of Patchogue, vice president of both the State Council and the Suffolk Conservation Council, presented the award last night at the council's annual convention at the Laurels Hotel.

The Press has done more fighting over the year for conservation," said Macres, "than any other newspaper in the metropolitan-Long Island area.

"That goes for battles to protect wetlands and uplands and against all forms of pollution, from Brooklyn to the Montauk Light House."

Macres told the awards audience of some of The Press conservation campaigns in the past year:

An expose revealing that more than 100,000 gallons of noxious, raw cesspool waste was being dumped into sandy ground directly over the purest portion of the Town of Southampton's only water supply—its underground water table. The series led to a storm of local protest and plans for an adequate sewage disposal plant are now on the drawing boards.

Another exclusive Press expose revealed that a sand and gravel operation along the island's North Shore was threatening salt water intrusion into the scanty underground water supply. The operation was also endangering the shoreline and ecological values in Long Island Sound. A roar of public protest followed the Press' revalations, and the program chewing away a beautiful cliffside facing the Sound is ended.

And another award-winning Press series detailed the story of giant Jamaica Bay, telling of its current polluted condition and what could be done to improve it. The stories alerted local residents in Queens and Brooklyn to the damage that could be done to the bay and New York City's only nature sanctuary by projected plans to extend Kennedy Airport's runways into the bay.

"And while the press under Starr's leadership was working on these and other big stories, it still found time and space to headline a battle for a tiny but vital 40-acre piece of wetland in Nassau County," Macres pointed out.

The state council's vice president noted that, over the years, The Press has won many national and local awards for its conservation stories and editorials, saying: "The Press probably holds more honors in the field than any other mass media organization in our area."

Macres ended his remarks by saying, "Starr

fought for conservation when it wasn't fashionable, more than 20 years ago."

Starr has received conservation awards from the Suffolk Fish and Game Association, the Suffolk Conservation Council and the Hempstead Wetland Resources Council.

Since the state council is a member of the 50-state National Wildlife Federation, Starr's selection for the top state honor makes him an automatic contender for the federation's annual national mass media conservation award.

The state council is active in legislative matters concerning conservation, such as projected plans for nuclear power plants. It also serves as advisor to both state legislative committees and state conservation officers in addition to aiding its members' local battles in New York's 50 counties.

Besides this, the council holds summer workshops for teachers and summer sessions for students at a camp of their own.

## HOUSE CONSIDERATION OF THE TRADE BILL

(Mr. GIBBONS asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. GIBBONS. Mr. Speaker, I want to applaud the leadership on both the Democratic side and the Republican side for the action that they took late last week in deciding to postpone the consideration of the trade bill or the Mills quota bill until sometime after the recess that we must take for the election. I think this is perhaps the most important piece of legislation that this Congress and this House of Representatives has faced in the year since 1930. Never has there been a more important issue to be decided.

I hope when this bill does come to the floor, the leadership will unite with some of the rest of us and allow us to try to have an open rule or to vote down the previous question on the gag rule or the closed rule that has been voted out of the Rules Committee. It seems to me every Member of this body sought to have an opportunity to express his own opinion in the form of an amendment or other type of action on this most important and most controversial piece of legislation.

Mr. Speaker, while I am not one of those who believes that the newspapers are always right or the commentators are always right, I think on this bill there has been more unanimity of opinion that this bill is by and large a bad bill, and must be changed, must be amended, or must be defeated.

Mr. Speaker, I include at this point in my remarks some of the editorial opinion from the different news media around the country:

[From the Buffalo (N.Y.) Courier Express, July 23, 1970]

WHAT OTHERS THINK OF THE "MILLS QUOTA BILL"

WHAT'S THE SENSE OF HAVING ANY IMPORT QUOTA?

President Nixon and Congress need to be reminded that there was good reason for the 23-year-old General Agreement on Tariffs and Trade outlawing nontariff trade barriers, such as quotas, among its members, which include the United States. The policy of freer trade which the United States has been following for decades is in jeopardy if quota legislation in any form is enacted.

[From the Kalamazoo (Mich.) Gazette, July 24, 1970]

HIGHER TRADE BARRIERS UNWANTED FOR NATION

Expansion of U.S. trade barriers would provoke retaliation abroad, injuring those American companies which export. It would also inflate the prices of foreign goods sold here, making it even more difficult for the hard-pressed American consumer to find low prices for needed products.

The world has grown much too small for its leading industrial nation to try to live in economic isolation. The free trade policy the United States had pursued for four decades should be maintained, and any congressional attempt to revive the anachronistic quota system should not be permitted to succeed. Neither textiles nor any other industry should be given special trade protection.

[From the Hillsdale (Mich.) News, July 16, 1970]

THE TARIFF TRAP

The protectionist chorus is delivered with a fine, patriotic fervor. We're going to protect American jobs, say the high tariff forces. They don't mention that those jobs will be protected by forcing the American consumer to pay higher prices—to subsidize American companies unable to meet competition. . . .

There is room for hard negotiations to erase inequities. There is no room for tariff battles. They always end the same way—by strangling everybody.

[From the Buffalo (N.Y.) News, Aug. 27, 1970]

GOOD FREE-TRADE OMEN

The bulging trade surplus of U.S. exports over imports recorded in June and July is a happy economic omen. . . .

We would hope such considerations might slow the protectionist drive in Congress to restrict imports of textiles, shoes or other products. These trade figures suggest that most American producers are not in desperate need of artificial protection to compete in domestic markets, and that such restrictions, to the extent they trigger retaliatory actions abroad, can harm American exporters who are now doing fine selling American products in foreign lands.

[From the Pueblo (Colo.) Chieftain, July 24, 1970]

PROTECTIONIST WIND BLOWS HARD

America's trading partners, particularly the European Common Market, have warned they will restrict American imports if their goods are blocked from the affluent U.S. market. The fear now is that the protectionist wind in Congress could blow itself into another global trade war. We may have to rely upon a Presidential veto to curtail or stop such a development.

[From the Birmingham (Ala.) Post-Herald, July 17, 1970]

A BAD TRADE BILL

If this protectionist measure passes Congress, we fear it will bring the country more grief than benefit. . . .

Quotas on imports are considered dirty pool under international trade rules, and other countries are sure to retaliate. . . .

The highest cost, though, will be paid by the poor. Any way you slice it, a quota is a device for holding up or raising prices. This means the poor person in Birmingham or Mobile or Atlanta will have to pay more for a knit shirt or cheap shoes. . . .

If it can be proved that the shoe and textile industries really require protection to survive, a better way is to give them direct subsidies. This would be honest and out in the open, and the public would know the cost. Quotas to restrict imports hide the costs to the public, and put an unfair share on the poor.

[From the Rochester (N.Y.) Times Union, Aug. 4, 1970]

AMERICA SHOULD NOT REVERSE FREE TRADE POLICY

Under the proposed legislation, jobs gained by U.S. import quotas could be more than matched by jobs lost in exporting industries, if other countries retaliated as expected against new U.S. restrictions by raising their own tariffs or imposing import quotas.

The higher domestic prices caused by shutout of foreign price competition would be paid by American consumers, and would fuel inflation. And the good will built up overseas by the U.S. through its championing of free trade would be quickly dissipated if America stirred up a new "trade war."

[From the Columbus (Ohio) Enquirer]

UNITED STATES IN DANGER OF LOSING CONTEST FOR WORLD MARKET

It was in 1930 that Congress passed the Smoot-Hawley Act, a high tariff measure listing more than 1,000 import items. Foreign nations retaliated in kind. It deepened the Great Depression, the opposite effect from what was intended.

We cannot now place the whole economy in jeopardy merely to protect isolated economic interests. History provides the lesson.

[From the Colorado Springs (Colo.) Gazette-Telegraph, Aug. 16, 1970]

FREE TRADE MUST ENDURE

There never has been a war in which both sides did not suffer, and this would certainly apply to the kind of "trade war" that is threatened by the protectionist philosophy now gaining ground in Congress. . . .

For the United States of America to abandon its historic position as a champion on free trade for the sake of easing competitive pressures on its domestic economy would be woefully short-sighted. We are an exporting nation, selling more than we buy on the world market, and aiming to sell even more. We have more to lose than to gain if economic warfare fought with tariffs and other impediments to free trade should break out among our trading partners.

[From the Toledo (Ohio) Blade, July 31, 1970]

THE MISCHIEF CAUSED BY TRADE "EXCEPTION"

The Japanese export only 26 per cent of foreign textiles reaching American consumers. The House measure, if aimed primarily at Japan, is going to hurt numerous innocents.

The textile and shoe industries have felt some pinches during the past year resulting in production cutbacks. But they are hardly alone on that count. To make special adjustments for them when there is a serious question whether they have been truly damaged by competition is the kind of move that could set off a chain reaction throughout the free-world trading nations.

[From the Cleveland (Ohio) Plain Dealer, Aug. 21, 1970]

A BETRAYAL OF FREE TRADE

That is a bad, reactionary trade bill which Chairman Wilbur D. Mills, D-Ark., brought out of his House Ways and Means Committee. . . .

The bill would lay open to new quotas and other trade barriers dozens of other products—any product which American consumers found greatly to their liking. . . .

All that is bad news for consumers. High tariffs or quotas that keep out the rest of the world's wares reduce the range of goods from

which the consumer chooses, and makes him pay higher prices in a monopolized or at least artificially rigged market. . . .

The President has indicated he would veto the bill if it widened its protectionist apparatus beyond textiles. We would support him if he vetoed this type of bill, which is a betrayal of U.S. free trade policy.

---

[From the New Kensington (Pa.) Dispatch, Sept. 5, 1970]

A TIMELY WARNING

The new wave of protectionism is not confined to the United States. The 77-member General Agreement on Tariffs and Trade (GATT), which oversees most of the world's trading relations, recently called on its members to counterattack. The most effective way of resisting protectionism is to continue to press in the opposite direction, toward further reduction of trade barriers.

---

[From the Dayton (Ohio) News, Sept. 8, 1970]

FACTS UNDERCUT PROTECTIONISM

In recent months, however, American exports have picked up and are likely to pick up even more if inflation subsides. This improvement in the balance of trade ought to take a lot of wind out of the protectionists' poormouth argument.

---

[From the Tarentum (Pa.) Valley News, Sept. 11, 1970]

DANGEROUS PROTECTION

Not only history but current evidence provides more reasons than ever for the House to reject emphatically the protectionist trade bill it is to consider soon.

---

[From the Flint (Mich.) Journal, Sept. 5, 1970]

NEGOTIATION JARGON GETS UAW BOOST

Much of the concern about establishment of import quotas has stemmed from the possibility of retaliation by nations hurt by American trade restrictions.

That there is another element of the issue worthy of consideration was emphasized by President Gustavo Diaz Ordaz of Mexico when he addressed a state dinner in his honor Thursday night in Coronado, Calif.

He warned that U.S. restrictions on international trade may imperil the economy of Latin America. . . .

This possibility is not to be taken lightly. Undermining efforts of our southern neighbors to achieve economic growth and political stability by restricting their export markets raises real dangers to our own well-being.

---

[From the Cumberland (Md.) Times, July 26, 1970]

INDUSTRIES ASK HELP FROM FOREIGN IMPORTS

This cry for a return to protectionism after more than two decades of gradually liberalized international trade policy should not be heeded by Congress. There are other ways of averting serious harm to U.S. manufacturing companies.

---

[From the Dodge City (Kans.) High Plains Journal, July 20, 1970]

NO TURN ABOUT IS FAIR PLAY IN PROPOSED IMPORT QUOTAS SET UP BY MILLS BILL AFFECTING AGRICULTURE

We believe enactment of the Mills Bill would be a disservice to the people of this country in the long run, and that it would have immediate damaging effects on American agriculture. We certainly join with the national and state wheat grower groups, the National Council of Farmers Cooperatives, the American Farm Bureau Federation, and the American Soybean Association in opposing it.

[From the San Diego (Calif.) Union, July 24, 1970]

PROTECTIONIST FEVER RISES: FREE TRADE PRINCIPLE MUST ENDURE

The United States is not alone in wrestling with the temptation of protectionism. Some of our major trading partners, notably Japan and the Common Market countries, have been yielding to the same defensive impulse to favor their own economies.

A firm stand by the United States on the principle of free trade can help persuade those nations that they are taking an unwise and perilous course. Congress can support that stand by keeping the trade bill within the limited bounds outlined by the Administration.

---

[From the Edwardsville (Ill.) Intelligencer, Aug. 19, 1970]

THREAT OF PROTECTIONISM

The House Ways and Means Committee has approved a new foreign trade bill which, if it becomes law, will almost certainly mean the European Common Market will put quotas on U.S. soybeans and soybean products. It could mean European and Japanese trade retaliation and what is commonly known as a "trade war."

For the American consumer this is likely to mean higher prices for clothing—and other products on which import quotas are placed. . . .

Members of the House and Senate should take a new look at the improved U.S. foreign trade situation. They should not be stampeded into adopting protectionist law.

---

[From the Buffalo (N.Y.) News, Aug. 21, 1970]

OPENING JAPAN'S ECONOMIC DOOR

Japan still retains many such barriers to investment and trade, some of them not only unfair but illegal under international trade agreements. But instead of calling upon the administration for more vigorous diplomatic action to end these inequities, Congress is taking the narrow protectionist view by seeking to set up import quotas on certain items.

---

[From the New Kensington (Pa.) Dispatch, Aug. 20, 1970]

PERILS OF PROTECTION

To maintain a genuine and stable prosperity, America must conduct a flourishing trade with other nations. But world trade is a two-way street. If we refuse to buy from others, if we raise tariff barriers against their products, they will not buy from us. Then, where are we? We will lose much of the foreign market that is essential to our economic well being.

---

[From the Lancaster (Pa.) Intelligencer Journal, July 29, 1970]

PROTECTIONISM AGAIN?

There are some industries, undoubtedly, who have suffered real harm from foreign imports. But there are other ways of giving judicious help to those industries, preferable to heavy-handed restrictions on trade.

Congress, in reaching a decision, should remember the basic rule that legislation should be in the national interest—the public at large should be the first concern, rather than the special interests of those groups who would benefit by restrictive trade barriers.

---

[From the Erie (Pa.) Times, July 26, 1970]

PREVENTING A TRADE WAR

The regressive foreign-trade bill fashioned by the House Ways and Means Committee would, as the President said, cause an international trade war.

---

[From the Enid (Okla.) Eagle, July 20, 1970]

TRADE WORLD QUOTAS

Trade wars have often been responsible for "hot" wars. It would seem that industrial nations would have long since learned that world trade, either through reciprocal agreements or freer trade policies, is the better way to compete in merchanidsing products. Evidently the lesson remains unlearned.

We would hate to see the trade world turn isolationist. But the trend is in that direction.

---

[From the Chicago (Ill.) Daily News, June 22, 1970]

IMPORTS AND LIVING COSTS

Restrictions on such imports would result in retaliatory measures against American exports, especially agricultural products, and increase the average family's outlay for clothing as well as shoes.

---

[From the Syracuse (N.Y.) Herald-Journal, Aug. 25, 1970]

PROTECT THE CONSUMER!

Our senior senator, Jacob K. Javits, doesn't like the new trade bill approved by the House Ways and Means Committee, due for House consideration next month, and said so.

He directed his ire, particularly, to the freeze on oil imports and the requirement the President limit imports when U.S. industries proved to the U.S. Tariff Commission they were being hurt.

Sen. Javits warned:

"Recent events have made it clear that a President can and will use trade policy for domestic political ends" and described how quotas already are increasing consumer prices in steel, oil and beef. He pointed out the following:

Steel—Since adoption of "voluntary" restraints the price per net ton of steel jumped from a pre-quota $131.76 in 1968 to $140.84 on July 3, 1969, then to $156.26 on July 2, 1970—a percentage gain in excess of the increase in the wholesale price of all commodities.

Beef—Rib roast in one New York grocery chain increased from 99 cents per pound in 1960 to $1.49 per pound in 1970. Hamburger in the New York-Northeastern New Jersey area rose from 49 cents a pound in 1960 to 88 cents in 1970.

"The import of second grade beef is strictly controlled and it is clear that the increases in the prices of such beef have increased far more rapidly than has the consumer price index," Javits said.

Oil—The recent report of the President's cabinet task force on oil import controls estimated that in 1969 alone consumers paid $5 billion more for oil products than they would have paid in the absence of import constriction.

"This linkage between import quotas and higher prices underlines the danger of passing rigid quota legislation at the same time inflationary pressures remain high," Javits said. "Such quota legislation could make it more difficult to bring such inflationary pressures under control."

---

[From the Binghamton (N.Y.) Press, July 22, 1970]

HOW ABOUT THE CONSUMER?

American industries that can demonstrate injury from imports are supposed to be able to get necessary help from the Federal Government in making an adjustment. By all accounts this procedure never has worked as well as it should.

It would be preferable to try and improve it, rather than to move in the direction of extending more special protection against import competition which, in the end, will hurt consumers and those who produce for export.

---

[From the Dayton (Ohio) News, July 28, 1970]

TRADE: CARD GAME

Foreign trade is like a card game played with different suits. We slap down protective

quotas on imports of shoes and textiles. The common market will trump us with a tax on their imports from us, particularly soybeans which are America's biggest export to Europe.

The market bloc with a surplus of fats would be delighted for the chance to keep American soybeans out of their countries. If we go protectionist, their protectionist position is much more defensible.

---

[From the Dayton (Ohio) News, July 23, 1970]

NIXON IS RIGHT

President Nixon has warned Congress not to give him a heavily protectionist trade bill, and congressmen ought to have the good sense and the responsibility to heed the warning.

President Nixon, who primed the protectionist fever during and after his campaign by saying textiles presented a "special case," at least seems aware of how self-destructive the potential flood of import quotas can be for the United States.

---

[From the Olean (N.Y.) Times-Herald, July 24, 1970]

NONE CAN WIN

The best interests of the United States lie in getting other nations to reduce their trade barriers rather than erecting new ones of our own.

Everyone would suffer if a chain reaction of curbs and countercurbs strangles world trade and shrinks output and the number of jobs everywhere, and that is the ultimate threat of economic isolation, a rough road the world's traders have traveled before.

---

[From the Joliet (Ill.) Herald-News, May 14, 1970]

THE FREE TRADE PRINCIPLE

Foreign goods find a ready market when they are of a quality equal to home-produced goods but cost less. This is the kind of competitive challenge to our industry that works ultimately to the benefit of the buying public. In the long run it is the shopper who suffers when restrictions are placed on the free flow of goods in the marketplace.

---

[From the St. Paul (Minn.) Dispatch, Jan. 24, 1970]

HELPING OUR FOREIGN TRADE

But continued expansion of America's foreign trade is vital to a healthy national economy. It is important for American consumers and for labor.

---

[From the Cincinnati (Ohio) Enquirer, Feb. 9, 1970]

THE NEED FOR A NEW TRADE ACT

For the sake of building a more prosperous and stable world, the President vitally needs authority from Congress to deal effectively with U.S. interests in world trade.

---

[From the Napa (Calif.) Register, July 20, 1970]

PROTECTIVE WALL FOR AMERICAN BUSINESSES

History does not lend its support to the solution being considered by Congress. Therefore, we believe industry and government should use all their ingenuity and vaunted "know how" to find other means to meet the situation before making an effort to turn the clock back to 1930.

---

[From the Journal of Commerce, June 23, 1970]

A NEW PERSPECTIVE

It is of more than passing interest that on the day Britain's Labor Government was voted out of office many of the more astute political commentators in London were ascribing its surprising downfall to a revolt among British housewives against soaring living costs. . . .

Congress would do very well as this point to study the impact of public wrath over rising prices on the outcome of last week's elections in Britain. It should certainly do so before voting new import curbs that could only mean further price increases here. The old argument that such curbs are necessary "to protect the American standard of living" won't do any more. Any citizen who has observed the effect of the oil import quotas on his own standard of living knows better. And elections, after all, are less than four months away.

---

[From the Fresno (Calif.) Valley Labor Citizen, July 24, 1970]

TRADE RESTRICTIONS

The new restrictions will bring retaliatory measures that will hurt Americans doing business overseas. The end result will be less competition, higher prices and economic woes.

---

[From the San Leandro (Calif.) News, July 25, 1970]

THAT OLD BUGABOO, THE TARIFF, AGAIN

Pressures are growing in Congress for restrictive trade policy laws which would literally "move back the clock" by decades. . . .

The protectionist way is tempting, particularly to politicians serving local vested interests. . . .

---

[From the St. Louis (Mo.) Post-Dispatch, June 30, 1970]

INVITATION TO ANARCHY IN TRADE

The way to remedy disparities caused by high levels of American wages and living conditions is not by opening Pandora's Box of tariff protection or quotas for a single industry.

Subsidizing noncompetitive American producers would help maintain the international trade structure, but it would tend to discourage efficiency in domestic industries. Still there ought to be a way, perhaps along the line of methods being used by Mr. Nixon in shoes, to provide reasonable help to disadvantaged American producers; other countries do for their industries. But we see more harm than good resulting from passage of the Mills bill.

---

[From the Memphis (Tenn.) Press-Scimitar, July 27, 1970]

TRADE-THREAT BILL

Such restrictinos on trade as the Ways and Means Committee is proposing are bound to lead to serious setbacks for American exports, which have been increasing in recent months. This would add to the overall deficit in U.S. dollar exchange (the balance of payments) with the rest of the world.

This bill, if enacted, could cost many American workers their jobs, because of the loss of export markets, and it certainly would lead to price increases for U.S. consumers—thus enlarging, instead of lessening, the inflation problem.

World trade is a two-way street. Congress is threatening the whole economy by trying to make it one-way.

---

[From the Mamaroneck (N.Y.) Times, July 22, 1970]

PROTECTIONISTS ON NOTICE

The inflation would arise from the higher domestic prices that would be protected—and encouraged—by the erection of trade barriers against competitive imports.

The President's distaste for quota systems is well grounded in an awareness of the disastrously self-defeating consequences of protectionist binges and trade wars throughout modern history.

---

[From the Newark (N.J.) Evening News, July 8, 1970]

CURBING TRADE

Free trade has been the goal and the policy of this country since the 1930's, and the free world's general economic advancement in that period has been based largely on a lowering of barriers to international commerce. Congress should resist any move to reverse that trend.

---

[From the Buffalo (N.Y.) Courier Express, Aug. 13, 1970]

TRADE BILL "SWEETENED" BUT NOT FOR CONSUMER

But even if the present bill, with all its contradictions, should be more acceptable to the White House, it will poorly serve the vast majority of Americans, who pay the bills in the nation's stores.

---

[From the Alexandria (La.) Daily Town Talk, July 23, 1970]

A GLOBAL TRADE WAR

The fear now is that the protectionist wind in Congress could blow itself into another global trade war.

---

[From the Wheeling (W.Va.) News-Register, July 29, 1970]

CONSUMERS' STAKE IN TRADE POLICY

The best trade policy would be one that promotes expansion of total trade rather than contraction. Restricting imports may seem to benefit workers in a particular industry from foreign competition but we must remember what it does to them and all Americans in their role as consumers. After all, while some are producers we all are consumers. . . .

Industries which can demonstrate actual injury from imports do and should continue to receive Government aid in adjusting to conditions. But we should not approach this problem by restricting competition from imports. To do so would be to injure the interest of consumers in competitive prices, and the broad national interest in expanded world trade.

Congressmen must view the proposed quota legislation on the basis of what is best for all Americans and not simply from the standpoint of special economic interests in their own districts.

---

[From the San Jose (Calif.) Mercury, July 17, 1970]

FREE TRADE POLICY ON WAY OUT?

The consumer suffers from trade barriers. Not only is he denied the opportunity to buy imports but some domestic concerns, unworried by foreign competition, may not work as hard to hold prices down.

If some businessmen gain from restricted trade, many others suffer. The U.S. still exports more than it imports. Quotas and other restrictions invite retaliation from abroad. A trade "war" affects not just dollar income but the whole fabric of international relations.

---

[From the New Orleans (La.) Times Picayune, July 17, 1970]

TRADE PROTECTIONISM POSES PROBLEMS

It is beyond arguing that American labor and factories should be safeguarded against dumping of foreign products on the domestic market. Yet stretching of basic protection into an elaborately restrictive policy

fosters the very Balkanization this nation has worked so assiduously to lower or eliminate.

---

[From the Albuquerque (N. Mex.) Journal, July 18, 1970]

QUOTAS THREATEN ECONOMY

The House would be ill-advised to take the narrow viewpoint espoused by the protectionist, a viewpoint which could lead to economic disaster.

---

[From the New York (N.Y.) Post, July 27, 1970]

AVERTING A TRADE WAR

The bill reported out by the Ways and Means Committee would reverse 37 years of progress toward free trade and would plunge the fragile entente between the U.S. and its partners into a bitter trade war. The very consumers whom the protectionists backing the legislations purport to be representing would in fact be the ultimate victims of such a global competition.

---

[From the Dayton (Ohio) News, July 31, 1970]

THROUGH THE NOSE

The congressmen could be more honest about their intentions by forgetting the quotas, billing taxpayers directly for the money, and turning it over to the textile, shoe and oil industries.

---

[From the Erie (Pa.) Times, Aug. 18, 1970]

HIGHER PRICES

One immediate result of a catch-all tariff bill—of the kind now being put together in Congress, with help from lobbyists representing both industry and labor unions—would be higher prices for any number of items. . . .

We hope the tariff bill is defeated in Congress. If not, we hope the President vetoes it.

---

[From the Springfield (Mo.) Leader & Press, July 20, 1970]

QUOTAS AREN'T THE ANSWER

What our government must remember, however, is that the consumer has a stake in this, and that the consumer is not an isolated industry, not a few thousand employes, but that every American is a consumer. It would be unfair to assess all our people to carry an industry that cannot meet competition, except on emergency basis. . . .

To aid and strengthen a temporarily troubled industry, yes; to solve its problems, whatever their nature, and afford permanent protection, no! Quotas are not the answer!

---

[From the Little Rock (Ark.) Gazette, July 21, 1970]

A DANGEROUS GAME IN TRADE RESTRICTION

The proposed new legislation is directly contrary to the spirit of the heralded Trade Expansion Act which Wilbur Mills and his committee wrote into the law early in the last decade. . . .

Arkansas is a great agricultural state and if the United States should blunder into a trade war damaging to our agricultural exports, the Arkansas economy might very well lose more than it would gain in both the long and short term.

The Ways and Means amendments to the foreign trade bill must not be allowed to stand as they are.

---

[From the Chickasha (Okla.) Express, July 20, 1970]

IMPORT QUOTAS CUT TWO WAYS

But it can be shown that import restrictions also hurt consumers, particularly those with low incomes. . . . Perhaps not a door but a box, a Pandora's box, has been opened.

[From the Pittsburgh (Pa.) Post Gazette, July 22, 1970]

REMOVING A MENACE TO WORLD TRADE

The chief objection to the import quotas prescribed by the House Ways and Means Committee is that they would not remedy the ills of ailing domestic industries. As Mr. Nixon has suggested most foreign trade analysts agree that import quotas are cumbersome and ineffectual instruments for enhancing domestic prosperity. Their primary effect on the U.S. economy would be a sharp rise in consumer prices. Even more devastating would be their impact on international relations.

---

[From the Miami (Fla.) Herald, June 7, 1970]

FREE TRADE STILL THE BEST

The advantages of freer trade to Americans are so obvious that a reversal of this 35 year old policy seems unthinkable. Yet Congress is under rising pressure from labor union spokesmen as well as business groups to slap quotas on imports.

---

[From the Baltimore (Md.) Morning Sun, Sept. 1, 1970]

BAD AND GOOD

The main push of the Committee bill is, however, for quotas—fixed quotas on textiles and shoes, variable quota authorizations on practically everything else. If enacted, such a bill would interrupt 35 years of freer trade for the United States. Without the quotas, but with repeal of ASP it would affirm and fortify that record.

---

[From the Newark (N.J.) News, Sept. 6, 1970]

WORRIED NEIGHBOR

Mr. Diaz Ordaz' speech can serve as warning of the reaction to be expected from the United States trading partners if the swing to self-defeating protectionism both in and out of Congress persists.

---

[From the Tarentum (Pa.) Valley News, Sept. 5, 1970]

A TIMELY WARNING

The Mills bill caters to so many special interests—Congressional, industry and labor—that it fails the people as a whole. It should be voted down by the House.

---

[From the Toledo (Ohio) Times, Sept. 1, 1970]

TAKE BACK YOUR PROTECTIONISM

* * * a voluntary agreement that works can set an example for other industries and obviate legislative import controls which would invite retaliation by other countries and touch off a potentially disastrous trade war.

---

[From the Evansville (Ind.) Press, July 25, 1970]

TRADE-THREAT BILL

This bill, if enacted, could cost many American workers their jobs, because of the loss of export markets, and certainly would lead to price increases for U.S. consumers—thus enlarging, instead of lessening, the inflation problem.

---

[From the Wall Street Journal, July 16, 1970]

VOTING FOR TRADE WAR

Any protectionists who think the trade picture can be improved by curbing imports are kidding themselves; Common Market countries, for instance, are already deciding which U.S. exports to attack.

Likely targets include U.S. farm products, which account for a sizable share of America's exports. . . .

Meanwhile, right here at home, the quotas guarantee higher prices for consumers, as well as reduced choice in the market. Willy-nilly, whatever their ability to pay, they will be compelled to subsidize a lot of businessmen.

---

[From the Wall Street Journal, July 28, 1970]

QUOTAS AND PRICES

Markets are seldom perfect, but they do still reflect the interaction of demand and supply. If quotas restrict supply and demand remains about the same or increases, the upward pressure on prices is inescapable.

If this were not true, if domestic producers had no fear at all of being undersold by imports, why on earth would any of them be interested in quotas? Try as they will, protectionists will never succeed in selling quotas as a blessing for consumers.

---

[From the Journal of Commerce, July 7, 1970]

SWEETENERS FOR IMPORT QUOTAS

Perhaps we are optimistic, but we don't think the public is all that dumb. We don't think the people or the more efficient industries in this country have many illusions of the purpose of import quotas. It is not to lower prices; it is to raise them. It is not to give people a greater choice in the markets; it is to narrow it. It is not to roll back price inflation, but to free it of one of the major influences that restrain it a little today.

---

[From the Journal of Commerce, July 15, 1970]

THE PRICE OF PROTECTIONISM

Officials of the European Economic Community are making little secret of what their reaction will be if Washington applies import quotas to textiles and footwear. They are hinting very broadly at the likelihood that their counterblow will fall on their own imports of American soybeans. . . .

It is worth noting that, although it came in a poor second to the United States, Mainland China was EEC's largest alternate supplier of soybeans last year. . . .

If the EEC countries and Japan manage to reduce substantially their imports of American soybeans it is only logical to expect that these stocks will start building up again under government loan programs.

This would mean, in effect, that the government would be picking up the bill by paying subsidies not to the textile and footwear manufacturers who assert they are being forced to the wall in their own markets, but to the soybean producers and exporters who have been making out quite well.

Does it make sense to blight one group of producers as the price of bailing others out of their competitive difficulties? If it does, we fail to see just how.

---

[From the Journal of Commerce, July 21, 1970]

THE TRADE POLICY SHOWDOWN

Mr. Nixon may feel Congress won't give him a bill so bad that a veto is unavoidable. Where he is running a risk is in the danger that the bill he receives won't be bad enough to draw a veto, but will be bad enough to set American trade policy back a long way.

---

[From the New York Times, May 12, 1970]

THREAT TO LIBERAL TRADE

To prevent a dangerous reversal of the liberal trade policies that have served this nation well for more than three decades will demand all the determination not only of Administration spokesmen and consumer-minded Congressmen but of those business and labor groups who depend on foreign trade for their livelihood.

---

[From the New York Times, Sept. 21, 1970]

A REACTIONARY TRADE BILL

Giving the President discretionary power to suspend quotas may actually worsen the legislation by making it even more discrim-

inatory. This form of bilateralism and special dealing could lead to a form of economic racism, since the 'national interest' clause is more likely to be invoked to exempt European countries from quotas than Asians or Africans. Poor countries striving to develop their exports would also be hurt by a quota system based on past shares of markets. . . .

Opponents of this protectionist bill will be serving the country's interest by making a hard fight against it in both House and Senate. If it can be put off until the next session of Congress, reason may yet return—even to groups now prepared to act against their own interests, in much the same way that farm, labor and business groups did forty years ago.

---

[From the New York Times, July 16, 1970]

LOOMING TRADE WAR

There is growing danger that the protectionist drive in Congress will ensnarl the United States in a trade war with the European Common Market and create grave problems for future relations between the world's two most important trade areas. Even more broadly, if protectionism takes command in this country, it could initiate a world-wide disruption of trade capable of threatening prosperity in many countries.

---

[From the New York Times, July 5, 1970]

TRIGGER FOR PROTECTIONISM

Quota protection would not even serve the long-term interests of the industries and workers being protected. This point receives strong documentation from the detailed report of the Nixon Administration's own interagency task force report on the shoe industry. The task force found that high-fashion shoe imports from Italy and Spain, far from damaging domestic producers, have stimulated the growth of the shoe market as a whole in this country. Without the style stimulus injected by the European imports, the task force concluded, the over-all shoe market might be cut in half.

---

[From the New York Times, June 28, 1970]

AVOIDING A TRADE WAR

The Administration might well be "reluctant" to adopt mandatory quotas. For one thing, they put the United States in violation of the General Agreement on Tariffs and Trade. For another, they will almost certainly provoke retaliation against the United States bv Japan and other countries hurt by American quotas. And they are sure to intensify problems of domestic inflation.

---

[From the Wall Street Journal, June 24, 1970]

NOT IN THE REAL WORLD

Higher tariffs, despite their other drawbacks, would spur foreign producers to reduce their costs and prices so that they could hold or expand their share of the American market. Under quotas they would have no such urge.

With the supposed intent of protecting domestic jobs, quotas would to some extent deaden the motivation of domestic industry. Whatever the effect in the U.S. market, this would not do much to prod the industry into new markets abroad.

---

[From the Tucson (Ariz.) Citizen, July 25, 1970]

DON'T IGNORE THE BATTLE AGAINST FOREIGN IMPORTS

Once quotas are established for textiles and footwear, how long will it be before other American industries are claiming equal protection? . . .

In the long run, protectionism works to the detriment of all.

Driving efficient producers from world markets only serves to drive up the prices of the products in question. The majority is made to suffer for the benefit of the few—the inefficient producers. . . .

The only times the national spotlight focuses on the drab issue of international trade are when it precipitates major economic crises. Too bad, because it is vital to the nation's future economic health that the protectionist be kept on a short rein.

This nation cannot afford economic isolation any more than it can afford political and diplomatic isolation.

---

[From the Washington (D.C.) Post-Times-Herald, July 20, 1970]

VETO THE TRADE BILL

If enacted unchanged, the Mills bill drafted by the Ways and Means Committee will make a major contribution to inflation. It will chill prospects for continued expansion of world trade. It will abuse the interest of many trading partners among both developed and less developed countries.

---

[From the Washington (D.C.) Star, July 22, 1970]

FOREIGN TRADE

Many mundane arguments can be marshaled in support of free trade—more jobs, efficiency through competition, a hedge against inflation, and a more peaceful international community. All this is important, but in these times of self-doubt and division it is equally important to recall the excitement of free trade as a doctrine. Free trade is as American as the ideal of an ever-beckoning frontier. Free trade was inspired, and has since been sustained, by those hardy innovators who enjoy the constant challenge to do something different, bigger or better. And without this kind of creative restlessness mankind would still be getting by on nuts and berries.

---

## PROTECTIONISM VERSUS FREE TRADE

(Mr. DENT asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. DENT. Mr. Speaker, I join with the previous speaker who addressed the House in asking that consideration be given to an open rule or at least to defeat of the previous question to open up and pave the road for an open rule.

Mr. Speaker, I intend to revise and extend my remarks today and to include with my remarks a chronological history of the trade and tariff actions of the Congresses of the United States since the very first Congress in 1776. I find that in most of the instances when I discuss trade and tariffs or protectionism or free tradism, call it what you will, I find there appears to be a very serious lack of knowledge, if not downright ignorance, of the history of trade and tariff actions of the Congresses of the United States.

Apparently there are a few in the Congress—and sometimes I am very fearful that this few in the Congress have very strong influence with a great number of Members—who have led Members to believe this Nation has climbed to its peak of progress and prosperity and influence on a policy of trade that is akin to the policy that we have today. Nothing is further from the truth. Had we adopted the kind of trade policies we are living under today, we might well be one of the nations that would be receiving aid from successful nations, rather than being the nation that is giving aid to the unsuccessful nations.

The real story of our trade history follows:

U.S. TARIFFS AND CHANGING CONDITIONS

In 1776 Adam Smith, a professor of moral philosophy at the University of Glasgow, published a revolutionary book on economics which he named "Inquiry Into the Nature and Causes of the Wealth of Nations."

Prior to this date, economic thinking had been dominated by a theory called "mercantilism." The central concept of mercantilism was that a nation is prosperous in relation to its money supply. One method of increasing the money supply was to expand exports and limit imports, thereby inducing an inward flow of gold and silver bullion. This required a host of regulations and restrictions inside the country, as well as at the borders, and swarms of enforcing agents.

Adam Smith in his "Wealth of Nations" developed a new concept. He declared that wealth comes from goods and services freely exchanged rather than from the money supply. His book introduced the idea of competition as the effective regulatory force in "free" economic society. Complete freedom of trade between different areas and different countries was a natural extension of his ideas of division of labor and competition.

The "Wealth of Nations" had a great influence upon the young patriots struggling to build a new nation out of the 13 American colonies. Alexander Hamilton was one of the first Americans to obtain a copy. Thomas Jefferson and James Madison refer to it frequently in their letters. Its ideas are constantly reflected in "The Federalist Papers."

By the close of the Revolution the prevailing opinion in America was in favor of free trade. This was a logical part of the general determination to promote "freedom"—freedom of speech, religious worship, assembly, and the other principles of personal freedom established by the Constitution and the Bill of Rights. Many of the principles set forth by Adam Smith were incorporated in those documents and in the constitutions of the individual States. They committed this country to the system of free, private, competitive enterprise.

But it is important to realize that many of the staunchest supporters of free trade, including Hamilton, appreciated the practical limitations of the theory. They saw that free trade can succeed only when applied within the boundaries of a community ruled by substantially the same laws. In this famous "Report on Manufacturers," presented to Congress in 1790, Hamilton strongly urged protective tariffs on manufactured products in contrast to his endorsement of free trade at home. He was apparently convinced that the free-trade area set up within the United States could develop its full potential only if protective tariffs were used to defend it against economic exploitation by other nations. Thus, he proposed tariffs to defend free trade within our own free markets.

Hamilton argued that the United States could attain a better balanced, more stable, more sustaining economy, better balanced for defense and national security, under a system of protective tariffs. He was concerned with the fact that the United States might remain a raw material supply area for Great Britain, as the Colonies had been, making them fully dependent upon the mother country for all manufactured goods. He wanted diversification for the Nation, just as many private enterprises today seek stability through diversification.

TARIFFS FOR REVENUE

The Colonies, however, had long been exposed to galling commercial restrictions imposed by Great Britain in her pursuit of the old mercantile theory, so that the newly established States had determined to keep government to an absolute minimum. They looked with disfavor upon the idea of import duties as unnecessary government interference. Hamilton's very able arguments were not sufficient to change the national thinking about protective tariffs. Nevertheless, almost the first act passed by Congress was a tariff law. It established duties on indigo, iron, wood, paper, leather, and even on tobacco and cotton. This tariff act was established as a revenue measure. In fact, up until the income tax law in 1913, import duties were the chief source of Federal revenue. In the 25 years from 1791 through the end of the War of 1812. Congress passed 24 different tariff acts. These merely modified rates, changed administrative procedures, or developed new classifications. Rates were, in general, fairly uniform on all commodities and it is estimated that less than 5 percent of all imports were on the free list. Collected duties appear to have been about 12.6 percent of the value of imports.

PROTECTIVE TARIFFS

The War of 1812 taught the new country many costly and bitter lessons. The war was the culmination of an attempt by Great Britain to drive American shipping from the seas and make the young republic entirely dependent upon Europe for manufactured products in exchange for raw materials. Because trade was interrupted during the war, it was necessary to establish manufacturing essential to the war effort and to civilian needs. This convinced the majority of the American people of the soundness of Hamilton's tariff principles which stimulated domestic growth of industry. Even Jefferson, who earlier had dreamed of worldwide reform in the name of free trade, changed his views. At the end of the war the new administration under James Monroe, a loyal follower of Jefferson, completely revised the tariff laws, stressing "protection" as the primary objective since many new industries, established during the war, could not compete at home with large European manufacturers.

Daniel Webster—who had, in 1824, thundered against the "obsolete and exploded notion of protection"—carried the day for high tariffs in 1828. Between 1812 and 1832 successive laws raised the general level of duties to some 45 percent of the value of all imports.

This move toward high tariffs was not uniformly applauded. The southern section of the country was much concerned since its economy depended largely on the export of tobacco and cotton in exchange for manufactured products from England and Europe. There were threats of nullification and secession in some of the Southern States.

This conflict of interest resulted in a policy of compromise sponsored by Henry Clay. His bill, passed in 1833, called for gradual reduction of all duties exceeding 20 percent, to be accomplished within 10 years. The experiment in compromise failed. By 1837 tariffs had been reduced to an average rate on dutiable goods of about 30 percent; and, of course, the average rate on all imports was much lower since many items had been put on the free list. As a result of the program of tariff reduction, the revenues collected were no longer sufficient to meet Government expenses. Moreover, the Nation's first great depression began in 1837. As a result of these circumstances, there was considerable agitation to increase tariff rates. Congress passed a new law in 1842 returning substantially to the tariff levels of 1832. Under the new act, revenues increased so that by 1846 they were in excess of Government requirements. Moreover, the country had entirely recovered from the depression.

The influence of southern politicians, however, was still potent. They forced many reductions in 1846, succeeded by sweeping reductions in 1857. Six months after this a financial panic swept the country, depressing agriculture, trade, and manufacturing alike. Most of the tariff rates had been reduced to 24 percent; and including items on the free list, duties on all commodities during the period 1857 to 1861 averaged about 20 percent. This was the lowest average rate of duties for the hundred years from 1812 to 1912.

Once again the Government was running at a deficit and the new Republican Party, although trying to avoid an open split with the South, passed the Morrill Tariff Act in 1861 which substantially restored the rates of 1846. To meet increased Government costs resulting from the Civil War, the tariff acts of 1867 and 1870 further increased tariff duties.

TARIFF COMMISSION

In the period following the Civil War, large immigration, rapid expansion into the western part of the country, extensive railroad building and the growth of other industries brought a new era of prosperity. Government receipts from customs duties were large. Once again agitation for tariff reductions developed and the Tariff Act of 1872 reduced the average rate on dutiable items to about 39 percent. Tariff rates remained a live issue and the Congress appointed the first Tariff Commission. In 1883 Congress passed a new tariff law based on the Commission's recommendations.

From 1789 until the income tax was introduced in 1913, tariffs were the principal source of revenue for the Federal Government, but there were always standard arguments against it. One argument was that tariffs would diminish imports and thus, regardless of the rates, dry up this source of income. However, the volume of imports was actually greater, and the Treasury fared better when the rates were relatively high. Indeed, in 1857 the main argument for reducing rates was that the Government was making too much money.

The experience of the country during the War of 1812 and the Civil War seems to have demolished the idea of international free trade as an end in itself. Changing political winds, and changing economic conditions, inevitably produced hundreds of changes in specific rates. The general level of rates tended to shift up when the Republicans were in power and down when the Democrats won. But the basic principles of protection consistently prevailed.

From about 1900 to 1932, minor changes were made from time to time. During the election campaign of 1908, the Republicans announced for the first time that the difference between the cost of production at home and a lower cost abroad was a basis for setting tariff rates. Nevertheless, it was not feasible to lower tariff rates significantly because import duties still remained the chief source of revenue for the Federal Government.

Under the Democrats in 1913, however, the new Federal Income Tax Law was passed. For the first time, tariff rate considerations were divorced from the compelling requirement of meeting the fiscal budget. The Democrats then passed the Underwood Tariff Act in which they made full use of the competitive principle enunciated in 1908. They acknowledged that foreign producers enjoyed a powerful advantage in low wages. Their purpose was to find rates which just offset this and other similar unnatural advantages. In theory, while exposing the domestic manufacturer to foreign competition, these rates would shield him and his workers against the effect of cheap labor abroad. The result was the most sweeping reduction since 1857.

Trade was so completely disrupted by World War I that the consequences of this radical 1913 change were not immediately felt. Promptly after the war, however, imports flooded in. The Germans actually proposed, as a means of paying off their indemnities, to sell $20 million worth of dyes per month in this country. In the face of the flood of imports, Congress passed an Emergency Act in May 1921. They then set to work preparing a new law.

A brief summary like this may leave the impression that drafting a tariff law is a fairly simple process, largely a choice between doctrines. Nothing could be more misleading. The rate on pistachio nuts, for instance, is vital to the man who has invested his life's savings in pistachio trees. He will bring to bear on his representative in Congress all the pressure he and his workers can contrive. The importer of pistachio nuts, and the farmer who fears discrimination against American wheat by foreign pistachio growers, will bring equally strong counterpressures to bear. The State Department, trying to negotiate an alliance with a pistachio-growing foreign country, and the War Department, trying to build a military stockpile of pistachio nuts, will have much to say. Trade has

become so complicated and so tangled that any item on the list can have endless domestic and international ramifications. It was because the problem has become so complicated that Congress established the Tariff Commission to serve as a group of experts to give assistance in drafting sound tariff legislation.

In working out the Fordney-McCumber Tariff Act of 1922, Congress and the Tariff Commission had to sift thousands of these conflicting claims and find a practical compromise between extreme positions. The result was to raise the average tariff rate slightly. Another general revision in 1930, embodied in the Smoot-Hawley Act, was again worked out on a product-by-product basis. Rates on many products were adjusted, some up and some down, and various provisions designed to protect the commerce of the United States against unfair competition were strengthened. The major depression of the early 1930's, however, so distorted the economy of the United States—and the world—that it is impossible to isolate the effects of this tariff.

RECIPROCAL TRADE AGREEMENTS ACT

Immediately after the election of Franklin D. Roosevelt in 1932, plans were made for a new tariff revision. Instead of carrying the revision through Congress and the Tariff Commission, the Reciprocal Trade Agreements Act was enacted, in 1934, as an amendment to the Smoot-Hawley Tariff Act. Under this amendment, the President was authorized for a period of 3 years to enter into trade agreements with other countries without congressional approval. His authority to reduce tariffs was limited to 50 percent of the then existing rates of duty and reductions were to be made only in exchange for reciprocal reductions from other countries. The President, operating through the State Department, began at once to negotiate trade agreements which mutually reduced rates between the two countries negotiating. Of course, as soon as we reduced the tariff rate to one country, we made the reduction available to all because of the application of our traditional most-favored nation policy. The consequences of this policy, initiated by the Reciprocal Trade Agreements program, have been confused by the effect of other factors at work at the same time—first continued depression, then the demands and devastation of World War II, followed by postwar dislocations, the Korean war, and the unremitting tensions of the cold war. Two facts, however, are clear. First, by any measure, U.S. tariffs are now among the lowest in the world. Second, the main objective of the program—a similar reduction of barriers throughout the rest of the world—has not been accomplished.

The first—that U.S. tariffs are now among the lowest in the world—may come as a surprise. This is a fact which has not been made clear to the American public.

As to the second point—the failure of the Reciprocal Trade Agreements program to accomplish a similar reduction in the barriers imposed by other countries—the evidence is abundant. Tariffs are the mildest of trade barriers. Import licenses, embargoes, quotas, exchange controls, cartels, and State trading are conspicuously more restrictive.

While efforts have been made to persuade other countries to relax their nontariff barriers—mainly by way of negotiations set in motion by the General Agreement on Tariffs and Trade, an international project launched in 1947—the result to date is not encouraging. In the opinion of many persons engaged in both domestic and foreign trade our negotiators, in their enthusiasm for expansion of world trade, have often surrendered more than they gained.

It has become customary for foreign nations to negotiate reductions of our tariffs in exchange for their tariff reductions and then to establish quotas on exchange controls which are even more restrictive than was the higher tariff so that in the end we have reduced our import restrictions but other nations have actually increased their trade barriers. Many of the most restricted foreign trade barriers—import quotas and exchange controls—effect deep-seated internal problems. They become an integral part of national inflationary money policies and socialistic national economic controls. Such quantitative restrictions can be removed only when sounder governmental policies are reestablished. No amount of negotiation on our part can change the internal situations which require these policies.

In this, our generation, we have witnessed the enactment and the operation of the Kennedy Round of Trade Agreements. All of us know the results. This Nation has been impacted to a greater degree during this time by the volume of imports than any time in our history.

More industries have felt the unfair competition, more jobs have been lost, and the Nation has more private, public, and corporate debts than all the other nations put together. This Nation also has the greatest static unemployment of any industrialized nation.

## NAVAL TRAINING OPERATIONS AROUND CULEBRA

(Mr. BENNETT asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BENNETT. Mr. Speaker, I speak today not as chairman of the Subcommittee on Real Estate but as an individual Member of Congress.

I have looked closely into the Navy's training operations around Culebra and the effect of that training on the people and the ecology of the island and its surrounding rocks and cays.

I have also followed closely the controversy over this issue in the Senate and in the media, and I believe the time has come for a new initiative that will benefit both the Navy and the people of Culebra.

The Navy has a real need for Culebra. Roosevelt Roads is the only area in the Atlantic Basin where coordinated, realistic fleet training operations can be conducted, and a good part of that training is done around Culebra—90 percent of all ship-to-shore bombardment training for the entire Atlantic Fleet and 80 percent of the air-to-ground weapons delivery training at the Atlantic Fleet Weapons Range. The Navy really wanted all of the island for more realistic targets and for more advanced weapons, but after 15 years of trying, it bowed to what it felt were the political facts of life. Instead the Navy announced a compromise plan which was presented to House and Senate Armed Services Committees last April.

People have lived on Culebra during the entire 34 years the Navy has trained there. No civilian has been killed or injured during training operations although an allegation was recently made that a boy sustained an eye injury in 1958 while playing with an "explosive toy" that some Culebrans say may have been left by the Navy. By any standards this safety record is truly extraordinary, and the Navy deserves due credit for it.

The Navy, however, has not contributed much to the local economy, although it has recently hired 35 Culebrans. At the same time, in the interest of safety it has of necessity restricted freedom of movement, particularly for local fishermen, and the presence of the Navy has undoubtedly discouraged many extensive tourist development. Therefore, many Culebrans feel that the Navy's presence has not been beneficial on balance. However, the local population of 726 is not likely to grow much, even with tourist development, and a population of that size—or double that size—simply cannot support adequate schools, hospitals and other facilities that one takes for granted in the modern world.

A vigorous campaign has recently been mounted to force the Navy off the island entirely. Culebrans and other well-meaning people are involved, but there are also developers, antimilitary groups and members of the Puerto Rican Independence Party whose motives apparently have little to do with the welfare of the people of Culebra. These people claim the Navy can train elsewhere by finding an uninhabited island or building a floating platform. I have studied this problem in depth, and there are no suitable islands for Navy training in the Roosevelt Roads operating area. As for the other suggestions, large floating platforms are fantastically expensive and not yet state of the art as targets, and artificial islands would cost hundreds of millions of dollars—even if a suitable location could be found.

For a small fraction of that cost the people of Culebra could be moved to another location in Puerto Rico where they could have better housing with potable running water and a sewerage system. I realize many Culebrans would not willingly move simply in exchange for another house, even if it were much better. I have, therefore, introduced a bill, the Culebra Resettlement Act, which not only provides each Culebran with equal or better housing elsewhere in Puerto Rico but which also provides for a substantial cash payment to each family and to each single person who is not a member of a family. Each head of a household would receive $10,000 in cash and every other person who maintains his

principal place of residence on Culebra who is not head of or member of a household would receive $5,000.

This would be the opportunity of a lifetime for the people of Culebra; yet it would cost only $2½ million in addition to the costs of moving the people and purchasing the land, which should cost about $8 to $12 million. For that cost the Navy would have a target complex where it could train on more realistic targets with its newest weapons—and without the need to worry about the safety of people living near target areas.

This act will not force the Culebrans off their land against their will. On the contrary, my bill provides for a plebiscite in which a majority of the voters of Culebra must approve the plan. Many Senators and Representatives have made impassioned statements about their concern for the people of Culebra. Now is their chance to do something for the welfare of those people by supporting passage of this bill which I have introduced today.

Some have already agrued that the Culebrans do not want to move off their island, no matter what the price. But is not this the kind of question we should ask the Culebrans themselves in a secret vote, where they will be free of any pressures except those of their own consciences? Anyone who truly believes in democracy should insist that the Culebrans be allowed to decide for themselves if they wish to accept or reject this offer which is, without any exaggeration, the chance of a lifetime.

This bill is good for the people of Culebra, good for the Navy, and good for the continued close and friendly relations between the United States and the Commonwealth of Puerto Rico. It deserves the support of all who are concerned both with the welfare of the people of Culebra and the security of this country.

## REPORT ON SCRANTON COMMISSION ON CAMPUS UNREST

(Mr. SCHERLE asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. SCHERLE. Mr. Speaker, the Scranton Commission on Campus Unrest has emerged from 3 months of extremely controversial hearings and deliberations with a wishy-washy, weak-kneed report. They labored to bring forth an elephant and produced a mouse. I strongly disagree both with its approach to the problem and with the final conclusions drawn.

The problem of campus unrest is one that must be dealt with primarily by educators and administrators on campus. These officials must learn to discipline students who break the law and disrupt the life of the university, by expulsion if necessary.

To lay the problem solely at society's doorstep is to ignore the responsibility which the students themselves must assume for their own actions. If they wish to be treated as adults and have a significant voice in university affairs, they must behave like adults rather than like children who throw tantrums when things do not go their way.

We have always had our problems. American society is not perfect. But constructive change must be made gradually and peacefully, not through bombings and burnings.

The "irresponsible rhetoric" of which many students complain, and for which they blame the establishment, has actually come far more often from the radical left.

Joseph Rhodes, Jr., for example, a Commission member famous for his attacks on Vice Presidential rhetoric, has often been guilty of intemperate and prejudicial palaver. Although he wraps himself in sanctimonious statements, he himself is a bigot. On "Meet the Press," he spoke of the tragedy of people's children being shot—referring to the deaths of students at Kent and Jackson State—yet he seems to have forgotten that the young men who serve in the National Guard are also someone's children. They are not test-tube babies bred by artificial insemination, but human beings subject to fear and danger, too. He also neglected to mention the tragic and violent death of a researcher at the University of Wisconsin together with the loss of many scholars' life work. Such selective compassion and concern betrays a blatant bias on the Commission's part in favor of student radicals.

I hope that this will be the last word in Commission studies and reports. We need less talk and more action. But the action must come from the college administrators themselves and that will take more guts than they have shown to date.

The letter follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
*Washington, D.C., September 28, 1970.*

HON. RICHARD NIXON,
*White House,*
*Washington, D.C.*

DEAR MR. PRESIDENT: This letter is to inform you of our support in your endeavor to solve the problems on American college campuses. We believe that the report by the Scranton Commission on Campus Unrest blatantly disregards the efforts you have already made.

In addition, we are convinced that the report totally ignores reality in its recommendations for ending terror and illegal, disruptive activities in the academic community. It is our belief that "ending the Vietnam war, reforming the universities, and a continuing commitment to social justice" will not in themselves placate campus extremists. The claim that greater efforts in these areas will effectively restrain militant revolutionists is unrealistic.

We concur with F.B.I. Director J. Edgar Hoover's open letter to college students of September 21st:

"The extremists are a small minority of students and faculty members who have lost faith in America. They ridicule the flag, poke fun at American institutions, seek to destroy our society. They are not interested in genuine reform. They take advantage of the tensions, strife and often legitimate frustrations of students to promote campus chaos. They have no rational, intelligent plan for the future either for the university or the Nation."

In closing, Mr. President, we reaffirm our staunch support for your continued positive efforts to lessen campus unrest—not to pacify the radicals who seek to destroy our society, but to insure the right of all students to pursue their education.

Respectfully,
BARRY M. GOLDWATER, JR.,
*Member of Congress.*
WILLIAM J. SCHERLE,
*Member of Congress.*

## THE 25 YEARS OF PROGRESS

(Mr. BEVILL asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. BEVILL. Mr. Speaker, the 4-year Alabama School of Medicine is celebrating its 25th year of progress. Since moving to Birmingham, 25 years ago, the school of medicine has offered a continuing program of excellence.

At this time, Mr. Speaker, I would like to place in the RECORD a recent editorial which ran in the Birmingham News, briefly describing the school's growth and development.

The editorial follows:

THE 25 YEARS OF PROGRESS

A quarter century ago this week the two-year medical program located on the Tuscaloosa campus of the University of Alabama was moved to Birmingham's Southside.

What has transpired in the ensuing 25 years is a glittering chapter in higher education in Alabama. The four-year Alabama School of Medicine, through its training in patient care and development of a constantly growing program of research, has earned a national reputation as an outstanding institution.

The 1945 fledgling, first housed in temporary quarters, now extends across 15 square blocks of the ever-expanding Medical Center. Target of planners at the University of Alabama in Birmingham is a physical area three times that size and what is certain to become medical training and scientific research preeminence in the Southeast.

The University of Alabama's School of Medicine, constantly adding new luster to its structure, is a major asset to the State of Alabama and certainly a prized member of Birmingham's "family."

From Thursday through Saturday the School of Medicine will mark its silver anniversary, recalling the struggles and the triumphs that have brought it to its present stature, presenting a program devoted to medical-scientific subjects and reflecting upon the history of the institution.

Alabama and Birmingham very properly may applaud the success achieved in this area of higher education which they have helped make possible. Present and future Alabamians are its beneficiaries.

## COMPREHENSIVE ENVIRONMENT PROGRAM

(Mr. BROWN of Ohio asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. BROWN of Ohio. Mr. Speaker, the Vice President of the United States has called attention recently to the fact that there are a number of members of the Johnny-come-lately Club who have discovered that crime is a problem in America and that radical extremism is a danger to a stable and progressive American society. Such politicians are like the French leader who had to run through the alleys of Paris to stay ahead of the crowd he thought were his followers.

I would also like to nominate for membership in the Vice President's Club of Come-latelys those noble folks on the majority side of the aisle who have recently become critical of the Nixon administration for not solving in its first 20 months in office the pollution problems which afflict our Nation and the world. To them I must ask, "Who was in charge of the Government—both the executive branch and both Houses of Congress—while environmental quality in America was deteriorating?"

I realize, as my Democratic colleagues do, that the assault on the environment has been going on for some time. But gentlemen and ladies, this Government was in your hands for 8 years from 1960 through 1968, the most recent period of your ascendency. Where was your concern then?

President Nixon has had the perception to recognize this crisis and to do something about it. He has taken more steps administratively and recommended more legislative action than the current Democratic leadership in Congress has found time to consider.

The President can only do certain things on his own authority. Unfortunately, his party does not control the Congress of the United States and so he must wait for action from the world's greatest deliberative body. And that is what the rest of the country is doing, too: Waiting. We have waited for 8 years while the Potomac became too thick to drink but too thin to plow, while the Great Lakes became fire hazards, and the Los Angeles smog became a nationwide phenomenon.

The records of both the past 20 months and the previous 8 years are well documented. The past 8 years when the Democrats held the administration has seen the destructive forces eroding America's environment go largely unchallenged. Some amendments to laws initiated in the Eisenhower era were passed. They sounded good, but proved unable to cope with the problems. Things got worse, instead of better. Shortly after my Democratic friends lost control of the administration they mysteriously received some new sense of mission in the antipollution crusade and have begun challenging the present administration to tackle the mammoth problems they had been unable to cope with. Apparently they hope that Americans will believe the suffocating air, the dirty water, the constant din of noise, the destroyed green space, and the crumbling inner cities have all occurred in the past 20 months. My friends, they were already there, and getting worse, before President Nixon had even been nominated by his party to run for the office he now holds.

The Nixon record of the past 20 months is in clear contrast to the virtual "nonrecord" of the previous 8 years under the Democrats. Not only new and far-reaching legislative programs have been developed and presented to the 91st Congress, but the President has taken numerous administrative actions to halt the assault on our environment. That record is too long for me to recite here. However, since it is apparent that some of my colleagues on the other side of the aisle have failed to read it, I include it in the RECORD for their attention. Then, I challenge them to get busy with the legislative proposal before them so the job can be done, and quit wasting time that jeopardizes the future of America in this important area of concern.

Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include extraneous matter, including the following 37-point program of executive action and legislative proposals of the Nixon administration, which is the most comprehensive environmental program ever proposed:

NIXON'S 37-POINT PROGRAM

*Water pollution*

1. Authorization of $4 billion to cover the Federal share of $10 billion needed for construction of municipal waste treatment plants. To be allocated at a rate of $1 billion per year over the next four years, with a reassessment in 1973 of further needs for 1973 and subsequent years.

2. Establishment of Environmental Financing Authority to ensure that every municipality can finance its share of treatment plant construction costs.

3. Revision of statutory formula governing allocation of grants for treatment plant construction, to permit construction of plants where need is greatest and where greatest improvements in water quality will result.

4. Requirement that treatment plants be built to prescribed design, operation and maintenance standards, and be operated only by certified operators.

5. Requirement that municipalities imposes users fees on industrial users sufficient to meet costs of treating industrial wastes.

6. Requirement of comprehensive river basin plans, to assure that construction of municipal treatment plants is complemented by abatement of all other sources of water pollution.

7. Encouragement of construction of large-scale, regional treatment facilities.

8. Extension of Federal-State water quality standards to include precise effluent standards for all industrial and municipal resources.

9. Provision that violation of established water quality standards is sufficient cause for court action.

10. Revision of Federal enforcement procedures to permit swifter court action against those in violation of water quality standards.

11. Provision that violation of established water quality standards is subject to court-imposed fines of up to $10,000 per day.

12. Authorization for the Secretary of the Interior to seek immediate injunctions where severe water pollution threatens imminent danger to health or irreversible damage to water environment.

13. Extension of Federal pollution control authority to include all navigable waters, both inter- and intra-state, all interstate ground waters, the United States' portion of boundary waters, and waters of the Contiguous Zone.

14. Tripling of Federal operating grants to state pollution agencies—from $10 million now to $30 million in 1975.

*Air pollution*

15. Publication of new, more stringent motor vehicle emissions standards for 1973 and 1975.

16. Revision of auto emissions enforcement procedures, to ensure that all new autos are in compliance with Federal standards.

17. Authorization for the Secretary of Health, Education, and Welfare to regulate gasoline composition and additives.

18. Initiation of a research and development program to produce an unconventionally-powered, low-pollution auto within five years.

19. Initiation of testing and evaluation programs to assist private developers of unconventional, low-pollution autos.

20. Establishment of national air quality standards, with the states preparing abatement enforcement plans to meet national standards.

21. Accelerate designation of inter-state air quality control regions.

22. Establishment of national emissions standards for pollutants that are extremely hazardous to health and for specified classes of new facilities.

23. Extension of Federal air pollution control authority to both inter- and intra-state situations.

24. Provision that violation of air quality standards and national emissions standards are subject to court-imposed fines of up to $10,000 per day.

*Solid waste management*

25. Redirection of solid waste research toward techniques for re-cycling materials and producing packaging materials that are easily degradable.

26. Council on Environmental Quality to develop bounty payment or similar system to ensure prompt scrapping and re-cycling of junk automobiles.

27. Council on Environmental Quality to work with appropriate industry and consumer groups to develop other incentives or regulations for re-cycling or easier disposal of consumer goods.

*Industrial involvement*

28. Establishment of National Industrial Pollution Control Council.

29. Priority treatment for patent applications which could aid in curbing environmental abuses.

*Parks and recreation*

30. Full funding of the $327 million available under the Land and Water Conservation Fund.

31. Review of all Federally-owned real estate to identify properties that can be converted to public recreational use, or sold, with proceeds used to acquire additional recreational areas.

32. Relocation of Federal installations that occupy locations that could better be used for other purposes.

33. Provision that the Land and Water Conservation Fund is maintained or increased as a source of funds for purchase of lands in future years.

34. Authorization for the Department of the Interior to convey surplus real property to State and local governments for park and recreational purposes at public benefit discounts of up to 100%.

35. Revision of budget accounting procedures to encourage Federal agencies to make more efficient use of their properties.

36. Assistance to State and local governments for making constructive recreational use of idled farmlands.

37. Authorization of long-term contracts with owners of idled farmlands for reforestation and other improvements for public recreational use.

II. HIGHLIGHTS OF PRESIDENT'S ENVIRONMENT PROGRAM: WATER POLLUTION

*Municipal pollution*

Major problems: 1. Federal funding for construction of water treatment plants has been far below the nation's needs.

2. Municipalities with serious pollution problems have often been unable to finance their share of treatment plant construction costs.

Administration proposals: 1. Federal funding to provide waste treatment in every community in the nation at the fastest rate

possible. $10 billion program to begin now, with assessment in 1973 of needs for 1975 and beyond.

2. Environmental Financing Authority to ensure that all municipalities needing treatment plants can finance local costs.

*Industrial pollution*

Major problem: 1. Regulations on disposal of industrial wastes (regulations apply to municipal wastes as well) have been too weak to prevent increasing water pollution.

Administration proposal: 1. Reform pollution control program to greatly strengthen regulations on industrial and municipal polluters and permit swift enforcement actions.

*Agricultural pollution*

Major problem: 1. Agricultural pollution sources are diffuse, necessitating control of agricultural methods and materials.

Administration proposal: 1. Phasing out of DDT and other hard pesticides. Water quality controls on concentrated animal feedlots.

AIR POLLUTION

*Automobile pollution*

Major problems: 1. Emissions from motor vehicles must be reduced greatly if air pollution is to be brought under control.

2. It may be impossible to reduce emissions from conventional automobiles sufficiently to reduce air pollution beyond 1980 in the face of increasing numbers of autos.

Administration proposals: 1. Strengthen Federal automobile emissions standards and reform enforcement procedures to ensure that they are applied to all new autos. Regulate gasoline composition and additives to achieve maximum possible pollution reduction.

2. Begin a research and development program to produce an unconventionally-powered, low-pollution auto by 1975 if we cannot reduce pollution sufficiently from conventional vehicles.

*Pollution from stationary sources*

Major problem: 1. The present program for regulating air pollution from stationary sources is extremely limited in scope and does not provide sufficient enforcement authority against polluters.

Administration proposal: 1. Establish national air quality standards and extend abatement regulations to all areas of the nation where air quality is below national standards. Establish national emissions standards for extremely hazardous polluters and certain classes of new facilities. Strengthen enforcement authority for swift action against polluters.

SOLID WASTES

Major problem: 1. New consumer technologies and marketing methods are creating an increasing volume of waste and refuse. There are few incentives for reusing wastes or disposing of them efficiently.

Administration proposal: 1. Develop incentives and regulations for reducing volume of wastes, by encouraging products that can be re-cycled or easily disposed.

PARKS

Major problems: 1. Metropolitan expansion is claiming potential recreation areas which will be irretrievable if not acquired *now*.

2. Federal funding for acquisition of recreation areas has been far below national needs.

3. The Federal government has not made imaginative use of its vast real estate assets.

Administration proposals: 1. Full funding of the Land and Water Conservation Fund: $327 million for fiscal 1971.

2. Identification and conversion of Federal properties which could better be used for public recreation. Selling of some Federal lands for financing of additional recreation areas.

3. Increased use of idled farmland for public recreation.

## DEMOCRATS ATTACK PRESIDENT NIXON'S ENVIRONMENTAL EFFORTS

(Mr. DEVINE asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. DEVINE. Mr. Speaker, I concur most heartily with what the gentleman from Ohio (Mr. BROWN) said a moment ago about the unfair attack by the Democrats against President Nixon's environmental efforts. I also agree with him that the Republican record is so clear regarding the Nixon administration's strenuous efforts to bring this problem under control that it can stand by itself. Until the Democrats can match this record, they had better quiet down and quit polluting our political environment with such baseless charges.

Under unanimous consent to revise and extend my remarks I include the following:

REPUBLICAN ENVIRONMENTAL POLICY INITIATIVES

PUBLIC LEADERSHIP—MAJOR PRESIDENTIAL STATEMENTS AND MESSAGES

*Message to Congress on Population Growth (July 21, 1969).*—Examined the implications of a continued population growth rate that will result in world population of 8 billion and a U.S. population of 300 million in the year 2000.

Recommended creation of a Commission on Population Growth and the American Future to examine (1) the probable course of population growth, internal migration and related demographic developments between now and the year 2000, (2) the resources in the public sector of the economy that will be required to deal with the anticipated growth in population, and (3) ways in which population growth may affect the activities of Federal, state and local governments.

The President also outlined government activities to increase research on population problems, encourage more trained persons to work in population and family planning programs at home and abroad, expand and better integrate family planning services.

*State of the Union Message—January 22, 1970.*—The President pledged to propose the most comprehensive and costly program to provide clean air, clean water, and open spaces in the nation's history.

*Message on the Environment—February 10, 1970.*—The President outlined a comprehensive program embracing 23 major legislative proposals and 14 new measures being taken by administrative action or Executive Order in the fields of: water pollution control, air pollution control, solid waste management, parklands and public recreation, and improved governmental organization in these fields.

*Statement on Industrial Pollution Control Council—April 9, 1970.*—By Executive Order, President Nixon created the *National Industrial Pollution Control Council* comprised of prominent industrial leaders. In creating the Council, President Nixon stated, *"The problem of the environment is one area where private enterprise can do the job only if government plays its proper role."* The Council, he indicated, *". . . will allow businessmen to communicate regularly with the President, the Council on Environmental Quality, and other government officials and private organizations which are working to improve the quality of the environment."*

*National Council on Marine Resources and Engineering Report—April 14, 1970.*—The National Council on Marine Resources and Engineering, headed by Vice-President Agnew, stated in its annual report to the President and Congress that the oceans as well as the air and land must be included in the battle against pollution.

*Message on Control of Dumping in the Great Lakes and the Oceans—April 15, 1970.*—The President recommended legislation to stop dumping of polluted dredged spoil into the Great Lakes and directed that a study of ocean dumping be completed by September 1, 1970.

*Message to Congress on Oil Pollution—May 20, 1970.*—The President proposed legislation and announced administrative actions to reduce the risks of oil pollution. In this message the President expressed the strong commitment of the Administration to protect the national environment without "retarding social and economic progress."

*Message to Congress on Administrative Reorganization—July 9, 1970.*—The President proposed Reorganization Plan No. 3 of 1970 which would establish the Environmental Protection Agency (EPA) and Reorganization Plan No. 4 of 1970 which would create a National Oceanic and Atmospheric Administration within the Department of Commerce. The President stated, *"Despite its complexity, for pollution control purposes, the environment must be perceived as a single, interrelated system. Present assignments of departmental responsibilities do not reflect this interrelatedness."* In proposing the new organization the President said that *"it would permit response to environmental problems in a manner beyond the previous capability of our pollution control programs."*

*Status.*—House—passed H.R. 17255 on June 10, 1970. This bill is similar to the Administration proposal. Senate—The Committee on Public Works is considering legislation containing major differences from the Administration bill.

*Solid Waste Legislation*

The Administration proposal would authorize the Council on Environmental Quality to conduct studies and make recommendations respecting the reclamation and recycling of material from solid wastes, and to extend provisions of the Solid Waste Disposal Act.

*Status*—House—passed H.R. 11833 on June 23, 1970. This bill is similar to the Administration bill. Senate—Committee on Public Works has reported S. 2005, which has major differences from the Administration bill.

*Parks and Recreation Legislation*

The Administration proposal would amend the Land and Water Conservation Act to provide for converting Federal properties which could better be used for public recreation.

*Status.*—House—Two bills involving the President's program have been reported from Committee—H.R. 18275 from the Committee on Government Operations and H.R. 15913 from the Committee on Interior. Senate—Hearings have been held on a revised Administration bill by the Committee on the Interior.

*Great Lakes Dumping Legislation*

The proposal prohibits the disposal of polluted dredging in the Great Lakes or its waterways and provides for establishment of containment facilities.

*Status.*—Referred to the Committees on Public Works in the House and Senate.

*Oil Pollution Control Legislation*

*The Ports and Waterways Safety Act of 1970* enables the Coast Guard to protect against oil spills by authorizing them to control vessel traffic in inland and territorial waters, to regulate the handling and storage of dangerous cargoes, and to establish safety requirements for waterfront facilities.

LEGISLATIVE LEADERSHIP—THE PRESIDENT'S ENVIRONMENTAL PROGRAM

On February 10, 1970, the President proposed *7 major bills* designed to carry out the pledges and recommendations outlined in

his State of the Union and Environmental Messages to Congress.

*Water pollution control legislation*

*Environmental Financing Authority.*—Establishes an Environmental Financing Authority to ensure that all municipalities needing treatment plants can finance local costs. Authority would be authorized to make commitments to purchase obligations and participations issued by State and local public bodies to finance the non-Federal share of treatment construction projects deemed by the Secretary of Interior to be eligible for direct Federal assistance.

*Facilities Construction.*—Amends the Federal Water Pollution Control Act to establish a $10 billion ($4 billion Federal share) program of construction for waste treatment facilities. Federal funds to be allocated at a rate of $1 billion per year over the next 4 years, with a reassessment in 1973 of further needs for 1973 and subsequent years.

*Enforcement.*—Authorizes the Secretary of Interior to develop comprehensive water quality programs and grants authority to permit swift enforcement.

*Research and Development.*—Amends the Federal Water Pollution Control Act to authorize research, investigation, training and demonstration projects to improve State and interstate pollution control programs. Greater flexibility is provided for the grant programs.

*Status.*—House—the 4 Administration bills have been referred to the Committee on Public Works. No hearings have been scheduled. Senate—Hearings have been held on the 4 Administration bills in the Committee on Public Works.

*Air pollution control legislation*

*Clean Air Act Amendments.*—Extends the Clean Air Act for 3 years; authorizes the Secretary of HEW to set national air quality standards and standards for emissions from stationary sources; establishes standards for composition of transportation fuels and fuel additives; provides for mandatory testing and certification of systems to control emissions from new motor vehicles and engines.

*Status.*—House—Hearings held by the Committee on Merchant Marine and Fisheries. Senate—referred to Committee on Commerce.

*The Vessel Bridge-to-Bridge Radiotelephone Act* requires the use of bridge-to-bridge radiotelephones on vessels.

*Status.*—House—Reported by Committee on Merchant Marine and Fisheries on December 10, 1969 and passed House on December 16, 1969. Senate—Referred to Committee on Commerce.

*Towboat Operator Act* requires uninspected towing vessels to be under the direction and control of a licensed operator.

*Status.*—House—Hearings have been held by Committee on Merchant Marine and Fisheries. Senate—Referred to Committee on Commerce.

*Administrative Leadership—Administrative Actions to Protect and Reclaim the Environment.*

*Appointment of a Cabinet Committee on the Environment*—May 29, 1969. In creating the committee by executive order, the President stated he was acting because "the quality of American environment is threatened as it has not been threatened before in our history." The Committee is a Cabinet-level advisory group to the President to provide a focal point for Administration efforts to protect all our natural resources.

*Implementing the Environmental Quality Act of 1969.*—Recognizing the urgency of improving environmental quality, the President in his *first official act of 1970* signed the Environmental Quality Act of 1969 creating a Council of Environmental Quality within the Executive Office of the President. Outstanding men were appointed to the new Council on Environmental Quality (CEQ).

Chairman: Russell E. Train, former Under Secretary of Interior and President of the Conservation Foundation.

Member: Robert Cahn, Pulitzer Prize winning reporter for the Christian Science Monitor.

Member: Gordon J. F. McDonald, Vice Chancellor for Research and Graduate Affairs, University of California, Santa Barbara.

The Council is already engaged in a series of significant activities including: supervision of the Executive Order to curtain pollution by Federal installations; development of bounty system to promote prompt scrapping of all junk autos; working with industry and consumer representatives to develop incentives to encourage re-use, re-cycling and easier disposal of commonly used goods.

*First Meeting of CEQ—Involving the State and Local Sector.*—On February 6, 1970, President Nixon met in Chicago, Illinois with governmental leaders and pollution control officials. The purpose of the conference was to allow the President and his advisors to hear from State and local officials about their attempts to abate pollution. The meeting continued the Administration's policy of involving the local sector in pollution control.

*Executive Order To Curtail Pollution by Federal Installations—February 4, 1970.*—The order requires that all projects or installations owned by or leased to the Federal government be designed, operated and maintained so as to conform with air and water quality standards—present and future—which are established under Federal legislation.

*The order established a $359 million program for achieving this objective and prohibits the transfer of these funds to other programs.* The order also requires that all facilities which are built in the future must be pollution free; budget requests for new facilities must include all necessary funds for pollution control.

The Nixon Executive Order strengthens previous executive orders in the field by:

Setting a specific date, December 31, 1972, when existing Federal installations must comply with pollution control standards.

Setting specific pollution control standards to replace the old vague standards.

Requiring that an agency use funds designated for pollution control. Under previous order, many funds had frequently been reprogrammed for other uses.

Providing for oversight of the order by the Council on Environmental Quality.

Covering ground water pollution and accidental pollution which were not previously covered.

WATER POLLUTION

The President authorized the Secretary of Interior to spend the full $800 million appropriated for FY 1970 for sewage treatment plants.

Secretary has been directed to institute the following reforms:

Require Federally assisted treatment plants to meet prescribed design, operation, and maintenance standards, and to be operated by State-certified operators.

Require municipalities receiving Federal assistance in constructing plants to impose reasonable users' fees on industrial users sufficient to meet the costs of treating industrial wastes.

Require development of comprehensive river basin plans at an early date, to ensure that Federally assisted treatment plants will in fact contribute to effective clean-up of entire river basin systems.

Encouragement, where feasible, of communities to cooperate in the construction of large regional treatment facilities.

One of the first manpower training programs started under the Nixon Administration in 1969 was the upgrading of 941 underskilled persons in their work as waste treatment plant operators in 20 states.

AIR POLLUTION

The Secretary of HEW has published notice of new, considerably more stringent motor vehicle emission standards he intends to issue for 1973 and 1975 models.

As an incentive to private developers, the President ordered that the Federal Government should undertake the purchase of privately produced unconventional vehicles for testing and evaluation.

The Secretary of HEW, Secretary of Transportation, and FAA Administrator reached an agreement with 31 scheduled and charter airlines to reduce air pollution caused by certain jetliners by 1972. This agreement will reduce the 34,500 pounds of solid pollutants discharged into the air each day by flying jets by 70–80%.

SOLID WASTE

The President has ordered a re-direction of research under the Solid Waste Disposal Act to place greater emphasis on techniques for re-cycling materials, and on development and use of packaging and other materials which will degrade after use, *i.e.*, which will become temporary rather than permanent wastes.

PARKS AND PUBLIC RECREATION

The President has stated that "the time has come to make more rational use of our enormous wealth of [Federal] real property, giving a new priority to our newly urgent concern with public recreation—and make more imaginative use of properties now surplus to finance acquisition of properties now needed." The President has therefore:

By Executive Order, directed the heads of all agencies and GSA to institute a review of all Federally owned real properties that should be considered for other uses. Special emphasis will be placed on identifying properties that could appropriately be converted to parks and recreation areas, or sold, so that proceeds can be made available to provide additional park and recreation lands.

Established a Property Review Board to review GSA reports and recommend what properties should be converted or sold.

PESTICIDE REFORM

In implementing the President's executive order to curtail pollution on Federal installations, Secretary of Interior Hickel on June 17, 1970 placed a ban on the use of pesticides on more than 500 million acres of Federal land. He placed thirty-two chemicals on a "restricted list" to be used only with approval of the Cabinet subcommittee on pesticides.

The Department of Agriculture proposed on June 10, 1970, reforms of the 1947 pesticides law which would—

Give power to HEW to enter manufacturing plants to check on the conduct of quality control program of pesticides.

Restrict dangerous pesticides to use by licensed, trained technicians who will be legally responsible for their misuse.

Permit Secretary of Health, Education, and Welfare to order a "preliminary suspension" of pesticides he considers dangerous. This would stop sales pending prompt administrative proceedings.

INDUSTRIAL POLLUTION CONTROL COUNCIL—INVOLVING THE PRIVATE SECTOR IN THE FIGHT AGAINST POLLUTION

On April 9, 1970, by Executive Order, President Nixon created the *National Industrial Pollution Control Council.*

The appointment of the Council reflects the Administration's belief that "the effort to restore and renew our environment cannot be successful unless the public and the private sector are both intensively involved in this work—with their efforts closely coordi-

nated." The Council will provide an important mechanism for achieving this coordination.

The functions of the Council are to:

Coordinate the efforts between the private and public sector to restore and renew the environment.

Give industry an active and visible part in planning programs to abate pollution from industrial sources.

Allow private business men to communicate directly with the President, the Council on Environmental Quality, and other government officials and private organizations working to improve the environment.

Survey, evaluate, and propose plans and actions of industry in the field of environmental quality.

MERCURY POLLUTION CONTROL

Due to possible damage to human organic systems from mercury poisoning and the fact that mercury is appearing in streams, fish, cattle, and hogs, the Department of Agriculture has canceled Federal registration for some 60% of mercury compounds.

In a further effort to end pollution by mercury, Attorney General John N. Mitchell on July 24, 1970 authorized the filing of suits against eight companies on charges of dumping mercury into lakes and rivers. The suits, filed under the Refuse Act of 1899 ask the court to halt the dumping of poisonous mercury and require the alleged polluters to take immediate remedial action.

POLLUTION DEVICE PATENT PRIORITY

In order to process inventions promising to clean up the environment, President Nixon has ordered that the United States Patent Office give special priority to the processing of applications for patents which could aid in curbing environmental abuses. The Patent Office's plan is to process environmental protection devices in 6–8 months instead of the usual 3 years.

OIL POLLUTION

In his message to Congress on May 20, 1970, President Nixon outlines the following actions being taken by the Administration to reduce the risks of oil pollution:

Submission to the Senate for its advice and consent two conventions, signed by the U.S. in conjunction with the Intergovernmental Maritime Consultive Organization to allow preventive action against vessels that threaten pollution danger to a country's coasts.

Secretary of State is being instructed to seek effective multilateral action to establish international standards for construction and operation of oil tankers.

All government agencies are being instructed to require their vessel and aircraft commanders to report all oil spills immediately and that the Coast Guard is increasing its offshore air patrols and enforcing all anti-pollution laws vigorously.

A radar system has been developed in San Francisco which enables tankers to move through congested areas with much less risk. More of these will soon be established.

Research and development efforts will be continued until solutions are found to the problems of oil spillage, cleanup, and the mitigation of ecological damage. Also, a new system of cleanup has been developed that will pump up to 20,000 tons of oil a day from a stranded tanker.

Calls upon private industry and Secretaries of Commerce, Interior, Transportation to develop port facilities for disposal of waste oil.

ENVIRONMENTAL PROTECTION AGENCY (EPA)

In fulfillment of his February 10, 1970 pledge to recommend improved administrative machinery to meet the problems of pollution, President Nixon, on July 9, 1970 submitted to Congress Reorganization Plan No. 3 of 1970, which creates an *Environmental Protection Agency*. EPA will eliminate the cross-purposed, multi-departmental pollution control programs already existing by bringing together into a single organization those programs. EPA will have a budget of $1.4 billion for F 1971 and 5,650 personnel. Under the terms of Reorganization Plan No. 3, the following would be moved to the new Environmental Protection Agency:

The functions carried out by the Federal Water Quality Administration (from the Department of the Interior).

Functions with respect to pesticides studies now vested in the Department of the Interior.

The functions carried out by the National Air Pollution Control Administration (from the Department of Health, Education, and Welfare).

The functions carried out by the Bureau of Solid Waste Management and the Bureau of Water Hygiene, and portions of the functions carried out by the Bureau of Radiological Health of the Environmental Control Administration (from the Department of Health, Education, and Welfare).

Certain functions with respect to pesticides carried out by the Food and Drug Administration (from the Department of Health, Education, and Welfare).

Authority to perform studies relating to ecological systems now vested in the Council on Environmental Quality.

Certain functions respecting radiation criteria and standards now vested in the Atomic Energy Commission and the Federal Radiation Council.

Functions respecting pesticides registration and related activities now carried out by the Agricultural Research Service (from the Department of Agriculture).

The creation of the EPA will have the following advantages:

It will strengthen, unify, and improve the effectiveness of pollution control programs of the Federal Government.

A single agency will provide a central focus for an evaluation of all governmental pollution control programs.

A single agency will clarify industrial responsibility by providing consistent standards.

State and local pollution control agencies will be able to look to one Federal agency for all financial and technical assistance.

It will provide strong, united pollution control effort that will cover all aspects of pollution rather than just one or two.

Hearings are now being held on the proposal. EPA will go into effect by September 7, 1970, unless disapproved by Congress.

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION (NOAA)

In fulfillment of his February 10, 1970, commitment, President Nixon sent to Congress on July 9, 1970, Reorganization Plan No. 4 of 1970 which would create a *National Oceanic and Atmospheric Administration*. NOAA would bring together into one administrative agency within the Department of Commerce all the major Federal programs dealing with the oceans and the atmosphere. The purpose of NOAA is to organize a united approach to the problems of the pollution of the atmosphere and ocean and to provide a a center of strength within the public sector of the Federal government for this purpose. NOAA, having 12,000 personnel and a budget of $270 million, will consist of the following:

The Environmental Science Services Administration from the Department of Commerce.

Most of the Bureau of Commercial Fisheries from the Department of the Interior.

The Marine Minerals Technology Program of the Bureau of Sports Fisheries and Wildlife from the Department of the Interior.

The office of Sea Grant Programs of the National Science Foundation.

Elements of the U.S. Lake Survey from the Department of the Army.

The National Oceanographic Data and Instrumentation Center of the Department of the Navy.

The National Data Buoy Program from the Department of Transportation.

ENVIRONMENTAL CONTROL TRAINING

In order to provide trained personnel to aid in fighting pollution, HEW, on July 16, 1970, initiated a project financed by the Labor Department that will provide classroom-type training in environmental control occupations for 1,100 jobless or underemployed persons. The trainees will receive instruction in such occupations as water and sewage plant operator, water and waste-water technician, fire prevention specialist, reforestation and timber stand improvement aide. In addition, the program will provide job placement assistance to trainees upon completion of the course.

INTERNAL COMBUSTION ENGINE

To fulfill his February 10, 1970 pledge President Nixon, on July 17, 1970 announced the establishment of a program to help develop an un-conventionally powered, low polluting alternative to the internal combustion engine by 1975. $4.5 million has been allocated for research grants and, in addition, $4.5 million is available for incentive grants to companies offering plans for vehicles powered by alternative systems. If a prototype proves successful, the government is willing to purchase up to 300 vehicles for additional testing.

EXECUTIVE ORDER FOR THE PROTECTION AND ENHANCEMENT OF THE ENVIRONMENTAL QUALITY

On March 5, 1970, President Nixon, by Executive Order, directed all Federal agencies to monitor, evaluate, and control their activities to protect and enhance the quality of the environment. This is part of the President's program to establish Federal Government leadership in environmental protection.

STUDENT COUNCIL ON PROTECTION OF THE ENVIRONMENT—INVOLVING YOUTH IN POLLUTION CONTROL

On December 10, 1969 Secretary of Interior Hickel formed a Student Council on Protection of the Environment (SCOPE). The Council, consisting of nine regional Councils and a National Council, is made up of students elected from educational institutions across the country. The Council both advises the Secretary on pollution control and provides a communication link between the Federal government and the student sector.

## PARTISAN ATTACK AGAINST REPUBLICAN PERFORMANCE

(Mr. CONABLE asked and was given permission to address the House for 1 minute and revise and extend his remarks and include extraneous matter.)

Mr. CONABLE. Mr. Speaker, I wish to associate myself with the remarks of the two gentlemen from Ohio (Mr. BROWN and Mr. DEVINE).

The Democratic Policy Council has once again lashed out in a partisan attack against Republican performance since taking office in 1969. I do not have the full text of their remarks yet, but I do happen to have a copy of their "America in the 1970's" released in February. This document also takes the Republicans to task on virtually every major issue facing our country today. Since I suspect their song has changed little, if any, since February, I would like to take this opportunity to review their charges one by one, setting them against the Nixon administration's record in each area.

Anyone who reads the Republican record will see that the Republicans have greatly improved upon the suggestions of Democrats and have in addition made a number of needed reforms that the Democrats never undertook or even thought of.

PRIORITIES

In their statement, the Democratic Policy Council called for a "decisive shift of resources" from pursuits which destroy man's capacity for life to those which enhance man's capacity for life.

REPUBLICAN RECORD

A week before the Democrats issued their statement, the President proposed just such a reordering of priorities in the national budget for fiscal year 1971.

For the first time in 20 years, Federal spending for defense needs has fallen below spending for human needs.

[In percent]

| | Fiscal year— | | |
|---|---|---|---|
| | 1961 | 1969 | 1971 estimate |
| National defense | 48 | 44 | 37 |
| Human resource programs | 30 | 34 | 41 |
| Other | 22 | 22 | 23 |

These figures reflect only the Federal budget. State and local outlays go almost exclusively toward meeting human needs.

Furthermore, in their statement, the Democrats contradict themselves by accusing the administration of a failure to "relate" the defense budget to "threats" to American security, and then stating that we need to make a "serious and determined effort to reduce our military budget."

As noted, the President has shifted priorities from defense needs to human needs, but he recognizes the need to keep America strong.

MANAGEMENT

According to the Democratic Policy Council, the "executive branch urgently requires the decisionmaking and command mechanism that would be provided by a National Domestic Council."

REPUBLICAN RECORD

President Nixon has already implemented such a Council. A new Cabinet-level Domestic Council has been established to formulate domestic policy, and a new Office of Management and Budget has been organized to implement the policy set down by the Domestic Council.

CRIME

The Democrats say that we "must swiftly and substantially increase the resources devoted to law enforcement and the administration of justice."

REPUBLICAN RECORD

The President has proposed 13 separate crime bills to Congress, but only one—the District of Columbia crime bill—has gotten to the President's desk for signature.

The District of Columbia crime bill is intended to serve as a national model anticrime program. Other Nixon administration proposals concerned organized crime, drug abuse, pornography, bail reform, antibombing legislation, and community treatment centers.

Under the Nixon administration, appropriations for the law enforcement assistance program, which provides Federal funds to help localities fight crime, have been increased to $650 million in fiscal year 1971 as compared with only $63 million in fiscal year 1969.

EDUCATION

The Elementary and Secondary Education Act of 1965 made it the policy of the United States to provide financial assistance to local educational agencies serving areas with concentrations of children from low-income families to expand and improve their educational program. But according to the Democrats:

To date these commitments remain unfulfilled and either ignored or undefined by the Republican Administration.

REPUBLICAN RECORD

The title I program which provides Federal aid for local school districts with high concentrations of low-income families, has been reorganized and restaffed with high caliber people by the Nixon administration. Following these changes, HEW implemented program guidelines, much stricter than before, which require a school district to spend as much for the education of disadvantaged children as it does for advantaged children before it can receive title I funds. These efforts promise to help untangle some of the redtape and out-right misuse of title I funds under the Democrats and put the program back on a proper course for the first time.

According to the Democratic version:

Existing program, including the landmark Elementary and Secondary Education and Higher Education Acts, remain underfunded.

REPUBLICAN RECORD

Under the Democrats, title I of the Elementary and Secondary Education Act funding for fiscal year 1970 totaled $1.2 billion; under the Republicans, the funding for fiscal year 1971 totals $1.5 billion.

Under the Democrats, the Higher Education Act budget requests for fiscal year 1970 totaled $897 million; under the Republicans in fiscal year 1971 the funding totals $968 million.

The Democrats say:

We need to make greater efforts in areas of pre-school education, child development, facilities and methods for teaching disadvantaged children.

REPUBLICAN RECORD

Shortly after taking over, President Nixon announced the creation of the Office of Child Development in the Department of Health, Education, and Welfare. This new office was designed to serve as a focal point for early childhood programs and to demonstrate the Nixon administration's commitment to the "first 5 years of life."

Under the Nixon administration, Parent and Child Centers have doubled and planned variations of child development programs have been undertaken to find better ways of meeting children's needs.

The Office of Economic Opportunity has recently devoted $2.6 million for the first comprehensive survey of existing child development resources and needs as a first step toward developing new responses to this perennial problem.

The family assistance plan, proposed by the Nixon administration, if enacted would provide $365 million to provide child care service for an estimated 450,000 children.

Forty Republican Members of Congress and five Republican Senators sponsored the "Comprehensive Head Start Child Development Act of 1970" which many eminent child development and child care authorities have hailed as "one of the best bills ever seen" and "a measure which offers a chance to make real progress in this field."

MEDICAL CARE

The Democrats propose that—

The time has come to look particularly at ways for the federal government to help establish and support national programs of health insurance.

REPUBLICAN RECORD

In June of 1970, President Nixon proposed basic reforms in health care for poor families.

In January 1971, the administration plans to offer legislation to establish a new family health insurance plan which will:

Cover all poor families with children, bringing equitable treatment for the working poor.

Require a modest contribution from participating families which will be scaled to increase with income so that there is no work disincentive "notch."

Provide a Federal floor of medical services nationwide which the States could supplement in a manner similar to their proposed role in family assistance.

WELFARE

On welfare, the Democrats maintain that the President's proposed family plan is not adequate. They say that the Government should instead implement "the broader proposals" made by the Heineman Commission on Income Maintenance.

REPUBLICAN RECORD

Actually, the family assistance plan provides greater assistance than the Heineman Commission's proposal. The Heineman Commission recommended income for family of four: $2,400. Family assistance plan for family of four on welfare will provide no less than $2,460—$1,600 in direct Federal payment plus $860 in food stamps.

Nevertheless, the Democrats go on to say that the minimum payments should be increased. Senator EUGENE MCCARTHY has proposed a program similar to the FAP except that the levels of support would be much higher.

REPUBLICANS POINT OUT

Under the McCarthy proposal, some 22 million male workers would qualify for welfare, and the cost would be close to $60 billion a year. The Democratic Policy Council fails to mention any type of work incentive or other attempt to decrease the numbers on the welfare rolls. The FAP reverses the present policy of penalizing work and rewarding nonwork—no longer will a man be forced to quit his job or leave his family in order to receive assistance. By including the working poor, $4 billion will be added to the amount presently spent on welfare—actually an investment now to

save money later. Without change, the present AFDC system would cost an estimated $12 billion by 1975.

TRANSPORTATION

In their statement, the Democrats proclaimed:

We need workable mass transportation systems to eliminate the daily worsening traffic congestion of the highways in our metropolitan centers.

REPUBLICAN RECORD

During his first year in office, President Nixon proposed a $10 billion mass transit program for the next 12 years, which is the largest request of any administration in American history.

HUNGER

The Democrats proposed that we need a "total commitment by the Federal Government to eliminate hunger and malnutrition" in the United States.

REPUBLICATION RECORD

In 1969, President Nixon made a pledge to end hunger and malnutrition in the United States, and he has taken steps in that direction.

Since May of 1969, the number of poor people participating in Government food programs has gone from 6.9 million to 10 million in May of 1970.

ECONOMY

In their statement, the Democrats said that if we are to use the resources of America wisely for the benefit of all, we will need to maintain a "strong and sound economy." They go on the way that this goal is "threatened by the cruel reality of inflation."

REPUBLICAN RECORD

In their 1968 platform, the Democrats failed to recognize the "cruel reality" of the inflation that started under the Johnson administration. It only became an issue for them when Richard Nixon became President.

Nevertheless, the President has made attempts to control the inflation he inherited from the Johnson administration. For the first time since the administration of President Eisenhower, we have had a balanced budget. The President has taken other steps to control inflation, including:

A new Productivity Commission, formed to help the economy operate more efficiently.

Occasional "inflation alerts" to bring attention to significant wage and price increases.

A Regulations and Purchasing Review Board to guide Government economic policy.

The economic course charted by the President is starting to pay dividends.

The rise in the cost of living has slacked sharply in recent months. The increase in August—only 0.2 percent—was the smallest since September 1967.

Interest rates in the money markets—including the prime interest rate—are declining.

Real income reached an all-time high mark during the first half of 1970 while inflation dropped from the 6.4 percent generated by Johnson's 1968 budget to 4.2 percent.

The surplus of exports over imports stands at an annual rate of $5 billion, as compared with a 1968–69 postwar low of $1 billion.

DEMOCRACY AND GOVERNMENT

The Democrats pledged elimination of voting discrimination on the basis of race, and attacked the Nixon administration for failure to support the Voting Rights Act.

REPUBLICAN RECORD

The President proposed a voting rights act which was nationwide, not sectional, in its approach. He signed the Voting Rights Act passed by the Congress, and for doing this he was "hailed" by Senator EDWARD BROOKE, Roy Wilkins, and Clarence Mitchell.

The Democrats claimed that the administration was delaying school desegregation.

REPUBLICAN RECORD

Nixon's recommended emergency school aid program, proposing an outlay of $1.5 billion to assist school desegregation can hardly be called a delay. His request for $150 million under existing authority was cut in half by the Democratically controlled Congress.

The Democrats accuse the Republican administration of opposing legislation to strengthen the enforcement powers of the Equal Employment Opportunity Commission.

REPUBLICAN RECORD

In August 1969, the administration's proposed Equal Employment Opportunity Enforcement Act was introduced in the Senate and House. Stronger than the legislation introduced by the Democrats, because it would involve the courts, this act has not been passed by either House of the democratically controlled Congress.

Additionally, the introduction of the "Philadelphia plan" to require building and construction trades unions to accept more minority groups members, has been hailed by usually critical civil rights leaders as potentially the most constructive step toward economic equality taken by a President since the 1930's.

In their section on reform of American government, the Democrats expressed their support for an amendment to lower the voting age.

REPUBLICAN RECORD

The President has been a longtime supporter of an amendment to lower the voting age, and signed the act passed by Congress to lower the voting age to 18 in all States.

ENVIRONMENT

The Democrats, in their statement, say that in the field of environment, "Federal Government must assert national leadership."

REPUBLICAN RECORD

On February 10, 1970, President Nixon, proposed seven major bills dealing with environment, which would carry out the program that he outlined in his state of the Union message. None of these bills has reached the President's desk for signature.

Recognizing that the Federal Government cannot and should not act in this area alone, the President has proposed joint action with States and local communities.

In April, President Nixon established the National Industrial Pollution Control Council.

Also in April, the President requested the Congress to take the necessary measures for environmental control of our estuarine resources, as well as a message on waste disposal and control of the Great Lakes and the oceans.

CONSUMER PROTECTION

The Democrats say:

The 1970's must be a time of expanding the consumer's right to choose and his right to be heard.

REPUBLICAN RECORD

The President has proposed a buyers' bill of rights, which would include an Officer of Consumer Affairs in the White House, a Division of Consumer Protection in the Justice Department, efforts to strengthen the Federal Trade Commission, and new laws that would enable private citizens and the Government to bring deceptive industries into court. The Consumer Product Testing Act would promote the development of adequate and reliable methods of testing characteristics of consumer products. The Drug Identification Act and the Consumer Warranty Act would provide important new standards in their respective areas. None of these bills has been acted on in either House of the Democratically controlled Congress.

In their statement of policy, the Democratic Policy Council made no mention of significant accomplishments and recommendations of the present Nixon Republican administration. Some of those we would call to your attention are:

Revenue sharing which would provide States and lesser political units of this country with revenues from the Federal income tax revenues. This aspect of the new federalism is consistent with the basic concept which seeks a new sense of partnership between the Federal Government and State and local governments, assigning responsibility and authority for public functions to the level best qualified to carry them out.

Commission on Population Growth and the American Future, proposed by President Nixon has been approved by the Congress and is now in operation.

Manpower Training Act is the new federalism in action. It would reverse for the first time the process that for more than a third of a century has taken responsibilities away from State and local governments and lodged them in Washington. It would consolidate in the interests of flexibility, decentralize where operations are best managed locally, and assert national standards of performance, and provide automatic adjustments to changes in the national economy.

Social security reforms were proposed by President Nixon, to make it a more equitable and effective instrument of income security for the aged, including automatic cost-of-living adjustments in social security benefits. Having passed the House, this is currently pending before the Senate.

Postal Reorganization Act is a first step and a solid structure upon which improvements can be made as the new system is established.

Draft reform which changed the order of call by Selective Service form the oldest-first to the youngest-first thus reducing the period of prime vulnerability to 1 year was passed.

## AMENDMENT TO MEET THE TRANSPORTATION NEEDS OF THE ELDERLY AND THE HANDICAPPED

(Mr. BIAGGI asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. BIAGGI. Mr. Speaker, this body will consider later today H.R. 18185, entitled the Urban Mass Transportation Assistance Act, which—if passed—will initiate a $5-billion Federal assistance program to build mass transit facilities across the Nation. At that time, I intend to introduce an amendment to permit 44 million Americans access to these facilities who would otherwise be excluded.

There is no question that our cities must have efficient mass transportation systems if they are to survive. More highways and the automobiles that fill them will only result in a slow death by strangulation for our central cities and asphyxiation for the residents. This measure would thus have a tremendous beneficial impact for the vast majority of our citizens.

However, Mr. Speaker, the present designs of mass transit systems are such that some 44 million Americans will be excluded from using them. These Americans are elderly citizens, handicapped persons, cardiac patients, accident victims, disabled veterans and many others who are hindered in their movements by age or physical impairment.

Also included are persons who are temporarily handicapped due to illness or other impairments.

In order to correct this glaring inequity at the start of our Federal mass transportation assistance program, I will introduce a floor amendment to H.R. 18185 which will require all federally assisted mass transit facilities to meet the needs of the elderly and the handicapped.

The United States is one of the few nations of the Western World which does not have a national policy to aid these persons. I sincerely hope my colleagues will share my view that these 44 million Americans can no longer be excluded from public transportation facilities and support my amendment when it is offered.

## GARDNER'S CAMPAIGN TO GET THE COUNTRY TO RUN

(Mr. MORSE asked and was given permission to adress the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. MORSE. Mr. Speaker, I was privileged to be able to have in my office this morning John W. Gardner, former Secretary of Health, Education, and Welfare, director of the Urban Coalition, and creator of a new political reform movement, "Common Cause," and to discuss at some length with him this innovative operation.

"Common Cause" is a stimulating and exciting concept, a prodigious undertaking to say the least, but one that is much needed and that has enormous potential. Certainly the reactivation and reinvigoration of the "public process," developing a more healthy relationship between the public and the Government, and instilling the individual citizen with a more positive and constructive attitude toward the political process, is a venture worthy of our attention and wholehearted support.

It is, therefore, a particularly happy coincidence that I am able to include in these remarks the following article while appeared in this morning's Washington Post:

GARDNER'S CAMPAIGN TO GET THE COUNTRY TO RUN

(By Edward P. Morgan)

Is John W. Gardner's "Common Cause," a new nonpartisan venture in political reform, a lost cause even as it has just begun? Some of his best friends despair that the former Secretary of Health, Education and Welfare, who now runs the Urban Coalition, is wasting his time as a modern Don Quixote. But Gardner believes that, far from breaking lances on windmills, he is developing an unsecret weapon that can make the machinery of government work. He is out to conquer what he considers the open society's deadliest enemy—apathy—and he is happily surprised, not to say downright astonished, at the public interest Common Cause had stirred up even before it was formally launched a few weeks ago.

Gardner's thesis, which is also the core of his latest book, "The Recovery of Confidence," is that people and their politicians are not concentrating enough attention on the country's main issue, which he calls the public process. Granted the urgency and divisiveness of such substantial issues as the war, race, crime, poverty and the economy, none of these, Gardner reasons, can be tackled realistically until we realize to what a "primitive" state we have let government at all levels deteriorate. "No successful executive," he says, "would tolerate such inefficiency in his business and yet he actually encourages primitivism in government by failing to exercise his social responsibilities as a citizen."

By concentrating on issues, by demonstrating how public pressure can and must force governmental decision-making out in the open where it can be seen, Common Cause hopes to mobilize a kind of moral indignation movement which will overcome a despairing citizen's "there's-nothing-I-can-do-about-it" reaction with a conviction that his voice and his vote can be made to count.

Gardner, a liberal Republican, a psychologist and teacher who has been called one of the clearest-thinking minds in the country, agrees with the Richard Scammon-Ben Wattenberg theory in their book "The Real Majority," that most voters are concentrated in the middle. But he rejects the inference that the middle cannot be moved except by playing to its own prejudices. "If we waited for the middle to move itself," Gardner says, "we would all still be living in caves. Inspiration and influence comes from the fringes."

Is he talking about leadership? Yes. He illustrates his concept of it by quoting a 19th century Japanese philosopher: "Some citizens are so good that nothing a leader can do will make them better. Others are so incorrigible that nothing can be done to improve them. But the great bulk of the people go with the moral tide of the moment. The leader must help create that tide." Gardner does not expect a flood tide of support for Common Cause. But responses to its first membership drive promise to triple and possibly quadruple the original projections by the experts handling its direct mail campaign. When news of the camaign filtered out prematurely, it made front pages from coast to coast, spiced with speculation that Gardner himself was a 1972 presidential prospect. This led to guest appearances on both network and local television.

Gardner is somewhat flabbergasted by the identity this exposure has swiftly given him. It produced a dollar bill from a ghetto resident and a thousand-dollar check from a corporation head, and these are not isolated instances. Roughly $400,000 of the half million Gardner figured was needed to get Common Cause off the ground has either been raised or pledged. This is apart from the organized membership drive needed to keep it going. In Boston's Logan airport the other day a young man, a total stranger, approached Gardner and asked to be put on Common Cause's mailing list. "I guess you missed my name the first time around," he said. On the plane, a stewardess handed him a note from a fellow passenger, a businessman, with the same request. The experience has been repeated in San Francisco and many other cities. From Zanesville, Ohio, a citizen wrote, "I want to volunteer, what can I do to help?" Such volunteers get personal long distance calls from Gardner's Washington office explaining how they can solicit members and organize local chapters to deal with issues on a community level—in addition to the pressures Common Cause hopes to put on state legislatures and Congress.

What does this response mean? "I think" Gardner says, "that people are beginning to realize they've got to do something about the public process before it's too late. Maybe they're no more than an activist one per cent but they're the people we're looking for,"—whether they're hard-headed businessmen or Ralph Nader types.

Is this the beginning of a third or fourth party Gardner-for-president movement? "I'm not a candidate for anything," Gardner still insists, as he has for at least five years. And he vehemently does not believe in splinter parties—though Common Cause's emergence has hardly quieted speculation about political alternatives for 1972. John W. Gardner denies that he's running for anything but he doesn't deny he's trying to get the country to run.

## POWER SHORTAGE IN WASHINGTON

(Mr. BERRY asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. BERRY. Mr. Speaker, it is nothing less than humorous when Members of Congress and employees in the Government bureau downtown talk about a power shortage in Washington.

I thought when they had this "brownout" event during this past week that there might be some changes made, but I drove across the 14th Street Bridge last night, through the heart of Government buildings, and every light, in every room, on every floor of every Federal building in that entire complex west of the Capitol was burning.

I assume that some of the lights are necessary for the people who are doing the cleaning of these offices, but why can not the cleaning people turn on the

light as they go into a room and turn it off as they leave?

I returned across the 14th Street Bridge at 11 o'clock last night and every building was still ablaze. There must be something wrong, Mr. Speaker, there must be someone whose business it is to try to save the taxpayers a few dollars and to try and stop this wanton, wasteless waste of energy and power. I have seen the same thing almost every night prior to this "brown out" and so-called power shortage, but I thought possibly someone might have learned something, but I guess that is expecting too much.

If this thing is not stopped then Congress should investigate this reckless waste of taxpayers' money and electrical energy.

It is almost as bad as having all of the dozen escalators in the Rayburn Building running 24 hours a day, 7 days of the week, that few, if any people ever use.

## CONGRESS SHOULD COMPLETE ITS WORK BY OCTOBER 15

(Mr. FINDLEY asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. FINDLEY. Mr. Speaker, I would like to call attention of all Members of this body to an excellent editorial which appeared in last night's Washington Evening Star, and I ask unanimous consent that the text of the editorial appear at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

The editorial follows:

CONGRESS CAN DO IT

Congress should step on the gas and try to avoid the lame-duck session which some members now regard as likely and perhaps even inevitable. The lawmakers are capable of completing their business and getting out of town by October 15, as scheduled, if they can summon a bit more energy and cooperative spirit.

There is a singular glumness in a flap-end session, resumed after a general election, and that's a reason why there hasn't been one since 1950. It is no fun to legislate in the Jingle Bells swirl, and members who are defeated in November, as some must be, will not be in much of a gung-ho mood. Dis-election is a proven incentive to absence.

Moreover, once a sizable number of legislators become convinced that an extended session is virtually certain, they will feel that the pressure is off and the result will be an immediate slowdown. Many will go home to campaign before the recess and the backlog for the lame-duck session will pile up ponderously.

The logjam still can be broken, and the Senate can make the first break tomorrow by voting to shut off debate on the constitutional amendment for direct election of presidents. The senators have been occupied with it since September 7, and it's time to invoke cloture and bring the question to a vote.

Also, the Senate should move the administration's Family Assistance Plan out of committee for an early vote. Hearings on it have been under way for many weeks, and nothing substantive can be achieved by extending them. Several other major items remain on the agenda, including defense appropriations, foreign aid, farm legislation and the controversial trade bill. But Congress, with some night work, should be able to vote on all of them by mid-October.

Many members of Congress who are battling for re-election quite naturally would rather postpone voting on controversial bills until after the election. Sweet upon their ears were Speaker McCormack's words last week end; he predicted a recess and a return to the hotter issues in November. But Senator Mansfield still clung to the hope of an October 15 adjournment, and we hope his colleagues will rally to that intent.

Mr. FINDLEY. Mr. Speaker, it starts by saying:

Congress should stop on the gas and try to avoid the "lameduck" session which some Members now regard as likely and perhaps even inevitable. The lawmakers are capable of completing their business and getting out of town by October 15, as scheduled, if they can summon a bit more energy and cooperative spirit.

In addition to the argument very ably set forth in this editorial, I would like to raise one very fundamental question: Is it really serving the public interest for the old Congress, which had been replaced by a vote of the American people just a few days before, to deal with vital questions? These questions should be left for the newly mandated Congress. I question the public interest being served by a "lameduck" session.

At this point I would be glad to yield to anyone who can make an argument in behalf of a "lameduck" session. We have more than 2 weeks remaining before mid-October. Surely we can wind up the business of the Congress and adjourn the 91st Congress by that date.

I will be glad to yield to anyone who can shed light as to why we should have a lameduck session of this Congress.

## THE GREAT PROBLEM OF OUR ECOLOGY

(Mr. HANNA asked and was given permisson to address the House for 1 minute, and to revise and extend his remarks.)

Mr. HANNA. Mr. Speaker, I listened with great interest but too little edification as several of our friends on the Republican side of the aisle hailed the record of their administration on improving the environment. It was interesting to me because in 1966, when I first made a presentation on this subject in the well of the House, I predicted that the problem of pollution of the environment was going to become one of the great political issues, and so it has come to be.

Particularly in the next few weeks, there will be contending voices striking out with bold rhetoric, expounding sweeping cures for the ills of pollution. But, Mr. Speaker, it conjures up in my mind a vision of contesting finger painters. Excited by the presence of a white sheet of new expanse for initial legislation and with the bright paint of abstract theories for legislative language everyone delightfully sets to making abstract designs much like an enthusiastic kindergarten class.

Let me say that when all the fun and games are over, I would hope that this administration, and any that should follow, would find a more useful understanding and a more promising place to pick up this problem. In my judgment, there will be no progress out of reorganization plans, nor from a plethora of well-intentioned programs, if there is an absence of sophisticated and proven measuring devices so that standard setting will make sense.

Several things disturb me. Obviously, existing devices are not capable of measuring conditions accurately enough so that their findings are acceptable. Serious questions can be lodged as to whether standards set by existing devices can be met or that performance in meeting standards can be adequately measured. Especially ironic is the fact that this administration, while bragging up its accomplishment, has actually broken up the scientific and technological capability that created the sophisticated measuring devices for space and has put this talent on the streets and in unemployment lines. These are the very people who ought to be at work creating and developing devices and instrumentation that will make sense out of standards and could assure performance out of programs.

I suggest it ill behooves any of us to stand bragging about our finger painting competition while our greatest capabilities are being laid waste and committed to idleness. When we move this environment problem toward solutions resting upon the scientific and technological capabilities developed in the space race, we will have put some intelligence and some noteworthy progress into our efforts.

## GEN. THADDEUS KOSCIUSZKO

(Mr. DORN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. DORN. Mr. Speaker, I am happy today to cosponsor the Byrne bill, H.R. 18161, to create a General Thaddeus Kosciuszko Home National Historic Site in Philadelphia. I am especially happy to join my colleague from Pennsylvania in this, the 300th birthday year of my own State of South Carolina, for this bill will honor a Revolutionary War hero who made such a great contribution to the Revolutionary War effort in the South.

On September 17, 1970, it was my pleasure to place in the CONGRESSIONAL RECORD a brief but excellent account of the Revolution in the South. This and other historical accounts make it clear that were it not for the strategic victories of General Nathanael Greene after Greene's arrival in the South in December 1780, the American Revolution could not ultimately have been successful.

South Carolinians are justly proud of the exploits of their patriot partisans such as Francis Marion, Andrew Pickens, and Thomas Sumter. But we are also proud of the indispensable contributions to the revolutionary effort made by General Kosciuszko. This Polish patriot became General Greene's military engineering officer; his work was essential to Greene's strategy of picking the proper time and place to match his outnum-

bered patriots against the British. In fact, General Greene's success in the South depended in large measure on Kosciuszko's calculations. We can still today discover evidence of Kosciuszko's work around Old Star Fort at Ninety Six, S.C., including the tunnel built to undermine that British fort. In General Greene's papers are maps and plats most probably prepared by Kosciuszko from which the South Carolina Department of Archives and History are restoring Revolutionary War sites in South Carolina. After the patriots' classic victory at Cowpens, in which Daniel Morgan trapped the British in a double envelopment much as Hannibal had done to the Romans 2,000 years earlier, General Cornwallis set out after the patriots and sought to avenge this defeat. For 2 weeks the British troops pursued the outnumbered patriots; the British most probably would have caught the patriots were it not for the fact that General Kosciuszko had had the foresight to construct wheeled carriages for quick movement.

Mr. Speaker, it is fair to say that without the military and engineering skill of General Kosciuszko the patriots' victories in the South would not have been possible. These Southern victories contributed largely to the final victory at Yorktown. Mr. Speaker, I urge passage of this bill, so that all Americans might appreciate the important contribution to our nationhood made by General Kosciuszko.

After the Revolution had been won, a grateful Congress voted the General an American citizenship and a land grant and Kosciuszko became one of the founders of the Society of Cincinnati.

In 1784 he returned to his beloved Poland, where for the next 15 years he fought in Poland's heroic struggle against Russian domination. He was a leader of the Polish revolt of 1794, and was held captive by the Russians for 2 years. After his liberation from the Russians, General Kosciuszko came to live in Philadelphia in the house that this bill would preserve as a National Historic Site.

It is "fitting and proper," Mr. Speaker, that in the cradle of liberty, the City of Brotherly Love, we preserve the house of General Kosciuszko. Again, I am happy to join in sponsoring this bill with my friend, the gentleman from Pennsylvania (Mr. BYRNE), and I hope it is expeditiously passed by the Congress.

## POINT OF ORDER

Mr. DELANEY. Mr. Speaker, I make the point of order that a quorum is not present.

Mr. O'NEILL of Massachusetts. Mr. Speaker, I move that the House do now adjourn.

The SPEAKER. The gentleman from New York makes the point of order a quorum is not present. Does the gentleman from Massachusetts withdraw his motion for the time being?

Mr. O'NEILL of Massachusetts. Mr. Speaker, I ask unanimous consent to withdraw my motion.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

The SPEAKER. Does the gentleman from New York withdraw his point of order?

Mr. DELANEY. No; Mr. Speaker, I do not.

Mr. GROSS. Mr. Speaker, I move that the House do now adjourn.

The SPEAKER. There are certain matters in connection with the operation of the House that the Chair would like to have taken care of. If possible, we would like to meet tomorrow at 11 o'clock, and there are some unanimous-consent requests.

Mr. PEPPER. Mr. Speaker, I would like to make a statement.

The SPEAKER. Under the present parliamentary situation the Chair cannot recognize the gentleman from Florida.

Does the gentleman from Iowa withhold his motion?

Mr. DELANEY. Mr. Speaker, I will withhold for a statement; yes.

Mr. GROSS. Mr. Speaker, I will withhold.

## PERSONAL EXPLANATION

Mr. PEPPER. Mr. Speaker, I was detained on official matters, and I arrived after the vote was taken on the bill H.R. 18185 on expanded urban mass transportation. I was here during the debate, and I participated in voting on the amendments, and if I had been here, I would have voted in the affirmative.

Mr. Speaker, I thank the gentlemen for withholding.

## HOUR OF MEETING TOMORROW

Mr. BOGGS. Mr. Speaker, I ask unanimous consent that when the House adjourns today, it adjourn to meet at 11 o'clock tomorrow.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

### PARLIAMENTARY INQUIRY

Mr. PICKLE. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. PICKLE. Mr. Speaker, if the House adjourns to convene early, to meet at 11 o'clock in the morning, would this bill be the first order of business?

The SPEAKER. The Chair will state in response to the inquiry that we are hopeful we will be able to get through early tomorrow, in connection with the religious obligations of Members of the House.

There was one other bill which it was the intention to bring up, and after the rule was adopted unanimous consent was going to be requested to have it considered in the House as in the Committee of the Whole, and that would have been the termination of the business for today.

There are two other bills for consideration tomorrow: the bill to amend the Atomic Energy Act of 1954 and what might be called the international piracy bill, which came out of the Committee on Ways and Means. It was the hope to dispose of those bills before 3 o'clock tomorrow, particularly if permission were granted for the House to meet at 11 o'clock tomorrow morning.

The Chair is giving that information in response to the parliamentary inquiry made by the gentleman from Texas.

The Chair would feel, however, in response directly to the question, that if the House adjourns this particular bill would not be brought up; but if the point of order that a quorum is not present were not pressed, the pending resolution and the bill it makes in order would be in the first order of business tomorrow; that is, the bill for the high-speed ground transportation extension. That would be the opinion of the Chair.

Mr. PICKLE. Mr. Speaker, reserving the right to object—and I shall not object——

The SPEAKER. The gentleman was making a parliamentary inquiry, rather than stating a reservation of objection.

Mr. PICKLE. I wish to make a further observation, Mr. Speaker, reserving the right to object to the unanimous-consent request.

Mr. BOGGS. That is correct, Mr. Speaker; I made a unanimous-consent request.

Mr. PICKLE. It will be necessary for me to be out of the city part of the time tomorrow, until 3 o'clock or thereabouts, and I wanted to offer an amendment to the bill. I will not object, however, in the hope that I can get some other Member to offer the amendment with respect to the high-speed ground transportation bill.

Mr. Speaker, I withdraw my reservation.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

Mr. HALL. Mr. Speaker, reserving the right to object to the unanimous-consent request, is it fair to assume, considering the way we are expediting business for the purposes stated by the Chair for tomorrow, that we can expedite the business in the following 2 weeks so that we can expect adjournment sine die?

The SPEAKER. The Chair is unable to answer that question at the present time.

Mr. HALL. Mr. Speaker, it would certainly seem to the Members that we should make every effort to do this. The Member speaking, from Missouri, is not unknowledgeable about the interrelations of the two bodies of Congress as to the need for sine die adjournment. In view of the refusal of the other body to vote cloture today, and extended actions in the past on matters that were moot to the people of America, it would seem unconscionable to have a rump session of the Congress return after the election, and not to adjourn sine die at the earliest possible date following the 10th of October.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

## THE PRESIDENT'S COMMISSION ON OBSCENITY AND PORNOGRAPHY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. DULSKI) is recognized for 15 minutes.

Mr. DULSKI. Mr. Speaker, a review of the activities of the President's Commission on Obscenity and Pornography reveals a history replete with biased and self-serving interests.

Were it not for the excellent work of a small—but vocal and well-informed—minority this country might have fallen victim to one of the biggest hoaxes in its history.

As I indicated in my previous remarks on this subject, the $2 million spent by the Commission is resulting in a majority report the validity of which this Congress cannot in good conscience accept.

Indeed, were it not for Rev. Morton A. Hill, S.J., Winfrey C. Link, and Charles H. Keating, Jr., the members of the Commission who constitute the dissenting minority, we in Congress would be facing extreme embarrassment.

We would have been saddled with a report which the money-hungry dealers in smut could depend upon as the greatest boon to date for their deplorable business.

If Congress were to follow the recommendations of the Commission majority, the filth peddlers would be able to surface with immunity and reap the harvest of more and more millions of dollars in profits at the expense of the moral structure of our great Nation.

To their credit, the minority would have no part of this hoax. These dedicated individuals fully recognized and accepted the mandate of Congress, worked diligently to fulfill it—and against unbelievable odds. Lesser men would have surrendered quickly in light of the adverse conditions they faced.

I cite just one example of the hardships confronting the minority. The Commission adamantly refused to hear the views of the public. Commissioners Hill and Link recognized that the absence of such views would have a detrimental effect on the workings of the Commission.

As a countermeasure, at their own expense, they held public hearings in a number of cities throughout the land. Prodded by the Hill-Link hearings, the Chairman finally conducted two public hearings, but these obviously were completely inadequate toward accurately reflecting the true public sentiment.

Even as the Commission's work was concluding, the adversity faced by the minority continued. The newest Commission member, Charles H. Keating, Jr., was forced to seek legal redress so that he would have an opportunity to include a full written dissent to the report.

This probably is the first time in the history of Presidential Commissions that a Commission member was compelled to seek a court injunction in order to be assured that his own complete views would be incorporated in the report. The necessity for such a course is deplorable, to say the least.

Except for this conscientious minority, Congress would have been faced with a Commission report not only contrary to the very purpose for which the Commission was created, but also lacking the vital and appropriate views of the dissenters.

The excellent and detailed dissent of Commissioners Hill and Link, concurred in by Commissioner Keating, should serve as the guide for future congressional action.

I believe this minority report warrants being brought to the attention of the Congress and the public as a separate document.

Mr. Speaker, as part of my remarks I am including the text of the minority report:

TEXT OF MINORITY REPORT OF THE COMMISSION ON OBSCENITY AND PORNOGRAPHY

(Report of Commissioners Morton A. Hill, S.J., and Winfrey C. Link; concurred in by Charles H. Keating, Jr.* of the Commission on Obscenity and Pornography)

OVERVIEW

The Commission's majority report is a Magna Carta for the pornographer.

It is slanted and biased in favor of protecting the business of obscenity and pornography, which the Commission was mandated by the Congress to regulate.

The Commission leadership and majority recommend that most existing legal barriers between society and pornography be pulled down. In so doing, the Commission goes far beyond its mandate and assumes the role of counsel for the filth merchant—a role not assigned by the Congress of the United States.

The Commission leadership and majority recommend repeal of obscenity law for "consenting adults." It goes on, then, to recommend legislation for minors, public display and thrusting of pornography on persons through the mails.

The American people should be made aware of the fact that this is precisely the situation as it exists in Denmark today. The Commission, in short, is presumptuously recommending that the United States follow Denmark's lead in giving pornography free rein.

We feel impelled to issue this report in vigorous dissent.

The conclusions and recommendations in the majority report will be found deeply offensive to Congress and to tens of millions of Americans. And what the American people do not know is that the scanty and manipulated evidence contained within this report is wholly inadequate to support the conclusions and sustain the recommendations. Thus, both conclusions and recommendations are, in our view, fraudulent.

What the American people have here for the two million dollars voted by Congress, and paid by the taxpayer, is a shoddy piece of scholarship that will be quoted ad nauseam by cultural polluters and their attorneys within society.

The fundamental "finding" on which the entire report is based is: that "empirical research" has come up with "no reliable evidence to indicate that exposure to explicitly sexual materials plays a significant role in the causation of delinquent or criminal behavior among youth or adults."

The inference from this statement, i.e., pornography is harmless, is not only insupportable on the slanted evidence presented; it is preposterous. How isolate one factor and say it causes or does not cause criminal behavior? How determine that one book or one film caused one man to commit rape or murder? A man's entire life goes into one criminal act. No one factor can be said to have caused that act.

The Commission has deliberately and carefully avoided coming to grips with the basic underlying issue. The government interest in regulating pornography has always related primarily to the prevention of moral corruption and *not* to prevention of overt criminal acts and conduct, or the protection of persons from being shocked and/or offended.

The basic question is whether and to what extent society may establish and maintain certain moral standards. If it is conceded that society has a legitimate concern in maintaining moral standards, it follows logically that government has a legitimate interest in at least attempting to protect such standards against any source which threatens them.

The Commission report simply ignores this issue, and relegates government's interest to little more than a footnote—passing it off with the extremist cliche that it is "unwise" for government to attempt to legislate morality. Obscenity law in no way legislates individual morality, but provides protection for public morality. The Supreme Court itself has never denied society's interest in maintaining moral standards, but has instead ruled for the protection of the "social interest in order and morality."

The Commission report ignores another basic issue: the phrase "utterly without redeeming social value." This language has been propagandized by extremists and profit-seekers, and it is so propagandized in this report as being the law of the land. It is not the law of the land, since no Supreme Court ever voiced such an opinion, yet this erroneous concept has been built into the statutes of the states as a result of extremists asserting that it is a necessary "test" enunciated by the Supreme Court. This erroneous conception has led to a vast upsurge in the traffic in pornography in the past four years. The fact is, it is nothing more than an opinion of three judges, binding on no one, neither court nor legislature.

In sum, the conclusions and recommendations of the Commission majority represent the preconceived views of the chairman and his appointed counsel that the Commission should arrive at those conclusions most compatible with the viewpoint of the American Civil Liberties Union. Both men singlemindedly steered the Commission to this objective.

In the interest of truth and understanding, it should be noted here that the policy of ACLU has been that obscenity is protected speech. Mr. Lockhart, the Chairman of the Commission, has long been a member of the American Civil Liberties Union. Mr. Bender, his general counsel, is an executive of the Philadelphia Civil Liberties Union.

The two million dollars voted by Congress have gone primarily to "scholars" who would return conclusions amenable to the extreme and minority views of Mr. Lockhart, Mr. Bender and the ACLU.

OUR POSITION

We stand in agreement with the Congress of the United States: the traffic in obscenity and pornography is a matter of national concern.

We believe that pornography has an eroding effect on society, on public morality, on respect for human worth, on attitudes toward family love, on culture.

We believe it is impossible, and totally unnecessary, to attempt to prove or disprove a cause-effect relationship between pornography and criminal behavior.

Sex education, recommended so strongly by the majority, is the panacea for those who

* Mr. Keating, while concurring in this report is preparing a separate dissent.

advocate license in media. The report suggests sex education, with a plaint for the dearth of instructors and materials. It notes that three schools have used "hard-core pornography" in training potential instructors. The report does not answer the question that comes to mind immediately: Will these instructors not bring the hard-core pornography into the grammar schools? Many other questions are left unanswered: How assure that the instructor's moral or ethical code (or lack of same) will not be communicated to children? Shouldn't parents, not children, be the recipients of sex education courses?

Children cannot grow in love if they are trained with pornography. Pornography is loveless; it degrades the human being, reduces him to the level of animal. And if this Commission majority's recommendations are heeded, there will be a glut of pornography for teachers and children.

In contrast to the Commission report's amazing statement that "public opinion in America does not support the imposition of legal prohibitions upon the consensual distribution" of pornography to adults, we find, as a result of public hearings conducted by two of the undersigned in eight cities throughout the country, that the majority of the American people favor tighter controls. Twenty-six out of twenty-seven witnesses at the hearing in New York City expressed concern and asked for remedial measures. Witnesses were a cross section of the community, ranging from members of the judiciary to members of women's clubs. This pattern was repeated in the cities of New Orleans, Indianapolis, Chicago, Salt Lake City, San Francisco, Washington, D.C., and Buffalo. (And yet, one member of the Commission majority bases his entire position for legalization on the astounding "finding" of the Commission survey that "no more than 35% of our people favor adult controls in the field of obscenity in the absence of some demonstrable social evil related to its presence and use.")

Additionally, law enforcement officers testifying at the Hill-Link hearings were unanimous in declaring that the problem of obscenity and pornography is a serious one. They complained that law enforcement is hampered by the "utterly without redeeming social value" language. The Commission's own survey of prosecuting attorneys indicates that 73% of prosecutors polled said that "social value" is the most serious obstacle to prosecution. The decision not to prosecute is usually a manifestation of this obstacle. This figure and information is strangely missing from the report's "Overview of Findings."

We point also to the results of a Gallup poll, published in the summer of 1969. Eighty-five out of every 100 adults interviewed said they favored stricter state and local laws dealing with pornography sent through the mails, and 76 of every 100 wanted stricter laws on the sort of magazines and newspapers available on newsstands.

We believe government must legislate to regulate pornography, in order to protect the "social interest in order and morality."

OUR REPORT

To the end that Congress asked for recommendations to regulate the traffic in obscenity and pornography, we will—at the close of this report—as much as it is in our power, carry out the mandate given us by the Congress to analyze the laws on obscenity (see Appendices), recommend definitions, and recommend such legislative, administrative and other advisable or appropriate action to regulate effectively and constitutionally the traffic in obscenity and pornography.

In addition, we will point up the astonishing bias of the Commission majority report by presenting to the President, the Congress and the American people, a history of the creation of the Commission, and a brief report on the heretofore secret operation of this Commission.

We shall document Commission bias and slant in the area of Effects, on which the entire report is based, and in the Legal area where the American people are asked to accept a misleading philosophy of law.

I. HISTORY OF CREATION OF COMMISSION

For several years prior to 1967 legislation to create a Commission on Obscenity and Pornography was introduced into the Congress. It passed the Senate each time, and each time died in House Committee.

Legislation was vigorously opposed by the American Civil Liberties Union, which reads the First Amendment in an absolutist way (cf. Annual Report, American Civil Liberties Union, July 1, 1965 to January 11, 1967, page 9). Their position that "obscenity as much as any other form of speech or press, is entitled to the protection of the First Amendment," can be found in an *amicus* brief in *Jacobellis v. Ohio,* 1964, among others.

In 1967, however, the feeling of the Congress was such that legislation to create a Commission was certain to pass. Now, the ACLU strategy changed. In April of that year, the Director of the Washington Office of the American Civil Liberties Union testified on such legislation before the House Subcommittee on Education and Labor.

He called for "scientific studies" in effects on the part of such a Commission, and maintained that *the public* and private groups should not be involved in the workings of the Commission.

A bill to create the Commission was considered by the Senate in May of 1967. The bill made no mention of effects studies, and drew for membership from both houses of Congress, from various governmental agencies, education, media, state attorneys general, prosecutors and law enforcement. It provided for public hearings and power of subpoena.

The bill which ultimately passed the Congress called for effects studies, drew heavily from the behavioral sciences for membership, and the power of subpoena had been removed. In other words, it was considerably weakened, and much more in line with the libertarian concept of such a Commission.

A White House press release dated January 2, 1968 reported that William B. Lockhart had been "selected" Chairman of the Commission, although public law 90-100 mandated that a chairman and vice-chairman be elected by the Commission from among its members.

Five months later, the Commission met for the first time. After five months, during which Mr. Lockhart had laid much groundwork, talking "effects" with several universities, the Commission voted to affirm his chairmanship.

Mr. Lockhart had present as an observer, at all sessions of the first Commission meeting, Mr. Paul Bender, who was later retained as general counsel to the Commission.

Mr. Lockhart has long contended that "scientific proof" of harmful effects is needed before an item can be adjudged obscene. (See Lockhart-McClure articles, U. of Minn. Law Rev.) This reasoning, followed to its logical conclusion, would have all obscenity law repealed, for it is virtually impossible to prove that one book or one film caused one person to commit an anti-social act or a crime. No court, nor any legislature, has ever demanded such "scientific proof" as requested by Mr. Lockhart and his civil libertarian confreres.

After the appointment of the Commission and the "selection" of the Chairman, no further word was heard, to our knowledge, from the Civil Liberties Union until October of 1969, when the same director of the Washington office testified before the House Subcommittee on Postal Operations. This time, he urged that no legislation against pornography be enacted *until the issuance of the Commission report.*

The Commission thus had its beginning in bias and never changed course. Using procedures wholly undemocratic, the Commission Chairman has marched the Commission from a preconceived assumption along a precharted path to a predetermined conclusion.

II. OPERATION OF COMMISSION

At this first meeting of the Commission, the Chairman asked for "confidentiality" or secrecy on the part of the members. The commission concurred.

No by-laws have ever been drawn up to our knowledge. No parliamentary procedure has been observed. There has not been a call for approval or amendment of minutes, distributed by mail. Because of this, one of the undersigned asked that meetings be taped or recorded. This request was refused.

Agenda for Commission meetings and for panel meetings were prepared by a handpicked staff, and received shortly before meetings, giving Commission members little time for preparation.

Two or three members who were in obvious and open disagreement with the Commission leadership were all but excluded from participation. From the beginning, Commission members heard only one viewpoint; seldom hearing alternatives.

Because of this, and because the Commission under its leadership had consistently refused to go to *the public* and hear other views firsthand, two Commissioners conducted public hearings at their own expense in eight cities throughout the country. At the completion of the hearings of Commissioners Hill and Link, the Commission voted to refuse them reimbursement for expenses incurred, deciding to hold two "official" hearings lest their report not receive public acceptance. (Note above the libertarian specification that *the public* should not be involved in the workings of such a Commission. Note also Commission majority explanation for not having conducted hearings until the end of the Commission's life.)

Commissioners themselves were not put into direct contact with the problem of obscenity in the concrete. A few films were shown at the first meeting; samples were "available," but no Commissioner was asked to become conversant with the problem in the concrete, so that he could be equipped to make judgments.

At the first meeting the Commission was summarily divided into four "working" panels. Panel members were not aware of what was transpiring in other panels, except for oral reports at meetings and brief written reports distributed by mail.

Full Commission meetings were held approximately every other month in the beginning. However, from October 1969 to March 1970 there was a lapse of five months between full meetings.

III. CRITIQUE OF COMMISSION BEHAVIORAL RESEARCH

Dr. Victor B. Cline, University of Utah psychologist and specialist in social science research methodology and statistics, has called the Commission's Effects Panel Report—upon which the majority report and its recommendations are based—a "scientific scandal."

Dr. Cline is the author of over 40 published research papers, principle investigator on a number of research projects funded by the Office of Naval Research, National Institutes of Mental Health, Offices of Education, etc. He teaches courses in clinical, experimental and child psychology, and is a practicing clinical psychologist.

Testifying before the Commission in Los Angeles on May 4, Dr. Cline called for, and has since repeatedly called for, the assemblage of an unbiased panel of scientists to (a) evaluate the original research sponsored by the Commission, and (b) assess what con-

clusions might legitimately be drawn from the assembled evidence. The Commission leadership and majority have ignored his request. In view of this, the signers of this dissenting report asked Dr. Cline to serve as an unpaid consultant. He agreed to do so, in the interest of scientific honesty and truth.

Following is Dr. Cline's evaluation of the Commission report, Effects Panel report, and "findings." [1]

A careful review and study of the Commission majority report, their conclusions and recommendations, and the empirical research studies on which they were based, reveal a great number of serious flaws and grave shortcomings. There are so many, in fact, that the entire report is suspect and lacking in credibility.

Readers of the majority report are at the "mercy" of the writers of that report, and must assume that evidence is being presented fairly and in good faith on both sides of the issue. This is also true for most Commission members themselves. It should be stated that members of the Commission Minority were allowed to look at most of the Commission-sponsored 85 research studies but only after repeated, dogged requests. And then a number were finally and most reluctantly released to them perilously close to the Commission-set deadline for this dissent.

A number of the research studies upon which the report is based suggest significant relationships between pornography, sexual deviancy and promiscuity. Yet, time and again data suggesting this linkage are omitted or "concealed." Findings from seriously flawed research studies or findings which do not follow from the data are frequently presented as fact without mentioning their very serious limitations. The scholarship in the preparation of this report, in short, is unusually shoddy. Since most of their studies are unpublished it will be virtually impossible for any interested social scientists to adequately critique their report—at least at the present time.

A typical example of omission is found in a Commission-contracted study by Alan Berger and associates in Illinois. In the study, they surveyed 473 adolescents, primarily in the age range of 14–18 (from working class backgrounds) with an extensive questionnaire which asked questions about their exposure to pornography, their sexual behavior, etc. In carefully reviewing these findings, it is distressing to note that those data not "favorable" to the Commission leadership and majority point of view are either played down or not mentioned.

In the study of the 473 high school students, they found a relationship between frequency of seeing movies depicting sexual intercourse and the adolescent engaging in intercourse (their table 46, page 101 is duplicated in part below.)

FREQUENCY OF SEEING MOVIES DEPICTING SEXUAL INTERCOURSE

[In percent]

| | Not at all | 1 to 4 times | 5 to 10 times | 11 or more times |
|---|---|---|---|---|
| Percent of males engaging in premarital intercourse | 53 | 62 | 73 | 88 |
| Percent of females engaging in premarital intercourse | 10 | 29 | 44 | ..... |

This data is in the Commission-financed technical report, but is not discussed [2] or presented, despite the fact that it has an important bearing on the "effects" question.

One example of improper reporting of research results is found in Chapter V of the Effects Panel Report. Here the Commission majority states:

"A comparison study of 39 delinquents and 39 non-delinquent youth (Berninghausen & Faunce, 1964) found no significant differences between these groups in the number of 'sensational' (obscene) books they had read. Non-delinquent youth were somewhat more likely (75%) than delinquent youth (56%) however, to report having read at least one 'possibly erotic' book."

What the Commission majority does not tell the reader is that:

(a) A significantly greater number of delinquent boys (than non-delinquent) had read two or more adults books (with erotic content); and a greater number of delinquents had read three or more erotic books than the non-delinquents.

(b) The authors of this particular research concluded that their primary measuring instrument (which determined what books were actually read) was unreliable. So the results appear to be worthless and should not be cited.

The writers of the Commission report make three errors: (a) They cite data to prove a point from a worthless study.

(b) They do not tell the reader that the study is flawed.

(c) They present only that evidence which favors their point of view. They fail to cite contrary findings.

Readers who will never read the original study will assume that the writers of the report are honestly supplying complete data. This is not the case.

The majority report of the Commission has made recommendations which involve repeal of all laws pertaining to sale or distribution of pornography to adults, and the same for children (except for pictorial material).

However, whenever sweeping changes in social policy, laws, regulations, etc., are recommended, changes which might affect the health and welfare of the nation's citizens, the burden of proof for demonstrating "no harm" or "no adverse results" is ordinarily thought to be on the shoulders of the innovators. The innovators, the Commission majority in this case, have not adequately demonstrated "no harm," and in fact have repeatedly "withheld" evidence suggesting negative effects, or potential deleterious consequence of being exposed to pornography.

A number of brief comments should be made about the research evidence which the Commission staff assembled and led them to conclude that they had "found *no* evidence to date that exposure to explicit sexual materials plays a significant role in the causation of delinquent or criminal behavior among youth or adults . . . or that exposure to erotic materials is a factor in the causation of sex crimes or sex delinquency," when *no* adequate casual studies were done. And again—it should be emphasized: To say *"we have no evidence,"* as they do, is not sufficient when one is recommending major changes in law and social policy which might effect the health and welfare of the nation's citizens.

1. *No Longitudinal Studies.* There were no longitudinal studies contracted by the Commission, studying the long-range effects of exposure to pornography and its effect on sexual activities, sex offenses, changes in moral values, etc. Nearly all studies involved covered only a few days or weeks or less (and in many cases only an hour or two).

2. *No Clinical Studies.* There were no in-depth clinical studies of individuals assessing the impact of use of pornography on attitudes, sex offenses, character, anti-social, or other types of behavior.

3. *Omission of Studies on "Porno-Violence".* No attention was paid to the problem of porno-violence where pornography and violence are linked together in fiction and in motion pictures. This omission is particularly surprising since the Commission focused most heavily on "effects" and in view of the findings in the Final Report of the National Commission on the Causes and Prevention of Violence (1969) which link visual presentations of violence to aggressive acting-out behavior. Their findings would appear to have some important implications for situations where violence and pornography are combined (e.g. sexual abuse, assault, etc. directed toward the female).

4. *Omission of Studies and Evidence in "Imitative Learning" Area.* There is an omission of research, concern or even discussion of studies in the area of imitative and social learning by such investigators as Albert Bandura and his associates at Stanford University. Since this body of research suggests that a significant amount of learning occurs through watching and imitating the behavior of others, this would logically appear to have great relevance to any "pornography effects" studies.

If Bandura's work (as well as others in this area) have any validity, it would suggest that certain types of pornography, involving whole sequences of behaviors, probably would effect some individuals if they saw it consistently modeled on the screen or in fiction. In view of this type of evidence and findings presented by the Bandura "school" it would seem, at the very least, that the Commission staff would indicate same cautions or concerns. There are none when one reads their recommendations.

5. *Over Reliance on Questionnaire and Verbal Self-Report Data.* Nearly all of the studies presented in evidence relied heavily on "verbal self report" without outside verification. A number of factors can make this data suspect, and caution must be exercised. (a) Subjects may consciously falsify or distort. (b) Questions in the sexual area in particular could lead to defensiveness, distortion, or "protective dishonesty" of responses. (c) It has been repeatedly demonstrated that slight changes in wording a question can make major differences in the number of people who will respond "yes" or agree with it. This was demonstrated in this study in a most dramatic fashion, when in the Commission-sponsored national survey of a national sample by Abelson, only 23% of the males admitted that pornography sexually roused them vs. 77% agreeing to this in the Kinsey studies. Whom can you believe? (d) Confusingly written questions or difficult vocabulary frequently render your data useless. Thus when in one study cited 40% of a male prison group denied ever having a "sexual orgasm," their response was most probably due to not knowing what the word "orgasm" meant.

The Commission writers tend to treat all "verbal report" as fact, and when there are discrepancies they tend to consider as significant only that data which favors their point of view.

Example:

Harris Poll (1969): 76% of U.S. wants pornography outlawed.

Gallup Poll (1969): 85% of U.S. favor stricter laws on pornography.

Commission Study (1970): 2% of U.S. viewed (Abelson) pornography as a serious problem.

However, when one looks at the question which Abelson asked in this Commission-financed study, it is not difficult to see why he came up with such a low percentage: "Would you please tell me what you think are the two or three most serious problems facing the country today?" It is doubtful that even the most concerned citizen would list pornography as among the first two or three when the country is faced with the problems of war, racial conflict, youth rebel-

[1] Since the minority were allowed only a limited amount of space to respond to the Final Report and the 4 Panel Reports this critique will necessarily be very limited and deal only with some of the flaws and limitations found.

[2] Except for a single sentence.

lion, law and order disruption, pollution, etc.

The Commission recommends abolition of nearly all laws regulating pornography, and justifies this by saying in their Legal Panel Report: *"A majority of the American people presently are of the view that adults should be legally able to read or see explicit sexual materials if they wish to do so."* They are basing this only on *some* of the responses of U.S. Citizens to Abelson's survey, but not on other data from the *same* survey (e.g. 88% would prohibit sex scenes in movies, when they were put there for entertainment). And, of course, they are rejecting out-of-hand results of the Harris and Gallup Polls who have been in business for several decades. This sort of picking and choosing of favorable statistics is indefensible, especially when most Americans, or even social scientists will probably never have an opportunity to view the original data on which their recommendations and conclusions are based.

Another example of flagrant distortion in the presenting of "results" is in the Legal Panel Report. For some reason they *also* review the empirical research findings on pornography's effects, public attitudes toward it etc., duplicating part of the Effects Panel Report.

While the writers of the Effect Panel report have made major changes and modifications in what they say, but only after heavy fire and criticisms by the minority and others about "flawed methodology" etc., which has resulted in some modesty and more care in their presentation of results—the same cannot be said for Legal Panel Report. Any law student or other reader of that report will find data which has been systematically marshalled to favor one point of view. This is particularly true in the "public attitudes" toward pornography section. Key data giving opposing evidence is excluded.

6. *Flawed Methodology.* Some of the studies were badly flawed methodologically. These limitations were rarely mentioned when discussing their conclusions. In fairness it should be stated that since the writing of the first draft of the "Effects Panel Report", which was so severely criticized, a major attempt has been made to be more cautious, accurate, and scientifically modest.

Some of the studies did not have control groups. This means that if you expose people to pornography and get "before" and "after" measures of their sex behavior you never know for sure to what the changes or no changes may be attributed to.

Example: In the Mann (1970) study of married couples exposure to pornography, they found that after the study was over their couples reported being more "stimulated" by having to fill out a lengthy sex diary every morning (which listed a number of explicit sex activities which they had to check as to whether or not they were engaged in) than by the several erotic movies shown them. In this study which thoughtfully did use control couples (who were *not* exposed to pornography), they found the "control" wives *significantly* higher at the study's conclusion on self ratings of "being adequate as marital partners." These women had not been exposed to anything. This kind of startling and explainable finding is not unusual in social science research. If this kind of "spontaneous result" had occurred with the wives exposed to pornorgraphy it would have been tempting to conclude that pornography was the cause. Control groups attempt, though not always successfully, to minimize this type of error.

*The Kutschinsky study*

In the final "Effects Panel Report" the Commission staff write, *"A survey (Kutschinsky, 1970) of Copenhagen residents found that neither public attitudes' about sex crimes nor willingness to report such crimes had changed sufficiently to account for the substantial decrease in sex offenses between 1958 and 1969."*

In the Final Report "summary section" they put it even more strongly,

"Other research showed that the decrease in reported sexual offenses cannot be attributed to concurrent changes in the social and legal definitions of sex crimes or in public attitudes toward reporting such crimes to the police, . . ."

The average reader or even social scientist will probably never get an opportunity to see what this Danish psychologist actually wrote in this report or what he did. He, of course, was studying the issue of why, with increasing pornography in Denmark, has the rate of sex crimes apparently dropped. Maybe pornography has a "therapeutic effect" on sex criminals. What Kutschinsky did, in fact, was intensively interview a carefully drawn sample of adult men and women throughout Cophenhagen surveying (a) whether they had ever been a victim in a sex crime, (b) did they report it, (c) would they report certain types of sex crimes now (or ignore it), (d) have they "changed their mind" over the past few years about the seriousness of certain sex offenses, and (e) how did they feel about these same things 10 years ago. He found that 26% of the men and 61% of the women of Copenhagen had been victims of some category of "sex crime" (some minor, some serious). However, only 6% of the male viewed (primarily homosexual molestation) and 19% of the female victims reported it to the police. This is consistent with statements made by the U.S. Department of Justice in their 1970 Unified Crime Reports referring to rape, "This offense is probably one of the most under reported crimes due primarily to fear and/or embarrassment on the part of the victims." This means overall that sex crime statistics are very "shaky" and have to be viewed with caution simply because most are probably never reported.

Kutschinsky concludes after a careful and extended analysis of his data that, "The decrease in (sexual) exhibitionism registered by the police during the last 10 years may be fully explained by a change in people's attitudes toward this crime and towards reporting it to the police." He concludes in about the same terms with regards to the sex crime of "indecency towards women" (which can involve anything short of a direct rape attempt on a female.) If the reader will go back and read again what the Commission said about Kutschinsky findings, we again get an example of critical omissions of important factual data. With regards to "peeping" a non-violent sex crime which has declined 79.9% in that last decade his data suggest that the availability of all sorts of visual pornography, films and live sex shows probably have reduced the need of the peeper to risk arrest looking through people's window when he can see much more in any porno shop. We would agree with this conclusion. In the only other sex crime which he evaluated, "Indecency toward girls" his data suggested little or no change in public attitudes towards its seriousness or lack of willingness to report it. The decline in this offense remains a puzzle with Kutschinsky suggesting pornography possibly being a (poor) substitute for little girls for this type of offender.

The Commissions presentation of the Denmark sex crimes data omits certain types of sex offenses such as incest which most people would regard as fairly serious. If as Kutschinsky's study suggests, there have been no real declines in sex crimes in certain categories, only a change in people's conception about their seriousness and a lessened inclination to report them, this should be given thoughtful and careful consideration. That Danish people have more liberal sex attitudes has been documented by various surveys including another by Kutschinsky which indicated that only 32% of Danes regard sex intercourse with an agreeable 14 year old as a crime, and only 12% would regard the rape of a female as a crime where she permitted the rapist to engage in prior petting.

The kind of sex crime most people would be concerned with would involve a personal assault as in rape, or on a child, or the situation involving exhibitionism which might "traumatize" some women and possibly effect their psychosexual feelings and attitudes negatively.

If we look at the Copenhagen rape statistics (combining rape, rape with robbery, attempted rape, and intercourse on threat of violence) which all involve a sexual assault on another—we get the following picture:

*Rape (all categories)—Number of cases*

| Year: | |
|---|---|
| 1958 | 57 |
| 1959 | 55 |
| 1960 | 37 |
| 1961 | 48 |
| 1962 | 53 |
| 1963 | 50 |
| 1964 | 39 |
| PORNOGRAPHY FREELY AVAILABLE | |
| 1965 | 42 |
| 1966 | 70 |
| 1967 | 44 |
| 1968 | 50 |
| 1969 | 35 |

If one looks at the table and notes that it was in about 1965 when pornography became generally available (even though legal recognition of this wasn't to come for several years) it presents a rather puzzling picture—in that until 1969, there were no major changes in rape rate other than the normal fluctuations common to preceding years. In any event it would certainly be injudicious to conclude that there has occurred a true change or decline in some sex crimes, at least yet, in the light of the above statistics or in view of Kutschinsky's findings that with certain sorts of sex offenses the "decline" can be partially or fully attributable to changes in people's attitudes about certain sex crimes and their changes in "reporting" practices. Other sorts of data which would be useful to have in studying this whole problem would be divorce rate figures for the past 10 years, venereal disease rates, changes in extra marital sex patterns, and prostitution figures for the decade.

*The Propper study*

The Commission in the summary of their Effects Panel Report conclude:

"In sum, the empirical research has found no evidence to date that exposure to explicit sexual materials plays a significant role in the causation of delinquent or criminal behavior among youth or adults. The Commission cannot conclude that exposure to erotic materials is a factor in the causation of sex crime or sex delinquency."

Based on the above paragraph, cited again and again in various forms throughout the whole report, we have the basis for recommending the removal of all pornography controls for adults and all controls (except pictoral pornography) for children.

Yet if we review the research of Propper, in his study of 476 reformatory inmates (see table 1 [3]) we note again and again a relationship between high exposure to pornography and "sexually promiscuous" and deviant behavior at very early ages, as well as affiliation with groups high in criminal activity and sex deviancy. This study was financed and contracted by the Commission, and while they refer to Propper's study often, no mention is made of any of these specific results in the Commission Report. This study was for many months in the hands of the professional committee that assembled and wrote the report as well as available for inspection of any of the Com-

[3] Table omitted.

mission members who wished to read it (but no one else). As the reader can scarcely fail to note, there is a striking relationship between heavy use of pornography and various kind of sexual "acting out," deviancy, and affiliation with high crime risk groups.

*Davis and Braught study*

Davis and Braught (1970) in a study of seven different populations of subjects comprising 365 people assessed the relationship between exposure to pornography and moral character, deviance in the home, neighborhood, sex behavior, etc. Samples of city jail inmates, Mexican-American college students, black college students, white fraternity men, conservative protestant students and Catholic Seminarians were studied intensively. In addition each had one female friend fill out a character scale about their behavior. In their study, which was impressive in its rigorous methodology and statistical treatment, they state, *"One finds exposure to pornography is the strongest predictor of sexual deviance among the early age of exposure subjects"* (pages 36). They note that since exposure in this subgroup is NOT related to having deviant peers (bad associations and companions) and similar type variables, it would be difficult to blame the sexual promiscuity and deviancy of these subjects on other influences such as being influenced by friends (rather than pornography) into these kinds of anti-social activities.

Once again it should be noted that this research report was contracted and financed by the Commission, was in the hands of the Commission staff, for many months, is referred to many times in their report—but not a single mention is made of these findings. This is a particularly important finding in that it suggests real dangers in exposing children and young adolescents to heavy quantities of pornography, the strong implication being that pornography can affect and stimulate precocious heterosexual activity and deviant sex behavior (homosexuality). Obviously more research must be done here, but like the studies linking smoking with lung cancer, it would seem incredibly irresponsible not to report such findings and especially in a report such as this where so few people have access to the original research, and where publication in the scientific literature, if it does occur, would be at least one or two years in the future. It is entirely possible that only one or two of the actual members of the Commission have read this report, and it is doubtful if many of the others would understand fully the scientific jargon and extended discussions of statistical treatment of the data.

*The Mosher-Katz study*

In another Commission sponsored study by Mosher and Katz (1970) studying male aggression against women in a laboratory setting, they concluded (page 23) that, "The data clearly support the proposition that aggression against women increases when that aggression is instrumental to securing sexual stimulation (through seeing pornography)." This finding was particularly true for men with severe conscience systems as well as for those feeling guilt about being aggressive. This suggests that the need for sexual stimulation (via pornography) can overrule conscience and guilt in "permitting" aggressive behavior towards women. And while this is only a laboratory demonstration, with many limitations, it still constitutes another "negative effects" type of evidence which no attention is paid to by the writers of the Commission report.

*Berger's study*

In Berger's study (1970) two of the most significant relationships in his research with young people was between exposure to large amounts of pornography and engaging in high levels of sexual activity. This was true for both high school students (gamm: .394 (males)) page 48, and college age subjects (gamma: .380 (males)) page 62. These relationships were lower (but still significant) for women. An example can be seen below.

*Percent college males engaging in sex intercourse, etc.*

| Amount of pornography exposed to student | |
|---|---|
| Hi 5–6 | 77 |
| 4 | 62 |
| 3 | 60 |
| 2 | 44 |
| Lo 1 | 4 |

And while the Commission Report writers correctly point out that just because there is a high association between two variables this doesn't necessarily mean that one "caused" the other. But it does suggest the *possibility* of causation, as in the early smoking-lung cancer studies.

*The Walker study*

Another Example of Using Flawed Data:

In Chapter V of the Effects Panel Report the Commission reviews the research of Walker (1970) studying sex offenders and non-offenders.

"The mean age of first exposure (to pornography) of the rapists was ½ year or more later than that of the matched non-sex offenders in reference to eight of the 15 items (types of pornography) and ½ a year or more earlier in reference to two. The biggest difference between the groups occurred in relation to depiction of heterosexual intercourse for which non-sex offenders had a mean age of first exposure of 14.95 and rapists a mean age of first exposure of 18.19."

The Commission reports this as fact when a quick look at Walker's tables shows that it can possibly be true. The table below is produced directly from their data.[4]

To claim that the Non-Sex Offenders saw pictures of a male and female having intercourse 1.3 years before they first saw a picture of a male sex organ, or nude female with breasts exposed, etc., demands a great deal of credulity from the reader. It likewise stretches the imagination for one to believe that the Sex Offender group witnessed pictures of animal-human intercourse, oral intercourse, and homosexual relations a year or less before ever seeing pictures of male-female intercourse. These data are obviously in error. And while it's not too difficult to imagine a single typographical error, we have two independent errors here both occurring in the same area. Common sense would dictate a recheck of this data by Walker or the Commission. This never occurred.

*The issue of whether sex offenders come from sexually deprived backgrounds*

The Commission in their Effects Panel Report, Final Summary Report and elsewhere again and again cite data to show that sex offenders come from conservative, repressed, sexually deprived backgrounds. Quotations from Chapter V, Effects Panel Report, capture well the essence of their conclusions:

"Sex offenders generally report sexually repressive family backgrounds, immature and inadequate sexual histories and rigid and conservative attitudes concerning sexuality."

Or another quote:

"The early social environment of sex offenders may be characterized as sexually repressive and deprived. Sex offenders frequently report family circumstances in which, for example, there is a low tolerance for nudity, or absence of sexual conversation, punitive or indifferent parental responses to children's sexual curiosity and interest. Sex offenders histories reveal a succession of immature and impersonal sociosexual relationships, rigid sexual attitudes, and severely conservative behavior."

Or still another quote:

"Suggest that sex offenders inexperience with erotic material is a reflection of their more generally deprived sexual environment. The relative absence of such experience probably constitutes another indicator of atypical and inadequate sexual socialization."

There are a number of things very wrong about these conclusions. In some of the studies where they compare sex offenders and non-offenders they, inexcusably, lump all different types of offenders together "into one bag" (e.g., Cook & Fosen, & Johnson, et al., 1970). The problem here, as the Kinsey Institute studies well demonstrate, is that there are at least 21 categories of sex offenders, some of whom show striking differences in family, sexual and psychosocial backgrounds. To draw general conclusions about such a diverse group is like doing a study on what religious people are like and include in your group Catholics, Unitarians, Buddhists and Black Panthers, treating them as a single "type." For example, aggressive rapists are very impulsive, having extremely high levels of sexual activity from an early age with very high degrees of criminality. They are very dangerous. The "Peeper" on the other hand tends to have very low rates of sexual experience, tends not to marry, and is poorly socialized.

Another type of problem is the use of an inadequate control group. To illustrates how this might cause serious problems consider the following: "Protestants are a more criminally inclined group of citizens than atheists." We study a group of protestants at the state prison and compare them with atheists taken from the general population, and sure enough our conclusion is correct. Or another (again made purposely absurd to illustrate the point). "Men who drink carrot juice will have a high sex drive" and we compare men 20–25 years of age who drink carrot juice with men 90 and over who don't drink it on a variable like frequency of intercourse. If we conclude this study shows that drinking carrot juice is related to or causes a "higher sex drive," we are in error. It has demonstrated no such thing. If we report this and *also* fail to mention that we didn't have a comparable control or comparison group, or not mention that the controls exceeded 90 years of age, then we've made a second serious error.

One of the studies that the Commission cites as giving evidence that "sex offenders" come from sexually deprived backgrounds is that of Thorne and Haupt (1966). Six percent of their college students report TRUE "I have never had a sexual orgasm" vs almost 30% for the rapists." While they don't have a matched control group to compare the rapists to, they do have data on murderers and property crimes offenders who one might guess would tend to be more similar in social class background, intelligence and age to the rapists (than the college students). When we look at their responses to this question we find an amazing 40% who indicate never having sexual orgasm. Since by the very nature of their offense it would be difficult to believe that 30% of the rapist sample never had orgasm, and in view of the Kinsey findings, findings that very nearly all of rapists (which they studied) engaged in premarital intercourse and nearly 80% engaged in extramarital sex after they married, these findings appear even more difficult to believe. However, if one is aware of the fact that most rapists, murderers, and property crimes felons come from lower socioeconomic backgrounds, have lesser education, etc. a very simple explanation offers itself. A significant number of these men didn't understand what the term "sexual orgasm" meant. Again, incorrect conclusions are drawn from the data.

Thus one can see the extreme importance of having matched control groups. If we use the murderers and property crimes felons as controls for the rapist sample (a risky thing to do) and compare how this typical sex offender compares on sexual repression, deprivation, etc., we find that (because they

[4] Table omitted.

are in jail) they *do* tend to feel more guilty about their sex behavior, but there are no real differences overall. However, if one compares all the prison population against the college students on attitudes we do find them a little more prudish in what they say—but not apparently in what they do, compared to the college students. This undoubtedly reflects the difference between current middle and lower class cultures out of which they emerge.

In the study of Goldstein and associates (1970) they attempted to obtain a good control sample to compare their sex offenders against. But unfortunately they were not too successful. His controls were significantly younger and better educated than his offender groups. (Example: nearly 80% of his controls were under 30 vs only 25% for one of the child molester groups). This makes it very dangerous to say that sex offenders are different or the same compared to "normals" when your comparison group is different. Remember the carrot juice and its relation to sexual activity?

The almost total disregard for these very elementary considerations in evaluating research findings by the Commission report writers leaves one very concerned about how they arrived at their conclusions.

*Sex crimes in the United States data*

The Commission after being criticized for inaccuracies in their early reports on incidence of sex crimes in America have made a number of corrections. However, a summary of this data would be in order here. Some have argued that because sex crimes have apparently declined in Denmark while the volume of pornography has increased, we need not be concerned about the potential effect in our country of this kind of material, because, essentially, of Denmark's benign experience. However, two considerations must be noted. First, we are a different culture with a major commitment to the Judeo-Christian tradition (which Denmark tends not to be); and secondly, we are actually only a year or so behind Denmark in the distribution and sale of pornography. Hardcore written pornography can be purchased anywhere in the U.S. now. Hardcored still pictures and movies can now be purchased over the counter in some cities. Anything can be purchased through the mails. And in a few cities people can attend hardcore pornographic movies. About the only thing we don't have, which Denmark has, are live sex shows. What is most relevant are sex crime statistics in this country, *not* Denmark. Since it was in about 1960, at the beginning of the decade that pornography began to flower in the U.S. relevant statistics should be examined carefully.

Reported rapes (verified): Up 116 percent 1960–69; up 9 percent 1960–69 per 100,000 females.

Rape arrests: Up 56.6 percent all ages, 1960–69: up 85.9 percent males under 18, 1960–69.

Prostitution and commercialized vice: Up 80.1 percent 1960–69 all ages; up 120.2 percent 1960–69 girls under 18.

Note: The bulk of prostitutes are 15–24 years, peak age: 22; only 13 percent of sex offenses (arrests) are women.

Source: "Unified Crime Statistics," 1970.

Illegitimate births—General note: During decade 1947–67 rate of illegitimacy doubled per 1,000 never married females. 1960–67 illegitimacy ratio up 71 percent (which is the number of illegitimate births per 1,000 live births).

Source: P. 31, 1970, "Natality Statistics."

Illegitimate births 1940 to 1967: Under 15, 2.1 to 6.9 (350 percent increase); 15–19, 40.5 to 144.4 (350 percent increase). During this period, the population of the United States increased 50 percent. "The greatest current rate of increase in illegitimacy is with 15–19 year olds" (source: p. 31, "Natality Statistics" 1970, U.S. Public Health Department).

VD—Gonorrhea—All ages: 1960–69: Up 76 percent; females 15–19: Up 52 percent, 1965–68; females 20–24: Up 36 percent 1965–68; females 25–29: Up 25 percent, 1965–68. VD fact sheet, 1969, U.S. Public Health Service.

"Sex offenses" (homosexual acts, statutory rape, etc.), All ages, 1960–69: Down 17 percent; under 18, 1960–69. Down 21 percent. This is spurious decline. Is due to change in law enforcement policy, primarily involving homosexual acts—Justice Department.

Source: "Unified Crime Report." 1970.

Divorce rate 1960, 393,000 (2.2 per 1,000 population); 1969, 660,000 (3.3 per 1,000 population).

Source: Monthly Vital Statistic Report. Mar. 12. 1970. U.S. Public Health Service.

From this data it would be difficult to argue for a decline in sex crimes and other social indicator data in the U.S. associated with an increase in all types of pornography. It would appear from all the social indicator data that our society is going through a period of considerable social upheaval and distress.

OPINIONS OF PROFESSIONAL WORKERS

In their summary section the Commission states, "Professional workers in the area of human conduct generally believe that sexual materials do not have harmful effects." While this appears to be true, these conclusions are based on a mail-back survey in which only a third of their sample responded. They also neglect to state that 254 psychiatrists and psychologists *had* seen cases where they reported they had seen/found a direct causal linkage between involvement with pornography and a sex crime, while another 324 professionals reported seeing cases where such a relationship was suspected. This totals, in actual numbers, 578. While these therapists represent a small group percentagewise, it would seem to this reviewer irresponsible to gloss over them as if they didn't exist. What if 900 of 1000 physicians indicated that they had found no relationship between cancer of the cervix and use of the coil contraceptive; but the other 100 physicians indicated that in their practice they had come across cases where there was a suspected or definite relationship. Do we discount the experience of the minority because they are outvoted where a possible health hazard is involved.

Additionally, they do not report (though they were aware of its existence) of another survey conducted by a religious group, the Archdiocese of New Jersey, in 1967 of professionals seeing a relationship between involvement with pornography and anti-social sex behavior. The majority of therapists here reported noting such a relationship at some time during their practice. This study is also flawed because of a low return of "mail-backs" by the professionals. But such is also true of the Lipkin and Carns study. Such omission of contrary evidence is difficult to understand.

*The Goldstein study*

In another Commission financed study by Goldstein (1970)[5] a study was made of the exposure to pornography and its relationship to sex activities of groups of sex offenders and others. In all, nine separate groups of male subjects were studied and compared. They found that the rapists were the group reporting the highest "excitation to masturbation" rates by pornography both in the adult (80%) as well as teen (90%) years. Considering the crime they were imprisoned for, this suggests that pornography (with accompanying masturbation) did not serve adequately as a catharsis, prevent a sex crime or "keep them off the streets." Fifty-five percent of the rapists report being "excited to sex relations by pornography." When reporting on "peak experiences" in exposure to pornography during their teens, 80% of the rapists report "wishing to try the act" that they had witnessed or seen demonstrated in the pornography exposed to them. This is far higher than with any other group. When asked if in fact *they did follow through* with such sexual activity immediately or shortly thereafter 30% of the rapists replied "yes." An even higher number of blacks (38% replied "yes") which is consistent with many studies showing very high rates of sexual activity early in life for this group. Even among the "normal" controls 28% replied "yes". If we can accept what they say at face value, this would suggest that pornography potentially does effect behavior and possibly adversely. This would also suggest serious concerns about exposing young people, especially to pornographic-violence. Since the writers of the Commission Report base most of their findings on data using "verbal self report" there is little reason not to at least consider as partially valid what these people say about pornography and its influence in their lives. When one asks them about the adult years and to what extent they "tried out behaviorally" what pornography had suggested to them, the figures drop somewhat (15% for rapists, 25% for child molesters, etc.) but still suggests an "effect."

[5] Table 9–10, pages 48. 50.

CONCLUSION

Since the Commission is recommending sweeping changes in laws and social policy, the burden of proof is on them to demonstrate "no harm" in suggesting exposure of wider sections of the population to more intense types of pornographic stimulus. This they never do. They can conclude only, as they do, that they have *found no evidence* that it causes harm. This is a shaky foundation for recommending such changes when a number of people *do* claim to have found such evidence including 254 clinical psychologists and psychiatrists (in the Lipkin and Carnes survey) a majority of law enforcement personnel, etc.

Their recommendations are especially surprising when one considers the possible "mental health" implications of the problem as well as the issue of values and "public morality."

With the absence of any significant data clearly demonstrating that pornography is generally "harmless or just a nuisance" and with the presence of a considerable body of data from their own studies that exposure to pornography IS related to a variety of anti-social and sexually deviant behaviors (which is not mentioned in the majority report) serious questions about credibility certainly must be raised about this report. There are a number of excellent studies available to the Commission which could yield a great deal of useful information. Instead, the Commission report is fraught with flaws, omissions, and inaccuracies.

The writer again strongly urges that an independent panel of unbiased social scientists, competent in behavioral science research methodology, be called to review the original studies assembled, as well as review what conclusions could be drawn from them.

LEGAL "FINDINGS" OF COMMISSION

We vigorously object to the words "findings" with regard to legal issues. Section IV of the majority report is an attempt to foist upon the people and upon the President and the Congress a philosophy of law which is misleading at best.[6]

The section headed letter "C" states that the "prevailing view" in the Supreme Court is that to be classified as obscene an item must meet three—and all three—criteria. These criteria, the report claims, are: (1) the dominant theme of the material, taken as a whole, must appeal to the prurient interest of the average person; (2) the material must be patently offensive according to contemporary community standards; and (3) the material must lack redeeming social value.

This is a misinterpretation of the law, as counsel to the Commission must know, for he originally stated in his Legal Panel Report that No Majority of the U.S. Supreme Court has ever accepted the proposition that "utterly without redeeming social value" is a

[6] On September 10, as this dissent was going to press, Mr. Lockhart called Commissioner Gill and instructed him to make certain modifications in these statements so that the legal panel report no longer reads the same as it did when the Commission was influenced by it to vote for the legalization of obscenity at their first meeting of August 11 & 12 and the final meeting of August 26 & 27.

"test" for obscenity. To say that an item may not be adjudged obscene if it does not meet all three of these criteria is false. It is exactly the promotion of this canard which has brought us to the deplorable state we are in today in this nation insofar as obscenity is concerned. No Supreme Court opinion so holds. In fact, the *Roth* case says the opposite. This is the only case where the Supreme Court gives us a definition of obscenity. The "utterly without redeeming social value" language is assumed to have been built into the *Roth* test by an opinion in the *Memoirs* (Fanny Hill) case of 1966.

However, this was the opinion only of three Justices: Brennan, Warren and Fortas. It was not the opinion of the Court, and so is not the law of the land. It is a three-Justice out of nine opinion, not binding on anyone. In 29 American Jurisprudence 2nd, at Section 195 of the topic "Courts," we find the following:

"A decision by an equally divided court does not establish a precedent required to be followed under the stare decisis doctrine. And where the members of the court unanimously or by a majority vote reach a decision, but cannot even by a majority agree on the reason therefor, no point of law is established by the decision and it cannot be a precedent covered by the stare decisis rule."

The Supreme Court of the United States has said in 218 U.S. at 213 that unless a majority of the Supreme Court agrees on an opinion the case cannot become "an authority either in this or in inferior courts."

The *Roth* case gives us only the prurient interest test and this test has not been modified by *any* subsequent Supreme Court decision. In *Roth* the Court said, an item is obscene when to the average person, applying contemporary community standards, the dominant theme of the material taken as a whole appeals to the prurient interest.

This brings us to the Legal Panel Report, prepared by general counsel Bender and staff, with the apparent assistance of Mr. Lockhart, from which the "Legal Findings" section is drawn, and upon which legislative recommendations are based.

The Legal Panel Report should reflect the concepts of the Commission, their conclusions, their interpretations and analysis and their recommendations for legislative action. Instead, the Commission is asked to adhere to ideas, concepts, suggestions, analyses and recommendations prepared by staff members appointed by the Chairman and his general counsel, and reflecting their points of view.

This Bender-Lockhart Panel Report is misleading in many fundamental areas of the law, and so misleads the Commission, so as to cause those members, many of whom are unlearned in the law, to come to fundamentally erroneous conclusions of the state of the law. We object specifically to the following misleading statements in the Bender-Lockhart Legal Panel Report:

1. "Unless there is a basis for finding that certain sexually explicit materials create such a danger (clear and present danger of significant social harm), therefore, general prohibitions upon the dissemination of 'obscene' speech would appear constitutionally invalid under ordinary principles." We are told on the next page that this analysis was rejected in *Roth* by the Supreme Court. Why then do they state it as a fact and ask the Commission to accept it?

2. Shortly after this, the Panel Report begins to take after the United States Supreme Court decision in *Roth* and suggests that it is erroneous and should be reversed and in fact has in effect been reversed by the decision in *Stanley* v. *Georgia* in 1969. They discuss the meaning of *Stanley* vis-a-vis *Roth* as they interpret it and make the following statements:

(a) "Obscenity prohibitions were found constitutional in the *Roth* decision * * * without investigation into or conclusions regarding the actual social effect of the dissemination of obscene materials. It is the conclusion—that obscenity prohibitions regulating what even consenting adults may obtain may be upheld without any indication of social harm—that has been brought into question by * * * *Stanley*."

(b) "*Redrup* may be read as doubting whether *Roth* was actually still the law."

(c) "In *Stanley* * * * the Court threw greatly into doubt the continuing validity of the fundamental premise of the *Roth* case that the dissemination of 'obscene' materials may be prohibited without reference to First Amendment values, and suggested, instead, the strong constitutional significance of the question whether such materials are in fact socially harmful."

(d) "The question of the social effect of obscenity, which *Roth* had deemed irrelevant has assumed critical importance in *Stanley* 'in order to determine whether the state there had a valid regulatory interest sufficient to prohibit private possesion of obscene materials.' The Court held in *Stanley* that it did not."

(e) "Prohibition upon the commercial dissemination of obscenity to consenting adults may interfere with the right of adults to read or see what they wish in their own homes."

(f) "*Stanley* appears to have held that government may not rest prohibitions upon what consenting adults may read or view upon a desre to control their morality."

(g) "It further held that adult prohibitions premised upon a desire to prevent crime or anti-social behavior must, at least, rest upon a solid empirical foundation."

A Commission member, reading these statements and the continual "pounding" of *Stanley v. Georgia* at every opportunity throughout the rest of this panel report, would naturally assume that these statements are true and that *Roth* in some way has been overturned in a very fundamental manner by *Stanley v. Georgia*. But as a matter of fact *Roth* has not been overturned. It has been specifically confirmed in *Stanley* at 22 L. Ed. 2d 542, where the Court says:

"Roth and the cases following that decision are not imparied by today's holding. As we have said, the states retain broad power to regulate obscenity; that power simply does not extend to mere possesion by the individual in the privacy of his own home."

If the Bender-Lockhart Panel Report was intended to give the Commission an unbiased view of the state of the law, why was not the meaning of this phrase expounded? Since *Roth* is still the law of the land, then the following are the true facts (as stated in *Roth*):

(1) It is not necessary to prove that "obscene material will perceptively create a clear and present danger of antisocial conduct or will induce its recipients to such conduct."

(2) That the basis for federal and state proscription for obscentity is "the social interest in order and morality."

It is also to be noted that the Court said its decisions following *Roth* are not impaired.

In *Ginsberg v. New York*, at 20 L. Ed. 2d 195, the Court said:

"Our conclusion in *Roth* * * * that the clear and present danger test was irrelevant to the determination of obscenity made it unnecessary * * * to consider the debate among the authorities whether exposure to pornography caused antisocial consequences."

The *Ginsberg* case was subsequent to *Roth*. Why was it not mentioned? Among other United States Supreme Court decisions subsequent to *Roth* that should have been mentioned are the following, all contradicting the Bender-Lockhart thesis that somehow *Stanley* has changed things:

1. *Times Film (1960)*—(State has right to censor obscene motion pictures.)

2. *Freeman v. Maryland (1965)*—(State may require prior submission of motion pictures to a Board of Censors.)

3. *Ginzburg v. U.S. (1966)*—(State has a valid interest in preventing pandering to "the widespread weakness for titillation by pornography" books and magazines.)

4. *Mishken v. New York (1966)*—(State has interest in protecting homosexuals from obscenity.)

5. *Interstate Circuit v. Dallas (1968)*—(Municipality may enact an ordinance regulating motion pictures for adults as well as children and censoring those obscene.)

Each of the statements made in (a), (b), (c), (e), (f), and (g) above in the Bender-Lockhart Report are incorrect when we look at *Stanley v. Georgia's* reaffirmation of *Roth* and cases thereafter. The statement made in (d) above is misleading that "private possession" is permissible because it fails to complete the quotation "in the privacy of his home."

It would appear that for purposes of the Bender-Lockhart Panel Report, the "wish is father to the thought." They would like *Stanley v. Georgia* to say what they say it says but that desire is not borne out by the facts of that case.

It is quite clear that *Stanley v. Georgia* stands for a very narrow position and that is that a state may not convict a person of a crime "for mere possession of printed or filmed matter in the privacy of a person's *own home*." 22 L. Ed. 2d 542. And again, at 22 L. Ed. 2d 551, the "right to be free from state inquiry into the contents of *his library*." The State has no business "telling a man sitting alone *in his own home*, what books he may read or what films he may watch."

It could not be much clearer that this was the narrow proposition decided. The Court said it *four* times while specifically upholding *Roth* and all subsequent decisions.

3. The Bender-Lockhart Panel Report hits us with two phrases. One appears to be the invention of the authors in lieu of the use of the word "obscene" and that is the phrase "explicit sexual material." The other phrase is the catchword "consenting adults" which is a euphemism to express the authors' position that there are no restraints on "explicit sexual material" as long as "consenting adults" patronize it. Translated simply, it means "Legalize Obscenity for Adults" and the authors of this report should have so labeled it since this is the net effect of their suggestions. Nowhere is it explained that neither of these terms is used in any Supreme Court opinion, nor is it explained that this is the phrase used by those who would have the Court legalize the showing of "I Am Curious (Yellow)" in both Massachusetts and Maryland where it has been held obscene. In fact, there is an amazing parallel between the Bender-Lockhart Panel Report and the language used in the briefs for the distributors of that motion picture. Both sing the same tune. The Panel Report suggests that adults have "a right to obtain [explicit sexual materials] they wish to see." They cite no justification for setting up this false premise. Certainly *Stanley v. Georgia* never said it. They then proceed to state the motivations of the government in regulating "explicit sexual materials" (which we translate to "obscene"). They fail completely, however, to give the real reason which is the "social interest in order and morality." Having set up two false premises, they then proceed to obfuscate the true situation. There is a bald misstatement of the law when the Panel Report says:

"In a series of cases subsequent to *Roth*, the Court made clear that where attempts were made to prohibit only specific distributional activities connected with sexual materials—and not to prevent consenting adults from obtaining material they wished to see—more inclusive definitional standards than that imposed in *Roth* would be permitted to be applied. The first case leading in this

direction was *Ginzburg* v. *United States*. There the Court * * * permitted the conviction of the defendant to stand because he was found to have 'pandered' the materials in an offensive manner rather than merely to have sold them to persons who wished to obtain them. Thus the Court permitted a conviction which it would not have permitted had the defendant merely been engaged in neutral dissemination to consenting persons."

You would assume that Mr. Bender and staff, who ought to know, have told the Commission members what the *Ginzburg* case held. Nothing could be further from the truth. As they ought to know, this is *not* what *Ginzburg* held, since:

(a) The term "consenting adults" is nowhere used or implied in that case.

(b) The Court did not say anything about *Ginzburg* not having "merely sold them to persons who wished to obtain them." It didn't mention that at all.

(c) The implication that the case stands for the right to receive "obscenity" by consenting adults is misplaced. The Courts said in *Ginzburg* that the materials *were not* "obscene in the abstract".

4. The Bender-Lockhart Panel Report suggests that "some of" the federal mailing statute may be unconstitutional under *Stanley*. This is another non-sequitur. The mailing statute has nothing to do with invading a man's home.

5. The implication on page 13 that there is something in *Redrup* which proves a theory that "consenting adults" have a right to receive obscenity is also misplaced. *Redrup* found the materials not to be obscene.

6. On page 16, the Bender-Lockhart panel Report states that:

"*Stanley v. Georgia*, if given full effect, would mean * * * that the individual's right to see materials of his own choice may only be overcome where there is a substantial social basis for government regulation. As a result, many applications of general prohibitions may no longer be permissible. The *Roth* standard for determining the 'obscene' retains potential validity only in those areas where *Stanley* permits general prohibitions to apply."

Now, if this problem were not so important to our country, the immediate reaction to such a non-sequitur from *Stanley* v. *Georgia* would be to shrug it off as ridiculous. There is absolutely nothing in *Stanley* to warrant this misinformation.

*Roth* is supreme," says Stanley—not the other way around. *Stanley* cannot be exploited or expanded to help the pornographers in this fashion.

7. Eventually, the Legal Panel Report abandons the position that *Fanny Hill* has modified the *Roth* test and engages in the business of counting Justices who have adopted the "patently offensive" test. Four of these six Justices are no longer on the Court so this maneuver fails. The footnote reference to Black and Douglas also fails since they have never enunciated this standard. The reference to Stewart and Harlan refers to federal cases only. The reference to the American Law Institute standard is misleading since that Institute never used the phrase "patently offensive".

8. Again, the Panel Report abandons its original claim that the *Roth* test included an "utterly without redeeming social value" element, and now tries to give new dignity to the opinion of three Justices (two of whom, if we use his technique, we should note are no longer on the Court) by calling it a plurality opinion. As we point out in our discussion of "Fanny Hill," under the decisions of the United States Supreme Court, an opinion of three Justices is no precedent, does not establish the law and does not bind either the United States Supreme Court or "any inferior court."

9. The Legal Panel Report finally admits that *Memoirs* "utterly without redeeming social value" "test" is not a test at all, not having been adopted by a majority, but they suggest that it is nice to incorporate the same in statutes because Black and Douglas are on the bench and this is two strikes against you. They state, "So long as at least three other Justices employ the three-part test," no application of a general prohibition which does not employ this test will be upheld on appeal. What kind of specious reasoning is this? The Bender-Lockhart Legal Panel Report seems so intent on keeping this unnecessary language in our statutes (which contradicts *Roth*—see our comments under *Memoirs* case) that they employ the scare tactics that you only need two more people against you and you lose. Is this what our statutes should be based on in this vital area? Is this what this Commission was formed for, "to estimate percentages"? Fortas and Warren are gone, leaving only Brennan who adheres to this pernicious concept. Presumably then, eight out of nine Justices will adhere to *Roth*, which rejects this so-called test and says that once it is obscene by the *Roth* test (which has no social value language), then it is proscribable. But this is not our function. We are to interpret *Roth* honestly and give the country an honest definition of obscenity. Such a definition does not include the "Brennan" so-called "test". It is to be noted, that the Legal Panel Report does not quote the recent decisions in Maryland, Massachusetts and Arizona that say that there is no "social value" test in *Roth* (see our comments in Appendix under *Fanny Hill*) nor do they say that New York is proposing repeal of this part of their statute (see our remarks under *Fanny Hill*).

10. The Bender-Lockhart Panel Report states that the Supreme Court believes that the *Roth* standard does not permit a finding of obscenity to be made under a prohibition of what consenting adults may obtain with regard to a large class of pictorial material. Again we note that there is no opinion of the Supreme Court that supports this statement that somehow "consenting adults" are a separate class under the *Roth* standard. That phrase is not used in any Supreme Court opinion.

### V. CONCLUSIONS

*We submit:* That the Commission majority has not carried out the mandates of Congress.

*We submit:* That its legislative recommendations should be excluded from consideration by the Congress and States, since they are not responsive to the mandate of Congress to regulate the traffic in pornography. It is irrelevant legislation and deserves condemnation as inimical to the welfare of the United States, its citizens and its children.

*We submit:* That the purpose of the Commission's report is to legalize pornography.

In the pursuit of the mandates of the Congress, and in compliance therewith, we have made a review of the law and the decisions of the United States Supreme Court; and have analyzed the same in detail. This review is attached as Appendix I. In the light of that review and comment thereunder, and in view of our other mandates, we make the following recommendations.

### VI. RECOMMENDATIONS

#### *1. Recommended test or definition of obscenity*

A thing is "obscene" if, by contemporary community standards, and considered as a whole, its predominant appeal is to the prurient interest. As a matter of public policy, anything which is obscene by the definition shall be conclusively deemed to be utterly without redeeming social importance. Any slight social value in such obscenity shall be deemed outweighed by the social interest in order and morality.

"Prurient interest" is defined as a shameful or morbid interest in nudity, sex or excretion which goes substantially beyond customary limits of candor in description or representation of such matters. If it appears from the character of the material or the circumstances of its dissemination that the subject matter is designed for, or directed to a specially susceptible audience, the subject matter shall be judged with reference to such audience. When the subject matter is distributed or exhibited to minors who have not attained their 18th birthday, the subject matter shall be judged with reference to an average person in the community of the actual age of the minor to whom such material is distributed or exhibited. In all other cases, the subject matter shall be judged with reference to the average person in the community.

*Comment*

This formulation is taken from the *Roth* case which is the only case in which the Supreme Court defined obscenity and the *Ginzburg* case, in which the Supreme Court accepts the concept of variable obscenity as it applies to minors. It rejects the suggestion of three of the nine Justices that "utterly without redeeming social value" is a test for obscenity, since the Supreme Court has never adopted this suggestion. In fact, it is this unnecessary "test" that has caused the flood of hardcore pornography in motion pictures, books, magazines and other publications.

A complete review of the lack of constitutional necessity for this so-called "test" is found in Appendix I in our comments under the *Memoirs* (*Fanny Hill*) case.

The *Roth* Test, it is claimed by some is subjective. Upon examination, however, it is plain that the individual juror is not instructed to apply his subjective concept of what is obscene, but to determine something objective *viz.* "the prurient interest of the average person." This is very similar to what juries are called upon to do in negligence cases where the juror is asked to determine if a person used that degree of care that a "reasonably prudent man" would use. This determination has never been thought to be subjective nor too impractical or difficult to apply. We have confidence in the ability of the Anglo-Saxon jury system to determine obscentiy if properly instructed. (See Judge's charge in *Roth* case Appendix I).

Our recommendations are squarely based on the concept that the State has, as the Supreme Court says, a right to enact obscenity legislation based on the "social interest in morality." There is a distinction that should be made between individual morality and the level of general morality which the state needs to protect.

A person's beliefs and practices depend on what he relies on for an authority as to what is right and best. As children grow up, they come under various authorities' influences: parents, relatives, friends, teachers, writers, actors celebrities, clergyman and a host of others. They are also influenced in various ways by other forces of good and evil.

At every point in life a person has a certain moral character. It is the sum total of what he then believes and practices in the area of right and wrong. This overall moral character is constantly changing under the interplay of the aforementioned influences. Thus if a person accepts higher standards, his moral character improves; if he accepts lower standards, his moral character deteriorates.

Not only does every individual reflect a certain moral character, but so does every group of individuals, a club, a city, a state, or even a nation—*the essence of which is determined by a general consensus of individual standards*. It is, stated another way, the distillation of all the individual moralities or the *level* of morality generally. It is this level, this distillation, this average,

this essence, which the state has an interest in protecting. The state protects this level from falling and creates an atmosphere by which it can rise. The obvious morals protected are chastity, modesty, temperance, and self-sacrificing love. The obvious evils being inhibited are lust, excess, adultery, incest, homosexuality, bestiality, masturbation and fornication.

A discussion of the background of the other aspects of this definition may be found in our comment on the Model State Obscenity Statute in Appendix II.

*2. Recommended Federal legislation*

We recommend:

(a) That the United States Codes Sections 1461, 1462, 1463, 1464, 1465 of Title 18, and Section 1305 of Title 19, and Section 4006 of Title 39 be amended to define "obscene" in accordance with our recommended definition of obscenity mentioned above.

(b) That so much of our recommended Model State Statute, found in Appendix II, which is suitable for incorporation in these federal statutes be therein incorporated.

(c) We recommend that Congress note that Section 4009 of Title 39, Prohibiting of Pandering Advertisements in the Mails, was specifically upheld by the U.S. Supreme Court in *Rowan* v. *U.S.*, decided May 4, 1970. This statute, it should be noted, gave a parent the right to require, also, that the mailer stop sending mail to "any of his minor children who have not attained their nineteenth birthday, and who reside with the addressee."

While the decision did not turn on this specific point, it is nevertheless an indication that the Supreme Court will accept at least an age 18, and possibly 19 or older, as a division line between minor and adult in the obscenity field. Certainly under 16 is too low.

(d) We have reviewed anti-obscenity legislation now before Congress which we believe will help, effectively and constitutionally, to regulate obscenity. This review is attached as Appendix III.

(e) We recommend legislation or a Presidential Directive establishing a Division, in the Office of the Attorney General of the United States, under the direction of a Deputy Attorney General, made up of a team of skilled lawyers ready and able to assist District Attorneys throughout the nation in prosecutions against sex exploiters. We have personal knowledge of the fact that district attorneys generally are desperately in need of this type of assistance. The urgent necessity for the same was enunciated in March of 1965 by the presiding Judge of Franklin County, Pa., Judge Chauncey M. Depuy, when he said:

"Whenever a prosecution for obscenity occurs in a county, the well-heeled purveyors of smut act with lightning alacrity to provide high-priced counsel for the defendant. Legal smut specialists are called into the county from the nationwide staff. These professionals soon place the local district attorney's staff, unacquainted with a highly specialized field of law, at a great disadvantage. The average district attorney or assistant is no match for these well-experienced 'pros' who move from county to county and state to state . . . There is no hope for government to serve the interest of the general citizen in managing this flood of pornography unless a massive effort is made at the Department of Justice level. An effective mechanism must be devised, on a permanent basis, as a division of the department, having . . . highly skilled lawyers ready to be loaned at any time . . . to assist the district attorney in connection with any prosecution against the sex exploiters."

It should be noted that if it is believed that such a mechanism could not be set up on the federal level without enabling legislation, such legislation could be based on the Commerce clause, since most obscenity is transported interstate or imported. A model could be found in language used in the Civil Rights Act of 1964.

(f) We recommend the establishment, by Federal legislation, of a National Crime Research and Reference Library on the Law of Obscenity. The Library will be unique, since the Librarian of Congress has indicated that after diligent search, "no reference to any special law library in this area has been found, and . . . such a library would be unique and unduplicated as a single collection."

The purpose of the library will be to service prosecutors nationwide to expedite preparation of cases. It will be available also to the judiciary, behavioral scientists, clergymen, writers and other professionals who can contribute to the effort to stem the flow of obscene material. The district attorneys of New York City are of the unanimous opinion that such a library will prove invaluable to law enforcement agencies. It will contain everything written on the law of obscenity: statutes, ordinances, decided cases, texts, commentaries, etc. It will also contain a section on medical, psychiatric and psychological research relative to obscenity. Law enforcement officials believe that the convenience of finding all precedents, statutes, briefs, etc. in one location will save countless hours in case preparation.

*3. Recommended State legislation*

(a) *Model State Obscenity Statute.*—Attached to this Report as Appendix II is our recommended Model State Obscenity Statute based on the concept of variable obscenity and taking into consideration all U.S. Supreme Court cases. We believe it is a constitutionally effective statute that will effectively regulate the traffic in obscenity. The suggested statute is explained and annotated in the Appendix.

(b) We also recommend to the States that they establish, by legislation, a Board of Film Review which would require—under carefully prescribed rules based on Supreme Court decisions discussed in Appendix I—the submission of all motion pictures for licensing prior to their exhibition. This proposed statute is taken from Maryland Statutes Article 66A which has been revised to comply with *Freedman* v. *Maryland*, a Supreme Court decision. In our opinion it will withstand constitutional attack. A copy of this proposed Model Statute on Film review is attached as Appendix IV.

(c) In addition, we suggest that some States might desire to permit local ordinances for the establishment of Film Review Boards, generally, or for the purpose of establishing classification of films as suitable or unsuitable for minors under 18. Such States should enact legislation confirming the existing right of municipalities to adopt such legislation, and permitting them to apply for injunctive relief in the courts; and requiring a prompt judicial determination of the issue. A suggested statute to be used as a model is Section 418A, again of the State of Maryland, found in Appendix V. It should be used as a supplement to any State statute or local ordinance on Film Review or classification. This model should be modified where used in aid of local ordinances to permit the Chief Legal Officer of the municipality, or the Film Review or Classification Board, to apply also for an injunction in the case of motion pictures.

(d) We recommend the employment of the injunctive remedy, found in 22a of the New York Statute or 418A of the Maryland Statute, to supplement the Model State Statute generally. This is a most effective weapon sanctioned by the decisions of the U.S. Supreme Court, and will reach all types of obscenity. See appendix V.

(e) We recommend that the Attorney General's Office be required to review for possible prosecution and type of suspected obscenity distributed or about to be distributed, of which he gains knowledge, and which falls into any of the descriptive categories listed below:

1. The Stag Film.
2. The Sexploitation Film.
3. The Commercial X-rated Film.
4. The Commercial Unrated Film.
5. Advertisements for X and Unrated Films.
6. Underground Sex Publications.
7. Underground Newspapers.
8. Mimeographed Underground Newspapers.
9. Sensational Tabloids.
10. Homosexual Magazines.
11. Sex-violence Magazines.
12. "Spreader" or "Tunnel" Magazines.
13. Teenage Sex Magazines.
14. Pseudo-Scientific Sex Publications.
15. So-called Nudist Magazines.
16. Lyrics on Commercially Distributed Rock Records.
17. Sex-action Photographs.
18. Sex-action Records.
19. Sex-action Slides and Tapes.
20. Mail Order Advertisements for the Above.
21. Paperbacks with themes of: Homosexuality, Sado-masochism, Incest, Bestiality.
22. Hardcover Books Devoted to Homosexuality, Sado-masochism, Incest.

(f) We advocate the establishment in the office of the Attorney General of each State, a team of one or more skilled attorneys, under the direction of a Deputy Attorney General, to be used to assist in the local prosecutions where intrastate commerce is involved or where federal assistance from the Department of Justice is not readily available.

(g) We advocate the establishment in State Police headquarters of a similar division, working closely with the legal staff just mentioned. The state police have experts in arson, ballistics and other specialties. The formation of a special unit on pornography is long overdue.

(h) We advocate the establishment of permanent State Commission to examine the laws on obscenity, to make recommendations to the legislature, and recommendations for more effective means of enforcement. A suggested statute is attached in Appendix VI, and is modeled on a statute of the State of Illinois, approved September 6, 1967.

(i) We recommend the establishment of a State Commission to review and classify Motion Pictures and printed materials for minors. A suggested statute in this respect, based on our review of *Bantam Books v. Sullivan* is attached as Appendix VII.

(j) As minimum legislation, we advocate elimination of the phrase "utterly without redeeming social value" in any State statute. A suggested statute is attached as Appendix VIII.

*4. Recommended local ordinances*

(a) We recommend a review of existing ordinances in the light of our review of U.S. Supreme Court decisions in Appendix I, and the modifying or amending of same to comply therewith, including the elimination of the phrase, "utterly without redeeming social value" whenever found.

(b) We recommend the adoption of local ordinances (wherever the State has not adopted a Film Review Statute) to review Motion Pictures—based on Maryland Statute recommended above.

(c) On an optional basis, or as part of a general ordinance on motion picture review, we recommend a Film Review and Classification Ordinance for minors. The suggested ordinance, attached as Appendix IX is liberally designed to meet Supreme Court requirements.

(d) We recommend an ordinance designed to protect minors from being exposed, on the highway or street, to drive-in movie scenes of motion pictures that are unsuitable for children. The suggested ordinance attached as Appendix X has been approved by

the United States Court of Appeals for the Fifth Circuit in the case of *Chemline Ind. v. City of Grand Prairie,* decided August 8, 1966, 364 F 2d. 721.

(e) We recommend a local ordinance to penalize the showing of obscene motion pictures, and to penalize the licensee found guilty. See Appendix XII, based on a second ordinance upheld in *Chemline* case above, containing pure *Roth* test.

*5. Recommended private action by the public*

(a) We recommend that private citizens join with or form private, non-sectarian, community organizations that take organized, but constitutional action against obscenity.

(b) We recommend citizens bring official legal complaints whenever evidence of obscenity comes to their attention.

(c) We recommend that citizens continually urge their municipal, State and federal officials, to prosecute obscenity cases. Here, again, this is best accomplished in an organized manner, working through an existing community organization.

NOTE.—Appendices are withheld.

## "VICTORY IS ESSENTIAL TO THE SURVIVAL OF FREEDOM"—RICHARD M. NIXON

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Louisiana (Mr. RARICK) is recognized for 10 minutes.

Mr. RARICK. Mr. Speaker, in October 1963, an American destined for leadership said:

> The Communist goal is to impose slavery on the free world. Our goal must be nothing less than to bring freedom to the Communist world.

In the same article he warned that the Communst leaders of Russia hope to perpetuate the slavery of 97 million Eastern Europeans by negotiating a nonaggression pact between the NATO nations and the Communist Warsaw Pact group. This he warned, would give the Communists what they want—recognition by the West, of the legality and permanence of the Soviet control and ownership over all the Eastern European countries behind the Iron Curtain.

At that time, this forward speaking American said:

> I believe that only the mobilization of the aroused and informed American public opinion will prevent the sellout of the right of 97 million enslaved people in Eastern Europe to be free.

Richard M. Nixon's evaluation of the Communist threat was correct in 1963 and it is just as correct today as he serves as Chief Executive of the largest free Nation in the world.

This October 3, when our Nation's Capital is hosting a march for victory and expecting several hundred thousand concerned Americans to petition for an end to the war and a freedom from communism, the White House will be dark, and the Russians will be building their submarine base in Cuba.

President Nixon's itinerary calls for him to be behind the Iron Curtain visiting the Communist State of Yugoslavia where he will be entertained by Chairman Tito and later host the old Bolshevik at a State dinner in Belgrade. His schedule also announces that he is to place a wreath at a monument to the Yugoslav unknown soldier—we assume a Communist hero who perhaps earned his glory roll in the execution of General Draza Mihajlovic and the Christian Cetniks.

Certainly, no one with the grasp of the Communist threat who prepared a paper on Khrushchev hidden weakness in 1963 could plead innocence to the capture and execution of the Cetniks by Marshal Tito—CONGRESSIONAL RECORD, volume 113, part 25, page 34854—nor the infamous Operation Keelhaul, one of the most sordid involvements of our country in the history of civilized mankind—see the remarks of Hon. ROMAN C. PUCINSKI, CONGRESSIONAL RECORD, September 24, 1970, page 33720.

Now, 25 years after World War II, this once-proud freedom fighter and stanch anti-Communist has remained silent and by his inaction has refused to make public to the American people the contents of the Operation Keelhaul files kept classified as top secret by the Army.

Does Richard M. Nixon still remember the young Hungarian railroad worker sending by him that unforgettable message, "Don't let us down; we want freedom too?"

The material follows:

[From the Saturday Evening Post, Oct. 12, 1963]

KHRUSHCHEV'S HIDDEN WEAKNESS

(By Richard M. Nixon)

On July 24 I went into Communist East Berlin escorted by five carloads of Communist agents and East German newsmen. The people I met were obviously afraid to show any signs of recognition or friendship. Those who did speak to me were immediately questioned by the police. Two small boys asked for autographs—I later learned they were picked up by the police and reprimanded. This was my depressing introduction to the most brutally repressive of all the Communist states.

But that same evening I went back to East Berlin without advance notice. This time the secret police were not aware of my presence until I had been in the city for over two hours. And now people came up to me to express their friendship for America and their hatred of the Communist government under which they were forced to live. As I was about to cross Checkpoint Charlie and return to freedom, a man walked up in the dark. "We are glad you came to East Berlin," he said. "The Americans are our only hope."

I had just seen the difference between day and night behind the Iron Curtain.

Last summer I also visited Budapest with my wife and two daughters, Tricia, 17, and Julie, 15. This is the city where seven years ago—in October of 1956—Khrushchev put down a revolution, while the request of the free Hungarian government for American help went unanswered. For this reason I did not expect a friendly reception. Yet everywhere we went we were completely swamped by people who wanted to shake hands, or say a word of greeting, or ask a question about America. It seemed that every other person I met had a relative who had fled to the United States after the 1956 revolution. One after another, even with policemen standing nearby, they said, "I wish I had gone too."

At an open-air market we were loaded down with scores of bouquets of flowers which people of very modest means had purchased to give us as a remembrance of our visit. When John Zimmerman, our *Saturday Evening Post* photographer, was taking pictures of the crowd around us, a policeman tried to stop him. Promptly, hundreds of Hungarians surrounded the policeman, berating him until he finally relented and allowed Zimmerman to continue with his photography. For three days we were given the same reception: People were openly critical of their own Communist government and openly friendly to the United States and to an American who to them represented the United States.

My experiences in Budapest and by night in East Berlin brought back memories of my arrival in Warshaw in 1959. Khrushchev had been given a cool reception in Poland only three weeks before, despite great efforts by the Polish government to give him a "spontaneous" demonstration of affection. Flowers had even been given to the people by Communist officials so they could throw them at his car and thus give him a "typical Polish welcome." But most of the Poles kept them instead.

I was therefore amazed to find that although the time of my arrival and my route through the city had not been announced, 100,000 cheering people lined the streets shouting, *"Niech zyje America"*—long live America. So many hundreds of bouquets of flowers were showered on us that the driver had to keep stopping the car to clear the windshield. We were told by the proud Poles, "This time we bought our own flowers!"

These personal incidents could be multiplied a thousandfold by the experiences of other Americans who have traveled in Communist-controlled Eastern Europe—in Romania, Czechoslovakia and Bulgaria, as well as in Poland, Hungary and East Germany.

And this is why I saw Khrushchev react so violently to the 1959 Captive Nations Resolution in which Congress called on free people to pray for the liberation of "enslaved peoples" behind the Iron Curtain. I remember clearly my first official call on the Soviet dictator in the Kremlin shortly after this congressional action. Rising out of his chair, he pounded the table and shouted, "This resolution stinks!" Then he described what he meant in a series of four-letter words so crude that even Oleg Troyanovsky, his usually suave translator, blushed as he translated them into English for my benefit.

For Khrushchev knows that he is sitting on a powder keg. He knows that the overwhelming majority of the people of East Germany, Hungary, Czechoslovakia, Poland, Bulgaria and Romania hate their Communist governments and would rise against them if they thought they had a chance to succeed. He knows that the Eastern European nations, through history and by tradition, hate and fear Russian imperialism. He knows that millions behind the Iron Curtain would leave their homes and go to Free Europe or the United States if they were allowed to do so by their governments. And he knows that despite the United States' failure to give more support to the 1956 Hungarian revolution, the people of the captive nations still consider America to be their main hope for ever obtaining freedom.

This is why the ugly Berlin Wall stands as a shocking symbol of Soviet fear and failure. Like the minefields, the watchtowers and barbed wire stretching along the Hungarian border, the Wall's purpose is not to keep enemies out but to keep the people in. It is not surprising, therefore, that Khrushchev's main foreign-policy objective at this time is to keep the lid on this Pandora's box of troubles for his Communist empire.

Today Khrushchev hopes to do this by negotiating a nonaggression pact between the NATO nations and the Communist Warsaw Pact group. This would give him exactly what he wants—recognition by the West of the legality and permanence of his Eastern European Communist regimes. He knows that all he now has are squatters' rights in these countries, obtained through very questionable means. For him, a nonaggression pact

would be a quitclaim deed—a legal title from the West. Yet there are now high officials in the Free World who ask: Why shouldn't we give this recognition to the Warsaw Pact governments? Don Cook of the New York *Herald Tribune*, writing from Paris on August 29, reports that a nonaggression pact is favored by Britain, Belgium, Luxembourg, Denmark, Canada and Italy. And, he goes on to say, "The Kennedy Administration is inclined to want to try the nonaggression-pact idea, but is not pushing or urging the plan."

In the early stages of the test-ban negotiations in Moscow, several trial balloons were sent up from "usually reliable" Administration sources, suggesting that the United States should agree to a nonaggression pact if this were the only way we could get Khrushchev to agree to a test ban. The public reaction in the United States to such a deal was so overwhelmingly unfavorable that all our negotiators finally agreed to do was "to discuss" this and other proposals in a future conference.

Because there are strong pressures from within as well as from outside the Kennedy Administration to make such a deal, I believe that only the mobilization of an aroused and informed American public opinion will prevent the sellout of the right of 97 million enslaved people in Eastern Europe to be free.

Those who favor a nonaggression pact argue that the Hungarian revolution proved we couldn't do anything in support of the people of Eastern Europe anyway, and besides, it is a small price to pay to keep Khrushchev in a "mellow mood." We heard the same argument in support of a policy of talking softly and carrying a toothpick in dealing with Castro. In short, we are hearing more and more talk about "accommodation," "disengagement," "coexistence" and other devices which add up to our approval of Soviet domination of Eastern Europe, and less and less talk about eventual freedom for the people living under Communist repression.

I believe the time has come for a complete change of direction and emphasis in American foreign policy toward Eastern Europe. We must begin by doing some clear thinking about what is at stake for the Eastern Europeans, for the Communists and for the Free World.

It would be shockingly immoral for the United States to do anything directly or indirectly which would give the impression that we accept Khrushchev's price—namely, that in return for "peaceful coexistence" we would draw a line down the middle of Europe and accept as permanent the Communist enslavement of 97 million Eastern Europeans. Not only would this be outrageous in the human sense, but it would be dangerously detrimental, both politically and strategically, to American foreign-policy interests.

THE WORLD—SLAVE OF FREE?

The Communist goal is to impose slavery on the Free World. Our goal must be nothing less than to bring freedom to the Communist world. Our policy must be guided by one overriding principle: We stand for freedom—not only for ourselves but for all people.

I believe we can and must accomplish this objective without war. The people who live in the captive nations have traditionally been oriented toward the West rather than toward Russia and the East. They became Communists not by choice but through force, subversion and coup d'etat.

Today these countries constitute the most dramatic evidence of the failure of Communism as a political, economic and social system. In terms of economics we need only to compare the slow growth of the bloc countries with the booming production of Western Europe. But it is in terms of human liberty that the contrast is greatest—the refreshing aliveness of West Berlin compared with the deadly drabness of East Berlin, the free spirit of Vienna compared with the stricken soul of Budapest. You can't eat freedom, it is said, and you can't see it either, but you can certainly feel it once it has been denied you. The Soviet Union has denied freedom to the 97 million people of Eastern Europe. And the result, as John Foster Dulles once said, is that "never has any imperialist system in history been more successful in extending its domination and less successful in gaining the approval of the people upon which it was imposed."

Eastern Europe is Khrushchev's greatest potential weakness; it is the area of our greatest potential strength. What then, can we do to help these people achieve their freedom?

We must first recognize that there are some things that we cannot do. There should be no loose talk of starting revolutions in countries like Poland, Hungary and East Germany in which thousands of Soviet troops are stationed, with millions more poised on the border.

We need only to recall the tragedy of the Hungarian Revolution in 1956. This was a true peoples' revolution. Thousands of workers and students succeeded in overthrowing the tyrannical Communist government. Then the Soviet army marched into the streets of Budapest. The freedom fighters asked for help; we gave them sympathy. We did nothing except to protest to the United Nations and open our doors to the fleeing refugees. I stood on the border near Andau, Austria, on a bitter-cold night in December of 1956 and saw the refugees coming into Austria and freedom. It was both an inspiring and a terribly depressing sight. These men and women had risked everything. They had fought magnificently for freedom. Then a hated foreign oppressor had moved in; they were forced to leave their land to find freedom elsewhere. Soon even this escape route was cut off.

It is, of course, easy to second-guess. But looking back, I believe we should have done more than we did. Unfortunately the Hungarian revolution could not have come at a more difficult time from our standpoint. The British, French and Israelis had chosen the same period to march into Egypt. We believed that there should be a single standard with regard to the use of armed force and that it should be applied both to our friends and enemies alike. When we referred the Suez case to the United Nations, our friends withdrew their forces as law-respecting, civilized governments would be expected to do. But when we took the same action with regard to Soviet suppression in Hungary, Khrushchev did what he always does—uses the U.N. when it helps him and ignores it when it hurts him. We ended up with a debate in the U.N.; the Hungarian Freedom Fighters ended up without a country.

What more could have been done short of risking world war is open to question. But I think the crime of Khrushchev and his Communist puppets in Hungary was so great that more dramatic methods should have been used to bring it to the attention of the world and to keep it there. Four actions would have served this purpose. First, we should have recognized the anti-Communist Nagy government promptly. This would have deprived Khrushchev of the legal argument that the Communist Kadar government had "invited" the Soviet forces to come in. Second, when Khrushchev refused to withdraw his troops from Budapest, we should have broken off diplomatic relations with the Soviet Union. Third, we should have permitted the organization of "volunteers" in free countries to help the freedom fighters. This is the action the Kremlin has taken in corresponding situations. Fourth, when the puppet Kadar government was set up in place of the free government, we should have recognized a government-in-exile. Such a government-in-exile by itself could not have changed the situation. But it would have been a symbolic rallying point not only for Hungarians but for people throughout Eastern Europe, who admired their courage and shared their ideals of freedom.

Because of our sympathy for the Hungarian Freedom Fighters, Hungary presents probably the strongest case for the adoption of an American policy designed to gain freedom for the people of Eastern Europe.

On the other hand, Hungary also provides strong ammunition for those who oppose such a policy. They argue that the revolution of 1956 showed the hopelessness of supporting any positive action to overthrow the Communist governments. And now that the test ban has been agreed to, the argument goes that this shows what can be accomplished in "reducing tensions" if we soft pedal issues on which Khrushchev is particularly sensitive, such as the captive nations of Eastern Europe and the Communist domination of Cuba. One American foreign-policy adviser said to me in Europe, "If the Kennedy Administration had not watered down the Captive Nations Resolution as it did this year, Khrushchev might never have agreed to the test ban." I doubt this conclusion. But assuming it is correct, was the test ban worth the price we paid? Did we sell out freedom for expediency?

Americans have always contended that if we are to retain freedom for ourselves we must support the cause of freedom for others. It is ironical that in the United States some of those who pride themselves on being "liberal" in foreign and domestic policy are the most violent opponents of any move to launch a peaceful offensive for freedom for the Eastern European peoples. They charge that those who support this program are "reactionary warmongers." The only appropriate "liberal" point of view is to downplay the "freedom issue" in our discussions with Khrushchev so that we can make progress on the "peace issues." To inject talk of captive nations in East-West negotiations will "rock the boat." Yet these same people are uncompromising in their demand for freedom from Portugal for Angola, full freedom for the black population of South Africa, and for the Negroes in America. In those cases, they are not bothered by the fact that raising these issues causes embarrassment to the governments of South Africa, Portugal and the United States.

I believe that we must have a single standard for freedom. Its denial in whole or in part, any place in the world, including the Soviet Union as well as the United States, is surely intolerable.

The ghetto, that grim relic of man's injustice to man, must go wherever it exists in the world. And this includes Eastern Europe, the most shocking ghetto of them all. We cannot write off 97 million people—people who now live in a place they are not allowed to leave, under a government they did not choose, and with no right to demonstrate, to vote or otherwise to voice their opinions against the tyranny which has been imposed upon them. Let us continue to be against those few remaining outposts of the old colonialism imposed by whites over nonwhites. But let us at the same time be just as vigorous in our opposition to the new Communist colonialism imposed by whites on whites which we see in Eastern Europe and in Cuba.

The moral argument is justification enough for a new policy of peaceful action in behalf of the peoples of Eastern Europe. An equally strong case can be made on solely strategic and political grounds. Let us take at face value the claim that Khrushchev will be irritated by our raising the issue of freedom for the captive peoples. Is this not the time to test his intentions? We have just agreed with him to a test ban. The "new" Khrushchev is being pictured all over the

Free World, as well as in the Communist world, as the leader in the fight for peace and in reducing tensions between East and West.

But what has he actually done to reduce tensions? In Western Europe, in the United States and in Latin America, the Communist parties with Khrushchev's approval and support are stepping up their programs aimed at the overthrow of free governments. Communism has made its greatest gains through this kind of indirect aggression. Are we, on our part, now going to give Khrushchev a hunting license in the free world and a privileged sanctuary in the Communist world?

It is claimed that the dangers of a war have been reduced because of the signing of the test ban. This claim is open to question. But there is no doubt whatever that if the danger of war has been decreased, the danger of defeat without war has been substantially increased. On August 29 the Associated Press in Washington reported, "David E. Bell, the foreign-aid director, predicted today that the Soviet Union and China would increase their campaign to dominate undeveloped areas once the nuclear treaty took effect." Moreover there is a genuine danger that, as a result of the test-ban agreement, our real sense of urgency may be replaced by a false sense of security. Some European powers will not be as quick to meet NATO defense goals; the concern about Communist subversion in free countries is now inevitably going to be less than it should be; the respectability of Communist-front organizations will now increase. I would not even be surprised to see a revival of the old American-Soviet Friendship Society—supported and controlled by the Communist Party, of course.

I believe that we are now entering a period of the greatest danger of Communist expansion in the Free World since immediately after World War II. As a Hungarian student told me in Budapest, "The Russian bear is always most dangerous when its arms are outstretched in a gesture of seeming friendship. If you get too close, you will be crushed to death." All signs point to an inescapable conclusion: A great new Communist offensive is being launched against the Free World, an offensive without resort to war, an offensive all the more dangerous because it is so difficult to recognize and to meet effectively.

We cannot meet and defeat such an offensive by a static policy of defense. It is altogether right and necessary that the President of the United States has declared to the people of West Berlin that if they are attacked we will help defend them. But at the same time we must make it clear that we will not stop there. Khrushchev does not hesitate to declare that Communism's goal is not simply to defend what Communism already has but to extend it throughout the world. Our goal for freedom can be nothing less. Much of Communism's appeal is that it is revolutionary in character. A revolution cannot stand still. If it does it dies. Khrushchev recognizes that the Communist revolution must grow if it is to survive. Our goal must not be simply to keep freedom from shrinking but to make it grow too. Our goal must be a free Cuba, a free Eastern Europe, a free Russia, a free China. And every policy must be directed to reach that goal through peaceful means. This was once the stated policy of the Kennedy Administration, but it has been watered down and wrapped in double talk from the time negotiations for the test ban began.

The great and vital issue of freedom for the oppressed is being kept on a back burner. It is high time for us to put it on the front burner, to make it a top-priority objective in every international negotiation.

What are some positive things the United States could do in behalf of freedom for the 97 million people of Eastern Europe?

We must above all keep the hope of freedom alive in their hearts. This means we must resist every attempt on the part of Khrushchev to gain recognition of the legality and permanence of Communist domination of these countries.

We must treat each of these countries as an individual nation. Although they all have Communist governments, they are no longer a bloc in the monolithic sense that they were 10 years ago. The people in each of these countries fear and distrust the Russians; they also have great national differences among themselves. Communism for a while tended to blot out these differences. Nationalism however, is growing in Eastern Europe, just as it is in Western Europe. In Western Europe it is a problem for us. In Eastern Europe it is a problem for Khrushchev. Nationalism there is our ally. The Congress should give the Administration the power to be flexible in its economic and diplomatic policies toward these countries.

We should do nothing for any of the Communist governments of these countries unless its purpose and effect will be to help the people get relief from Communist oppression. For example, our whole program of aid to Yugoslavia must now be very critically reappraised. We provided nearly $2.3 billion in military and economic assistance to Yugoslavia from mid-1945 through mid-1962. We gave most of this aid because Tito had split with the Kremlin, and we believed that by subsidizing Tito we could widen the split. Now Khrushchev and Tito have thrown their arms around each other, and it is quite apparent that the military equipment we provided for Tito would be on the Soviet side in the event of world conflict. Yet because Tito was against first Stalin and then Khrushchev, some people in the United States gained the false impression that his brand of Communism was more "liberal" than the Soviet brand. On the contrary, the people of Yugoslavia have suffered even more at the hands of their Communist government in recent years than the people of the Soviet Union. American aid has brought little if any relief to the *people* of Yugoslavia.

In the light of our experience in Yugoslavia, under no circumstances should military aid be provided for any country with a Communist government. Such military assistance may appear at the moment it is granted to be justified on the ground that it would strengthen the hand of a satellite Communist government against the Soviet Union. But we must recognize that while the Communists have differences among themselves, when the chips are down they are going to join forces against us. The Soviet-Chinese quarrel is significant in this respect. What they are arguing about is not how to beat each other, but how to beat us. This is their fight. We most certainly should stay out of it.

We should set these minimum goals: (1) Get the Soviet occupation forces out of the countries of Eastern Europe; (2) get the governments of these countries to adopt policies which will allow people to leave if they desire to do so; (3) get the Communist governments to adopt a let-live policy toward the established churches in these countries and toward other institutions of freedom; (4) increase contact with the people of these countries as distinguished from the governments, including visits from high-ranking U.S. officials to remind these people that they have not been forgotten; (5) increase the exchange of publications, broadcasts and other instruments of communications, especially communications designed to keep the young people in contact with the Western world and free institutions.

As a specific example, we should not agree to "normalize" relations with the outlaw Kadar regime in Hungary unless these minimum conditions are met: (1) removal of Soviet troops from Hungary; (2) removal of the "wall" of barbed wire, minefields and watch towers which separates Hungary from Free Europe; (3) satisfaction of the conditions Cardinal Mindszenty insists upon for relations between the Catholic church and the government; (4) greater freedom for Hungarians to leave the country if they desire to do so; (5) removal of restrictions on the flow of information from Free Europe and America into Hungary by radio, newspapers and magazines. This latter point is vital. Although the overwhelming majority of the people of Hungary and other Eastern European countries are opposed to Communism now, there is a real danger that an entirely new generation will grow up with no knowledge of any other way of life, due to lack of contact with the Free World. That is why the policy advocated by some well-intentioned anti-Communist groups "to cut off all contact with countries with Communist governments" is wrong. We must increase contact with the people of these countries without putting the stamp of approval on their Communist governments.

OUR BEST POTENTIAL WEAPONS

We should agree to only those economic programs that will have the effect of serving the objectives I have listed above. Programs of trade and aid are our biggest potential weapons; at the same time, they are the most difficult to use effectively. No American action should be taken if it strengthens a Communist government's strangle-hold on the people. If a satellite government indicates a clear intention to pursue a course independent of and even opposed to the U.S.S.R. in foreign policy, we should provide economic co-operation, but only if the satellite government also combines its anti-Soviet policy with some relaxation of its repression against its own people. In Tito's case, for example, we paid too much attention to his differences with the U.S.S.R. and too little to the terrible plight of the Yugoslav people and to our responsibility to help relieve it.

In our policies and pronouncements, we must not fail to distinguish between the Communist regimes and their subjects, between the Kremlin and puppet governments on the one hand and people on the other. The Kremlin's failure to win the voluntary, free allegiance of its peoples is one of the strongest deterrents preventing it from risking actions that might lead to war. We must never forget that the Communist governments may be our enemies but that the people living under those governments are our friends.

This is admittedly a complex and controversial answer to the problem. It would be much simpler to follow the approach of the "liberals" and ignore the plight of 97 million people in the Eastern European countries so that we will not jeopardize our efforts to seek other goals in dealing with Khrushchev. It would be much simpler to follow the approach of the "reactionaries" and support a program of encouraging revolutions in these countries to be followed by American forces to support such revolutions without regard to the risk of world war this policy would entail. And, of course, it would be even more "popular" simply to advocate cutting off all contact with the governments and peoples of Eastern Europe and denying any economic cooperation on the ground that "we shall provide no aid to Communists."

But we are confronted here with a tragic human problem of 97 million people living under Communist tyranny. The great majority of these people are against their Communist government; and their hopes for freedom, no matter how limited, are with America. We demonstrated in 1956 that we cannot support a revolution in the event they begin one. On the other hand, we cannot be completely negative in our policy. I believe our only responsible course of action is to find positive, peaceful methods of achieving more freedom and a better life for these people. A negative, do-nothing policy can only have

the effect of leaving them at the mercy of their Communist governments and destroying the morale of millions of anti-Communists in the Communist world.

And there is an even more far-reaching consideration. We cannot appear to acquiesce in the Communist enslavement of millions behind the Iron Curtain and still make our opposition to Communism elsewhere credible. If it is all right with us to see Hungarians, Poles, Czechs enslaved, why not logically Venezuelans and Malayans and Cubans? By surrendering the Eastern Europeans to their Communist masters, we are surrendering our presumed leadership of anti-Communist forces throughout the world.

I wish every American could have the opportunity to travel in Eastern Europe, as I have had again last summer. I am sure that no American would then feel complacent about the plight of these captive peoples. For those who are fortunate enough to take such a trip, I say: When you get to Budapest or Warsaw or East Berlin, don't be satisfied with the guided tour—hotels, buildings, restaurants, statutes are pretty much the same in all the capitals of the world. The people, their problems, their hopes, their dreams—this is the real and important story.

As our train was leaving the Budapest railroad station for Vienna, a young railroad worker came up to me. Speaking in halting English, he said, "My brother left in 1956 and is now living in Columbus, Ohio. If you should see him, will you tell him that he was right? I should have gone too. And I hope to join him before it is too late."

The train had started to move before he finished. I sat down in my seat and as I looked out the open window I saw that he was running alongside. "The address," he shouted, "I forgot to tell you the address. It is on Euclid Avenue in Columbus. Tell him I hope to join him—tell him—tell him." The train had pulled away before I could get his name or the street number.

He was trying to send his message to his brother living in Columbus, in the very heart of America. But as far as I was concerned he was sending a poignant and unforgettable message through me to the heart of America—"Don't let us down. We want freedom too."

---

[From the Washington Post, Sept. 25, 1970]

NIXON TO SPEAK TO 6TH FLEET FROM CARRIER

(By Ken W. Clawson)

President Nixon will pay a personal call on the alerted 6th Fleet during the early part of his eight-day European tour that starts Sunday, the White House announced yesterday.

Mr. Nixon will address the entire fleet from the deck of the aircraft carrier USS Saratoga, which has been patrolling off the coast of Israel and Lebanon. It was pulled back from the alert zone to 30 minutes helicopter flying time out of Rome, and will take on the President Monday night.

The President's remarks from the carrier Tuesday will be piped to the rest of the fleet in the eastern Mediterranean.

The President is expected to receive personal reports from American ambassadors to Middle East nations Wednesday at NATO's Naples headquarters. He will also confer with NATO commanders.

Mr. Nixon will be accompanied by his wife, Secretary of State William P. Rogers and other White House officials.

His itinerary, released yesterday, shows a ceremonial-studded tour that includes private talks with President Tito of Yugoslavia, Generalissimo Franco of Spain, Pope Paul VI, Prime Minister Edward Heath and Queen Elizabeth II of Great Britain, President Saragat of Italy and President de Valera of Ireland.

Air Force One will leave Andrews Air Force Base at 7:30 a.m. Sunday, arriving in Rome that night. The President will be welcomed by President Saragat in ceremonies at Quirinale Palace.

Private talks between the Presidents, an audience with the Pope and a meeting with student priests at the North American College of the Vatican are scheduled before the President helicopters to the Saratoga.

After reviewing jet launchings and recoveries and weapons firings Tuesday, the President will fly to the USS Springfield, flagship of the fleet, to confer with fleet commanders. He will then return to Naples and confer with ambassadors Wednesday morning.

He arrives in Belgrade Wednesday afternoon, and will join President Tito in a motorcade through the city. In the evening, Tito will give a state dinner.

The two Presidents will confer Thursday morning. In the afternoon, Mr. Nixon will go to Zagreb in Croatia, and to Kumravec, birthplace of the Yugoslavian President. That night, the Nixons will give a state dinner for Tito in Belgrade.

The Nixons arrive at midday Friday in Madrid for ceremonies that include a motorcade with Generalissimo Franco through the city, private talks with Prince Juan Carlos, Vice President Carrero Blanco, and a state dinner.

Mr. Nixon arrived in London on Saturday, Oct. 3, and will go to Chequers, Prime Minister Heath's country residence, for private talks followed by luncheon with the queen.

Later Saturday, the Americans fly to Shannon, Ireland, where they will travel by car to Kilfrush House, 17 miles south of Limerick, for the night. The house is owned by New York industrialist John A. Mulcahy, a friend of Mr. Nixon's.

On Sunday, an entire morning will be spent on the Paris peace talks with Mr. Nixon and Secretary Rogers meeting with Ambassadors David K. E. Bruce and Philip C. Habib, and Henry Kissinger, Mr. Nixon's national security adviser.

Mr. Nixon will spend Sunday night in another Mulcahy residence at Waterville, 35 miles southwest of Killarney. He will helicopter Monday to Timahoe to visit a graveyard where some of his maternal ancestors are buried.

A final, 90-minute motorcade will take the President to Dublin for a meeting with President de Valera. The party arrives back at Andrews AFB early Monday evening, Oct. 5.

---

[From the New York Times, Sept. 25, 1970]

NIXON SCHEDULE OUTLINED

WASHINGTON, September 24.—On his European trip, President Nixon will spend eight nights in seven cities, motor through downtown Madrid and rural Irish towns, consult with American diplomats, visit the graves of ancestors and place a wreath at a monument to the Yugoslav Unknown Soldier.

---

## TENTH ANNIVERSARY OF NIGERIAN INDEPENDENCE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. DIGGS) is recognized for 10 minutes.

Mr. DIGGS. Mr. Speaker, on October 1, Nigeria will mark the 10th anniversary of its independence. A decade may not be long in history, but history has been long and full in this decade for Nigeria. Nigeria's independence, like that of our own country, is in one sense a social experiment with lessons for all mankind. Nigeria is exploring how pluralist states and indeed the international community can achieve the goal so well expressed in its national anthem, "though tribe and tongue may differ, in brotherhood we stand."

As Nigeria moves into the second decade of its independence, we in the United States look forward to continuing the efforts of our two countries in the search for a better life for our people. We have worked together in many areas within the past 10 years, both between ourselves and international organizations. I would like especially to commend the Nigerian Government's ongoing efforts to promote regional economic and trade programs in West Africa. The United States shares the view that the lives of neighbors can be enriched by mutual cooperation. There is an important role for Nigeria to play in the future of all of Africa.

Today, we Americans reaffirm the bond of friendship which has always existed between our two countries. That bond, as the revered first Prime Minister of Nigeria remarked to the U.S. Congress in 1961, is twofold. Within Nigeria and the United States reside the largest concentration of peoples of African descent of any countries in the world. But above all, Sir Abubakar Tafawa Balewa said, "we share a history of common struggle to achieve freedom from anything that is oppressive to the human spirit." We look forward to marching shoulder to shoulder with Nigeria in that common struggle in the decades ahead.

---

## PRISONS AND VISITS BY WIVES

(Mr. KOCH asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous material.)

Mr. KOCH. Mr. Speaker, not very long ago an investigation took place into the conditions existing at the men's detention center in Manhattan commonly known as the Tombs. That investigation occurred as a result of a riot by the prisoners. During the course of the riot and subsequent investigation the commissioner of the New York City Department of Corrections verified that the inhumane conditions complained of by the prisoners did in fact exist. The subsequent investigation conducted under the auspices of State Senator John R. Dunne again confirmed what has been known for many years, that the conditions under which prisoners are held at the Tombs are inhumane and must be corrected.

I am sorry to report that not much has taken place by way of correction except for, and admittedly it is a most important exception, some reduction in the overcrowding. The Tombs originally built for 932 men had within the last year more than 2,000 prisoners confined in the same accommodations. The number of prisoners held today in the Tombs is 1,357, still 146 percent of capacity.

Anyone familiar with corrections knows that unless and until we provide decent minimum standards covering not only physical facilities but also rehabilitation and educational programs we will be releasing men who in great numbers will return to prison within the year. Recidivism is high and in one police precinct in New York City I have been informed that more than 50 percent of those apprehended in burglaries and robberies in that district are former convicts.

I would like to call attention to what are in my judgment the harmful attitudes of the New York State Department of Corrections headed by Commissioner Paul D. McGinnis. My experiences with that commissioner and his department have brought me to the conclusion that whatever is wrong with the New York City Department of Corrections, is compounded on the State level. I would like to recite one simple illustration of the kind of attitude displayed by the New York State Department of Corrections. It concerns itself with simple nonconjugal visitation and rather than state in detail what I wish to call to the attention of this House I would prefer to let the correspondence in this matter speak for itself. After reading the correspondence I would hope that our colleagues will join in cosponsoring H.R. 16794, a bill which would establish minimum standards for local and State correctional institutions seeking Federal financial assistance.

The correspondence follows:

NAPANOCH, N.Y.,
*May 30, 1970.*

Mr. EDWARD I. KOCH,
*Member of Congress, House of Representatives, Washington, D.C.*

DEAR SIR: I am sending this letter to you because you were recommended to me by a fellow inmate now serving time with me at the Catskill Reformatory, Napanoch, N.Y. He told me that you helped him while he was at the tombs in N.Y.C. If you cannot help me in my present dilemma would you kindly forward this letter to someone who can. I was convicted on my own improvided plea of guilty to section 2205 R.P.L. (Possession of a Dang. Drug & Implements) as a class "A" misdemeanor accepted by Magistrate Lane on Nov. 25, 1969 in & before the Supreme Court Of The City Of New York, Part 16, County Of The Bronx. I was therein sentenced on March 6, 1970 to serve a max. term of 1 yr. in the county jail (Rikers Island Reformatory For Men) under the supervision, jurisdiction, and custody of The New York City Department Of Correction. However two wks. after I had been delivered to Rikers Island I was transferred to The Catskill Reformatory here at Napanoch, N.Y. and placed under the jurisdiction of the State Of N.Y. I inquired into obtaining information as to whether my imprisonment herein is by virtue of any mandate sentencing or committing me hereto. I was informed by an Administrative Official that no such mandate is possessed. It seems apparent that the City Commissioner Of Correction is without legal justification to fail to comply, violate or contravene the actual execution of this defendants sentence of judicially ordered imprisonment in a county jail. Therefore the City Commissioner may not administratively or arbitrarily transfer this duly committed city prisoner out of his lawful custody to conditions that now amount to unordered jurisdiction of the State Department Of Correction. The fact of my imprisonment in The Catskill Reformatory has deprived me of numerous benefits & rights which I had enjoyed in the City Institution such as:

* A. Unrestricted freedom of correspondents as to sending and receiving mail, permission to freely write to anyone friend and relative.

B. Authorization to post one personal letter a day.

* C. Geographically closer to counsel to confer on legal matters.

D. Within geographically reasonable reach of visitors.

E. Guidance staff readily available to make phone calls for inmates.

F. Licensed physicians in attendance for medical treatment and emergencies.

G. Sufficient uniform clothing distributed to all inmates.

H. Confinement in dormitories rather than 17 hrs. a day in cell.

I. Greater variety in the preparation and serving of meals to inmates.

J. Availability of work release program.

K. Higher hourly wages paid to inmates who work in county jail.

* A. I have been personally denied (5 times) by the Superintendent of this State Institution to correspond with my common-law-wife whom I had lived with for the past 4 years. She has also been denied the priviledge of visiting me. We are still close to one another.

* C. There are other legal technicalities concerning my sentence to Rikers Island which are far too lengthy and detailed for me to even attempt to get all of them onto one sheet of stationary. (I had to hoard in order to send these two pages to you.) I would definitely have to discuss them personally with my lawyer, and he is simply too busy at this time to travel the 90 miles to come up here.

All of which collectively amounts to an unwarranted deprivation of liberty, contrary to due process of law, and a denial of the equal protection of the law, violative of inalienable rights secured by the 5th & 14th Amendments to the United States Constitution, as guaranteed by the Glorious Majesty of the Constitution; yet guarantee and practice though made with equal promise can often be worlds apart.

Sir, my sentence of 1 yr. is up on Dec. 31, 1970 with time off for good behavior, please I beg of you, if you find that I am legally correct about my present conditions of confinement would you kindly see to it that I am redelivered to Rikers Island as soon as it is humanly and humanely possible. Thank you for your time and your indulgence.

My lawyer firm name is Markowitz & Chorney, Counsellors at Law, 1844 Nostrand Avenue, Brooklyn, N.Y. 11226.

Respectfully,

NATHAN WRIGHT, No. 309.

P.S.—Please excuse any errors that this letter may contain as I explained before however stationary is limited here.

---

CONGRESS OF THE UNITED STATES,
U.S. HOUSE OF REPRESENTATIVES,
*Washington, D.C., June 8, 1970.*

Mr. NATHAN WRIGHT,
*Napanock, N.Y.*

DEAR MR. WRIGHT: Thank you for your letter of May 30th.

I am presently looking into the points you raised in your letter, and I will be in communication with you again as soon as I have a response to my inquiries.

Sincerely,

EDWARD I. KOCH.

---

CONGRESS OF THE UNITED STATES,
U.S. HOUSE OF REPRESENTATIVES,
*Washington, D.C., June 8, 1970.*

Hon. GEORGE MCGRATH,
*Commissioner of Corrections, New York, N.Y.*

DEAR GEORGE: I have received a letter from Nathan Wright now held at the Catskill Reformatory in Napanoch. He claims that he was sentenced to serve in the county jail by the Supreme Court of the City of New York, but later moved from Rikers to the Catskill Reformatory. He feels that this move from Rikers is contrary to the court's sentence.

I know that you do have authority to move prisoners to the state prisons to prevent overcrowding; could you please give me the statute citation for this authority so that I might forward it to Mr. Wright. In addition, he claims hat he is not allowed to write to his common-law wife of four years, nor is she allowed to visit him. Is this indeed the state's policy—and does this differ from the policy at Rikers Island?

Thanking you, I am,

Sincerely,

EDWARD I. KOCH.

---

OFFICE OF THE COMMISSIONER OF CORRECTION, CITY OF NEW YORK,
*New York, N.Y., July 1, 1970.*

Hon. EDWARD I. KOCH,
*Congressman, New York, N.Y.*

DEAR CONGRESSMAN KOCH: This is in response to your letter of June 8, 1970.

Section 6-g, of the New York State Correction Law provides that in order to relieve overcrowded conditions in the New York City Correction facilities, we may enter into an agreement with the State to house City sentenced inmates in New York State Correction facilities. The New York City Department of Correction has entered into such an agreement with New York State, pursuant to Section 6-g of the Correction Law.

In New York City Correction facilities, inmates are permitted to write to and receive mail from anyone. Upon approval by the Warden of the institution, an inmate may be visited by a common-law spouse if the inmate designates the common-law spouse as one of his or her visitors.

We have no specific information with respect to the policy relating to mail and visitors at New York State Correction institutions. I suggest that you write to the office of the State Commissioner of Correction, Paul D. McGinnis, for such information.

Very truly yours,

GEORGE F. MCGRATH,
*Commissioner.*

---

NAPANOCH, N.Y.,
*July 4, 1970.*

Mr. EDWARD I. KOCH,
*Member of Congress, House of Representatives, Washington, D.C.*

DEAR SIR: Thank you for your prompt response to my letter of May 30th.

I am sending this letter to you hoping that you have made sufficient inquiries concerning my predicament, and that I will discover what your findings were in your reply to this letter of July 4th.

I have been granted a writ of habeas corpus by Justice John H. Pennock, of The Supreme Court of New York State, Ulster, County Special Term July 5, 1970, Calendar No. 21. As the writ is dated June 29, 1970, I expect to be before the bench of Justice Pennock any day now, so any favorable information that you may be able to supply me with at this time will be greatly appreciated.

My application for the above mentioned writ is in conjunction with the contents of my May 30th letter to you. Thank you for your indulgence.

Sincerely,

NATHAN WRIGHT.

---

CONGRESS OF THE UNITED STATES,
U.S. HOUSE OF REPRESENTATIVES,
*Washington, D.C., July 14, 1970.*

Hon. PAUL D. MCGINNIS,
*Commissioner, New York State Department of Correction, Gov. Alfred E. Smith State Office Building, Albany, N.Y.*

DEAR COMMISSIONER: A prisoner, Nathan Wright, incarcerated at your Catskill Reformatory in Napanoch has complained to me that he is not allowed to write to his common-law wife of four years, nor is she allowed to visit him. It is my understanding from Commissioner McGrath that in the New York City Correction facilities inmates are permitted to write to and receive mail from anyone; and, upon approval by the Warden, an inmate may be visited by a common-law spouse.

I should appreciate receiving from you clarification of the state's policies.

Thanking you, I am,

Sincerely,

EDWARD I. KOCH.

---

STATE OF NEW YORK,
DEPARTMENT OF CORRECTION,
*Albany, N.Y., July 24, 1970.*

Hon. EDWARD I. KOCH,
*House of Representatives,*
*Washington, D.C.*

DEAR CONGRESSMAN KOCH: I have your letter of July 14 with reference to an inmate, Nathan Wright, who was formerly incarcerated at Catskill Reformatory.

Actually this man was returned to the New York City Department of Correction on April 27, 1970, so your question as far as he is concerned is moot.

Yours very truly,

JOHN R. CAIN,
*Deputy Commissioner.*

---

U.S. HOUSE OF REPRESENTATIVES,
*Washington, D.C., July 27, 1970.*

Mr. JOHN R. CAIN,
*Department of Correction,*
*Alfred E. Smith State Office Building,*
*Albany, N.Y.*

DEAR MR. CAIN: I have your letter of July 24th, and I do appreciate your responding. However, I am a bit puzzled over how you can report that Mr. Wright was returned to New York City on April 27th when I have received correspondence from him from the Catskill Reformatory as recently as July 4th.

Again, I would appreciate your looking into this as soon as possible—it may interest you to know that I have also been contacted about this by Mr. Nathan Wright's priest. Even if Mr. Wright has been moved back to New York City I would appreciate your advising me of your policies regarding inmate writing and visitation privileges with respect to common-law spouses.

Thanking you, I am.

Sincerely.

EDWARD I. KOCH.

P.S.—Is it possible, not withstanding your security arrangements that there is an extra prisoner in your detention center?

---

STATE OF NEW YORK,
DEPARTMENT OF CORRECTION,
*Albany, N.Y., August 6, 1970.*

Hon. EDWARD I. KOCH,
*House of Representatives,*
*Washington, D.C.*

DEAR CONGRESSMAN KOCH: Your letter of July 27 regarding Nathan Wright was received at the beginning of Commissioner Cain's vacation. Unfortunately, a misunderstanding of communications resulted in an erroneous entry on our records regarding Wright's whereabouts. Mr. Wright is still confined in Eastern New York Correctional Facility.

The reason that he has not been permitted contact with his common-law wife is because Wright is still legally married. In cases in which either of the parties involved in a common-law relationship still have legal spouses, permission for contact is withheld until such time as some form of legal separation can be produced.

Yours very truly,

JOSEPH M. RYAN,
*Senior Administrative Assistant.*

---

CONGRESS OF THE UNITED STATES,
U.S. HOUSE OF REPRESENTATIVES,
*Washington, D.C., August 24, 1970.*

Mr. PAUL D. MCGINNIS,
*Commissioner, State Department of Correction, State Office Building, Albany, N.Y.*

DEAR MR. MCGINNIS: I have received word from your office (by letter of August 6th signed by Joseph M. Ryan) that the reason prisoner Nathan Wright in the Catskill Reformatory is not able to see or write to his common-law wife is because he is still legally married to another woman.

I have been told by Commissioner George F. McGrath that in New York City Correction facilities, "inmates are permitted to write to and receive mail from anyone." Why should the state's policies be any more strict, particularly since many City sentenced prisoners are being incarcerated in state prisons (Mr. Wright is one of them)?

Furthermore, your own pristine regulations regarding visitation privileges seem to be ludicrously misplaced, particularly in view of the want of so many social and educational rehabilitation services that would be really helpful to the prisoners. Your policy is such an absurdity; we are not even talking about conjugal rights for the prisoners, but rather supervised visitations whose opportunities are few enough.

Mr. Wright has lived with his common-law wife for four years. It seems to me that a policy could be established which would make visitation allowances for such cases.

My interest is not only in Mr. Wright, but in all of the prisoners in similar situations. I would urge that you take whatever steps necessary to update your regulations to make these accommodations, as well as allowing prisoners to write and receive mail from anyone.

Sincerely,

EDWARD I. KOCH.

---

CONGRESS OF THE UNITED STATES,
U.S. HOUSE OF REPRESENTATIVES,
*Washington, D.C., August 25, 1970.*

PAUL D. MCGINNIS,
*Commissioner, State Department of Correction, State Office Building, Albany, N.Y.*

DEAR COMMISSIONER: I have received word from your office (by letter of August 6th signed by Joseph M. Ryan) that the reason prisoner Nathan Wright in the Catskill Reformatory is not able to see or write to his common-law wife is because he is still legally married to another woman.

I have been told by Commissioner George F. McGrath that in New York City Correction facilities, "Inmates are permitted to write to and receive mail from anyone." Why should the state's policies be any more strict, particularly since many City sentenced prisoners are being incarcerated in state prisons (Mr. Wright is one of them)?

Furthermore, your own pristine regulations regarding visitation privileges seem to be ludicrously misplaced, particularly in view of the want of so many social and educational rehabilitation services that would be really helpful to the prisoners. Your policy is such an absurdity: we are not even talking about conjugal rights for the prisoners, but rather supervised visitations whose opportunities are few enough.

Mr. Wright has lived with his common-law wife for four years. It seems to me that a policy could be established which would make vistation allowances for such cases.

My interest is not only in Mr. Wright, but in all of the prisoners in similar situations. I would urge you to take whatever steps necessary to update your regulations to make these accommodations, as well as allowing prisoners to write to and receive mail from anyone.

Sincerely,

EDWARD I. KOCH.

---

STATE OF NEW YORK,
DEPARTMENT OF CORRECTION,
*Albany, N.Y., September 9, 1970.*

Hon. EDWARD I. KOCH,
*Member of Congress,*
*Washington, D.C.*

DEAR CONGRESSMAN KOCH: I have your letter of August 25, 1970 censuring our rules and regulations, relating to visitations and correspondence particularly as applied to common-law marriages.

As you know, the State of New York outlawed common-law marriages by Chapter 606 of the Laws of 1933, effective April 27, 1933. In a recent case involving the question of common-law marriages, the Court of Appeals said: "There can be little doubt that the public policy of this State has been to withhold recognition of common-law marriages and it is unassailable that in its broad powers to regulate society, the State has the power to set standards and procedures to control such a basic institution as marriage." (People v. Ernest Allen, decided July 2, 1970.) Your recommendation would encourage such illicit relationship and lead to the grievous situation of having a married inmate who is on parole jeopardize his parole status by consorting with a woman not his wife.

With reference to Nathan Wright and other New York City prisoners similarly situated, we advised Commissioner George F. McGrath that if he will authorize such females to be placed on the City Inmates' Visiting List, we will honor his designation.

Very truly yours,

MANUEL T. MURCIA,
*Counsel.*

---

CONGRESS OF THE UNITED STATES,
U.S. HOUSE OF REPRESENTATIVES,
*Washington, D.C., September 15, 1970.*

PAUL MCGINNIS,
*Commissioner of Correction, State of New York, The Governor Alfred E. Smith State Office Building, Albany, N.Y.*

DEAR COMMISSIONER: I refer to our earlier correspondence and the most recent letter which I received from your Counsel, Manuel T. Murcia, Esq., dated September 9. I asked you to review your policy in this matter. Your pristine regulations regarding visitation privileges seem to be ludicrously misplaced, particularly in view of the lack of so many psychological and educational rehabilitation services that would really be helpful to the prisoners. Your policy can only be described as an absurdity: we are not even talking about conjugal rights for prisoners, but rather supervised visitations whose opportunities are few enough.

It is sad to note that New York, the Empire State, which prides itself on leading in the social fields finds itself today far behind the state of Mississippi which not only permits visits of this nature but in addition also provides conjugal visits by wives of both lawful and "common law."

I await your reply.

Sincerely,

EDWARD I. KOCH.

---

CONGRESS OF THE UNITED STATES,
U.S. HOUSE OF REPRESENTATIVES,
*Washington, D.C., September 15, 1970.*

Hon. JOHN R. DUNNE,
*Garden City, N.Y.*

DEAR JOHN: You will recall in our chance meeting at Columbus Circle that I mentioned to you the outrageous situation prevailing in state prisons concerning visits to prisoners by women whom they consider to be their wives but to whom they are not necessarily legally married.

I have received a letter from Manuel T. Murcia which is so outrageous that I call it to your attention with the hope that you will take all measures necessary to see to it that this situation is immediately remedied. I trust that Commissioner McGrath will provide the letter of authorization so as to protect city prisoners delivered into the custody of the state but it will take your intercession to provide such relief to state prisoners.

It is sad to note that New York, the Empire State, which prides itself on leading in the social fields finds itself today far behind the state of Mississippi which not only permits visits of this nature but in addition

also provides conjugal visits by wives both lawful and "common law."

I await your response.

Sincerely,

EDWARD I. KOCH.

---

CONGRESS OF THE UNITED STATES,
U.S. HOUSE OF REPRESENTATIVES,
*Washington, D.C., September 15, 1970.*

ROBERT R. DOUGLASS,
*Counsel to the Governor, The Executive Chamber, Capital, Albany, N.Y.*

DEAR BOB: I am enclosing correspondence which I have had with Commissioners McGinnis and McGrath and with Manuel T. Murcia, Counsel to the Commissioner McGinnis on the subject of permitting visits to prisoners by women whom the prisoners consider to be their wives although not necessarily legally married to them. It appears now that such privilege may be granted to city prisoners held in custody in state institutions.

It is sad to note that New York, the Empire State, which prides itself on leading in the social fields finds itself today far behind the state of Mississippi which not only permits visits of this nature but in addition also provides conjugal visits by wives both lawful and "common law."

I await your reply.

Sincerely,

EDWARD I. KOCH.

---

CONGRESS OF THE UNITED STATES,
U.S. HOUSE OF REPRESENTATIVES,
*Washington, D.C., September 15, 1970.*

GEORGE MCGRATH,
*Commissioner of Correction, City of New York, New York, N.Y.*

DEAR GEORGE: You have received a letter from Manuel T. Murcia, a copy of which I am enclosing for your convenience, on the subject of permitting prisoners sent to State correctional institutions by the City to have as visitors women with whom they have lived who are not necessarily their lawful wives. This subject came up in connection with one such prisoner, Nathan Wright, but obviously it affects many more.

I am certain, knowing you to be the compassionate person that you are, that you will immediately provide the necessary letter of authorization not only for Mr. Wright but for all other prisoners so situated. The callousness of Commissioner Paul D. McGinnis and his Counsel, Manuel T. Murcia, exhibited not only at the hearing which I conducted on May 23, 1970 but in correspondence which I have had with them continues to evidence itself.

Sincerely,

EDWARD I. KOCH.

---

OFFICE OF THE COMMISSIONER OF
CORRECTION, CITY OF NEW YORK,
*New York, N.Y., September 21, 1970.*

Hon. EDWARD I. KOCH,
*Representative in Congress, Longworth Office Building, Washington, D.C.*

DEAR CONGRESSMAN KOCH: In reference to your letter of September 15, 1970 regarding visitation privileges for City prisoners housed in State correctional facilities, please be advised that under our rules members of the immediate family who are 16 years of age or over may visit an inmate of any of our institutions. Common-law wives or husbands are classified as members of the immediate family. In addition, any person, 16 years of age or over, who is not a member of the immediate family, may be permitted to visit an inmate, provided that no member of the immediate family objects to the visit.

Pursuant to your request, we are sending to Mr. Manuel T. Murcia, Counsel to the State Department of Correction, a letter of authorization for common-law wives to visit City prisoners held in State facilities.

Sincerely yours,

GEORGE F. MCGRATH,
*Commissioner.*

CONGRESS OF THE UNITED STATES,
U.S. HOUSE OF REPRESENTATIVES,
*Washington, D.C., September 15, 1970.*

MANUEL T. MURCIA, Esq.,
*Counsel to Commissioner Paul D. McGinnis, State of New York, Department of Correction, Alfred E. Smith State Office Building, Albany, N.Y.*

DEAR MR. MURCIA: I have your letter. I am astounded at your reply and would like further clarification. Is it presently the parole procedure that if a parolee lives with a woman not his wife that his parole status is thereby jeopardized?

I was, to say the least, shocked by the implication of your letter that you are not able, as counsel to the Department of Correction, to distinguish between a state policy and statute of not recognizing "common law" marriages affecting rights relating to alimony and inheritance and the denial to an inmate the right to see a woman visitor he considers to be his wife although not legally married to him.

I have written to Commissioner McGrath urging that he immediately authorize women having that relationship to prisoners to be placed on the New York City inmates visiting list, so that you will at the very least permit prisoners sent to you by New York City that privilege.

I am writing to Governor Rockefeller's counsel, Robert Douglas and Senator John Dunne urging that they take whatever measures are necessary to see to it that state prisoners are similarly treated.

It is sad to note that New York, the Empire State, which prides itself on leading in the social fields finds itself today far behind the state of Mississippi which not only permits visits of this nature but in addition also provides conjugal visits by wives both lawful and "common law".

I await your reply to my question.

Sincerely,

EDWARD I. KOCH.

---

STATE OF NEW YORK,
DEPARTMENT OF CORRECTION,
*Albany, N.Y., September 23, 1970.*

Hon. EDWARD I. KOCH,
*House of Representatives,*
*Longworth Office Building,*
*Washington, D.C.*

DEAR CONGRESSMAN KOCH: I have your letter of September 15, addressed to Commissioner Paul McGinnis, and a letter of the same date addressed to Mr. Manuel T. Murcia, Counsel.

First, although Mr. Joseph M. Ryan, Senior Administrative Assistant, has already apologized to you for erroneous information contained in our letter of July 24, in view of your continued castigation of the Department, please accept this as a formal letter of apology for the fact that a temporary employee made an entry on the wrong card.

I note your P.S. "Is it possible notwithstanding your security arrangements that there is an extra prisoner in your detention center?" My only reply is that anything is possible.

With my letter of July 24, had I known that he was still confined in the Eastern New York Correction Facility, I would have sent to you a copy of my letter to Mr. Wright under date of June 5, 1970, copy attached, which I believe is fully self-explanatory.

Our agreement with the City of New York is that we will permit visitation and correspondence privileges with any one certified by the New York City Department of Correction. In the absence of any such advice from the City Department of Correction, we attempt to apply the rules of the State Department of Correction to those cases. The simple facts of this case, and which is apparently your only complaint, is that this Department is making an attempt to recognize the sanctity of marriage, and not to encourage promiscuity.

In several of your letters you have characterized our regulations as "pristine." If you are using one definition of the word as being primitive, then, of course, you are entirely in error. If you are using another definition of the word which states extremely pure, untouched, unspoiled, I can only regret that our rules are not pure enough.

Your allegation that our "visitation privileges seem to be ludicrously misplaced," leads me to wonder just what is wrong. How can an elected Congresman from the 17th District of the State of New York find anything to incite laughter or ridicule in the sincere efforts of a Department to carry out its obligations to the unfortunate people who have been committed to our care?

You also allege that our "policy can only be described as an absurdity;" just the opposite is true. We have tried to base our rules and regulations on reason, truth, and a rational application of the attitude of society in this quickly changing world.

I hesitate to even comment on the paragraph of your letter to Mr. Murcia in which you state: "I was, to say the least, shocked by the implication of your letter that you are not able, as counsel t the Department of Correction, to distinguish between a state policy and a statute of not recognizing 'common law' marriages affecting rights relating to alimony and inheritance and the denial to an inmate the right to see a woman visitor he considers to be his wife although not legally married to him." I do not know of any employee of the Department of Correction, least of all our very able counsel, who does not readily recognize this difference.

In both of your letters to Mr. Murcia and to Commissioner McGinnis you write: "It is sad to note that New York, the Empire State, which prides itself on leading in the social fields finds itself today far behind the state of Mississippi which not only permits visits of this nature but in addition also provides conjugal visits by wives both lawful and 'common law'. Again, when a Congressman representing the 17th District of New York could form such an opinion of one of the outstanding Departments of Correction in the nation, I would believe that he is entitled to a full and complete reply which I have attempted to give to you by this letter.

I certainly want to thank you for your interest in the New York State Department of Correction, and I trust that when you become more familiar with its obligations, your opinion might change. We do not claim to be perfect, but we are trying to be better.

Along these lines, and for your information, I am sending to you a copy of our regulations covering the Designation and Classification of Institutions. We believe that just the removal of the words "prison" and "reformatory" and calling all of our institutions "Correctional Facilities" is a small step in the right direction.

I am also enclosing copy of regulations promulgated by Commissioner McGinnis, and which will be effective October 19, 1970, covering Procedures for Implementing Standards of Inmate Behavior and for Granting Good Behavior Allowances, and a copy of the regulations covering Special Housing Units.

Again, thank you for your interest in this Department, and assuring you of our continued cooperation, I am

Yours very truly,

JOHN R. CAIN,
*Acting Commissioner*

---

STATE OF NEW YORK,
DEPARTMENT OF CORRECTION,
*Albany, N.Y., September 24, 1970.*

Hon. EDWARD I. KOCH,
*House of Representatives,*
*Longworth Office Building,*
*Washington, D.C.*

DEAR CONGRESSMAN KOCH: Supplementing my letter of September 23, I respect-

fully submit a copy of a letter received today from the Division of Law Enforcement Assistance in the State of Mississippi.

Apparently the officials in the State of Mississippi are not as sure as you are that New York State is far behind the State of Mississippi in correctional matters.

Yours very truly,

JOHN R. CAIN,
*Acting Commissioner.*

---

STATE OF MISSISSIPPI,
OFFICE OF THE GOVERNOR,
*Jackson, Miss., September 21, 1970.*

DEPUTY COMMISSIONER CAIN,
*Department of Corrections, Governor Alfred E. Smith Senate Office Building, Albany, N.Y.*

DEAR MR. CAIN: This letter is to confirm our telephone conversation of September 14, with reference to visiting your state and studying your Department of Corrections.

Senator James Molpus, Chairman of the Legislative Penal Study Committee and I plan to leave Jackson October 25 for Albany. We will meet with you and your staff on Monday, the 26th of October for a briefing. The rest of our visit will be spent visiting various institutions of your system.

We will look forward to seeing New York's Department of Corrections. I will be in contact with you at a later date as to specific times for a meeting on Monday. Looking forward to meeting and talking with you, I am.

Sincerely,

KENNETH W. FAIRLY,
*Executive Director.*
JEANNINE TOWNSEND,
*Planning and Research Assistant.*

---

CONGRESS OF THE UNITED STATES,
U.S. HOUSE OF REPRESENTATIVES,
*Washington, D.C., September 28, 1970.*

MANUEL T. MURCIA,
*Department of Correction, State of New York, Albany, N.Y.*

DEAR MR. MURCIA: I have received word from Commissioner McGrath that he has authorized you to permit common-law wives to visit city prisoners held in State facilities.

I would appreciate receiving your letter advising me of the date that you issue the appropriate regulation.

Sincerely,

EDWARD I. KOCH.

---

CONGRESS OF THE UNITED STATES,
U.S. HOUSE OF REPRESENTATIVES,
*Washington, D.C., September 28, 1970.*

ROBERT DOUGLASS,
*Office of the Governor, State of New York, Albany, N.Y.*

DEAR BOB: I am surprised that I have not received a response to my letter to you of September 15.

Since writing, I have received two letters, one from Commissioner George McGrath which is really splendid and I enclose a copy for your information.

The second letter is from Acting Commissioner John R. Cain. The letter reinforces my feelings that there should be a complete investigation into the State Corrections system. The letter, a copy of which I enclose is so silly as not to require a reply on my part. It should, however, merit an investigation on your part of not only the conditions in the institutions but also of the caliber of the people in charge of them.

It is most distressing after prison matters receive public attention as a result of some riot that in fact little is done by those responsible for correcting the injustices. I hope you will give this matter your attention.

Sincerely,

EDWARD I. KOCH.

---

CONGRESS OF THE UNITED STATES,
U.S. HOUSE OF REPRESENTATIVES,
*Washington, D.C., September 28, 1970.*

Hon. JOHN R. DUNNE,
*Garden City, N.Y.*

DEAR JOHN: I am surprised that I have not received a response to my letter to you of September 15.

Since writing, I have received two letters, one from Commissioner George McGrath which is really splendid and I enclose a copy for your information.

The second letter is from Acting Commissioner John R. Cain. The letter reinforces my feelings that there should be a complete investigation into the State corrections system. The letter, a copy of which I enclose, is so silly as not to require a reply on my part. It should, however, merit an investigation on your part of not only the conditions in the institutions but also of the caliber of people in charge of them.

It is most distressing after prison matters receive public attention as a result of some riot that in fact little is done by those responsible for correcting the injustices. I hope you will give this matter your attention.

CONGRESS OF THE UNITED STATES,
U.S. HOUSE OF REPRESENTATIVES,
*Washington, D.C., September 28, 1970.*

Mr. NATHAN WRIGHT,
*No. 309, Box R,*
*Napanock, N.Y.*

DEAR MR. WRIGHT: You will be pleased to know that, as a result of your request and my taking the matter up with the State and City Correction officials, a new policy has been established with respect to City prisoners held in State institutions. The City Correction Commissioner has authorized the State to allow common law wives of City prisoners held in State institutions to visit them.

I know that you will shortly be leaving the institution and so this new policy will not affect you to any great extent. But it is a legacy which you have left your fellow prisoners.

Sincerely,

EDWARD I. KOCH.

---

## PORNOGRAPHY: THE THREAT AND THE SOLUTION

(Mr. STEED asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. STEED. Mr. Speaker, we are all aware of the increasing concern of the public at the spread of pornographic literature, especially through the mails. This has come about largely as the result of court decisions.

Postmaster General Winton M. Blount has been in the forefront of efforts to deal with this problem because of the responsibility of his Department. He has perforce become an authority on this issue, and his address given Monday, September 28, to the Nashville Area Chamber of Commerce is an able contribution. I share his conclusions and hope they will be further implemented.

The address follows:

REMARKS BY POSTMASTER GENERAL WINTON M. BLOUNT, NASHVILLE AREA CHAMBER OF COMMERCE, NASHVILLE, TENN., SEPTEMBER 28, 1970

This is a time of paradox in the United States. It is a time of great opportunity, and a time of grave concern.

We have within our grasp a future of peace and prosperity with justice and freedom for all. But all about us we see the limits of our freedoms being tested.

We see militants of the left and right claiming absolute freedom where framers of our constitution intended relative freedom.

And today you can work your way through the Bill of Rights and at almost any point find those rights abused.

How we respond to these abuses will have a lot to do with the kind of country we pass on to our children.

How we respond to these abuses will help determine whether they shall inherit a nation that is strong, free and at peace with itself, or a nation crippled by its own moral ambiguity and characterized by a greater concern for its appetites than for its integrity.

One of the most time-consuming and certainly the most unpleasant part of my job involves dealing with one of those abuses—the problem of pornography.

The sea of obscenity that floods America from within the nation and from without is a truly disturbing example of an open society under attack.

Most disturbing of all is the fact that this attack is predicated on our First Amendment freedoms.

The First Amendment to the Constitution, as you know, is one of the keystones of America's structure of ordered liberty. The amendment says, in part, that "Congress shall make no law . . . abridging the freedom of speech or of the press . . ."

Under the cover of this amendment, the dirt merchants have erected a multi-million dollar empire dedicated to human degradation.

We are now testing whether that empire will stand or if it will be destroyed.

The post office is a primary force in the struggle to see it destroyed.

The law forbids the use of the mails for conveying obscene materials. The mere existence of the law, however, has not prevented pornographers from making extensive use of the mails for this purpose.

The number of dealers in mail-order pornography has increased in recent years to something over four hundred; of that number, however, only about twenty at any one time are considered major dealers. These are big-league operators, who use direct-mail advertising on a scale comparable to the nation's large mail-order houses.

These mailers commonly send two and three million advertising pieces into American homes during an advertising campaign, frequently with little or no discrimination as to the recipient.

As a consequence, our children are often subjected to pictures and printed matter of the most vile sort.

As a parent and a grandparent, I find that unacceptable, and I find particularly unacceptable the use of the postal system for this purpose.

But there is another dimension to the matter. In any discussion of the problem of pornography, the effect of pornography on the young always seems to emerge as the central issue. Certainly it is of critical concern. But, personally, I am deeply concerned about the effect of pornography on any human being, and on the civilization of which each human being is a member.

If we consider for a moment those values which underlie our American institutions, we find that what America is all about can be summed up in two words: human dignity.

We seek freedom for our people because freedom is the condition most conducive to human dignity. We seek security for the same reason.

We seek prosperity, because prosperity is the condition most conducive to human dignity; because poverty crushes the human spirit.

At our best we honor diversity—because the right to be what he chooses, to act and live as he chooses are all vital to the dignity of the human being.

But what do we mean by "human dignity?" What is it that gives these two words so much importance to us here in America?

Let me tell you in this manner: In the story of Creation, the Bible says: "And the Lord God formed man of the dust of the ground, and breathed into his nostrils the breath of life; and man became a living soul."

As a people we believe that each man has a spark of divinity within him; we accept the sanctity of the human spirit and of the human body. And as we preserve and sustain these, we preserve and sustain human dignity.

As we violate these for sensation or for profit, we act against the dignity of man, and we act against all that we have suffered and struggled to build for more than two centuries on this continent.

Pornography is not simply a threat to the best interests of our children.

It is an act of violence against the human spirit.

With disturbing frequency, however, it is being argued that pornography ought to be legalized.

What are the arguments of those who favor such a course?

One of the most important—the one we pay perhaps the greatest attention to—is the argument that censorship of pornography violates the First Amendment's prohibition against interference with freedom of speech and of the press.

If this prohibition were absolute, the argument would be sound.

But it is not absolute.

It was Justice Holmes who pointed out that the first amendment would not protect a man who falsely shouted fire in a crowded theater, for such an act created the sort of clear and present danger that Congress has the right to prevent. In a different way, but to the same effect, we have laws against libel which make freedom of the press relative.

The argument that pornography cannot be censored without destroying our civil liberties is, it seems to me, fundamentally wrong.

There is the argument that we cannot be sure pornography has an effect on children.

If we are to take this seriously, then we must ask if any book—if any picture—has an effect on children; indeed, such a position questions the effect of education itself, for education asks that a child respond to what he is exposed to. And how shall a child respond to a photograph of, for example, a human being, without clothing, bound helplessly, and being beaten with whips to the apparent gratification of all involved.

This example, if you will believe me, is relatively innocuous in comparison to much of the smut that is pushed on people in this country. I am far from being a prude, and I don't want to be hypocritical about that. But I have seen things in this job that would make the most sophisticated people sick to their stomach.

And yet we're told we can't be sure this has any effect on children. Who's going to swallow that? Who's going to risk swallowing that?

Childhood is a constant testing of what is fantasy and what is reality; it is a time when values are established. Are we willing to accept, in the service of some dubious argument about the limits of civil liberty, the argument that we cannot be sure pornography has an effect on children, and the logical extension of that argument, that it therefore ought not to be prohibited?

There is the position that if we legalize pornography, it will soon lose its interest for people, and eventually the traffic will end.

Well, one of the members of the President's Commission on Obscenity and Pornography is the Reverend Winfrey Link from over in Hermitage, and Reverend Link's comment about pornography being eliminated through availability was this: he said, "I don't run an open sewer through my yard and think that after a month the germs won't bother me any more."

I think that's pretty much to the point.

And then, of course, we have the argument that there is no evidence that pornography has an adverse effect on adults, and even if it could be shown to have such an effect, adults have a right to abuse themselves in this manner if they choose.

Let's examine that argument.

I think it is false on both counts.

While it is difficult to establish a cause and effect relationship between an anti-social act and an avid interest in pornography, it is possible to suggest that an inclination toward anti-social behavior may be reinforced and even encouraged by pornography.

Cases in the files of the Post Office Department provide sufficient instances of people acting out in fact the fantasies of the pornography they have collected, of people engaging children in unnatural acts, or seducing children into this behavior, to justify a concern that there is some relationship between pornography and anti-social behavior.

There is a significant risk, I believe, that some people may be led by curiosity to purchase this material, then to purchase material showing even more bizarre behavior, until finally they are led to commit the same behavior.

Now, is it true that these people have the right to subject themselves to these ill effects if they choose?

I don't think so.

Such a position supposes that these effects are kept within the individual. This is not the case.

The evidence suggests that people can become addicted to pornography just as others become addicted to alcohol or drugs. And just as the alcoholic and the junkie are capable of anti-social behavior beyond their own will, so is the person hooked on pornography.

Some have seriously argued that pornography may have a beneficial effect. This is the theory of catharsis, and it maintains that pornography provides a harmless outlet for sexual energy which might otherwise be expended in some objectionable manner.

The logic of this position would require that sex crimes should go down as the availability of pornography goes up. All the evidence available indicates that this doesn't happen.

I find that reassuring. I am not a psychologist. Neither am I indifferent to the fact that there are a lot of lonely people in this society.

But is the human condition so mean, and the resources of our culture so limited that the only therapy we can provide for repressed and lonely people is pornography?

As I am sure most of you know, Denmark has lifted certain restrictions on pornography. This has had a dual effect on the United States. It has on one hand substantially increased the flow of pornographic material coming into the country.

And it has, at the same time, increased the pressure from proponents of the legalization of pornography in America. Those who argue for legalization make the case that the legalization of pornography has produced a drop in the sex crime rate in Denmark.

Of course it has.

Pornography used to be a crime there and now it isn't. Therefore the crime rate dropped. Statutory rape used to be a crime; now it isn't. So this contributed to the drop in the crime rate. If they legalize burglary, it will drop some more. They'll have the same number of burglaries, but these won't be crimes anymore.

We have gone to Denmark and talked to the authorities there and the real sex crime rate has not dropped. Period.

But this is the sort of reasoning we see applied to the matter. It seems to me that we have a very great deal at stake here and I think we had better stop thinking with our glands and start using some sense about these problems.

If I read the President correctly, this Administration is not going to legalize pornography. Whether the courts will do it is a different question. We hope they won't. In the past decade, some of our courts have been persuaded that the virtual impossibility of defining pornography precisely is sufficient reason for granting absolute license.

But there are few, if any, precise definitions in Western jurisprudence. What mathematical formula identifies a "fair preponderance" of the evidence in a civil suit? At what precisely defined point is guilt established beyond any "reasonable" doubt? And what is a reasonable doubt? What is an unreasonable doubt?

There is a problem here, certainly. We are giving fallible men the responsibility for making judgments that go to the heart of our democratic freedoms, and one man's smut may be another man's art.

But it is difficult to suppose that by weighing the content of a work and the apparent intent of the creator and the purveyor of that work that we cannot tell what is pornography and what is not. And where we cannot tell, then let the presumption be in favor of the contested work, and we will still be adequately protected.

I know what the First Amendment to the Constitution says, but I think we read our Constitution selectively. I recommend reading the whole thing right from the beginning which establishes the purpose of that Constitution.

It says, We the people of the United States . . . in order to promote the general welfare . . . do ordain and establish this Constitution. . . . If there is anything conducive to the general welfare in a graphic representation of the most repulsive filth imaginable, I confess it escapes me. It apparently doesn't escape some of our courts, unfortunately.

I am not overly optimistic about our ability to deal conclusively with this problem. For one thing, even with courts firmly disposed to eliminate this problem, there is the sheer overwhelming fact that our court system is too overburdened to deal effectively with these matters.

This fact alone contributes to the proliferation of pornography.

And for another thing, pornography is a business. It's a very big business, and like some businesses it puts a premium on survival at any cost.

So we have to find a way to reduce the profits of that business and to make it impossible for them to operate at any price.

In the Post Office Department we have put a great deal of effort into this, and I think we are having some success.

We have more than four hundred dealers under investigation. In the fiscal year just ended we indicted sixty dealers and ten more dealers were indicted in the first two months of this current fiscal year.

So far, we have gotten some fourteen convictions.

On the sixteenth of this month, we won a major victory in this battle when the Ninth Circuit Court of Appeals in Los Angeles upheld the conviction of Marvin Miller. Mr. Miller is a major dealer in pornographic materials and enjoyed the distinction of being singled out for the attention of a national

magazine recently. In February, 1969, he was sentenced to five years imprisonment and a fine of $7,500 for himself and $15,000 for his company. The appeals court which upheld this conviction has reversed pornography convictions in the past. We hope and we believe that we are seeing a new attitude here on this matter.

In the last six months of 1969, we had approximately 178,000 complaints from postal patrons about receipt of pornographic material. In the first six months of 1970, these were down to roughly 105,000.

The President has put the full weight of his office into this battle. He has asked Congress to make it a Federal crime to put pornography into the hands of anyone eighteen years old or under; to make it a federal crime to exploit a prurient interest in sex through advertising; and to broaden the ability of the homeowner to prevent sexually-oriented advertising material from entering his home through the mail.

Now the Congress has begun to respond; it has passed legislation that will enable homeowners to protect themselves from unwanted sex-oriented advertising, and it is, we hope, to enact the remainder of the President's legislative requests in this area.

But with everything, the deciding factor in this matter is going to be the American public.

If the people decide against pornography, we can do away with it.

If we endorse stringest laws;

If we elect and appoint discerning judges;

And if, above all, we refuse to patronize the pornographer, then

We can put him out of business.

Movies show violence because it shows a profit. They show cheap sex because it shows a profit.

It is the same with all media.

If it isn't profitable, it doesn't play.

I'm not suggesting a witch-hunt. I'm sure there are a lot of heavy breathing crusaders waiting in the wings for the call to arise. I'm always a little suspicious of those people, and psychiatrists frequently find them interesting. I think we can do this job without bringing the lunatics and the smear artists out of the woodwork. At bottom, the answer rests on a very simple foundation, and that is taste.

It is still considered sophisticated in some quarters to scoff at American culture, but for a young nation we have contributed greatly.

Whitman, Robinson, Masters, Sandburg, Frost, Marianne Moore, and T. S. Eliot are all American poets.

Clemens and Melville and Fitzgerald were American writers.

Whistler and Cassatt, Eakins and Pollock and Ben Shahn are American painters.

Copeland and Gershwin are American composers. Blues and jazz are American contributions to music. The greatest symphony orchestra in the world is an American orchestra.

We have virtually stamped out polio.

Our cancer research is among the most advanced in the world.

We have gone to the moon.

These are the things that reflect America. This is the heritage we must pass on. There is no room in America for the commercial degradation of the human spirit.

There is no room in America for those who use our freedoms to destroy the very habits of mind and spirit that give meaning to these freedoms.

It is true, as the poet said, that

Not only under ground are the brains of man / Eaten by maggots.

Shall we then pay allegiance to those things we have in common with any animal?

Or shall we hold ourselves above the animals, where God placed us, and pay allegiance to that spark of divinity in each of us—the spark of divinity that this nation was founded to protect and to exalt?

Ladies and gentlemen, in the awful balance between human degradation and human dignity, let us put ourselves down on the side of dignity as our people have always done.

## PUBLIC SUPPORT NEEDED FOR U.S. POW'S

(Mr. DON H. CLAUSEN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. DON H. CLAUSEN. Mr. Speaker, many people are now convinced that only a massive public outcry will compel North Vietnam to extend to the American servicemen they hold captive, the rights afforded them under the Geneva Convention on Protection of Prisoners of War, which it signed in 1957. North Vietnam has repeatedly said that its government is sensitive and responsive to public opinion in this country and I feel the time has come to "put their feet to the fire" and just see how sensitive they really are.

The few American POW's who have escaped and returned have reported that our men are being isolated, beaten, and mentally tortured in North Vietnam, hung by their wrists in Laos, led around like animals or summarily shot in South Vietnam. In addition, they are deprived of all contact with the outside world, they cannot receive mail or packages and, in most instances, their families and loved ones do not even know if they are dead or alive. By any civilized standards, this is inhuman treatment and the kind of torture that outrages all sense of humanitarianism.

For the first time in modern history, the International Red Cross has been denied any and all contact with prisoners of war. The International Control Commission is not permitted to inspect the prisons or facilities in which these men are being confined. Our Government's requests for the names of the POW's they hold have been repeatedly ignored. The wives of these men have personally appealed to Hanoi's representatives in Paris and time after time, been scoffed at or put off. And, once again, the U.N. has proved totally ineffective and without a voice on such a humanitarian cause as this.

Clearly, we, as people, can no longer afford to stand aside and pay no attention to what is happening with respect to these young Americans and their families. Regardless of how we feel about the war in Vietnam, the fact remains that nearly 1,400 American servicemen listed as "missing in action" in Vietnam over the past 5 years, are being subjected to unspeakable indignities and human suffering.

I have met with the wives of some of these men, I have cosponsored a resolution expressing the sense of the Congress on this question, and I have written letters appealing for humane treatment for these men. I have appealed to my constituents for public support. I intend also to do everything possible to insure that these brave men languishing in Communist prison camps are not forgotten here at home.

## TAKE PRIDE IN AMERICA

(Mr. MILLER of Ohio asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MILLER of Ohio. Mr. Speaker, today we should take note of America's great accomplishments and in so doing renew our faith and confidence in ourselves as individuals and as a Nation. The phenomenal growth rate of the American economy is exemplified by the projection that over the next 10 years the gross national product will increase $500 billion which is more than the entire growth of our economy in the first 160 years.

## CRACKDOWN ON SMUGGLING IMPORTANT TOOL IN FIGHT AGAINST DRUGS

(Mr. PEPPER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PEPPER. Mr. Speaker, it is sad but true that oftentimes criminals can stay one step ahead of the law in the pursuit of their illegal activities. So, it gives me a great deal of pleasure to learn that there are law enforcement officers as quick witted and ingenious as some criminals are.

A story in yesterday's Washington Star detailed the efforts of the U.S. Bureau of Customs to curb illegal drug traffic into Dulles International Airport. These drug smugglers are dealing in cargoes worth millions on the black market, and often mean death for those who buy their wares. As chairman of this body's Select Committee on Crime, I have learned all too well the difficulties of ending drug smuggling. Yet this traffic in death must stop, if we are to save the children of America.

I commend the Bureau of Customs and its many dedicated agents for the difficult job they do. I wish Commissioner Ambrose, who testified before our committee's heroin hearings in New York, continued success. Let us as Congressmen remember the difficult job facing the Bureau of Customs and provide the bureau with the necessary manpower to do this vital job.

So that my colleagues may share the information in the Star article, Mr. Speaker, I include it in the RECORD at this point:

DRUG SMUGGLING IS AN ART, SO IS STOPPING

(By Walter Taylor)

"My first official directive to you, Mr. Ambrose, is to make this (anti-smuggling of narcotics) program the first order of business in the Bureau of Customs."—Treasury Secretary David M. Kennedy at swearing-in ceremonies for Commissioner of Customs Myles J. Ambrose, August 5, 1969.

On Christmas Eve last year, an attractive 19-year-old woman with a pronounced British accent appeared at an air cargo terminal at Washington's Dulles International to claim a holiday package that had arrived there from England.

Inside the carton were two ceramic jars, one containing cheese and the other plum

pudding, and a paper box filled with liquor candies.

Of considerable interest to agents of the Bureau of Customs was the less traditional Christmas fare they discovered concealed in the cheese and pudding—about 5 pounds of hashish.

In that month, inspectors checking luggage of passengers on a late afternoon flight into Dulles made what stands as the current record for a hashish seizure at the airport.

"WEIRDO"

Inside what was described as a "weirdo" fibreglass statue that one agent thought weighed more than it should have, investigators found 38 pounds of the hallucinogenic weed, worth more than $150,000.

More recently, customs agents at Dulles have made three sizable narcotics seizures, the latest early this month when two South Americans allegedly attempted to smuggle nearly 30 pounds of marijuana into the country in false compartments of a suitcase.

On Aug. 23, a 31-year-old former Catholic priest was arrested and charged with smuggling after customs agents said they found some 9.5 pounds of hashish taped in chunks to various parts of his body. He pleaded guilty Friday.

And a few days later four Washington area young people were arrested when they tried to claim an ice chest shipped to the airport from Jamaica. Hidden in the insulation of the cooler were 15 pounds of marijuana, investigators said.

These are just 5 of more than 185 seizures in the Washington area made by agents of the Customs Bureau since July of last year, just a month before Treasury Secretary David M. Kennedy admonished his new customs chief to make as his "first order of business" a crackdown on narcotics smuggling.

There is no official breakdown of the statistics, but officials at the bureau say a vast number of the seizures have involved illegal drugs and almost all have taken place at Dulles.

VARIETY OF REASONS

These same officials cite a variety of reasons for the bureau's increasing success—40 percent more seizures in fiscal 1970 than in fiscal 1969.

Some credit Ambrose, at 44 the youngest man ever to hold the office of commissioner. Ambrose came to the bureau after 15 years of law enforcement experience as assistant to the Secretary of Treasury for law enforcement during the Eisenhower administration, as an administrative assistant to the U.S. attorney for the Southern District of New York and as executive director of the Waterfront Commission of New York Harbor.

One of his first acts as commissioner was to increase the strength of the bureau by nearly 10 percent by hiring an additional 1,000 agents, port investigators and inspectors to join in the fight against narcotics trafficking.

In May, in the first official notice of its kind, Ambrose asked indulgence of travellers to the United States, warning of a "grave danger from drug abuse" facing this nation.

"The U.S. Customs is charged with the responsibility of keeping illicit narcotics, marijuana and dangerous drugs from being smuggled into our country," he said "We ask your understanding and cooperation . . . to help combat this serious problem."

Others in the department think the recent appointment of Harold F. Smith, a veteran of more than 33 years of government investigative work, to the post of assistant commissioner of customs for investigations has had much to do with the bureau's recent successes.

Smith, who supervises the enforcement and investigative activities of more than 900 enforcement officers in the bureau's five domestic and two overseas regions, was described by one of his men recently as "the J. Edgar Hoover of the Customs Bureau."

INNOVATIVE TECHNIQUES

Ambrose and Smith, however, credit their men and innovative investigative techniques being tried at a number of bureau facilities. The commissioner cites one additional factor:

"More amateurs are shipping drugs into the country," he said in a recent interview. "Our people are trained to catch professionals, so it's relatively easy to catch amateurs.

"More novices are shipping, more of them are getting caught and the bureau is getting pretty good publicity because of it," he said.

The bureau is experimenting with a number of electronic devices to detect drug smugglers at some air and sea ports in other parts of the country, Ambrose said, but at Dulles it relies strictly on its inspectors and investigators.

Basically, the bureau if concerned with passengers on overseas flights terminating at Dulles and commercial cargo that is shipped to the airport for business firms and private individuals in the Washington area.

The number of international passengers using Dulles increased from 213,656 in fiscal 1969 to 263,818 during fiscal 1970, according to statistics of the Federal Aviation Administration.

Over all passenger traffic—on international and domestic flights—totalled 2.2 million last year, a 66 percent gain from 1967.

In a long line of air cargo terminals at the airport, a small crew of inspectors process more than 1,000 packages that arrive each month. According to Fred Huber, supervisor of inspections at Dulles, about two-thirds of these are opened and meticulously examined.

YEARS OF EXPERIENCE

"After years of experience—you're not infallible of course—you know when to open four boxes or six boxes" of a commercial shipment. "It's a sixth sense that you develop over the years."

Shipments to individuals are given particularly close attention. "We take a look into each and every one," Huber said as he stopped to squeeze the foam rubber seat on a Japanese motorcycle awaiting pickup in one of the barn-sized, corrugated-steel warehouses.

Despite this close inspection of personal packages, Huber said, smugglers still attempt to slip contraband items through. One agent, Tom Cash, explained the smuggler's scheming:

"I am a smuggler. I play the odds. I wait until 5 o'clock when it's a good bet there's a lot of people in here to pick things up. I figure the inspector won't want to hold everybody up, and he won't look too closely."

It's actually not such a good bet.

Fred Cornetta, another agent, stood by a sign in the passenger terminal that reads: "Patience, please—A few extra minutes to clear customs is a small price to pay to help us keep drugs away from your child."

Cornetta, who recently was transferred from a customs checkpoint on the Canadian border, is in charge of investigations at the airport. He is a soft-spoken man, educated at Georgetown University here. His face and voice hardens when he speaks of narcotics.

LIKE A DISEASE

"It's like a disease. It's like a cancer. We have to be worried about other things out here, people trying to avoid (paying) duty, that sort of thing, but all the time you're trying to cut out the cancer. That's what you're shooting at primarily."

Both he and Cash liken their jobs to others in the law enforcement field. "Fred and I try to approach law enforcement on a gentleman's level," said Cash.

"A lot of people expect to run up against some ignorant callous type who knocks them up against the wall and says, 'I can search you any time I want so I think I will.' But it's not like that here.

"We try to be courteous all the time. If we have to arrest somebody it can be done in a gentlemanly fashion, in private so nobody has to be embarrassed about it."

Cornetta, a veteran of eight years with the bureau following a five-year tour with the Bureau of Narcotics and two years as a security officer with the State Department, soon will become the first resident agent at Dulles. He will supervise the 40-odd inspectors and port investigators presently assigned to the sprawling, federally owned facility.

One day recently Cornetta, Cash and Huber stood talking near the new customs wing of the airport when the first passengers of a flight from Frankfurt, Germany, began trickling past Immigration Department screening stations to claim their luggage.

MINGLES WITH THRONG

Cornetta walked away from the others and began mingling with the throng of passengers. Cash stationed himself near one customs checkpoint. Huber made his way to another.

A kinky-haired youth in a corduroy sports jacket and toting a haversack caught Cornetta's eye.

The agent nodded to a port investigator and the young man found himself channelled into a line of passengers at a secondary screening station, one of nearly a dozen long tables near one end of a long corridor.

Another young man, a bulging camera case hanging from his shoulder, was routed to another station. A portly, older man wearing a bow tie and struggling with an overstuffed suitcase was directed to a third.

For each passenger who passed on to a customs checkpoint where an inspector would carefully go through each piece of his luggage, a half dozen others claimed their suitcases and paper sacks of souvenirs from a conveyer belt and moved unhampered from the corridor into the huge airport lobby beyond.

At the checking station each passenger was asked to open his luggage. An inspector rifled carefully through each bag, occasionally unzipping an electric razor case or peeking into the battery chamber of a transistor

The young man with the kinky hair had a difficult time unloading his knapsack but the inspector stood by patiently, acknowledging with a smile the small pile of dirty underwear the youth pulled from the top of the bag.

COUNTER MAN GIVES CUE

The inspector's expression changed somewhat, however, when the youth extracted a quart-sized soda bottle containing a number of dry, leafy twigs. On cue from the counter man, Cornetta and Cash ambled toward the young man as did a plant quarantine inspector who had been standing nearby.

The bottle, it turned out, contained four sprigs of heather.

Although Cornetta and Cash insist physical appearance does not determine whether passengers are routed through the checkpoints, virtually every young person on the flight was asked to open his luggage for inspection.

Couples with small children and large assortments of baggage generally were passed without displaying their belongings.

Only the man with the heather was detained for more than a few minutes. When the youth balked briefly after an inspector asked him to remove the wrappings from a candy bar in his knapsack, he was escorted into a private office nearby to be searched. He was released a short time later.

"Once you start on somebody, all lights are green," explained Cornetta as he watched the youth disappear into the office with Cash.

A few minutes later, Cornetta and Huber left the terminal and headed for a jumbo 747 passenger jet parked far out on a runway.

Inside the aircraft, the agents wandered down the long aisles peering under seats and occasionally lifting the edge of a seat cover. The giant aircraft, Cornetta said, presents "a whole new concept of flight; we have to develop new concepts of searching it."

He motioned toward the front of the plane. "A regular plane is bad enough; look at this thing—it's like a ship."

The two agents explained that it is necessary to search all planes that have terminated overseas flights at Dulles and are continuing to other stateside airports. Contraband could be concealed on the plane, they said, while passengers or crew members were clearing customs inside the terminal. The cargo could then be retrieved without fear of detection, they said.

"NOBODY'S IMMUNE"

"Nobody's immune from bringing things in," Cornetta said. "We've arrested airline personnel; we've even arrested an ambassador."

He stopped, attracted by a loose panel in the ceiling of the plane.

"Look at that. You could hide just about anything in a place like that . . . Or there . . . or there," he said, pointing to a row of overhead compartments in the plane. Cornetta climed onto a seat, pried loose the ceiling panel and peered inside. Nothing.

Back at the terminal, Cash and about a dozen inspectors were beginning to process another planeload of passengers. Six overseas flights were expected at the airport within the next four hours. The checks, the surreptitious nods, the inspections and the searches would go on.

## INTRODUCTION OF PUBLIC EMPLOYEE RELATIONS ACT

(Mr. CLAY asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. CLAY. Mr. Speaker, today Mr. WALDIE and myself are joined by 33 of our House colleagues in introducing the National Public Employees Relations Act. For years public employees have been granted the dubious distinction of being denied the fundamental right of every American worker to organize, bargain collectively, and to be protected from unfair labor practices.

Federal, State, and local government employees have been dependent upon Government bureaucrats, State legislatures, and Congress to provide them with adequate incomes and decent working conditions, which have been afforded to their nongovernmental brothers for over a generation.

The National Public Employee Relations Act would remedy this situation by defining the rights of public employees, providing for union dues deductions by Government employers, and defining unfair labor practices by both public employers and employees.

The recent strikes of the postal workers and teachers are examples of the harvest we reap when workers are denied the right to organize and effectively represent and defend their own interests. In the absence of a true collective bargaining framework in which employees and employers can iron out their differences, those differences are taken to the streets rather than the bargaining table.

With the exception of the Iron Curtain countries, every nation in the world affords the protections to labor unions that are denied to Federal, State, and local government employees. These protections are granted to every working American through the National Labor Relations Board and in the Federal courts, and the National Public Employees Relations Act would provide the means to cover Federal, State, and local government employees.

The National Public Employees Relations Act would define the rights of public employees, establish a procedure for choosing labor representatives of public employees through elections, and provide additional procedures for the resolution of unfair labor practice complaints by either management or labor. The collective bargaining framework established by the bill contemplates the possibility of binding agreements for the arbitration of unresolved grievances and disputed interpretations and allows either party to go to court to enforce provisions of such agreements once they have been authoritatively determined. Finally the bill provides for administration of its procedures by a five-man National Public Employee Relations Commission appointed by the President and confirmed by the Senate, and for mediation of disputes by the Federal Mediation and Conciliation Service.

## REPORT TO THE PEOPLE OF THE FIRST CONGRESSIONAL DISTRICT OF MARYLAND

(Mr. MORTON asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MORTON. Mr. Speaker, it has been my privilege to represent the people of the First District of Maryland during the 88th, 89th, 90th, and 91st Congresses. In order that they can fully understand the extent to which the Federal Government is participating in the improvement and economic development of the district, I should like to take this means of reporting to them on the various projects in which there has been or is to be the granting of Federal funds or action by Federal agencies.

These projects, which either have been initiated, are underway, or have been completed, directly affect many aspects of community life and progress throughout the 12 counties of the First Congressional District. They represent the efforts and cooperation of many individuals. They redound to the credit of many people—town and county officials, employees of the Federal agencies, civic organizations, and, of course, private citizens. My staff and I have devoted time and energy to them all.

The dollars shown are the total Federal expenditures in the counties. They include civilian and military payrolls, retirement and social security benefits, and maintenance and improvements to Government buildings and installations. They also include contracts with and sales to the Federal Government.

This accounts for the vast differences in the level of expenditure in the various counties. For example, the Naval Academy in Anne Arundel accounts for the vast difference between it and other counties. Cecil County is another example where defense contracts account for a large share of Government expenditures.

I welcome this opportunity to congratulate and express my appreciation to the many people, both in Government and out, who have helped bring these projects into being.

Mr. Speaker, permit me to add that officials of the Federal Government have been quite fair and equitable in their treatment of our district in these matters. Close examination and comparison with other districts reveals that the First District has fared very well.

Before listing the individual projects, I should like to indicate in another way the extent to which the Federal Government is participating in the economic and physical development of our district. During an average fiscal year of my incumbency, Federal outlays and expenditures in each county have been:

| | |
|---|---|
| Anne Arundel | $338, 000, 000 |
| Calvert | 7, 000, 000 |
| Caroline | 13, 000, 000 |
| Cecil | 70, 000, 000 |
| Dorchester | 16, 000, 000 |
| Kent | 12, 000, 000 |
| Queen Annes | 9, 000, 000 |
| St. Marys | 58, 000, 000 |
| Somerset | 9, 000, 000 |
| Talbot | 13, 000, 000 |
| Wicomico | 23, 000, 000 |
| Worcester | 12, 000, 000 |

Grand total of Federal expenditures in the district overall during an average fiscal year has been a very creditable $580 million.

Mr. Speaker, each of the federally funded projects in the First District is of great importance to some people and some of them are vital to a great number of people. One which is important to the entire district—to the entire Chesapeake Bay region—and one which came about as a result of legislation I prepared and introducted is the Chesapeake Bay Study, which includes construction of the Hydraulic Model and Technical Center. This $15 million project is designed to effect short-term improvement and long-range planning for Maryland's greatest asset, the Chesapeake Bay. I am pleased to report that the study is nearing completion, land has been transferred from the State of Maryland to the Federal Government—62 acres at Matapeake, Kent Island—and site preparation for accelerated construction of the Hydraulic Model and Technical Center will begin soon.

Another Federal project of benefit to the entire region which stems directly from legislation I introduced is the Assateague Island National Seashore—a $16.5 million project to establish a recreational area encompassing conservation and utilization of 19,000 acres for present and future generations. I am pleased to report that 80 percent of the land acquisition has been completed or is in litigation; that day—use facilities are near completion and that 1½ million persons have visited the area during the current season.

The Chesapeake & Delaware Canal project, calling for an ultimate expenditure of $100 million and designed to improve Maryland's maritime commerce, is another project destined to be of univer-

sal benefit. It is now about 80 percent complete.

Other significant projects, which are being initiated, are now underway or have recently been completed, include:

ENVIRONMENTAL IMPROVEMENTS

GENERAL

Aquatic weed problem—northern bay section.

Anne Arundel County oil spill—Monitor the problem closely and request necessary cleanup on the Federal level.

Black Walnut Point—Dredging.

Calvert Cliffs powerplant—Monitored project closely. Met with scientists, professional people, State and Federal agencies, to assure that no detrimental effects will result.

Cambridge deepwater port—Arrange Federal maintenance.

Cambridge Hospital—Land from dredged material transfer to hospital—pending.

Cecil County—Spoil disposal areas, negotiated minimum local damage and inconvenience.

Chesapeake Bay—Initiated algae study for northern bay region.

Chesapeake Bay Basin study—Construction of hydraulic model. Site selection made at Matapeake. Land transferred from State.

Chester River—Maintenance dredging completed.

Chincoteague Bay—Pocomoke River Canal project—5-year study complete.

Choptank River—Relocation of navigation devices.

Church Creek—Dredging project.

Columbia storm erosion and sediment control—Amount: $280,000. For demonstration and quantitative evaluation of storm water erosion and sediment control practices in a developing urban area.

Crisfield Harbor project—Dredging.

Bellevue—Small boat harbor.

Deal Island beach erosion—Stabilization assistance.

Dogwood Harbor—Dikes are under construction to contain the dredged material. Dredging to start soon.

Elk River—Dredging.

Ewell channel project—Dredging.

Ewell—Navigational aids, fog horn, and light.

Farm Creek—Assistance in arranging seawall through State cooperation.

Fishing Creek channel project—Dredging.

Honga River and Tar Bay—Dredging.

Kent Narrows—Maintenance dredging complete.

Maryland water resources aid—Legislation authorizing hydrological study of Delmarva Peninsula.

Mount Vernon-Websters Cove project—Lighted navigational aid.

Muddy Hook Cove project—Dredging, $39,900.

Ocean City—Sinepuxent Bay and Ocean City harbor and inlet dredging, $75,456.

Ocean City channel project—Maintenance dredging, two wrecked vessels removed.

Oxford beach erosion—First on east coast.

Pocomoke Sound project—Dredging.

Pond Creek area project—Preserved for wildfowl—originally planned for dredged material disposal.

Poplar, Jefferson, and Coaches Island project—Working for transfer ownership of property to Smithsonian Institution, making area eligible for Federal assistance on beach erosion control.

Rock Hall project—Stone jetty repair making harbor useful.

Rhodes Point project—Small boat harbor.

Rumbley project—Harbor.

St. Catherine's Sound—Placement of navigational aids, installation of new lights.

St. Catherine's Sound—Maintenance dredging scheduled.

St. Jerome's Creek project—Maintenance dredging.

Sinepuxent Bay, Upper and Lower—Maintenance dredging complete.

Susquehanna River project—Channel dredging to Havre de Grave.

Susquehanna River debris—$14,000 study authorized for permanent correction of problem.

Town House Creek project—Added navigational aids.

Tred Avon River project—Dredging, $322,900—pending.

Tyler Cove project—Dredging, $24,100.

Tylerton project—Dredging, small boat harbor.

Upper Thorough—Repair stone breakwater.

Weems Creek project—Working with Corps of Engineers regarding siltation from soil erosion due to construction projects.

Wells Cove project—Establish breakwater study, $17,000.

Wicomico River project—Dredging, $137,608.

Worcester County—Coastal stabilization study. Three-year program: $115,000—complete.

Susquehanna River compact—Presently before Congress for Federal approval.

ENVIRONMENTAL IMPROVEMENTS

WATERSHED PROJECTS

Aydelotte watershed project—Wicomico County.

Big and Little Elk Creeks watershed project—Cecil County.

Coonfoot watershed project—$154,800 total cost; $104,600 Federal; soil drainage, Worcester County.

Corsica watershed project, Queen Annes County.

Dividing Creek watershed project—Wicomico County.

Franklyn Branch watershed project—$164,520 total; $112,560 Federal grant, Worcester County.

Goldsboro watershed project—Caroline County.

King's Creek watershed project—Somerset County—application pending.

Long March watershed project—Queen Annes County.

Marshyhope watershed project—Caroline County.

Marumsco watershed project—Somerset County—application pending.

Middletown watershed project—Dorchester County.

Ninepin Branch watershed project—Worcester County.

Passerdyke watershed project—Wicomico County.

Rehobeth watershed project—Somerset County—application pending.

St. Marys watershed project—Project approved and out of committee.

Shingle Landing watershed project—Worcester County.

Timmonstown Branch watershed project—Worcester County.

Turkey Branch watershed project—Somerset County—application pending.

Upper Choptank watershed—Soil drainage program; 18 percent in Caroline County. Total cost: $4,908,150.

Upper Manokin watershed project—Somerset County.

ENVIRONMENTAL IMPROVEMENTS

WATER AND SEWAGE PROJECTS

Betterton water and sewage project—$454,000.

Broadwater wastewater treatment plant.

Cambridge water and sewage project—Grant: $140,000. Modifications to existing sewage treatment plant to provide secondary treatment.

Cambridge—Sewer facilities and other small projects. Grant: $174,250.

Cecilton water and sewage project—Grant: $441,000.

Centerville water and sewage project—Total: $120,600. Grant: $30,150.

Charlestown water and sewage project—Awaiting legislation.

Chesapeake Beach water and sewage system—$765,430.

Chestertown sewage project—Total: $672,400. Grant: $47,700.

Crisfield sewage project—$1.2 million.

Denton sewage project—Total: $483,500. Grant: $112,120.

Easton water and sewage—Expansion now underway.

Edgewater water and sewage project—Bonds issued for construction of centralized system.

Elkton sewage project—$485,032.

Fairlee water and sewage project—$133,460.

Franklin Manor and Cape Anne water and sewage project—Total: $827,444. Previous amount of $33,000 for construction of two pumping stations and secondary sewage treatment plant.

Frenchtown-Rumbley water and sewage project—$104,100.

Fruitland water and sewage project—$805,000.

Galena sewage project—Total: $160,000. Grant: $43,000.

Hebron Sewage Treatment Plant.

Hurlock sewage disposal system—Total: $928,000.

Kennedyville water and sewage project—Total: $93,400.

Lexington Park water and sewage project—Construction grant for intercepting sewer system.

Millington sewage project—Total: $179,200. Grant: $14,500.

Neavitt Harbor project—$31,000.

Newark water and sewage project—$362,000.

North Beach water and sewage system.

North East Sanitary District sewage project—Total: $613,000. Grant: $148,250.

Ocean City water and sewage project—Cost: $3,700,000. Completed.

Perryville water project—Total: $660,000—town to pay half, no application has been filed.

Port Deposit sewage treatment project—Total: $475,100. Grant: $141,000.

Preston sewage project—Total: $93,500. Grant: $22,500.

Prince Frederick water and sewage project—$665,000.

Queenstown water and sewage project—$700,000.

Rock Hall sewage disposal project—$774,900—pending.

Rose Haven water and sewage system.

St. Michaels—Worked with community to get pilot program for sewage treatment plant. Result, oyster taking areas left open that would have been otherwise closed.

Secretary sewage project—Total: $608,800. Grant: $154,000—under construction.

Snow Hill sewage project—Total: $347,900. Grant: $86,600.

Sudlersville water and sewage project—$365,000.

Willards water and sewage project—$956,600.

Worton water and sewage project—$553,100.

COMMUNITY IMPROVEMENTS

PUBLIC HOUSING PROJECTS

Annapolis housing project—Preliminary loan: $50,000. Construction of 250 new units—200 units especially designed for the elderly.

Annapolis housing project—Grant: $232,000. For modernization of low-rent housing. Construction of a day-care center, enlargement of existing community building, rewiring units, and painting.

Bow Street housing project—Complete.

Cambridge public housing project—$2 million Federal loan.

Cambridge Urban renewal—$1,137,000 Federal grant.

Crisfield public housing project: $729,189 Federal loan.

Crisfield housing project: Total: $3,735,322—200 units completed.

Easton housing project—Getting underway.

Elkton urban renewal—$66,353 survey and planning grant.

Elkton Courthouse—$187,642 Federal grant for expansion and renovation, $1,595,083 total cost.

Hughesville housing development—$50,427.

Hurlock housing project—Development of low income housing project—underway.

Queen Anne housing project—Worked with OEO group to fund housing study. Assisted in setting up housing group. Worked with FHA for private construction loans. Assisted in getting additional help for faster handling of applications.

St. Michael's Housing Authority—Project under construction.

Salisbury urban renewal—$1,010,102 total; $866,983 Federal.

COMMUNITY IMPROVEMENTS

PARKS

Annapolis parks—Grant: $20,563. Park beautification, Harbor Park, Memorial Park, and Paca Gardens.

Anne Arundel County Park—Grant: $17,950; acquisition of 17.96 acres of land for recreational park.

Elkton Park—Grant: $13,003. Purchase of additional 6 acres next to existing 18-acre park.

Leonards Mill Park—Obtained necessary funds for park.

Long Wharf Park—Grant: $51,500. Development of 5 acres of the 15 acres of park.

Pocomoke Cyprus Park—Grant: $4,815. Development of 7-acre park.

St. Clement's Shores Park—Grant: $15,344 for development.

Snow Hill, Byrd Park—Grant: $11,770 for development of 27 acres.

COMMUNITY IMPROVEMENTS

GENERAL

Assist independent telephone company in obtaining Federal loan for modernization and line extension.

Berlin Health Center—$35,000 Federal share.

Blackbird control—Federal assistance from the Department of Interior to find solution.

Blackwater Game Refuge—Visitors facility expansion.

Brice House—Historic recognition for national historic landmark.

Chase-Lloyd House—Received national historic landmark.

Chesapeake College—Guidance for Federal assistance.

Court House Point—Recreational pond.

Crisfield — Radar station — surplus property—arranged facility to be turned over for local school.

Crisfield—Weather equipment—Somers Cove Marina.

Denton—Diversion of farmland to golf course and country club; $151,190 Federal loan.

Eastern Neck National Wildlife Refuge—Funding.

Easton—Talbot County Health Center, $300,000 total; $100,000 Federal.

Easton—Memorial Hospital expansion: $4,340,800 total; $625,000 Federal share.

Easton—St. Michael's railroad crossings—Successful in having signs removed alleviating traffic hazard.

Easton railroad bridge—Successful in having hazardous bridge removed.

Easton—Airport resurfacing runways: $242,900 total; $121,450 Federal grant. Completed.

Elk Neck—Mosquito control project.

Elk Neck State Park—Swimming area permit expedited.

Flood insurance—Now available in Ocean City for property owners to pay regular rates. Government will pay additional amount.

Friendship International Airport—Retention of existing schedules and addition of supplemental services.

Great Mills High School Recreation Center—Grant: $13,722 for development of 3 acres.

Greene's Freehold—Restoration grant: $47,500 plus $140,000.

Impacted school assistance—$280,000 per year.

Knapps Narrows—Purchase of Coast Guard site.

London Town Public House—Received national historic landmark. Restoration grant: $90,255.

Millington Swim Club—Amount requested: $63,500. Completed.

Nassawango Country Club—Loan and grant: $497,100, total project: $436,600, other funds: $63,600.

Naval Academy Library and Education Center—Contract award: $8,923,000.

Ocean City Jetty—Rehabilitation of jetty is required. Cost will be $300,000. Funding necessary.

Ocean City—Arranged for old Coast Guard station to be turned over to town of Ocean City.

Paca House—Work to receive funding for restoration of historic house.

Patuxent River bridge—Received permit. Now up to the State roads commission.

Pirates Cove, Galesville—Pollution problem in area.

Restoration for fish and wildlife programs—$114,000.

St. Mary's County—Surplus property of U.S. Naval Test Center—transferred.

St. Mary's County Schools—Grant: $722,026.

Salisbury-Wicomico Airport—ILS equipment has been approved. Participated in obtaining airport improvement funds.

Salisbury State College—Assisted in establishing the college library as a depository library in the First Congressional District.

Smith Island—Removal of junked cars from island by Navy and fire department.

Tulip Hill—Received national historic landmarks.

GOVERNMENT IMPROVEMENTS

Assateague Island—80 percent land acquired or in litigation; $3,000,000 has been spent for development of day facilities. Annual visitation 1½ million.

Beach erosion—$115,000 study complete for the stabilization of Maryland coastline. Study in final stages of review, will be presented to 92d Congress. Estimated Federal share $30.5 million. Local share $4 million.

Bainbridge—Wave barracks construction—$1,091,000.

Centreville—Federal building. Total cost: $377,000.

Coast Guard move from Tilghman to Dorchester County.

Crisfield—New Coast Guard Station.

Crisfield—Tangier mail route retained and prevented relocation to Onancock.

Crumpton—New post office facility approved.

Hillsboro—Retain post office.

Hurlock—Post office, new facility.

Kent County Board of Education—Grant: $19,998. For instruction of teachers regarding problems dealing with desegregation.

Kent County—Coast Guard Station complete.

Leonardtown Post Office—Working for door-to-door delivery.

Naval Academy Midshipmen's Store—See that all military academies were furnished the same privileges.

North East—New post office facility: $61,000.

Ocean City—Coast Guard facility.

Odenton Post Office retained.

Perry Point Hospital—Work to improve facilities and equipment.

Perry Point Hospital—Retention of complete facility for veterans service.

Preston postal facility replacement.

Public schools received Federal assistance in areas where large amount of

Government employees work and areas cannot be taxed.

Public schools in the First Congressional District received Federal assistance through the normal procedures established by the Maryland State Board of Education and Federal Government.

Queenstown—New post office facility.

Rhodes Point—Door-to-door postal service delivery.

Ridgely drop zone—U.S. Air Force.

Salisbury—Federal building. Total cost: $781,520 for land and construction.

Smith Island—Establish door-to-door mail delivery.

ECONOMIC IMPROVEMENTS

GENERAL

Anne Arundel County Economic Opportunity Committee—Continuous grants and assistance.

Anne Arundel County Economic Opportunity Committee—Strongly recommended to Donald Runsfeld consideration of yearly budget request.

Anne Arundel County Economic Opportunity Committee—Grant: $61,968. Job placement and follow-up.

Anne Arundel school system—Request for surplus property at Fort George G. Meade for use of county schools.

Bainbridge—Retention of training center.

Baiting regulations—Clarify wording of baiting regulations. House committee report has gone back to Interior.

Bay Country Festival—Arranged Federal participation.

Biological control—Working with experimental station regarding pesticides and insecticides regarding elimination of DDT.

Bloodsworth Island—Commitment from Navy to decrease size of explosives used in target practice.

Business—Government conferences held in Annapolis, Salisbury and Elkton.

Button industry—Effect tariff change favorable to button industry.

Chesapeake Bay Seafood Association—Continue to work on numerous problems such as funding, marketing, identification, mechanization, and other general fishery problems.

Chesapeake Clamchip Corp.—EDA loan.

Choptank River—Oyster harvest. Worked with State to correct pollution problems.

Cordova poultry—Worked for fair treatment with inspection practices.

Crab processing machine—Worked with local developers. Crisfield Maritime Industrial Park—$1.5 million grant, $3 million project.

Delmarva Council planning grant: $87,200.

Delmarva poultry industry—Inspection services changes opposed freight rate decrease—pending general assistance in all aspects.

Dorchester Industrial Development Corp.—Assisted in obtaining loan for starting of business to create jobs.

Elkton Police radio interference—Frequency changed.

Elkton Vocational and Technical Training Center.

Farmers Home Administration—1970—Total: $6,152,400. Private housing loans 461, Economic Opportunity loans 435, farm operating loans 140, and farm ownership loans 40.

General Cable Corp.—Negotiate for lease of equipment from Navy.

Kent County planning grant: $27,650. Total: $41,475.

Maryland tobacco—Included in 5-cent subsidy for export.

Milford Laboratory—Effort to retain Milford Laboratory for continuation of oyster research. Laboratory closed—arrangements made for nucleus group to continue research.

Milk market—Worked for consolidation with Baltimore, Philadelphia, and Washington milk shed.

Ocean City sand dollars project—To be used by the Ocean City Fire Company to put out plastic tokens. Approval received from the Treasury Department to raise money for fire company.

Princess Anne—Custom pet foods—Assisted in establishing new business for creation of jobs: $710,000.

Perry Point rental increase—Opposed rent increase of 140 percent. Appeal pending.

Salisbury nursing homes—To remove obstacles with Blue Cross-Blue Shield regarding determination if homes were approved for payment of intensive care patients. Would alleviate overcrowding of hospital.

School lunch program—Clarified school lunch program administration favorable to area canners.

Seafood Market News Office retained.

St. Michaels—Flight pattern revised by Dover Air Force Base to alleviate problems caused by noise. Will now fly over bay area.

Sweet corn—Added to school lunch program.

Sweet potatoes—Artificial regulations. Placed on school lunch program. USDA to purchase surplus.

Tag-A-Long Trailers—SBA loan bogged down. Local SBIC concern made the necessary arrangements to accelerate loan. Will increase employment in Centreville area.

University of Maryland—Authorized by Congress to allow university to purchase land and buildings from the Department of the Interior, located in center of campus.

---

## UNREASON ON OUR CAMPUSES

(Mr. STRATTON asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. STRATTON. Mr. Speaker, at this time of year, as the American people brace themselves against the possibility of renewed violence on the Nation's campuses, I believe it may be helpful for all of us to read and reflect upon a very thoughtful address delivered last May by the retiring chancellor of the State University of New York, Dr. Samuel B. Gould.

All too often these days we gain the impression that almost all of our Nation's college administrators have tended to support student efforts at disruption on the campus or at least to excuse them. Few voices have been heard speaking out from college administrators and college faculty members to point out what these disruptive actions are threatening to do to the basis of free American education.

Dr. Gould's address is therefore a very welcome voice, almost one crying in wilderness, to point out the profound dangers that are involved in these disruptive tactics, that all too often do seem to be encouraged and fostered by short-sighted faculty members and administrators. Here is a man who knows what he is talking about.

Under leave to extend my remarks, I include the address by Chancellor Gould, delivered on May 28, 1970, at the commencement ceremonies of the Albany Medical College of Union University, in Albany, N.Y.:

THE GROWING ASSAULT ON REASON

(This address was given by Samuel B. Gould, Chancellor, State University of New York, at the Commencement of Albany Medical College, Albany, New York, on May 28, 1970)

I.

The assertion is made so often and with such vehemence these days that the university is an anachronism. It is charged with having no proper or defined place in our modern world; it still has the decayed aroma of medievalism in spite of the strong countervailing smog of technology; added to all this is a mystifying but heady atmosphere of politicalization.

If even part of this accusation is true, then how much more anachronistic or superfluous is the commencement speaker? Even in the best of times he has been the extra baggage of the ceremonial trip, the suitcase that is always in the way while en route and that doesn't have much of usefulness inside once it is opened. He is cumbersome, heavy, a nuisance even to check in a convenient locker and forget. He is, in short, the one superfluous element in the day's celebration.

You can imagine, therefore, that I approach my task with a certain sense of trepidation. Yet, the past couple of months have been so shattering to intellectual life in America in so many ways that I am deeply grateful for the opportunity to talk briefly with you this afternoon.

II.

I want to talk about only one thing: my sharpening impression that we have entered a period where reason is being challenged, assaulted, and ripped out of more and more of our whole society. To me, it represents the single most fundamental value change of our time.

Some people find this change exhilarating and liberating. Some find it disquieting and alarming. Personally, I have been observing it with a fearful sort of fascination.

As short a time as a decade ago would anyone have believed that a considerable portion of America's intelligent, even brilliant, students and scholars would be banding together to reject reason as the primary path of learning? The number is not large yet, but is enough to question whether the central place of intellect should not now be occupied by instinct, spontaneous feelings, and pleasant sensations. Would anyone have believed that the fuzziest kind of formlessness would be considered preferable to the disciplined analysis, concentrated questioning, and scientific rigor of university life? Would anyone have believed that the search for individuality among students that has been so highly prized and championed by our colleges (even though too rarely achieved), would be supplanted in places by a surge toward individual acts of terror or mob license? Would anyone have believed that some students and younger scholars would jointly be advocating violence or the con-

tinuing threat of violence as the only solution to the problems of higher education or society? Not *all* students, not even a majority, and not *all* scholars, only a small portion, but enough of them to bring almost any campus to its knees and keep it there.

Wherever we turn, we can find ample illustrations of the turn away from reason. Think of it: the most highly educated nation in the world is reviving astrology and occultism, and importing obscurantist pundits from exotic corners of the world to give advice. And it is not the poor and absolutely distraught who are doing this, but some of the most highly educated and affluent. Sensitivity institutes are springing up everywhere, in which the emphasis is not on the interaction of minds but on the release of emotions and the encouragement of impulse.

In cultural circles there is the phenomenon of so-called Impossible Art. For example, Claes Oldenburg, a man of considerable talent, digs a grave in Central Park, fills it up again, and calls it art. This may seem amusing and harmless, but a commentator in one of the leading art periodicals, *Art in America*, reported that Impossible Art is causing "a violent upheaval in the art worlds of America and Europe, and attacking the art establishments of dealers, private collectors, galleries, museums, critics, and art historians in much the same way that students are attacking college institutions." The theater seems to concentrate more and more of its efforts on new forms of soul- and body-baring that blunt and numb not only the mind but ultimately the senses as well. In films and books American directors and authors often act like smirking juveniles who have just discovered the titillations of pornography and don't know whether to feel guilty or liberated. In music we find serious musicians discarding their work of creating edifying liquid architecture and toying with random electronic squeaks and roars, while a growing portion of popular music has a decibel volume that not only destroys its occasionally ingenious subtleties and touching lyrics but creates a form of mass catalepsy.

And over the whole scene hangs the miasma of drugs. Millions of persons now escape frequently from the reality, responsibilities, and complexity of life through drugs, preferring to plunge into the lethargic fantasies of their irrational selves. For many current college students, marijuana, "speed," and LSD are the modern equivalents of the 1920's hip flask of bad whiskey. Last year Americans purchased, and presumably consumed, three and one-half *billion* pep pills, and almost as many tranquilizers. We seem increasingly to prefer the self-imposed chemical pollution of our bodies to the really tough confrontation of our minds with our huge social problems. With growing hypocrisy, we preach the urgent need for greater intelligence, concern for others, and sustained social action; and then we cop out with a trip into personal gratification or self-pity, replacing constructive efforts with freak-outs, rationality with sensations.

This growing number of forms through which the rational instrument of our mind is being pushed aside in the emerging life styles, this rejection of history and disregard of the future leaving only the *now* as life's essential element, this fever pitch of emotionalism, hedonism, and righteous moralism, however stimulated—these have now become distinguishing features of our society.

III.

As I need hardly tell you, the protagonists in pressing for this new philosophy have been our young people. This is nothing radically new; youth has always been in the forefront of fun, romance, adventure, and challenges to the status quo. What is different about contemporary America though are three things: the size and health of our youth; the location and nature of work of most of our youth; and, most important, the amount of attention paid to their desires by the rest of society. We have moved into a new society which some of our sociologists call a juvenocracy. It is an age characterized by a remarkable adult preoccupation with young people and a corresponding preoccupation of young people with themselves, their own wishes, and their new sense of power.

Contrary to popular reports, America's population is not getting younger. The median age, in fact, rose from 24 in 1910 to 30 in 1950, dropped slowly to 27.5 in 1968, and has now levelled off at just under 28. By 1980 the median age is expected to rise another six months. What has increased dramatically, however, is the number of America's youth—in the past 10 years the number of persons between 15 and 25 increased from 27 to 39 million, or 44 percent—and the health of this age group. Because of the miracles of modern medicine and scientific research and this nation's public health programs, far fewer young persons are maimed, crippled, or weakened by childhood diseases and deficiencies. They are privileged with greater good health and undisturbed vigor than any previous generation. According to a recent National Health Survey, the chief cause of death of persons between 15 and 25 is no longer tuberculosis or diptheria or influenza; it is automobile accidents. Fifty-five percent of all youth who die these days are killed by accidents, mainly by automobiles. America's youth, unlike those of India, Spain, or Brazil, can take healthy exuberance for granted.

Another dramatic change has been the astounding increase in the number of young people in *school*. Whereas almost two-thirds of America's youth between 15 and 25 were out working at jobs 20 years ago, today 55 percent are in school studying full-time. The college population, for example, has nearly tripled since 1950. Thus, the pursuits, preoccupations, and leisure time of young people have shifted markedly.

But possibly the clearest manifestation of modern juvenocracy is the amount written or said about our youth; that is, the attention paid to them by adults. Our newspapers and periodicals are flooded with stories of the exploits and oddities of the young. Radio and television panels address themselves almost daily to the question of why the new generation thinks and acts as it does. Social scientists turn out studies in inordinate quantities, all purporting to offer keys to the puzzles of alienation, political extremism, the disdain for legal authority, the fascination with drugs, and the so-called sexual revolution. The producers of goods have suddenly discovered that in our young people they have an enormous market, and they now woo them assiduously with huge advertising campaigns. And, a growing number of adults across the nation pay youth the greatest compliment of all by styling virtually everything to their specifications and in their image.

While all this is going on in our society, we witness a strange paradox. At the very time that America is becoming a juvenocracy, many young men and women are complaining with mounting bitterness that they are neglected, misunderstood, and even forgotten as a generation. They claim that modern life depersonalizes them and drains away or represses their freedom and individuality. They argue that the world has given them nothing but botched enterprises, outmoded structures, and imminent chaos and death. A portion of them believe in their hearts that most adults are craftily working to enslave their souls.

To escape, to liberate themselves, an increasing number of young people annually flout the accepted mores of society in what seem to some to be outrageous actions, or they adopt the rhetoric, slogans, and even the tactics of jungle guerrillas or terrorist anarchists. A growing proportion maintain that what they believe in their hearts or feel in their bellies has a greater truth than all the piles of evidence, accumulations of facts, or rational arguments that others assemble for their scrutiny. We seem almost to be going back to the days of Galileo, with what youth consider to be revealed truth fighting the findings of modern science.

Our colleges and universities, open to new ideas and relatively defenseless, seem an ideal launching pad for the assaults on society and upon reason itself. Where else can one talk about and practice exhibitionalism or anarchism, or any other kind of *ism*, with such impunity? What better place is there for getting maximum attention for one's thrusts against society, democracy, and reason while receiving at the same time maximum protection from the legal authorities and the powerful and sometimes equally irrational counter-forces?

Thus, the modern university has become a staging area and a battleground. It is both the focal point and the mirror for the new characteristics of our society. What a sublime irony! The institution in society that has steadfastly championed freedom of thought as an inviolable right of man finds itself contributing to its own extermination because it can discover no acceptable way to resist the most violent actions that stem from such freedom of thought. The institution that has as its reason for being the advancement of the life of the mind finds itself increasingly used as the base from which reason is being challenged and derided.

IV.

I am sometimes asked whether I think we are experiencing a faddist upheaval among our youth or a fundamental change that will lead to a whole new concept and style of life in America. It is a difficult query to answer. After all, we have had retreats from reason before, both in the history of the world and in the history of the United States. They have come and gone, and the university has survived them. Violence is not a stranger to this land, and confrontation was a vital ingredient in the birth of this nation. Is there anything truly different about today? Are we viewing a peripheral set of circumstances that will not finally upset the major efforts of society or alter its values? Or are we due for a reassessment of all of man's hitherto accepted philosophies?

I wish I had a clear answer to these questions. I can only say that, although a review of history provides a modicum of reassurance, I am very uneasy about what may happen. Many of you may recall the etching by Goya with the inscription, "The sleep of reason brings forth monsters."

One major reason for my unease is that so many new elements now contribute to the difficulty of maintaining rational, peaceful, humane forms of civilization. The speed at which change now takes place and our growing inability to adjust to such change are only two such elements. Science and technology advance with such rapidity that humanistic considerations inevitably lag behind. An increasing number of young persons look at much of this scientific and technological change with suspicion, distaste, and sometimes with utter revulsion—even while they promptly adopt its penicillin and computers, its jet planes and birth control pills. As they see it, the use of reason has led only to increased ugliness and tragedy—to the despoiling of our natural resources, to mass killings, to the increasingly manipulative patterns by which men deal with each other. Much of what reason has created must be torn down, they feel. And reason itself has to be pulled off its pedestal.

I can understand this new distrust of reason. But I find it hard to accept the view that the path to a better life lies in disruption and destruction and in the elevation of feelings to a position of primacy in regulating our individual and social behavior. This country

has ample legal, governmental, and social instruments, at hand, through which more rapid social charge can occur, through which more humane, life-regarding patterns can be evolved. That these instruments have not been used more effectively is not the fault of the instruments so much as it is the fault of the men using them. And it is the fault of the men using them. And it is the fault of adults and youth alike. Youth has no monopoly on idealism and adults are not the only hypocrites in society. We have all contributed to many of our society's well-publicized shortcomings, just as we have all contributed to many of our society's less talked about but internationally envied successes.

One of our successes, for all its imperfections and tribulations, has been and still is the American university. It is not too much to say that America's colleges and universities represent a triumph. They have done what no one thought could be done—expanded in quantity while at the same time growing in quality. America's colleges have educated four times as large a percentage of young people as any nation in the world, while rising to undisputed scholarly eminence in dozens of fields of inquiry, from poetry to space engineering, from sociology to biochemistry.

The American university will continue to exist, no matter how much it is transformed in structure, governance, or academic style, so long as it insists upon the central role of thought and reason. If the university surrenders its belief in reason, or if forces in society compel it to give up reason as its central activity, the university will decline and lose its point for being there. Ecstasy, sensitivity, pleasure, political debate, and emotional exercise can be gained from numerous other activities and institutions in society.

Whether our colleges and universities will continue to move ahead or, indeed, survive depends largely on whether we can find enough persons and devise adequate ways to keep alive the enterprise of intellectual inquiry. I can assure you that this is not easy to do in these times of fierce political controversy, intense moral fervor, and sensational cultural change. In case you think I am some kind of academic Jeremiah, I would point out that dozens of American colleges and universities are already close to a breakdown of teaching and objective inquiry—including a few of our very best.

Yet our society and our universities *must* keep alive the march of reason, the quest for truth, the pursuit of more beauty and greater justice for men. We need to gather up our courage, to reassemble and reassert our principles, to halt the retreat from reason. To do this takes fortitude, understanding, a degree of discriminating judgment, and a sense of humor that is not overabundant, either inside or outside our campuses today.

Somehow we must learn to distinguish between youthful derision and justifiable rage, between the cruelly pelting, factually untrue, and deliberately provocative hail of verbal and other abuse, and the criticism that is borne out in fact. We must be prepared to act humanely but vigorously when minor episodes of hooliganism turn into ugly and vicious displays of wanton violence. We must learn to delineate between massive impatience for constructive change and raw passion for destruction. I say this knowing that most persons at our universities face these tests with a minimum of experience in such matters and a maximum of distaste for confronting them.

The skills and creative abilities for stemming the flight from reason and for revamping our society to meet the new needs of the hour and of the future are all around us, waiting to be used. You graduates have your full share of them. You need only take full cognizance of the current historical trends and face them with flexibility but with an unshakable will, with patience but with vigorous courage, with determination but with characteristic American cheerfulness. Otherwise, the society you will soon be ministering to will increasingly be surrendering to no more than expressions of feeling unbuttressed by rationality.

Reason, like the colleges and universities that seek to foster it, is a fragile sword, sharp but slender, and double-edged. But it is still man's best weapon. I beg each of you to help prevent the mounting heat of dogmas, politics, and passions from melting it down. And I would ask you also never to forget the absolutely vital role that institutions such as this Medical College play in the sustenance and encouragement of the curiosity, precision, and power of the human mind.

*Good luck.* May each of you have rewarding careers and lives of service to others.

## GENERAL LEAVE TO EXTEND ON MILITARY PROCUREMENT AUTHORIZATION CONFERENCE REPORT

Mr. MATSUNAGA. Mr. Speaker, on behalf of the chairman of the Committee on Armed Services, the gentleman from South Carolina (Mr. RIVERS) I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the adoption by the House today of the conference report on the military procurement authorization for fiscal year 1971, H.R. 17123.

The SPEAKER pro tempore (Mr. STRATTON). Is there objection to the request of the gentleman from Hawaii?

There was no objection.

## LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. SCHEUER (at the request of Mr. BINGHAM), for today, on account of illness.

Mr. OLSEN (at the request of Mr. UDALL), for today and September 28, on account of official business.

Mr. SHIPLEY (at the request of Mr. ALBERT), for today and September 28, on account of official business.

## SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. DULSKI, for 15 minutes, today, and to revise and extend his remarks and include extraneous matter.

(The following Members (at the request of Mr. ZION) and to revise and extend their remarks and include extraneous matter:)

Mrs. HECKLER of Massachusetts, for 5 minutes, today.

Mr. RIEGLE, for 15 minutes, today.

Mr. RIEGLE, for 15 minutes, on September 30.

(The following Members (at the request of Mr. MATSUNAGA), to revise and extend their remarks and to include extraneous matter to:)

Mr. RARICK, today, for 10 minutes.

Mr. DIGGS, today, for 10 minutes.

## EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. KOCH, to include extraneous material with his statement today when the House is in the Committee of the Whole.

Mr. WYDLER, immediately prior to the passage of H.R. 18126 today.

Mr. HOLIFIELD during general debate on the conference report on H.R. 17123, Military Procurement and Reserve Strength, and to include extraneous matter.

Mr. YATES in three instances and to include extraneous matter.

Mr. PEPPER prior to the vote on the conference report on H.R. 17123.

(The following Members (at the request of Mr. ZION: and to include extraneous matter:)

Mr. HUNT.

Mr. SHRIVER in three instances.

Mr. GROVER.

Mr. DON H. CLAUSEN.

Mr. ERLENBORN.

Mr. WYMAN in two instances.

Mr. CARTER.

Mr. DERWINSKI.

Mr. FINDLEY.

Mr. McDADE.

Mr. BROTZMAN in two instances.

Mr. MILLER of Ohio in four instances.

Mr. WOLD.

Mr. BRAY in two instances.

Mr. DELLENBACK.

Mr. MORTON.

Mr. CONTE.

Mr. SCHMITZ in two instances.

Mrs. HECKLER of Massachusetts.

Mr. ASHBROOK in two instances.

Mr. BELL of California.

Mr. SCHWENGEL in two instances.

Mr. STEIGER of Arizona.

Mr. COLLIER in five instances.

(The following Members (at the request of Mr MATSUNAGA), and to include extraneous matter:)

Mr. DINGELL in four instances.

Mr. CAREY in two instances.

Mr. THOMPSON of New Jersey in two instances.

Mr. ROGERS of Colorado.

Mr. COLMER in three instances.

Mr. ANDERSON of California in two instances.

Mr. CLARK.

Mr. FRASER in four instances.

Mr. PEPPER.

Mrs. SULLIVAN in three instances.

Mr. HAWKINS in two instances.

Mr. MAHON in two instances.

Mr. RARICK in two instances.

Mr. BURLISON of Missouri.

Mr. STOKES in two instances.

Mr. PURCELL in two instances.

Mr. ABBITT.

Mr. COHELAN in two instances.

Mr. WOLFF in two instances.

Mr. DULSKI in five instances.

Mr. OLSEN in two instances.

Mr. PRYOR of Arkansas in two instances.

Mr. VANIK.

Mr. DENT in four instances.

Mr. BROWN of California.
Mr. MONAGAN.

## SENATE BILLS REFERRED

Bills of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 752. An act to authorize the conveyance of all right, title, and interest of the United States reserved or retained in certain lands heretofore conveyed to the State of Maine; to the Committee on Armed Services.

S. 2461. An act to amend the Randolph-Sheppard Act for the blind so as to make certain improvements therein, and for other purposes; to the Committee on Education and Labor.

S. 3425. An act to amend the Wagner-O'Day Act to extend the provisions thereof to severely handicapped individuals who are not blind, and for other purposes; to the Committee on Government Operations.

S. 3795. An act to amend the Soldiers' and Sailors' Civil Relief Act of 1940, as amended, in order to extend under certain circumstances the expiration date specified in a power of attorney executed by a member of the Armed Forces who is missing in action or held as a prisoner of war; to the Committee on Veterans' Affairs.

S. 4187. An act to authorize the Secretary of the Army to convey certain lands at Fort Ruger Military Reservation, Hawaii, to the State of Hawaii in exchange for certain other lands; to the Committee on Armed Services.

## ENROLLED BILL SIGNED

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker:

H.R. 14373. An act to authorize the Secretary of the Navy to convey to the city of Portsmouth, State of Virginia, certain lands situated within the Crawford urban renewal project (Va–53) in the city of Portsmouth, in exchange for certain lands situated within the proposed Southside neighborhood development project.

## ADJOURNMENT

Mr. MATSUNAGA. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 43 minutes p.m.), under its previous order, the House adjourned until tomorrow, September 30, 1970, at 11 o'clock a.m.

## EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2411. A letter from the Executive Director, Federal Communications Commission, transmitting a report of the backlog of applications and hearing cases in the Commission as of August 31, 1970, pursuant to section 5(e) of the Communications Act as amended; to the Committee on Interstate and Foreign Commerce.

2412. A letter from the Administrator of General Services, transmitting a report of claims settled during fiscal year 1970 by the Administration under the Military Personnel and Civilian Employees' Claims Act of 1964, pursuant to section 3(e) of the act; to the Committee on the Judiciary.

2413. A letter from the Secretary of the Army, transmitting a letter from the Chief of Engineers, Department of the Army, dated September 23, 1969, submitting a report, together with accompanying papers and an illustration, on Goleta, Calif., and vicinity, Santa Barbara County South-Coastal Streams, Calif., in partial response to an item in section 209 of the Flood Control Act of 1962 (H. Doc. 91–392); to the Committee on Public Works and ordered to be printed with an illustration.

2414. A letter from the Secretary of Health, Education, and Welfare, transmitting the preliminary report concerning current information on the health consequences of using marihuana, pursuant to title V, Public Law 91–296; to the Committee on Interstate and Foreign Commerce.

2415. A letter from the Secretary of the Treasury, transmitting a report of operations by Federal departments and establishments in connection with the bonding of officers and employees for the fiscal year ended June 30, 1970, pursuant to section 14(c) of the act of August 9, 1955 (6 U.S.C. 14); to the Committee on Post Office and Civil Service.

## REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. HALEY: Committee on Interior and Insular Affairs. H.R. 19000. A bill to amend the act of April 24, 1961, authorizing the use of judgment funds of the Nez Perce Tribe (Rept. No. 91–1498). Referred to the Committee of the Whole House and the State of the Union.

Mr. HALEY: Committee on Interior and Insular Affairs. S. 3116. An act to authorize each of the Five Civilized Tribes of Oklahoma to popularly elect their principal officer, and for other purposes; with amendments (Rept. No. 91–1499). Referred to the Committee of the Whole House on the State of the Union.

Mr. EVINS of Tennessee: Select Committee on Small Business. Report on the impact of credit cards on small business (Rept. No. 91–1500). Referred to the Committee of the Whole House on the State of the Union.

Mr. ROGERS of Colorado: Committee on the Judiciary. H.R. 15008. A bill to establish the Plymouth-Provincetown Celebration Commission; with amendments (Rept. No. 91–1501). Referred to the Committee of the Whole House on the State of the Union.

Mr. ROGERS of Colorado: Committee on the Judiciary. S. 4247. An act to amend the Bankruptcy Act, sections 2, 14, 15, 17, 38, and 58, to permit the discharge of debts in a subsequent proceeding after denial of discharge for specified reasons in an earlier proceeding, to authorize courts of bankruptcy to determine the dischargeability or nondischargeability of provable debts, and to provide additional grounds for the revocation of discharges (Rept. No. 91–1502). Referred to the Committee of the Whole House on the State of the Union.

Mr. NICHOLS: Committee on Armed Services. H.R. 12650. A bill to amend title 10 of the United States Code to allow wounded members of the Armed Forces to inform their families of such injuries by telephone at Government expense; with amendments (Rept. No. 91–1517). Referred to the Committee of the Whole House on the State of the Union.

Mr. RIVERS: Committee on Armed Services. H.R. 18359. A bill to authorize the showing in the United States of documentary films depicting the careers of General of the Armies John J. Pershing, General of the Army H. H. Arnold, General of the Army Omar N. Bradley, General of the Army Dwight D. Eisenhower, General of the Army Douglas MacArthur, General of the Army George C. Marshall, General Lyman L. Lemnitzer, General George S. Patton, Jr., General Joseph Stillwell, General Mark W. Clark,, and General James A. Van Fleet (Rept. No. 91–1518). Referred to the Committee of the Whole House on the State of the Union.

Mr. KASTENMEIER: Committee on the Judiciary. S. 1628. An act granting the consent of Congress to the Western Interstate Nuclear Compact, and related purposes (Rept. No. 91–1519). Referred to the Committee of the Whole House on the State of the Union.

Mr. KASTENMEIER: Committee on the Judiciary. H.R. 2175. A bill to amend title 18 of the United States Code to authorize the Attorney General to admit to residential community treatment centers persons who are placed on probation, released on parole, or mandatorily released; with amendments (Rept. No. 91–1520). Referred to the Committee of the Whole House on the State of the Union.

Mr. CAREY: Committee on Interior and Insular Affairs. S. 2314. An act to amend section 4 of the Revised Organic Act of the Virgin Islands relating to voting age (Rept. No. 91–1521). Referred to the House Calendar.

Mr. RIVERS: Committee on Armed Services. H.R. 15216. A bill to authorize the Secretary of Defense to lend certain Army, Navy, and Air Force equipment and to provide transportation and other services to the Boy Scouts of America in connection with the World Jamboree of Boy Scouts to be held in Japan in 1971, and for other purposes; with amendments (Rept. No. 91–1522). Referred to the Committee of the Whole House on the State of the Union.

Mr. GALLAGHER: Committee on Foreign Affairs. House Joint Resolution 1162. Joint resolution to amend Public Law 403, 80th Congress, of January 28, 1948, providing for membership and participation by the United States in the South Pacific Commission (Rept. No. 91–1523). Referred to the Committee of the Whole House on the State of the Union.

Mr. FALLON: Committee on Public Works. S. 3619. An act to revise and expand Federal programs for relief from the effects of major disasters, and for other purposes; with an amendment (Rept. No. 91–1524). Referred to the Committee of the Whole House on the State of the Union.

Mr. GALLAGHER: Committee on Foreign Affairs. House Joint Resolution 1146. Joint resolution authorizing a grant to defray a portion of the cost of expanding the United Nations headquarters in the United States (Rept. No. 91–1525). Referred to the Committee of the Whole House on the State of the Union.

Mr. STAGGERS: Committee on Interstate and Foreign Commerce. H.R. 12061. A bill to amend the Federal Food, Drug, and Cosmetic Act, and for other purposes; with an amendment (Rept. No. 91–1526). Referred to the House Calendar.

Mr. NICHOLS: Committee on Armed Services. S. 583. An act to provide for the flying of the American flag over the remains of the U.S.S. *Utah* in honor of the heroic men who were entombed in her hull on December 7, 1941 (Rept. No. 91–1527). Referred to the Committee of the Whole House on the State of the Union.

Mr. STAGGERS: Committee on Interstate and Foreign Commerce. H.R. 14301. A bill to implement the Convention on Offenses and

Certain Other Acts Committed on Board Aircraft, and for other purposes (Rept. No. 91–1535). Referred to the Committee of the Whole House on the State of the Union.

Mr. YOUNG: Committee on Rules. House Resolution 1227. Resolution for consideration for H.R. 18679, a bill to amend the Atomic Energy Act of 1954, as amended, to eliminate the requirement for a finding of practical value, and for other purposes (Rept. No. 91–1530). Referred to the House Calendar.

Mr. MATSUNAGA: Committee on Rules. House Resolution 1228. Resolution for consideration of H.R. 11547, a bill to amend the Consolidated Farmers Home Administration Act of 1961, as amended, to increase the loan limitation on certain loans (Rept. No. 91–1537). Referred to the House Calendar.

Mr. ANDERSON of Tennessee: Committee on Rules. House Resolution 1229. Resolution for consideration of H.R. 15560, to amend the Federal Insecticide, Fungicide, Rodenticide Act, as amended (7 U.S.C. 135–135k), to prohibit the importation of certain agricultural commodities to which economic poisons have been applied, and for other purposes (Rept. 91–1538). Referred to the House Calendar.

Mr. COLMER: Committee on Rules. House Resolution 1230. Resolution for consideration of H.R. 16408, to amend the joint resolution establishing the American Revolution Bicentennial Commission, as amended (Rept. No. 91–1539). Referred to the House Calendar.

Mr. COLMER: Committee on Rules. House Resolution 1231. Resolution for consideration of H.R. 19444, a bill to authorize for a temporary period the expenditure from the airport and airway trust fund of amounts for the training and salary and expenses of guards to accompany aircraft operated by U.S. air carriers, to raise revenue for such purpose, and to amend section 7275 of the Internal Revenue Code of 1954 with respect to airline tickets and advertising (Rept. 91–1540). Referred to the House Calendar.

## REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. FEIGHAN: Committee on the Judiciary. S. 378. An act for the relief of Peter Rudolf Gross (Rept. No. 91–1481). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. S. 732. An act for the relief of Mrs. Nimet Weiss (Rept. No. 91–1482). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. S. 737. An act for the relief of Konrad Ludwig Staudinger (Rept. No. 91–1483). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. S. 1123. An act for the relief of Ah Mee Locke (Rept. No. 91–1484). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. S. 3167. An act for the relief of Kimoko Ann Duke (Rept. No. 91–1485). Refererd to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. S. 3212. An act for the relief of Curtis Nolan Reed (Rept. No. 91–1486). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. S. 3263. An act for the relief of Maria Pierotti Lenci (Rept. No. 91–1487). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. S. 3265. An act for the relief of Mrs. Anita Ordillas (Rept. No. 91–1488). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. S. 3529. An act for the relief of Johnny Mason, Jr. (Johnny Trinidad Mason, Jr.); with an amendment (Rept. 91–1489). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. S. 3600. An act for the relief of Kyung Ae Oh (Rept. No. 91–1490). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. S. 3620. An act for the relief of Mrs. Anastasia Pertsovich (Rept. No. 91–1491). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. S. 3675. An act for the relief of Ming Chang (Rept. No. 91–1492). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. S. 3813. An act for the relief of Kim Julia and Park Tong Op (Rept. No. 91–1493). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. S. 3853. An act for the relief of Mrs. Pang Tai Tai (Rept. No. 91–1494). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. S. 3858. An act for the relief of Bruce M. Smith (Rept. No. 91–1495). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. S. 4073. An act for the relief of Joo Lee and Myung Joo Lee (Rept. No. 91–1496). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. Senate Concurrent Resolution 79. Concurrent resolution favoring the suspension of deportation of certain aliens (Rept. No. 91–1497). Referred to the Committee of the Whole House.

Mr. SMITH of New York: Committee on the Judiciary. H.R. 2302. A bill for the relief of Mrs. Rose Thomas (Rept. No. 91–1503). Referred to the Committee of the Whole House.

Mr. DONOHUE: Committee on the Judiciary. H.R. 11676. A bill for the relief of Philip C. Riley and Donald F. Lane; with an amendment (Rept. No. 91–1504). Referred to the Committee of the Whole House.

Mr. SMITH of New York: Committee on the Judiciary. H.R. 13806. A bill for the relief of Irwin Katz; with an amendment (Rept. No. 91–1505). Referred to the Committee of the Whole House.

Mr. FLOWERS: Committee on the Judiciary. H.R. 15864. A bill for the relief of Robert L. Stevenson; with an amendment (Rept. No. 91–1506). Referred to the Committee of the Whole House.

Mr. HUNGATE: Committee on the Judiciary. H.R. 15865. A bill for the relief of Marion Owen; with an amendment (Rept. No. 91–1507). Referred to the Committee of the Whole House.

Mr. DONOHUE: Committee on the Judiciary. H.R. 16276. A bill for the relief of William E. Carroll; with an amendment (Rept. No. 91–1508). Referred to the Committee of the Whole House.

Mr. FLOWERS: Committee on the Judiciary. H.R. 16502. A bill for the relief of Gary W. Stewart; with an amendment (Rept. No. 91–1509). Referred to the Committee of the Whole House.

Mr. SMITH of New York: Committee on the Judiciary. H.R. 17272. A bill for the relief of certain employees of the Department of Defense; with amendments (Rept. No. 91–1510. Referred to the Committee of the Whole House.

Mr. SMITH of New York: Committee on the Judiciary. H.R. 17853. A bill for the relief of Carlo Bianchi and Company, Inc.; with an amendment (Rept. No. 91–1511). Referred to the Committee of the Whole House.

Mr. SANDMAN: Committee on the Judiciary. S. 878. An act for the relief of James E. Miller (Rept. No. 91–1512). Referred to the Committee of the Whole House.

Mr. SANDMAN: Committee on the Judiciary. S. 882. An act for the relief of Capt. William O. Hanle (Rept. 91–1513). Referred to the Committee of the Whole House.

Mr. DONOHUE: Committee on the Judiciary. S. 1422. An act for the relief of Donal E. McGonegal (Rept. No. 91–1514). Referred to the Committee of the Whole House.

Mr. DONOHUE: Committee on the Judiciary. S. 2755. An act for the relief of Donald N. O'Callaghan; with amendments (Rept. No. 91–1515). Referred to the Committee of the Whole House.

Mr. MANN: Committee on the Judiciary. S. 3138. An act for the relief of Ruth E. Calvert (Rept. No. 91–1516). Referred to the Committee of the Whole House.

Mr. MAYNE: Committee on the Judiciary. H.R. 14543. A bill for the relief of Mrs. Rolando C. Dayao (Rept. No. 91–1528). Referred to the Committee of the Whole House.

Mr. RODINO: Committee on the Judiciary. H.R. 15767. A bill for the relief of Mrs. Maria Zahaniacz (nee Bojkiwska); with an amendment (Rept. No. 91–1529). Referred to the Committee of the Whole House.

Mr. EILBERG: Committee on the Judiciary. H.R. 15922. A bill for the relief of Leela Messin Bell; with amendments (Rept. No. 91–1530). Referred to the Committee of the Whole House.

Mr. MAYNE: Committee on the Judiciary. H.R. 16857. A bill for the relief of Soon Ho Yoo; with an amendment (Rept. No. 91–1531). Referred to the Committee of the Whole House.

Mr. MAYNE: Committee on the Judiciary. H.R. 17431. A bill for the relief of Jacqueline and Barbara Andrews; with an amendment (Rept. No 91–1532). Referred to the Committee of the Whole House.

Mr. RODINO: Committee on the Judiciary. H.R. 17508. A bill for the relief of Jung Yung Mi and Jung Ae Ri; with an amendment (Rept. No. 91–1533). Referred to the Committee of the Whole House.

Mr. EILBERG: Committee on the Judiciary: H.R. 17912. A bill for the relief of Jin Soo Park and Moon Mi Park; with an amendment (Rept. No. 91–1534). Referred to the Committee of the Whole House.

## PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ADDABBO:

H.R. 19486. A bill to amend the Social Security Act to provide for medical and hospital care through a system of voluntary health insurance financed in whole for low-income groups, through issuance of certificates, and in part for all other persons through allowance of tax credits, and to provide a system of peer review of utilization, charges, and quality of medical service; to the Committee on Ways and Means.

By Mr. BROTZMAN:

H.R. 19487. A bill to eliminate certain authority of the Administrator of General Services with respect to trade and exchange of real property, and for other purposes; to the Committee on Public Works.

By Mr. BURLISON of Missouri:

H.R. 19488. A bill to regulate trade in drugs and devices by prohibiting the dispensing of drugs or devices by medical practitioners and their participation in profits from the dispensing of such product, except under certain circumstances, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. COLLINS:

By Mr. CLAY (for himself, Mr. WALDIE, Mr. ADAMS, Mr. ANNUNZIO, Mr. BARRETT, Mr. BIAGGI, Mr. BINGHAM, Mr. BROWN of California, Mr. BURTON of California, Mr. BUTTON, Mr. CAREY, Mrs. CHISHOLM, Mr. CONYERS, Mr. DENT, Mr. DIGGS, Mr. ECKHARDT, Mr. EDWARDS of California, Mr. WILLIAM D. FORD, Mr. HALPERN, Mrs. HANSEN of Washington, Mr. HARRINGTON, Mr. HAWKINS, Mr. HELSTOSKI, Mr. JACOBS, and Mr. LEGGETT):

H.R. 19490. A bill; National Public Employee Relations Act; to the Committee on Education and Labor.

By Mr. CLAY (for himself, Mr. WALDIE, Mr. LOWENSTEIN, Mr. MEEDS, Mr. MIKVA, Mr. MOORHEAD, Mr. REUSS, Mr. SCHEUER, Mr. STOKES, Mr. TIERNAN, and Mr. THOMPSON of New Jersey):

H.R. 19491. A bill; National Public Employee Relations Act; to the Committee on Education and Labor.

By Mr. DENT (for himself, Mrs. GREEN of Oregon, and Mr. SAYLOR):

H.R. 19492. A bill to amend the Higher Education Act of 1965, as amended, and for other purposes; to the Committee on Education and Labor.

By Mr. WILLIAM D. FORD:

H.R. 19493. A bill to assure an opportunity for employment to every American seeking work; to the Committee on Education and Labor.

By Mr. LOWENSTEIN:

H.R. 19494. A bill to amend the act of June 27, 1960 (74 Stat. 220), relating to the preservation of historical and archeological data; to the Committee on Interior and Insular Affairs.

By Mrs. MINK (for herself, Mr. BINGHAM, Mr. BUTTON, Mr. COHELAN, Mr. FRASER, Mr. GUDE, Mr. HORTON, Mr. KARTH, Mr. KOCH, Mr. MOORHEAD, Mr. MURPHY of New York, Mr. PATTEN, Mr. STOKES, and Mr. TIERNAN):

H.R. 19495. A bill to amend title II of the Social Security Act to provide in certain cases for an exchange of credits between the old-age, survivors, and disability insurance system and the civil service retirement system so as to enable individuals who have some coverage under both systems to obtain maximum benefits based on their combined service; to the Committee on Ways and Means.

By Mr. MINSHALL:

H.R. 19496. A bill to amend the Soldiers' and Sailors' Civil Relief Act of 1940, as amended, in order to extend under certain circumstances the expiration date specified in a power of attorney executed by a member of the Armed Forces who is missing in action or held as a prisoner war; to the Committee on Veterans' Affairs.

By Mr. O'HARA (for himself, Mr. NEDZI, Mr. WILLIAM D. FORD, and Mr. DINGELL):

H.R. 19497 A bill to authorize the Secretary of the Interior to establish the Thaddeus Kosciuszko Home National Historic Site in the State of Pennsylvania, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. ST GERMAIN:

H.R. 19498. A bill to amend title 10, United States Code, to permit the recomputation of retired pay of certain members and former members of the Armed Forces; to the Committee on Armed Services.

H.R. 19499. A bill to amend title 5, United States Code, to provide for the continuance of Federal employees group life and accidental death and dismemberment insurance during periods of active duty and active duty for training with the U.S. Armed Forces, and for other purposes; to the Committee on Post Office and Civil Service.

H.R. 19500. A bill to amend part B of title XVIII of the Social Security Act to include drugs requiring a doctor's prescription, and colostomy irrigation equipment, among the medical expenses with respect to which payment may be made under the program of supplementary medical insurance benefits for the aged; to the Committee on Ways and Means.

By Mr. SCHMITZ (for himself, Mr. BENNETT, Mr. CRANE, Mr. DENT, Mr. MCKNEALLY, Mr. RARICK, Mr. ROUSSELOT, Mr. THOMPSON of Georgia, and Mr. ZABLOCKI):

H.R. 19501. A bill to amend title 10 of the United States Code to provide that an abortion in facilities of the uniformed services may be performed only in accordance with the requirements of the law of the State in which the abortion is performed; to the Committee on Armed Services.

By Mr. THOMPSON of New Jersey:

H.R. 19502. A bill to establish an American Folklife Foundation, and for other purposes; to the Committee on House Administration.

By Mr. WOLD:

H.R. 19503. A bill to provide a penalty for unlawful assault upon policemen, firemen, and other law enforcement personnel, and for other purposes; to the Committee on the Judiciary.

By Mr. FALLON (for himself, Mr. BLATNIK, Mr. JONES of Alabama, Mr. KLUCZYNSKI, Mr. WRIGHT, Mr. GRAY, Mr. CLARK, Mr. EDMONDSON, Mr. JOHNSON of California, Mr. DORN, Mr. HENDERSON, Mr. OLSEN, Mr. ROBERTS, Mr. KEE, Mr. HOWARD, Mr. ANDERSON of California, Mr. CAFFERY, Mr. ROE, Mr. CRAMER, Mr. HARSHA, Mr. GROVER, Mr. CLEVELAND, Mr. DON H. CLAUSEN, and Mr. MCEWEN):

H.R. 19504. A bill to authorize appropriations for the construction of certain highways in accordance with title 23 of the United States Code, and for other purposes; to the Committee on Public Works.

By Mr. FALLON (for himself, Mr. DUNCAN, Mr. SCHADEBERG, Mr. SNYDER, Mr. DENNEY, Mr. ZION, Mr. MCDONALD of Michigan, Mr. HAMMERSCHMIDT, and Mr. MILLER of Ohio):

H.R. 19505. A bill to authorize appropriations for the construction of certain highways in accordance with title 23 of the United States Code, and for other purposes; to the Committee on Public Works.

By Mr. DORN:

H.R. 19506. A bill to authorize the Secretary of the Interior to establish the Thaddeus Kosciuszko Home National Historic Site in the State of Pennsylvania, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. WILLIAM D. FORD:

H.R. 19507. A bill to adjust the pay of employees of the Federal Government, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. LENNON:

H.R. 19508. A bill to assure safe and healthful working conditions for working men and women; by providing the means and procedures for establishing and enforcing mandatory safety and health standards; by assisting and encouraging the States in their efforts to assure safe and healthful working conditions; by providing for research, information, education, and training in the field of occupational safety and health; and for other purposes; to the Committee on Education and Labor.

By Mr. MOLLOHAN:

H.R. 19509. A bill to amend title 38 of the United States Code to provide improved medical care to veterans; to provide hospital and medical care to certain dependents and survivors of veterans; to improve recruitment and retention of career personnel in the Department of Medicine and Surgery; and for other purposes; to the Committee on Veterans' Affairs.

By Mr. STAGGERS (for himself and Mr. SPRINGER):

H.R. 19510. A bill to amend section 14 of the Natural Gas Act; to the Committee on Interstate and Foreign Commerce.

By Mr. YATRON:

H.R. 19511. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability benefits thereunder; to the Committee on Ways and Means.

By Mr. BELL of California:

H.J. Res. 1386. Joint resolution authorizing the President to proclaim annually the day of November 1 as "National Women in Education Day"; to the Committee on the Judiciary.

By Mr. BENNETT:

H.J. Res. 1387. Joint resolution to establish the Culebran Commission for the purpose of resettling the inhabitants of Culebra; to the Committee on Interior and Insular Affairs.

By Mr. HALPERN:

H. Con. Res. 755. Concurrent resolution expressing the sense of the Congress with respect to an International Convention at the Hague for the purpose of drafting a treaty on unlawful seizure of aircraft; to the Committee on Foreign Affairs.

By Mr. ROBISON of New York (for himself, Mr. HANSEN of Idaho, Mr. BUTTON, Mr. SCHWENGEL, and Mr. PREYER of North Carolina):

H. Con. Res. 756. Concurrent resolution expressing the sense of Congress that U.S. troop withdrawals from Indochina continue on an irreversible basis according to a set schedule; to the Committee on Foreign Affairs.

By Mr. YATES (for himself and Mr. BOB WILSON):

H. Con. Res. 757. Concurrent resolution urging the President to determine and undertake appropriate actions with respect to stopping armed attacks on aircraft and passengers engaged in international travel; to the Committee on Foreign Affairs.

## PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. GIBBONS:

H.R. 19512. A bill for the relief of M. Sgt. George C. Lee, U.S. Air Force; to the Committee on the Judicary.

By Mr. JARMAN:

H.R. 19513. A bill for the relief of Ronald K. Downie; to the Committee on the Judiciary.

By Mr. RUTH:

H.R. 19514. A bill for the relief of Juanito Bernard Manzano; to the Committee on the Judiciary.

By Mr. RYAN:

H.R. 19515. A bill for the relief of Harry Leonard Martin; to the Committee on the Judiciary.

By Mr. WIGGINS:

H.R. 19516. A bill for the relief of Sherry Saunders; to the Committee on the Judiciary.

## PETITIONS, ETC.

Under clause 1 of rule XXII.

606. The SPEAKER presented a petition of Dr. Harry E. Stockman, Arlington, Mass., relative to certain Air Force procurement tactics, which was referred to the Committee on Armed Services.

# EXTENSIONS OF REMARKS

## FURTHER COMMENT FROM WYOMING ON STUDENT UNREST

## HON. JOHN WOLD

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

*Monday, September 28, 1970*

Mr. WOLD. Mr. Speaker, on September 18, I included in the RECORD a few remarks concerning the current problems which the campuses of our Nation face in terms of disorder and violence. I also had printed the thoughts and comments of some of the citizens of my State. I include the text of my newsletter together with some additional remarks made by the people of Wyoming:

JOHN WOLD: YOUR WYOMING CONGRESSMAN REPORTS ON CAMPUS UNREST

DEAR FRIEND: "On strike—shut it down!" was a chant that many students and faculty dissenters screamed this spring in hopes of closing their school. Seven-hundred-sixty colleges and universities across the country came to their knees under the pressure of such groups! It meant that nearly 1.5 million students had to temporarily abandon their plans for an education.

We cannot tolerate such actions in Wyoming. Wyoming young people have generally had able school administrators. Wyoming can be proud that our state leads the Nation in per capita investment for education. Last year the University of Wyoming faced student unrest to a degree it had never before experienced. Restraint prevailed and serious confrontations were avoided, but there was a potential for trouble. Our responsibility is to explore and solve campus problems ahead of time.

Change is vital to progress but we must be cautious that constructive protest doesn't erupt into destructive violence. The purpose of this report is to squarely face these problems and to come up with constructive solutions. I want you to know what I have done in this area as your Congressman. I also would appreciate your sentiments written on the enclosed form so that I can tell the U.S. Congress how Wyoming feels on this important problem.

Sincerely,

JOHN WOLD,
*Your Congressman.*

---

CAMPUS UNREST! ROAD TO REVOLUTION?

VIOLENCE IS NOT LEGITIMATE DISSENT

The rights of dissent and protest are fundamental to a democratic society. Our government should not interfere with the right of dissent as long as it is peacefully conducted and the rights of others are respected.

Violence in any form, in any measure, under any circumstance, is not a legitimate means of protest on or off a campus.

THOSE BEHIND CAMPUS VIOLENCE

The facts show that the bulk of campus violence is caused by the extreme new left led by the so-called Students for a Democratic Society (SDS).

SDS leaders have been open in their statements of purpose. Greg Calvert, an SDS spokesman, has said: "We are trying to build a guerrilla force in an urban environment; we are actively organizing sedition."

The SDS publication, New Left Notes, says: "When we move with the people of the world to seize power from those who now rule, we can expect their pig lackeys to come down on us . . . We've got to actively fight. We've got to bring the war home to the mother country of imperialism, 'Amerika'—the final front."

We cannot afford to ignore or underestimate the potential of SDS efforts directed at our colleges and high schools. Their dissent movement has shifted from peaceful protest to an outright declaration of war on the American system.

It is interesting that Lenin, before gaining control in Russia, used the college youth to promote anarchy and to destroy government in Russia—actions very similar to those being taken by the leaders of the new extreme left in the United States today.

THE PRICE OF STUDENT VIOLENCE

The cost of student violence has been high in lives and property damage. In the 15-month period between January 1969 and April 1970, this country suffered a total of 4,430 bombings, 1,475 attempted bombings and 35,129 threatened bombings. This cruel form of terrorism accounted directly for the deaths of 40 people and $21.8 million in property damage.

Campus disorders, according to the Treasury Department, accounted for 56 percent of these incidents of terrorism.

The price of these incidents decreases the amount of loans and scholarships available to deserving students.

REASONS FOR VIOLENCE

It is fashionable to attribute most student unrest to the Vietnam War. That is partially true.

Young people have always been in revolt against their parents. But what is unprecedented about today's outburst is the support they receive from so many people who should know better. In many cases we see professors, not only endorsing violent behavior, but out throwing rocks at the policemen.

FBI Director J. Edgar Hoover told President Nixon's Commission on Campus Unrest that student dissent is threatening to plunge the nation's educational facilities to the brink of chaos. "The activities of student dissidents and violence-prone campus radicals have implanted the notion in our youth that the road to progress lies in threats, disruption and destruction," Hoover said. "Most of our youth are a credit to their parents and to this country, but a minority steeped in an attitude of indulgence and materialism, has terrorized whole academic communities, bringing the nation's educational facilities to the brink of chaos."

WHAT ABOUT THE MAJORITY OF YOUNG PEOPLE?

FBI estimates indicate that the SDS and their sympathizers number only about one percent of the students at our colleges and universities. While that rabble with filthy bodies and filthier mouths monopolize the headlines, there are millions of responsible young college students who are more concerned about getting an education than destroying the system that is providing their educational opportunities.

Even more thoroughly ignored are the millions upon millions of young Americans who decide to go to work instead of to college. These young people are experiencing the same daily hardships of other Americans. They pay bills, pay taxes, raise their families and keep a home together, usually with the added handicaps of less money, less experience and fewer possessions.

HOPEFUL SIGNS

Students who go to college to get an education should begin to challenge those who want to start a revolution. If they don't, they may find their precious heritage of freedom and opportunity gone down the drain.

In increasing numbers, however, young people seem to be turning from demonstrations and protest, and concentrating instead on change through the political process. The college student who works to elect a candidate who supports his point of view is doing far more for his cause than he could possibly achieve by participating in a protest demonstration.

WHAT CAN YOU DO?

We are now approaching the fall and the return of a large number of young people to the campuses. We must place faith in these young people. This generation, perhaps more than any other, is sensitive to the shortcomings of our society and wishes to become meaningfully involved in their solution. We must encourage that interest and concern without losing sight of the need to deal firmly with violence and disorder.

There must be an assertion of leadership among the law-abiding students, professors, administrators, alumni, and public officials. At the same time an effort must be made to anticipate trouble, to remedy valid grievances, and to maintain clear channels for the effective handling of requests and complaints.

Young people must learn that while dissent is healthy, violence is not. Those who disagree with public policy have the right to dissent, but not to destroy property or interfere with the rights of others, including the right of other students to get an education.

---

REMARKS BY PEOPLE OF WYOMING

"I am a senior majoring in Education at the University of Wyoming. I am simply appalled by the radical actions taken by a large share of students involved in expressing campus unrest. I think police and college officials ought to have a strong arm in dealing with radicals. Withdrawing financial aid to radicals is an excellent idea. I am a member of ROTC."—Kenneth P. Marx, Laramie.

"Our young people do have some legitimate beefs such as the fact that they can pay taxes and be drafted to fight in wars which they feel are wrong, but they cannot legally drink, smoke or vote. Their peaceful protests and demonstrations often turn to violence because peaceful protests go unheeded or their significance is deliberately suppressed by the media—see the attached letter (which was not printed). I do not believe in letting campus militants disrupt or take over a college. I'm with Mr. Hayakawa on that, and have publicly stated this view."—Gil Stevenson, Laramie.

"I feel the colleges and high schools should have more *rules* that apply to *each* student and if not obeyed—have the students expelled. Our school system, I feel, has let down the students and parents that are really trying to get an education. Also, we need more *trade schools* and help for the students that aren't college material. We also need more communication between *teachers* and *students*. I think high school education or age 18 should be made a law."—Helen A. Cossitt, Sheridan.

"I feel that students have the right to peaceful dissent *but* violence has no place in our society and I feel that either students or faculty members engaging in violence should be immediately suspended from the university or college permanently."—C. W. Lyon, Cheyenne.

"We are suggesting legislation that would immediately expell or dismiss any of these people (students and faculty) from our colleges that in any way contribute to violence, property damage, etc. This would give the

greater percentage of our young people the right to an education. We further suggest that all of your views be extended to cover the high-school level."—Mr. & Mrs. Byron B. Rawlings, Sheridan.

"I am in complete harmony with the view that we are foolish, weak and apathetic to allow a small minority of rabble rousers to paralyze our educational system. They have no rights they are trying to preserve, but rather they deprive many Americans of basic rights we have had for generations. Laws which protect these rights should be enforced. I feel the right to peaceful protest is one thing, but interpreting this right to cover violence, and to champion the cause of an enemy government and to destroy our freedoms should be curtailed."—LaMont R. Merrit, Afton.

"The only way to achieve peace on the campus, in my opinion, is to: 1) Adopt strict, clearly-defined, rules against any and all interruptions, demonstrations or violence on our college campuses; 2) then, strictly enforce these rules without regard to who breaks them; 3) violators should be expelled immediately followed by prosecution in the courts; 4) and finally, all rules and enforcement should apply to the *College Professors* since they are *much more responsible* for the problem than the student."—Roy H. Guess, Casper.

"Part of the college's job is to turn out at graduation time, responsible, well-behaved adults. If they (the colleges) do not do this, they are failing in their duty to parents and society."—Mrs. J. G. Wannschaff, Casper.

"I believe that students not obeying the rules and regulations of the college which they are attending should be immediately expelled from school; and especially the State supported schools such as the University of Wyoming. We taxpayers are getting fed up with the added taxes that such unrest in the schools demands."—Mrs. J. S. Bookout, Wheatland.

"If there are injustices, correct them. Expell student trouble makers and fire faculty members who support student rioting and terrorism. Prosecute individuals who are guilty of destroying property."—George W. Steinbrech, Lander.

## PROBLEMS FACING U.S. 6TH FLEET

### HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

*Tuesday, September 29, 1970*

Mr. THURMOND. Mr. President, in view of the present threats to peace in the Middle East, I invite the attention of Congress to a news column written by Henry J. Taylor and published in the State newspaper, Columbia, S.C., on September 25, 1970.

Mr. Taylor correctly points out the decline of U.S. seapower as evidenced by our naval forces in the Mediterranean. He notes the U.S. 6th Fleet is facing a growing and more modern Soviet Navy in that area of the world as well as elsewhere.

Mr. President, I ask unanimous consent that the editorial be printed in the Extensions of Remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SIXTH FLEET UP AGAINST IT: AGING U.S. SHIPS FACE GROWING RED ARMADA

(By Henry J. Taylor)

ATHENS.—While rumors swept the Middle East that the U.S. Sixth Fleet would intervene against the Palestine commando skyjackers, our force was tied up tighter than a drum in the eastern Mediterranean.

In fact, this country—Greece—is the only country in the entire eastern Mediterranean where the Sixth Fleet can congenially call.

It cannot go to neighboring Turkey, long a solid anchor of NATO in the eastern Mediterranean, without provoking street riots, protest-bombings and crippling internal strikes. That represents a complete reversal in our defense capability in this explosive part of the world. And in the light of the fiery Israel-Arab situation, it is the main immediate problems of U.S. Vice Admiral Isaac C. Kidd Jr., now newly commanding the Sixth Fleet.

Moreover, west of Turkey and except for Israel, Tunisia and Morocco, the entire southern rim of the Mediterranean is hostile to us. Syrian, Egyptian and Algerian harbors are available to the expanding Soviet Mediterranean fleet. And even on the Iberian peninsula at the Atlantic gate to the Mediterranean, opinion is incensed over what millions of Spaniards and Portugese call our double-standard—one for colonial powers, another for the Afro-Asians.

Meanwhile, Admiral Kidd, aboard his flagship, the USS Springfield, a light guided-missile cruiser, has taken over a profoundly worried fleet now alerted for immediate call in a nearly impossible situation.

Behind the scenes, and at this moment, Admiral Kidd's command consists of about 50 vessels, including two aircraft carriers and 200 aircraft. The personnel numbers 25,000. Even with the additional Marines arriving aboard the helicopter carrier Guam, his force has only a combat-ready battalion landing team of a scant 3,000 Marines.

His ships are also aging ships which show an encroaching obsolescence. Admiral Kidd does not see how he can compensate for time's natural wastage. An alarming proportion of his fleet was built during the 1939–45 war period and is 25 years old.

Its support by the once all-powerful British navy is all but negligible. In fact, Admiral Kidd finds that the entire worldwide British navy has now been reduced to 3 aircraft carriers, 2 commando ships, 8 nuclear-powered submarines, 33 conventional submarines, 3 cruisers, and 87 large and small destroyers and frigates. British naval strength in the Mediterranean is merely the converted carrier Albion at Cyprus, the guided-missile destroyer Fife at Malta, and the frigate Euryalus at Gibraltar.

Moreover, Admiral Kidd is constantly harassed today by the Soviet probings in these waters. For example, the Soviet "tanker" Kustanaia suddenly arrived on the flank of his flagship Springfield in the crisis over the planes and passengers skyjacked to the Jordanian desert. A Soviet helicopter hovered nearby. Both were loaded with electronic gear to intercept messages between Admiral Kidd's Springfield and Sixth Fleet units cruising off Lebanon's coast regarding our possible intervention.

Although the Soviet has no aircraft carriers (anywhere), its Mediterranean fleet's ships now outnumber Admiral Kidd's command. Then, looking further, he sees the Soviet naval expansion not only in the Mediterranean but to all the seven seas.

Admiral Kidd estimates that the Soviet fleet now consists of 75 nuclear-powered and 320 diesel-powered submarines, 25 cruisers, 100 destroyers, another 100 destroyer escorts, 275 patrol vessels, 300 mine sweepers, 300 torpedo boats, 125 missile boats, 2 helicopter carrier vessels, 130 amphibious craft and literally thousands of support, auxiliary and service craft.

Of nearly equal importance, the Reds have in these waters and worldwide a nearly new fleet. Only 1 per cent of the entire Soviet fleet is 20 years old, NATO Supreme Commander Gen. Andrew J. Goodpaster told me. That the Soviet is driving all out to seize supreme seapower from our country seems obvious to Admiral Kidd—While the United States Navy is admittedly inadequate to meet our worldwide national and international commitments.

The quiet, oh, so quiet expansion of Soviet maritime power was the military phenomenon of the 1960s. At close hand this looks like a relentlessly rising flood tide in the 1970s.

Admiral Kidd has his work cut out for him around here, as the Mideast continues to boil, the skyjackers add to that explosive turmoil, and the Kremlin makes its bid to achieve the balance factor in global power.

After a visit to our NATO naval headquarters near Naples, to the Greek island of Corfu, where elements of our Sixth Fleet are visiting, and then here at our eastern Mediterranean command's control center, the grim question arises: Who is policing the peace of the world now?

## FOREIGN POLICY

### HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Monday, September 28, 1970*

Mr. FINDLEY. Mr. Speaker, foreign policy touches every family intimately. In recent years we have seen how remote, limited wars not only shatter international peace but also the basic fabric of our own society, destroying the peace and destroying precious lives and other resources. As a member of the House Foreign Affairs Committee, I have worked to strengthen the role of the Congress—the people's branch of the Government—in the control of war-making authority and foreign policy generally. Following is a brief summary of my efforts (full texts of statements, resolutions, bills or amendments mentioned available upon request):

SOUTHEAST ASIA

With the change in administration 2 years ago, the greatest problem faced by our Nation was the war in Vietnam. On March 24, 1969, just 2 months after President Nixon took office, I urged our new Commander in Chief to begin troop withdrawals. In a speech on the floor of the House, I stated:

Hanoi will concede nothing of importance at the negotiating table.

There is no reason that the South Vietnamese troops, who substantially outnumber the Communists, cannot if they have sufficient spirit, fight their own battle aided by our material support.

On March 25, I placed in the CONGRESSIONAL RECORD the names of the 31,379 Americans killed in hostile action in Vietnam prior to the time that Richard Nixon become President. Covering 122 pages

with fine print, this Vietnam Roll of Honor—which I have since updated four times—is meant to honor the courage of the men who fought and died in Vietnam and also to show in the most graphic way why our combat involvement must be ended.

Shortly thereafter, President Nixon announced the first withdrawal of 25,000 ground combat troops.

By October 1969 the country was again getting restless over the progress, or seeming lack of it, in the Vietnam war. Some thought that a quick military blow might end the war, while many others thought that the rate of withdrawal should be greatly speeded up.

On October 6, I introduced a resolution declaring that:

> The substantial reductions in U.S. ground combat forces in Vietnam already directed are in the national interest and that the President be supported in his expressed determination to withdraw our remaining such forces at the earliest practicable date.

Nearly one-fourth of the membership of the House cosponsored my resolution. Shortly after this initiative, I received a personal letter from President Nixon thanking me for introducing the resolution, stating that "this legislative action is greatly appreciated."

In November 1969, as the Vietnam issue continued to boil in the country, I introduced, together with the leadership in the House of Representatives, a resolution supporting the President's diplomatic initiatives to bring an end to the conflict and calling for a "just peace" in Vietnam. However, I argued that it was not sufficient for the House merely to endorse the President's diplomatic initiatives in Vietnam. Supported by President Nixon's letter thanking me for my earlier resolution, I offered an amendment to the pending resolution "support[ing] the President's expressed determination to withdraw our remaining ground combat forces at the earliest practicable date."

To the full House, I argued:

> Clearly, the House of Representatives has a duty to formulate a position on basic Vietnam policy, and I would hope it will endorse the policy being pursued by the President. . . . Our new Commander-in-Chief deserves a vote of confidence in the fundamental policy change he has initiated.

Despite my pleas, my proposal, for which the President himself had voiced approval, was not adopted.

With the approach of Christmas, my staff in Washington began collecting money for the annual "Christmas in Vietnam" project. Volunteers bought and wrapped $3,000 worth of gifts for our servicemen in Vietnam. American and Pan American Airlines airlifted the gifts directly to Vietnam, where they were distributed on Christmas eve.

On April 30, 1970, the defense procurement authorization was before the House of Representatives for consideration. I offered an amendment to the bill prohibiting any of the funds authorized to be used to finance the introduction of American ground combat troops into Laos, Thailand, or Cambodia without the prior consent of Congress "except to the extent that such is required, as determined by the President and reported promptly to the Congress, to protect the lives of American troops remaining within South Vietnam." Debate became hot, and the House finally adjourned without voting on my amendment to await the President's address to the Nation.

That very evening, President Nixon announced in a televised address that he had sent American combat troops into Cambodia because he felt that enemy positions in the sanctuary areas were capable of endangering the lives of American troops remaining in Vietnam.

Shortly thereafter, I met with the President at the White House. Present also were other members of the House Foreign Affairs Committee and the Senate Foreign Relations Committee. President Nixon stated to the group his support for my amendment and said he thought it "splendid." He said that he hoped that it would pass when the bill was voted on that week.

Although adopted over all other pending amendments pertaining to the Cambodian intervention, when the final vote came, the House decided to say nothing.

In the aftermath of the sending of U.S. troops into Cambodia, public demonstrations were organized for Washington. I felt that such demonstrations did not provide young people with a constructive way to set forth their ideas and arguments effectively. A tremendous number of leaderless people massed together in front of the White House add up to confusion, not clarity. To help provide young people with a proper forum, I organized a special committee of Congressmen to hold 2 days of hearings on student views toward U.S. policy in Southeast Asia. Over 60 students from 50 different colleges and universities traveled at their own expense to Washington to testify. The leadoff witness was a young man from Kent State University who, like several others, spoke in support of President Nixon's policies. Other witnesses expressed opposition. All were opposed to violence in any form as a means to achieve a change in policy, and said they were willing to work within the system. The hearings have been printed and copies are available upon request.

WAR-MAKING POWERS

A bill to require Presidential reports on the commitment of U.S. troops, which I introduced, has been adopted virtually intact by the House Foreign Affairs Committee and is expected to be approved soon by the full House. The bill specifies that the President shall submit promptly to Congress a report giving his detailed reasons, and authority for sending troops to foreign soil without first securing specific approval from Congress, and the expected scope of the activities contemplated. This step will help the Congress fulfill its constitutional responsibility in the warmaking field, and I feel, reduce the possibility of new Vietnam-like involvements in the future.

NATIONAL SECURITY

In 6 years work as delegate to international conferences on security, I have developed a proposal which will strengthen NATO and yet permit a substantial reduction in our troops in Europe while protecting our national interests. On September 9, I had the privilege of presenting the details in a 35-minute discussion personally with President Nixon. On September 24 I met with Admiral Moorer, chairman of our Joint Chiefs of Staff for the same purpose. Earlier I presented it to German, French, and British leaders, and am gratified to know it is now receiving active consideration throughout our NATO alliance.

---

## THE FLIMSY CASE FOR THE SST

### HON. HARRY F. BYRD, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

*Tuesday, September 29, 1970*

Mr. BYRD of Virginia. Mr. President, the Roanoke Times of September 24, 1970, contains an excellent editorial entitled "The Flimsy Case for the SST."

I agree with the conclusion drawn in the editorial that the SST is at the present time a nonessential and expensive project.

The editor of the editorial page of the Roanoke Times is Forrest M. Landon.

I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE FLIMSY CASE FOR THE SST

By this time, with the Senate vote on appropriations so near, both sides on the supersonic transport question are, we think, exaggerating their case. We have not stopped our ears, but we have ceased to pay quite as much attention to the outcries about the sonic boom's potential effect or the damage that may result from SST vapor trails in the upper atmosphere. That kind of harm may yet result, but the threat is speculative right now.

Yet even if we discount all the environmental and social arguments against the SST, we remain unimpressed by the justifications offered for it. What earthly need have we, or the rest of the world, for an 1,800-mile-an-hour airplane while earthbound traffic is mired up? Indeed, the chief point put forward by the Nixon Administration seems to be that we must develop an SST because other nations are doing it and if we don't, our balance of payments and our preeminent position in the aircraft industry will suffer.

Perhaps they will. But the federal government already has invested $738 million in SST development and is being asked now to put in another $290 million. Administration spokesmen have indicated they would be willing if necessary to go the last mile and underwrite not only development (at a total cost of $1 billion) but also production (another $3 billion).

And this is before there is demonstrable market demand for the craft, before there can be any assurance that enough of our SSTs would sell for the federal government to recoup its investment.

If they didn't sell, what good would that do our balance of payments or our aircraft industry's rating? Meantime, what good would all this added federal spending have done for the budget or the anti-inflation effort?

Our view is that the SST is an unnecessary prestige project, and if it is too expensive and risky for the aircraft industry to shoulder it, then neither should the taxpayer. If the industry, now in a slump, needs federal help to bail it out, let it be put to work on more useful tasks, like developing pollution-free mass-transit vehicles for our roads and streets.

## WE MUST SAVE OUR SCHOOLS, AND OUR PEOPLE FROM CRIMINALS IF WE ARE TO SAVE OUR NATION

### HON. JAMIE L. WHITTEN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

*Monday, September 21, 1970*

Mr. WHITTEN. Mr. Speaker, I wish to thank my friend and distinguished colleague G. R. "SONNY" MONTGOMERY for arranging today's discussion. He has been in the forefront in efforts to save public education.

My friends, our public school system is being destroyed, and it is being destroyed needlessly and without bringing about the objective sought by those who are responsible for its destruction. This is a subject I have discussed many times in the Congress; and while the House of Representatives has passed provisions which I have offered as limitations on the appropriations bill for the Department of Health, Education, and Welfare at least 5 times, only this year were we able to get the amendments through the other body without seriously weakening them. Of course we had the all-out support of our Senators.

These provisions, which appear in Public Law 91–380 as Sections 209 and 210, read as follows:

SEC. 209. No part of the funds contained in this Act may be used to force any school or school district which is desegregated as that term is defined in Title IV of the Civil Rights Act of 1964, Public Law 88–352, to take any action to force the busing of students; to force on account of race, creed or color the abolishment of any school so desegregated; or to force the transfer or assignment of any student attending any elementary or secondary school so desegregated to or from a particular school over the protest of his or her parents or parent.

SEC. 210. No part of the funds contained in this Act shall be used to force any school or school district which is desegregated as that term is defined in Title IV of the Civil Rights Act of 1964 Public Law 88–352, to take any action to force the busing of students; to require the abolishment of any school so desegregated; or to force on account of race, creed or color the transfer of students to or

* * *

These amendments, while a limitation on the use of funds, passed the House and Senate by overwhelming votes, clearly showing the feelings of the people of the United States, as evidenced by the "People's Branch" of our Government, the Congress.

Notwithstanding this, we see the Federal judiciary rushing in to complete the destruction of the system which has existed for generations, usurping powers not given the courts by the Constitution, a course the judges would not dare to follow if the Department of Justice, the executive department, would say no; for the courts, or the judges, are dependent upon the Marshals, representatives of the executive department, to carry out their orders.

Not only have communities been torn up by the problems thus brought to our schools, but the students are being deprived of an education. This will be felt for the rest of their lives by every child who suffers through this period of poor and unsatisfactory schooling.

I would point out again that no society or nation in history has stood for any great length of time unless it provides 3 things: internal protection of its people; protection of property rights, so men will have the incentive to work and save; and the education of its people. I can do no better than to repeat here what I have said on other occasions.

Law enforcement was seriously hampered by the Federal courts in my section of this country, and it has spread all over the United States until now in this area, as in most other cities, you are afraid to get out on the streets at night. The morning newspaper lists almost a half page on the major crimes of each preceding day. Last year we had 18,000 robberies and 9,000 burglaries and another 9,000 cases of other crimes of violence in Washington.

PROPERTY RIGHTS

The Nation's courts let property rights be destroyed in my section. It spread to the burning of Detroit, Cleveland, Washington, Los Angeles, and hundreds of other cities.

So it is here. If you stand by and let HEW or the courts destroy quality education in my section, it is bound to come home to you.

You would not believe what has been done. We have home economic students being sent to schools where they do not have the equipment for teaching the subject.

We have youngsters in the lower grades who are going to schools where all the facilities are large, constructed for seniors and juniors. We have juniors and seniors going to schools with low blackboards, low commodes, and low drinking fountains, facilities intended for elementary school students. The interchange of faculty is unbelievably disastrous. Teachers have quit and you have to hire whoever you can get. One parent, discussing the math teacher, said she was fine until she got into fractions, long division and decimals.

We are violating the intent of the Civil Rights Act of 1964. Believe you me, we are destroying public education for all races. It is my section now but if not stopped it will spread to yours, just like violence and property destruction did.

In my hometown there are colored as well as white people who come to me and say: Congressman, isn't there something you can do to save our schools? Congressman, won't you help us see that our children can go to school where we want them to go—do they have to be carried all around over the country to teachers who are not qualified?

I have never been one who would want to visit on any section of the United States what has happened in my section. The schools and public education have been destroyed as of the moment. We are having children hauled miles from one direction to another against their wishes, to create a racial mix to satisfy some court or judge. I have one constituent—a man whose daughter and son are in one school and now the daughter in the next class is going 12 miles in another direction to a different school; and next year she will have to go 12 miles in another direction to another school—against everyone's wishes.

I am told we have more than 475 schools over our region which have been closed; we have had new school buildings closed. Yet in some cases classes are held from 7 to 5 o'clock in the overcrowded remaining buildings.

I have joined with numerous colleagues in a request to intervene and appear before the Supreme Court in pending cases to urge that Court and through it the Judges of the Court of Appeals and the District to let up.

Let us return our educational system to the local school boards, to the parents and, yes, to the teachers before it is too late.

This the Federal judges can do. To this end we need the executive department, the President, to exercise his separate and equal power as Chief Executive, to withdraw his support of the present dangerous course. Without the support of the executive department there is not a court that can or, in my judgment, would even try to carry out a single one of these school orders.

## AMERICAN LABOR MAGAZINE SPOTLIGHTS A LABOR UNION AND ITS LEADER

### HON. VANCE HARTKE

OF INDIANA

IN THE SENATE OF THE UNITED STATES

*Tuesday, September 29, 1970*

Mr. HARTKE. Mr. President, American Labor magazine is one of the few national news magazines devoted to the labor scene. As such, it is indispensable reading material for those who are concerned about the future of America's working men and women.

The 1970's are a time of challenge for all Americans, and this includes those who are part of our Nation's vital transportation network. We are in a period of great technological change and our economy and our society must cope with problems of a complexity and size unprecedented in our history.

In these years ahead, America needs a strong, free, democratic trade union movement. And in these years ahead, our Nation will be better and stronger as the labor movement produces new ideas and new concepts for the improvement of the standard of living and the quality of life of every citizen.

When a recent issue of American Labor magazine crossed my desk, I was

pleased to see pictured on the cover one of my old friends—C. L. "Les" Dennis—the leader of the largest transportation union in the AFL–CIO and a man who has made the Brotherhood of Railway and Airline Clerks a modern union on the move.

In a 10-page article, the editor-in-chief of American Labor magazine turns the spotlight on "the largest and most diversified transportation union in the AFL–CIO," its leader and his views on future trends in the transportation industry.

Illustrating the innovative thinking which characterizes Les Dennis is his bold, new plan to aid the financially troubled rail industry. In recent testimony before the Senate Commerce Committee, Les Dennis proposed that $1 billion from the railroad retirement account be loaned to the railroad industry for capital and service improvements. Whether or not this plan becomes a reality, it is nonetheless an intriguing idea and demonstrates a fresh and imaginative approach to an old and recurring problem: Whither the railroads?

I think that Senators would be interested in reading some of the highlights of this article. I ask unanimous consent that excerpts be printed in the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM AMERICAN LABOR MAGAZINE

Dennis gets things done; no doubt about that. The size and strength of his union and the benefits he has helped win for the membership is proof enough of his abilities, but the total atmosphere is a relaxed one, for "C. L.", as most everyone refers to him, is regarded by his staff as more of a concerned leader than as a demanding boss.

The labor organization he heads covers a range of personnel that includes all clerical and related employes in the railroad industry and those in the airline and steamship industries as well—freight handlers, ticket clerks, janitors, people in the accounting departments, IBM operators, the drivers for the Railway Express Agency (REA). It also covers the patrolmen, the telegraphers, taxi-drivers in Florida and Georgia . . . and much more.

Considered a craft union by some, since its founding in a cigar store in Sedalia, Missouri, on December 29, 1899, the Brotherhood has grown from 33 railway clerks to a membership of over 300,000 and is, in reality, a kind of "universal union" in the transportation industry.

Over the past several years, mergers with the Railway Patrolmen's International Union and with the Order of Railroad Telegraphers (ORT) have been accomplished. More recently, the Federation of Business Machine Technicians and Engineers (an independent association) has been brought under the umbrella as well. In the public sector, the BRAC roster includes personnel involved in water resources and sewer systems. The range is wide . . .

ON TOMORROW

In discussing the overall economy as it related to his own particular industry, Dennis saw the unprecedented population growth not so much as a potential for business profit but as a period of re-analysis of the people's aims and needs.

Automation, with its attendant attrition of jobs and potential massive dislocation of employment opportunities, he felt was going to remain one of the major bargaining issues for the foreseeable future . . .

"But as technology advances, as it inevitably must," he pointed out, "we have to think about the millions of people who will be entering the workforce in the years ahead. They have to live and make enough to supply themselves and their families a decent standard of living. And from every actuarial estimate, tomorrow's population will be living longer than we do now. It's a brain buster."

From the long-range viewpoint, he was convinced that some way would have to be found to develop an economy which would guarantee the creation of continuous earning capacity for the greatest number possible—regardless of whatever technological developments came along.

"Without income, there's no buying capacity," he said. "And automating millions of people out of an ability to earn their way, is a prospect of terror I don't even want to think about.

"The protection of people must come first," he said. "Without them—there is nothing."

ON BRAC'S GROWTH POTENTIAL

Looking at the potential prospects of growth for his own union, Dennis felt that the airline industry (many of whose major carriers are still only partially organized) and the airline-related freight forwarding companies, represented the largest void that needed attention. The numbers he mentioned were in the neighborhood of 150,000. He saw another possible 75,000 in the supervisory and subordinate official family of the railroads as well: the major chief clerks, the IBM analysts, the personal secretaries, assistant office managers, etc. The present union membership in the 50 United States, Puerto Rico and Canada is 305,000 . . .

Tall, big-boned, heavy set, BRAC's president moves with a surprising speed. If one of the basic qualities of leadership is energy, a cataloguing of his multiplicity of union and charitable involvements on a year-round basis would be irrefutable testimony that nature has given him this ingredient in abundance. Few individuals have started lower in the economic barrel to make it to the top.

Whatever the drives and talents that led Dennis to success in his chosen field, the overall journey has sensitized one phase of his makeup in a manner different. It has enlarged rather than diminished his feeling of kinship with people at every level.

One can say of a lot of individuals, "This is a leader." And Dennis certainly fits that category. But what lingers on long after that fact has been acknowledged is the deeper image not so much of power as of the respect he engenders.

---

## STUDY ON RIOTING MERITS STUDY

---

### HON. JOHN E. HUNT

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. HUNT. Mr. Speaker, everyone is familiar with the proliferation of committees and commissions to study endless problems and to make recommendations with respect to the recommendations made by predecessor committees and commissions. One Commission of note was the National Commission on the Causes and Prevention of Violence. It was born on June 10, 1968 and, for more than 2 years, studied violence, a subject that is perhaps as old as the history of man. Violence continues, and much to the consternation and frustration of public officials, law enforcement authorities, and the general public which is demanding a solution.

A solution, of course, comes with understanding the problem and I believe Eugene H. Methvin, associate editor of Reader's Digest, has come up with a revealing and enlightening study of violence in his book "The Riot Makers." I recommend its reading and commend to your attention the following review of the book by Walter Trohan in the September 4, 1970 issue of the Chicago Tribune:

STUDY ON RIOTING MERITS READING

(By Walter Trohan)

WASHINGTON.—This is the age of riots. For some years many have wondered about explosions of violence in our streets and on our verdant campuses: Are they spontaneous or are they planned?

Now comes the ringing answer that the riots are a part of a program of social demolition by old and new radicals in the volume "The Riot Makers," by Eugene H. Methvin, associate editor of Reader's Digest, who has been studying the problem for more than five years. His 587 page book, published by Arlington House at $10, is one of the most important studies undertaken of our contemporary society.

No one can pretend to discuss this problem until he has read this book. William Shakespeare divided the life of man into seven ages. Methvin discovered the seven stages of rioting—organizational deployment, preconditioning, sloganeering and hate targeting, creating the crowd nucleus and screen, on the scene crowd management, police baiting and "confrontation," and manufacturing martyrs.

Methvin traces the technology of rioting back in history, giving a poison ivy crown of evil to Nikolai Lenin. He warns against attempts to separate the threats of "left wing" and "right wing" radicalism, noting that the two frequently blend.

Josef Stalin ordered the German Communist Party to form a united front with Hitler and his Nazis in order to wreck the Wiemar Republic. Benito Mussolini was an old revolutionary socialist. Fidel Castro and his "martyred" pal, Che Guevara, were both early admirers of Hitler and might have followed in his footsteps had he not gone down in flames with his particular brand of totalitarianism before they came into power.

Today, Lenin's writings are surpassing the Bible in the number of published translations. If Stalin hadn't perfected his program of social demolition, Methvin says it would have been with us anyway, because others began it and others would have developed it.

Lenin and his followers were both borrowers and lenders of the techniques of social demolition. Borrowings came from such extremes as the vast outdoor functions in front of St. Peter's in Rome and the crowd playing of Adolph Hitler.

Methvin details what some may have forgotten, which is how the Communists encouraged dupes to make torches of themselves to gain propaganda advantage in Viet Nam. These immolations induced the United States to turn its head when President Diem was assassinated. In 1960, organized rioting in Tokyo forced President Eisenhower to cancel a state visit.

But there is more to this book than past history or even detailing of the radical influences at work in the organized social demolition underway from coast to coast. He not only tells how riots can be started, but how they can be prevented, in large part thru proper public education.

Methvin, the son of a Georgia newspaperman, who was born to the craft he loves, has done one of the finest jobs of reporting these aging eyes have seen. He wrote his book because a study of rioting was needed; there were no experts on the subject even tho this country was being damaged by rioting abroad and at home.

Let it not be assumed that Methvin is expounding a gospel of the extreme right. He is aware that there could be no rioting unless there were explosive tinder lying about in slums, unrest and discontent. These have a role in his program of counter action but he cautions against launching any study of the problem by stacking committees and commissions with people who have made up their minds before they know the problem.

## DESTRUCTION OF RESEARCH FACILITIES ON COLLEGE CAMPUSES

### HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

*Tuesday, September 29, 1970*

Mr. THURMOND. Mr. President, the problem facing Government research centers on college campuses was the subject of an editorial entitled "A Look at Campus Research," published in the Aiken, S.C. Standard, of September, 22, 1970.

The editor of the Aiken Standard, Mr. Samuel A. Cothran, has written a thoughtful article which deserves the attention of the Congress. It is my feeling the views Mr. Cothran has expressed in this editorial are similar to those of the present administration and of Congress.

I ask unanimous consent that the editorial be printed in the Extensions of Remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A LOOK AT CAMPUS RESEARCH

Defense Secretary Laird is quite correct in saying that need now exists for a good look at the question of government research on college campuses. Mr. Laird's comment was occasioned by the bombing of the Army's math research center at the University of Wisconsin, a deplorable act but one which could provide a point of departure for an overall program evaluation.

If, Secretary Laird observed, federal research facilities on campus are adding to administrators' headaches, then there are other locations where they could be built. That, certainly, is an alternative, but not necessarily the best course. If security is a prime consideration, relocation may be advisable. If it is not, cost factors deserve attention.

New buildings and complex equipment take money and the taxpayers have a stake in such government spending. Savings are realized in some university research centers where federal and institutional projects make use of the same labs, tools and manpower.

Reaction of student militants has focused attention on defense research, but sight should not be lost of the multi-million-dollar projects in such fields as health and environmental sciences which are included in the federal research program on campuses. What contributions are anticipated from which projects must be measured carefully before decisions are made to divorce federal research from college centers.

We question the argument of liberals and leftists that there is no place at a university for defense-related research while in the same breath they demand of that university greater political involvement and a larger role in reshaping society. If it is wrong for a university to conduct or help conduct scientific research that is military-oriented, then it is equally wrong for the university to enter the political arena or to engage in efforts to effect socio-economic changes in the neighborhood.

If, after a hard look, departments of the federal government elect to make changes in campus research programs, their erasons should be other than the hue and cry raised—and the bricks and bombs tossed—by would-be revolutionaries. The idea of a minority band of student dissidents and drop-outs telling the American government where it can have research done is hard to swallow.

## LEGISLATIVE REPORT

### HON. GARNER E. SHRIVER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. SHRIVER. Mr. Speaker, during the 91st Congress I have introduced more than 70 bills and resolutions in the House of Representatives. Many of the proposals they contain have become law. Following is a report on those of major interest:

H.R. 50, to increase the personal income tax exemptions of a taxpayer from $600 to $1,200. Exemption increased to $750 in Tax Reform Act of 1969.

H.R. 10595, to extend the Great Plains conservation program. Enacted as Public Law 91–118.

H.R. 4599, to extend in lieu of taxes payments on certain federally owned properties, such as Air Force Plan 13 in Wichita, to assist Sedgwick County, Derby and Wichita school districts. Passed House and reported by Senate Government Operations Committee.

H.R. 6290, to extend head of household benefits to single taxpayers. Some provisions enacted as part of Tax Reform Act.

H.R. 9331, to improve the operation of the legislative branch of Government including amendments to end secret voting procedures. Passed House, pending in Senate.

H.R. 11047, to provide cost-of-living increases in social security benefits. Passed the House, pending in Senate.

H.R. 11046, to increase to $3,600 amount individuals may earn without suffering deduction in social security benefits. Amount was increased to $2,000 in legislation now pending in Senate.

H.R. 11142, to prohibit the use of the mails to convey salacious materials to anyone. Passed the House.

H.R. 12490, to extend the Golden Eagle passport fee program into Federal recreation areas. Exacted into law.

H.R. 8188, to provide for the striking of medals in commemoration of the 100th anniversary of the founding of Wichita, Kans. Enacted into law.

H.R. 16038 through 16044, seven bills to clean up the environment by setting air standards, studying recycling of solid wastes and providing funds for water pollution control, and providing penalties. H.R. 16039 to authorize Council on Environmental Quality to conduct certain studies relating to solid wastes passed the House. H.R. 16039 to amend Clear Air Act passed and in House-Senate conference.

House Concurrent Resolution 359, expressing sense of Congress with respect to North Vietnam and the National Liberation Front of South Vietnam complying with requirements of Geneva Convention relating to humane treatment of prisoners of war. Passed the House and Senate.

House Resolution 614, expressing support of President Nixon's efforts to negotiate peace in Vietnam.

H.R. 18876, to provide for fiscal responsibility through the establishment of a limitation on budget expenditures. Pending in Government Operations Committee.

House Concurrent Resolution 729, expressing sense of Congress that the administration should act immediately to enter into bilateral agreements with all nations providing for mandatory extradition of hijackers of aircraft. Hearings held by Foreign Affairs Committee.

## MISSISSIPPI A GOOD AND SAFE PLACE TO LIVE

### HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. COLMER. Mr. Speaker, for many years we Mississippians have advocated that our State is a good place in which to live. Once again it has been pointed out, by an outstanding journalist in my congressional district, Mr. Clayton Rand, that Mississippi has the lowest crime rate nationwide, thus further emphasizing the "safe" and the "good" aspects of the Magnolia State.

I want to take this opportunity to insert in the RECORD the article by Mr. Rand in this regard:

CRIME ON INCREASE

(By Clayton Rand)

Director J. Edgar Hoover of the Federal Bureau of Investigation in his report for 1969, shows that there were nearly 5,000,000 serious crimes committed, with the risk of becoming a victim having increased 120 percent since 1960. There was an increase of 12 percent over 1968.

Of the 50 states, Mississippi had the lowest crime rate in 1969, as it has before, and California had the highest. The crime rate for Mississippi was only 740.5 crimes per 100,000 population, while the California rate was 4,110.5 per 100,000 or over five times as high as Mississippi.

Mississippi is often made the scapegoat among the states by the sensational press and the networks for its alleged violence. They should be told that according to the FBI record Mississippi is the safest place to raise a family, own a business, or stay alive.

In the observance and enforcement of the law, Mississippi leads. One's person is secure there unless one happens to be a Communist or an outside meddler.

Mississippi is also censured because it has the lowest per capita wealth and earning power of the States. She is poor but proud, and being the most impoverished state, she has proven that poverty is not the primary cause of crime.

## VITAL MESSAGE ON CAMPUS UNREST

### HON. DON H. CLAUSEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. DON H. CLAUSEN. Mr. Speaker, in its editorial "Vital Message on Campus Unrest," the Boston Herald Traveler writes about a recent article by Dr. Sidney Hook which caught the attention of the President who recommended it to some 1,000 college and university officials.

Dr. Hook, a professor of philosophy at New York University, warns that although the university was once in danger of intimidation and intellectual corruption from without the system, it is now in danger from within. The goal of learning, he says, has been changed to a goal of political action, and many campus leaders are condoning tactics of force and violence by those leading the assault on academic freedom.

To assume that campus unrest and disruption will continue until the political and social problems of our society are solved is nonsense, says Dr. Hook, as that leads inevitably to the conclusion it will never stop because we will always have problems which need solving.

As the report of the Commission on Campus Unrest has just been released, I think my colleagues will find this editorial of particular interest:

VITAL MESSAGE ON CAMPUS UNREST

On today's editorial page, the Herald Traveler is pleased to reprint the text of an excellent article by Dr. Sidney Hook, a professor of philosophy at New York University.

Yesterday President Nixon sent copies of Professor Hook's article to nearly 1,000 college presidents and other university officials, with a note reminding them that they bear the primary responsibility of maintaining order and discipline on the nation's campuses.

Professor Hook is one of America's most distinguished scholars. His reputation is based, more than anything else, on his staunch defense of academic freedom over the years. A generation ago, Dr. Hook warned that academic freedom was in danger as a result of ignorance and intimidation outside the Halls of Ivy. Today, he says, it is menaced by intimidation and intellectual corruption coming from within the academy itself.

Too many college administrators, faculty members and students are yielding quickly and easily to the unreasonable demands of campus dissidents, he asserts. And too many of them are quick to blame the foreign policies of the Nixon administration—or almost anything else, for that matter—as the cause of campus violence.

The assumption that collegiate unrest and disruption will continue until the political and social problems of our society are solved, says Hook, is nonsense. For that leads inevitably to the conclusion that it will never stop, since we will always have problems to solve.

Even if that were not so, he reminds us, no assumption concerning the causes of student unrest can justify the perversion of the university's purposes from the goal of learning to the goal of political action—much less condone the tactics of force and violence employed by many of those who are leading the assault on academic freedom today.

Dr. Hook's article contains a message rather similar to the one which President Nixon delivered last week in his speech at Kansas State University. So it is no surprise that Mr. Nixon would describe it as "one of the most cogent and compelling documents I have read on the question of campus violence," and that he should send it along as recommended reading for many of the nation's top college officials.

We trust that he also sent copies to members of the White House commission on campus unrest, headed by former Pennsylvania Governor William Scranton, which is expected to issue a report shortly that will arrive at somewhat different conclusions. From what we hear, the commission is unlikely to bear down on the vital point stressed yesterday by Mr. Nixon—to wit, that "those who cannot accept the rule of reason, those who resort to the rule of force, have no place on a college campus."

## EASING THE PROBLEMS OF OUR SENIOR CITIZENS

### HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. THOMPSON of New Jersey. Mr. Speaker, we have become increasingly aware of the difficulties faced by our senior citizens in coping with their financial problems. Congress has sought to ease this burden in a number of ways. Enactment of medicare did much to dispel the fear of the cost of protracted illness. More recently, Congress has raised the level of social security benefits to keep pace with inflation. And earlier this year, the House passed and sent to the Senate legislation raising the level of annual earnings from $1,680 to $2,000 a year which a person receiving social security benefits may retain without penalty.

One of the most difficult problems confronting the senior citizen is that of meeting ever rising real property taxes. It is for this reason, Mr. Speaker, that I take this opportunity to draw the attention of my colleagues in our State delegation to a referendum question which will appear on the November 3 election ballot in New Jersey. That referendum question will propose that the State constitution be amended to increase from $80 to $160 the tax deduction allowed on real property for New Jersey residents 65 years of age and over.

Mr. Speaker, this may seem to be a modest sum, but I can assure you that this additional $80 tax saving would, in many cases, mean the difference between a senior citizen's ability to retain a home or lose it. I am also aware that our municipalities can ill afford to lose tax income. But the proposed amendment takes that situation into account by providing that the $80 increase will be reimbursed to the municipalities by the State. I sincerely hope and trust that my colleagues will join me in supporting this worthy proposal and in bringing it to the attention of our respective constituencies.

## THE PROPERTY ACQUISITION AND DISPOSAL REFORM ACT OF 1970

### HON. DONALD G. BROTZMAN

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. BROTZMAN. Mr. Speaker, I am today introducing legislation which would eliminate the Federal Government's practice of exchanging surplus lands for the buildings and other real property it needs. The bill, known as the Property Acquisition and Disposal Reform Act of 1970, requires that surplus lands and other real property be sold outright to the highest bidder so that there can be no question about whether or not full value is received by the American people.

My bill would eliminate the poor business practices which result when the General Services Administration negotiates property trades rather than coming to Congress for appropriations to erect necessary facilities.

I understand, Mr. Speaker, that the GSA needs sufficient authority to act quickly on high priority projects, and there are provisions in my bill providing for that. Sixty percent of the proceeds of surplus real property sales would go into the U.S. Treasury. However, the other 40 percent would be retained in a Federal property fund and would be available to the GSA without going through the appropriation process, where the projects in question have been authorized by Congress. The establishment of the Federal property fund will enable the GSA to move even more quickly on high priority projects than is presently the case in exchange negotiations.

Another provision of the bill gives the GSA Administrator authority to construct or acquire buildings without specific congressional authorization if the total cost of the project is under $100,000. The same authority would be extended to the GSA to alter or renovate existing public buildings if the total cost of the project is under $200,000.

Recently, Mr. Speaker, the GSA took steps to tighten up its procedures for determining the fair market value of properties involved in trades, but in my opinion this is merely treating the symptom, not the ailment. There is no doubt in my mind that, regardless of how scrupulously the GSA supervises its appraisal procedures, the exchange procedure places the Federal Government in a poor bargaining position, and the chance that full value will not accrue to the American people hangs heavily over every transaction.

I want to carefully note that I am not criticizing the GSA and its employees for the system which exists. They are dedicated public servants who want to provide the public with essential buildings and other properties with a minimum of lost time. The fault lies in the system within which the GSA must operate. That system was set up by Congress.

Mr. Speaker, I hope it will be possible to consider this legislation before the conclusion of the 91st Congress.

## THEODORE ROOSEVELT

### HON. BYRON G. ROGERS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. ROGERS of Colorado. Mr. Speaker, my constituent, Mr. George Fair, of 1375 South Clermont Street, Denver, Colo., has been a student of history for many years and has written an article concerning the late President Theodore Roosevelt, and I am inserting it in the RECORD so that it may be read by other Members of Congress:

THE LATE THEODORE ROOSEVELT

(By Mr. George Fair)

My first time to see Theodore Roosevelt was at the Union Station in Indianapolis in June, 1918. His train from St. Louis was three hours late because of a wreck on the Pennsylvania lines. It was one of those hot, humid Indiana days, but despite the heat and the long delay, a huge crowd of people awaited the arrival of the dynamic man from Sagamore Hill. When he emerged from the station and entered an open car, he was greeted by a spontaneous burst of applause, which was one of the greatest I was ever to see or to hear.

After all of these years, I can see him now, standing in the back of the car waving an old Panama hat to the people leaning out from windows high above the street and to the ones pressing close to his car. Theodore Roosevelt's boundless energy generated enthusiasm to people in all walks of life.

My two brothers and I were fortunate in obtaining standing room close to the speakers platform in the coliseum at the Indiana State Fair Grounds. We could look up and see the former president delivering his speech, the perspiration rolling down his face, as he exhorted a large and enthusiastic crowd of people to buy Liberty Bonds. He was interrupted many times by shouts from the huge coliseum, "T. R. for President in 1920."

As his birth date, October 27, nears, fond memories of those colorful and stirring days in Indiana during the Presidential campaign of 1912 come back to me. Roosevelt was nominated by the Progressive Party at its Convention in Chicago. At the close of the convention, the delegates sang "Onward Christian Soldiers," and Roosevelt started his campaign with the battle cry, "We stand at Armageddon and battle for the Lord."

We looked upon Theodore as our friend and mentor as thousands of others in Indiana and across the nation did. We thought of him as fair to the working man but he was ever ready to denounce a Samuel Gompers if he was convinced labor was wrong in its demands. On the other hand, he was quick to condemn "the malefactors of great wealth." He was President of all the people.

He awakened the imagination of the American people and fired it with his forceful ardor to strive for more noble ends. Roosevelt touched the nation's pride and made the world appraise the greatness of America. He was a fighter, a challenger, ever ready to do battle for a righteous cause, and he had a hatred of dishonesty and trickery. Throughout his life, he had independence, character, and courage. When convinced he was right, he had no fear of any public clamor or pressure from any source.

Those large, black headlines in the Indianapolis Sun on January 6, 1919, "Roosevelt Dead" were heard to believe, for Theodore Roosevelt always gave one the impression of lasting youth that would go on and on. It seemed that his vigor would never diminish and that his enthusiasm and love of the strenuous life would always sustain him.

## TWENTY-TWO HOUSE MEMBERS URGE PRESENT THIEU ABIDE BY TERMS OF GENEVA CONVENTION

### HON. AUGUSTUS F. HAWKINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. HAWKINS. Mr. Speaker, today 22 Members of this House have sent a letter to His Excellency Nyguyen Van Thieu, President, Republic of Vietnam. The text of that letter is appended to this statement, as is the text of a letter to Ambassador Ellsworth Bunker.

Those of us who signed the letter have done so because we are concerned about our prisoners of war now held by the North Vietnamese and treated in an inhumane way. We believe that it is in the interests of our own kith and kin that we do all we can to assure humane treatment for prisoners of war captured and held by our own U.S. Army and those forces allied with us. When we ask that the Geneva Convention be observed by all parties involved in combat in Vietnam we are first and foremost desirous of aiding our own young men held in captivity but recognize that all military prisoners, no matter by whom held, are entitled to the protection of the Geneva Convention.

The letter follows:

SEPTEMBER 29, 1970.

Hon. ELLSWORTH BUNKER,
*Ambassador Extraordinary and Plenipotentiary, U.S. Embassy, Saigon, Vietnam.*

DEAR MR. AMBASSADOR: The original of the enclosed letter was sent directly to President Nguyen Van Thieu. The mails what they are, I am taking the liberty of asking that you forward to His Excellency the within copy so as to make certain that delivery is made.

I do hope, Mr. Ambassador, that you agree with the sentiments expressed in the letter addressed to His Excellency Nguyen Van Thieu and that you will endeavor to support in the strongest terms our request. An additional copy of the letter is enclosed for your file.

Sincerely,

AUGUSTUS F. HAWKINS.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
*Washington, D.C., September 29, 1970.*

His Excellency NGUYEN VAN THIEU,
*President, Republic of Vietnam,*
*Saigon, Vietnam.*

DEAR PRESIDENT THIEU: As Members of the United States House of Representatives, we are directly appealing to your humanity and that of your nation in the matter of military and political prisoners of war now held by your government. In the conflict that is taking place in Vietnam, prisoners of war must include those taken in actual combat as well as those men, women, and children who are taken into custody by your government as political prisoners.

It is with a growing sense of outrage that the American people and many Members of Congress view your nation's continued insensibility to the feelings of the families of these prisoners. You have disregarded basic standards of human decency and morality in your nation's continued refusal to abide by the terms of the Geneva Convention. That Convention requires that you not only publish the names of those prisoners in your custody, provide them with proper food and medical care, permit inspections of your prisoner of war facilities and allow the free flow of mail between prisoners and their families but that you also provide recognized standards in your detention facilities. Your government's violation in providing such facilities was recently documented at Con Son and caused most Americans to be filled with revulsion against your practices.

As Members of the House of Representatives, we will not now attempt to debate the merits of present American policies in Southeast Asia. Many of us hold differing views on such policies but we are united in our insistence that you exercise compassion and humanity to those prisoners of war who are now in your custody. This concern far transcends questions of international politics; it recognizes a kindred humanity apart from consideration of race, color, or political persuasion.

We are among those Members of Congress who have written a letter to President Pham Van Dong appealing to his humanity and that of his government in the matter of prisoners of war who are our sons now in their custody and have advised him that the families of these men and a concerned American people look to him as the leader of his government to respond to our plea.

We look to you for a similar response.

Sincerely,

EDWARD I. KOCH, JOSEPH P. ADDABBO, WILLIAM R. ANDERSON, JONATHAN B. BINGHAM, DANIEL E. BUTTON, SHIRLEY CHISHOLM, JEFFREY COHELAN, AUGUSTUS F. HAWKINS.

CHARLES C. DIGGS, Jr., DON EDWARDS, JAMES G. FULTON, MICHAEL J. HARRINGTON, HENRY HELSTOSKI, ALLARD K. LOWENSTEIN, ABNER J. MIKVA.

ROBERT N. C. NIX, RICHARD L. OTTINGER, BENJAMIN S. ROSENTHAL, EDWARD R. ROYBAL, JAMES H. SCHEUER, LOUIS STOKES, and ROBERT O. TIERNAN,

*Members of Congress.*

## MESSAGE FROM W. A. BOYLE, PRESIDENT, UNITED MINE WORKERS OF AMERICA

### HON. FRANK M. CLARK

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. CLARK. Mr. Speaker, I would like to insert the following message in the RECORD from W. A. Boyle, president of the United Mine Workers of America:

W. A. (Tony) Boyle, president, United Mine Workers of America, today called for federal loan guarantees to help overcome the severe shortage of coal cars.

Boyle said that while he is generally opposed to such federal guarantees, the "facts of life" make them necessary at this time because of the growing energy crisis in the United States. He said also that present tight money, high-interest policies make relevant the question of an interest subsidy to stimulate coal car construction.

"The United States today faces a major energy crisis because of past inattention to the problem of coal. We have all the coal we need to meet this energy crisis. One of the major obstacles is the lack of means to transport coal to electric power plants," the UMW president said.

Boyle urged congressional hearings without delay into the problems of the coal car shortage. He said that such hearings should consider both the problem of coal car financing and of locating power plants at or near the mine mouth.

"A crash program of coal car construction and rehabilitation must be undertaken at once if we are to meet the energy needs of the 1970's. International problems threaten world oil supplies; natural gas is already in short supply; our hydro-electric sites are all but exhausted; atomic power presents serious hazards to human life and will grow increasingly expensive because of the already apparent exhaustion of uranium ores. In these circumstances, there will be increasingly reliance upon coal transportation and the alternative to national action may well be serious brownouts.

"Mine mouth power represents a viable alternative to rail transportation and, used in conjunction with coal car construction, can do much to meet the energy shortage now looming while minimizing urban air pollution. Congressional inquiry should focus upon the lack of research in this area. Certainly, American ingenuity can find answers to transmission difficulties that will make it possible to meet much of our growing need for power by shipping it via wire from the mine areas to the consumer," Boyle said.

## AMERICAN LABOR MAGAZINE SPOTLIGHTS A LABOR UNION AND ITS LEADER

### HON. ARNOLD OLSEN

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. OLSEN. Mr. Speaker, American Labor magazine is one of the few national news magazines devoted to the labor scene. As such, it is indispensable reading material for those who are concerned about the future of America's working men and women.

The 1970's are a time of challenge for all Americans, and this includes those who are part of our Nation's vital transportation network. We are in a period of great technological change and our economy and our society must cope with problems of a complexity and size unprecedented in our history.

In these years ahead, America needs a strong, free, democratic trade union movement. And in these years ahead, our Nation will be better and stronger as the labor movement produces new ideas and new concepts for the improvement of the standard of living and the quality of life of every citizen.

When a recent issue of American Labor magazine crossed my desk, I was pleased to see pictured on the cover one of my old friends—C. L. "Les" Dennis—the leader of the largest transportation union in the AFL–CIO and a man who has made the Brotherhood of Railway & Airline Clerks a modern union on the move.

In a 10-page article, the editor in chief of American Labor magazine turns the spotlight on "the largest and most diversified transportation union in the AFL–CIO," its leader and his views on future trends in the transportation industry.

Illustrating the innovative thinking which characterizes Les Dennis in his bold, new plan to aid the financially troubled rail industry. In recent testimony before the Senate Commerce Committee, Les Dennis proposed that $1 billion from the railroad retirement account be loaned to the railroad industry for capital and service improvements. Whether or not this plan becomes a reality, it is nonetheless an intriguing idea and demonstrates a fresh and imaginative approach to an old and recurring problem: whither the railroads?

I think my colleagues in the House would be interested in reading some of the highlights of this article—excerpts are reprinted below:

Dennis gets things done; no doubt about that. The size and strength of his union and the benefits he has helped win for the membership is proof enough of his abilities, but the total atmosphere is a relaxed one, for "C. L.", as most everyone refers to him, is regarded by his staff as more of a concerned leader than as a demanding boss.

The labor organization he heads covers a range of personnel that includes all clerical and related employes in the railroad industry and those in the airline and steamship industries as well—freight handlers, ticket clerks, janitors, people in the accounting departments, IBM operators, the drivers for the Railway Express Agency (REA). It also covers the patrolmen, the telegraphers, taxi-drivers in Florida and Georgia . . . and much more.

Considered a craft union by some, since its founding in a cigar store in Sedalia, Missouri on December 29, 1899, the Brotherhood has grown from 33 railway clerks to a membership of over 300,000 and is, in reality, a kind of "universal union" in the transportation industry.

Over the past several years, mergers with the Railway Patrolmen's International Union and with the Order of Railroad Telegraphers (ORT) have been accomplished. More recently, the Federation of Business Machine Technicians and Engineers (an independent association) has been brought under the umbrella as well. In the public sector, the BRAC roster includes personnel involved in water resources and sewer systems. The range is wide . . .

ON TOMORROW

In discussing the overall economy as it related to his own particular industry, Dennis saw the unprecedented population growth not so much as a potential for business profit but as a period of re-analysis of the people's aims and needs.

Automation, with its attendant attrition of jobs and potential massive dislocation of employment opportunities, he felt was going to remain one of the major bargaining issues for the foreseeable future . . .

"But as technology advances, as it inevitably must," he pointed out, "we have to think about the millions of people who will be entering the workforce in the years ahead. They *have* to live and make enough to supply themselves and their families a decent standard of living. And from every actuarial estimate, tomorrow's population will be living longer than we do now. It's a brain buster."

From the long-range viewpoint, he was convinced that some way would have to be found to develop an economy which would guarantee the creation of continuous earning capacity for the greatest number possible—regardless of whatever technological developments came along.

"Without income, there's no buying capacity," he said. "And automating millions of people out of an ability to earn their way, is a prospect of terror I don't even want to think about.

"The protection of people must come first," he said. *"Without them—there is nothing."*

ON BRAC'S GROWTH POTENTIAL

Looking at the potential prospects of growth for his own union, Dennis felt that the airline industry (many of whose major carriers are still only partially organized) and the airline-related freight forwarding companies, represented the largest void that needed attention. The numbers he mentioned were in the neighborhood of 150,000. He saw another possible 75,000 in the supervisory and subordinate official family of the railroads as well: the major chief clerks, the IBM analysts, the personal secretaries, assistant office managers, etc. The present union membership in the 50 United States, Puerto Rico and Canada is 305,000.

Tall, big-boned, heavy set, BRAC's president moves with a surprising speed. If one of the basic qualities of leadership is energy, a cataloguing of his multiplicity of union and charitable involvements on a year-round basis would be irrefutable testimony that nature has given him this ingredient in abundance. Few individuals have started lower in the economic barrel to make it to the top.

Whatever the drives and talents that led Dennis to success in his chosen field, the overall journey has sensitized one phase of his makeup in a manner different. It has *enlarged* rather than diminished *his feeling of kinship with people at every level.*

One can say of a lot of individuals, "This is a leader." And Dennis certainly fits that category. But what lingers on long after that fact has been acknowledged is the deeper image not so much of power as of the *respect* he engenders.

## VOTING RECORD

### HON. GARNER E. SHRIVER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. SHRIVER. Mr. Speaker, each year hundreds of votes are taken in the House of Representatives. Some are on controversial issues where the vote is close while others receive overwhelming majorities.

Since coming to Congress in 1961, there have been 1,708 recorded votes to date, and we have not yet completed this second session of the 91st Congress.

It is not practical to list every vote I cast during the 91st Congress. However, in order that I can report to my Kansas constituents, I herewith present my record on some of the more important bills.

LEGISLATION SUPPORTED BY CONGRESSMAN SHRIVER

I voted in favor of the following bills:

Amendment to Constitution providing for election of President and Vice President by direct popular vote.

To allow the President to institute a lottery system for selecting draftees.

To provide for reform procedures in the House of Representatives.

Postal reform bill including a prohibition on postal workers strikes and containing a right-to-work amendment.

The Elementary and Secondary Education Act authorizing $5.3 billion per year through 1972.

Office of Education 1971 appropriation bill of $4.4 billion, including amendment prohibiting use of funds for forced busing.

Unemployment compensation bill authorizing States to amend their pro-

grams to provide for 13 weeks' additional benefits during periods of widespread unemployment.

To provide additional funds for the home mortgage market.

To authorize $775 million to control air pollution.

To establish the Council on Environmental Quality.

To authorize $348 million for a 3-year period to control water pollution.

To amend the Omnibus Crime Control and Safe Streets Act.

To authorize special educational programs on the dangers of drugs.

Drug Abuse Prevention and Control Act of 1970.

To extend the Hill-Burton hospital construction aid program for 3 years. Later voted to override Presidential veto.

Community Mental Health Centers Construction Act with provisions for mentally ill children.

Health Act extension bill for research and training in the fields of heart disease, cancer, stroke, and other diseases.

Tax reform bill closing or modifying various tax loopholes; increasing the amount of the personal exemption from $600 to $750 and a gradual increase in the standard deduction; phaseout of surtax; and 15-percent increase in social security benefits.

To provide for a 15-percent increase in benefits for retired railroad workers.

Agriculture Act of 1970 including $55,000 limitation upon crop payments.

Supporting President Nixon's effort to negotiate a "just peace" in Vietnam.

Calling for humane treatment and release of prisoners of war held by North Vietnam.

To increase education benefits for 736,000 veterans.

To provide necessary hospital or domiciliary care to veterans over 70.

To provide additional mortgage guarantees for veterans.

LEGISLATION OPPOSED BY CONGRESSMAN SHRIVER

I voted against the following bills:

Senate amendment to add $587.5 million in urban renewal funds.

Lowering the voting age to 18 by statute rather than through submission to the States of an amendment to the Constitution.

Guaranteed minimum wage in family assistance plan.

To authorize each Member of the House to hire an additional staff member.

To authorize $475 million for the Appalachian Regional Commission which excluded most of the United States from benefits.

To authorize a new sports arena in Washington, D.C.

Senate amendment to Export Control Act which would ease U.S. exports of nonstrategic goods to Communist countries.

Authorization for 1970 foreign-aid program of $2.2 billion.

Pay increase for Members of Congress which was untimely, ill-advised, and contributed to inflation.

Seating of Adam Clayton Powell of New York.

## UNITED STATES AND ASIA

### HON. JOHN N. ERLENBORN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. ERLENBORN. Mr. Speaker, Mr. Walt Rostow, assistant for national security affairs to former President Lyndon Johnson, has written an article for the New York Times in which he explores the consequences of unconditional immediate withdrawal from Southeast Asia.

Mr. Rostow discusses the possible effects this would have not only on Southeast Asia nations, but also such other nations as China, Burma, Japan, and India. Lastly, he asks that out of our knowledge of our country's history and character, could we passively deal with our domestic problems as we read of "slaughter in Vietnam and elsewhere; of an Asia thrown into chaos or worse; of a world seized of a proliferating arms race?"

For the benefit of my colleagues, I include the article "United States and Asia" in the RECORD.

[From the New York Times, Sept. 22, 1970]

UNITED STATES AND ASIA

(By W. W. Rostow)

Contrary to every short-run political and personal interest, three successive American Presidents decided over the past decade that the events set in motion by a prompt withdrawal of our forces and commitment from Vietnam and the Asian mainland would risk a larger war there and create dangerous instability elsewhere.

Right now, in sustaining that assessment, we face at home: rising unemployment and rising prices, yielding insufficient real resources for public purposes from the tax base; an infirm balance of payments; acute racial tension; massive tasks of urban rehabilitation; an ardent margin of the affluent young who have come to believe that a quick route to the humane and decent life they seek lies in confrontation, violence and destruction.

Driven by these domestic pressures, some Americans have concluded that the United States should abandon its commitment to Asia and let the forces at work there find their way to chaos or equilibrium, war or peace.

No one can reconstruct fully the lines of argument which led the Presidents to their contrary, painful judgment. But at least some of the costs of unconditional immediate withdrawal from commitment in Southeast Asia are apparent.

First, such withdrawal of commitment would change radically the terms of the debate going forward within mainland China. Powerful forces are at work there to move post-Mao-China toward concentration on the modernization of its life. American withdrawal would inevitably lead Peking to exploit its new opportunities to the south. No one can predict the precise way in which a nuclear China, with preponderant ground forces, would exercise its power in the vacuum we would create. But it is most unlikely that Peking would remain passive.

Second, the nations of Southeast Asia, certainly as far as Singapore—quite possibly as far as Indonesia—would lose their independence or be thrown into a protracted military or quasi-military effort which would shunt them from promising paths of economic, social, and political progress.

Third, Burma would either fall under Communist domination or become the scene of an Indian-Chinese struggle.

Fourth, almost certainly Japan and India would quickly move to manufacture their own nuclear weapons; and the Nonproliferation Treaty would probably die. The willingness of many nations to forgo the production or acquisition of nuclear weapons is based on a carefully balanced calculation that reliance on the United States, explicit or implicit, provides somewhat greater security and less risk than would going it alone and creating a national nuclear capability. The reversal of American policy in Asia would shift that marginal calculation. An America that walked away from a treaty commitment because it could not handle its domestic problems, after putting into the field a half-million of its armed forces and encouraging a small ally to fight desperately for its independence, might well not be regarded as a reliable ally.

An American withdrawal from a treaty commitment on the grounds of domestic problems could well be judged an extraordinary event related to the subject matter of the Nonproliferation Treaty jeopardizing the supreme interests of nations which now depend upon us.

Fifth, there is a question every American must answer for himself, out of his knowledge of our country, its history, and its character: Would the United States observe passively these consequences of its decision? Would we turn with energy and pride and unity to clean the air and the water, deal with ghettos and racial inequity as we read of Hue-like slaughter in Vietnam and elsewhere; of an Asia thrown into chaos or worse; of a world seized of a proliferating nuclear arms race?

And what of the effects of all this in Moscow and Cairo?

We might repeat the process of erratic withdrawal and return to the world scene which has cost us—and all humanity—so much in this century. We might, again, deceive our adversaries as Vishinsky once accused us of "deceiving" Moscow about the seriousness of our interest in South Korea. But it is most unlikely that, in the end, we will turn our backs on Asia.

## GOLDBERG WANTS TO LEGALIZE MARIHUANA

### HON. JAMES R. GROVER, JR

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. GROVER. Mr. Speaker, the pledge by New York gubernatorial candidate Arthur Goldberg to lead a drive to legalize marihuana if a scientific commission so recommends is symbolic of the Democratic Party's attitude on law and order—do not enforce the laws, just remove the penalties.

Goldberg said he would not recommend marihuana for children, of course. I am certain that parents of America can count as a measure of thanksgiving the fact that Goldberg no longer sits on the Supreme Court which is wrestling with the problems of law enforcement, compounded by the drug traffic in which marihuana plays a major role.

Goldberg is the darling of the arch-liberal wing of the Democratic Party,

which AFL–CIO chief, George Meany, has warned is taking over control of the party's leadership. The failure of this Congress to move for over a year on anti-crime legislation is further proof that the opposition party's leadership is inflicted with unenthusiasm for an all-out war on crime.

One thing certain about Mr. Goldberg's blatant appeal to the hophead vote—his campaign has really gone to pot.

## BURLISON BILL LIMITS DISPENSING OF DRUGS

### HON. BILL D. BURLISON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. BURLISON of Missouri. Mr. Speaker, I am introducing legislation today which if enacted would put an end to an unseemly practice which threatens to besmirch the reputation of the Nation's physicians. The bill is directed at those physicians Senator HART has aptly called the "doctor-merchants." These unscrupulous practitioners charge their patients for professional services. Then switching from the role of doctor to that of pharmacist, they sell drugs and other devices to the patient, generally at inflated prices. I believe there are no such doctors in my district. Nevertheless, the national problem is enough to warrant action.

The abuse takes several forms—some obvious, some subtle. The doctor may simply assign one of his office girls or nurses to fill the prescriptions he has ordered. The cost of the drugs is added to the charges for professional services. This endangers the patient in at least two ways. Those who dispense drugs in doctor's offices are seldom properly trained for the job. Second, space will not allow a doctor to keep a large enough inventory of drugs to fill all the possible prescriptions. The unfortunate tendency in such cases is to prescribe the next best thing. When the exact drug needed is available at the drugstore around the corner, second best is not good enough.

If the doctor does not want to use his own staff to fill prescriptions, he may own or take a percentage lease on a pharmacy, frequently on his own premises. This practice can be a bonanza especially when several doctors are involved. Most independent pharmacies net a profit of no more than 5 percent. By contrast physician-owned pharmacies may make much more. In one year a pharmacy owned by a group of doctors in southern Illinois netted $110,000 on gross sales of $333,000. The reasons for success are clear. In his patients, the doctor has a ready market for his pharmacy. Since the market is, for all intents and purposes, captive, he need not concern himself with competitive pricing. Prices may be readily set several percent higher than those of the independent drugstores.

A less apparent, but equally profitable, system is provided through the physician-owned drug companies. They are not really drug companies. Rather they are small, regional "repackaging" companies buying established drugs in bulk and marketing them under their own brand names. Since druggists must follow a prescription to the letter, the doctor-stockholder is free to specify the products of the company in which he has an interest. If the pharmacist wants to keep the doctor's business, he must stock the doctor's brand irrespective of its comparative quality or economy.

The vast majority of physicians, Mr. Speaker, do not engage in these practices, but the profit potential is so alluring that the physician is subjected to very great temptation. Despite the publicity of several years of congressional hearings and the ethical ban of the American Medical Association, the number of doctor-owned drug companies and the number of percentage-lease drugstores has increased.

The bill I introduce would put an end to these practices by prohibiting doctors from merchandising the products they prescribe. However, it would clearly not prohibit doctors from dispensing drugs in emergencies, in one-dose units, when there is no community pharmacy, or if it is occasional dispensing and not a part of his usual course of business.

## CHURCH AND POLITICS

### HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

*Tuesday, September 29, 1970*

Mr. THURMOND. Mr. President, there is much discussion in the country about the churches getting into politics. We see every day in every field where supposedly religious men are engaging in active lobbying and pressure politics designed to influence legislation in the direction which suits their ideological motivations.

Many people are fed up with this attitude since there is usually no connection between true religious feelings and the ideological politics which are being waged in the name of the church.

The Charleston News and Courier last Sunday had an interesting editorial entitled "Church and Politics" which points up this problem. In this editorial the News and Courier endorses the idea that the church perhaps has a role in the political arena. However, the role is not the role being played by the political churchmen.

The News and Courier's suggestion is that if members of the churches feel that public policy is not adequate that the members themselves should get out into the rough and tumble of secular politics. The News and Courier says:

> Perhaps if church members themselves had been less reticent in the past either to run for office or support others' campaigns the churches might have been less likely, as institutions, to enter the "rough and tumble of secular politics." Certainly there is plenty of all kinds of work for laymen to do, inside the church and out, if they are willing to do it.

Mr. President, I ask unanimous consent that the editorial, entitled "Church and Politics," be printed in the Extensions of Remarks at the conclusion of my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CHURCH AND POLITICS

Many church members have been disturbed when their church has entered political or economic arenas in which ecclesiastical leaders are ill-equipped or poorly informed to act. There are members, however, who believe their church has a duty to go beyond its walls in some way and seek an active part in secular affairs.

It is to these, perhaps, that Stephen C. Rose addresses himself in his book, "Sermons (Not Preached) in the White House." It has become fashionable, writes Mr. Rose, "in sophisticated church circles to play down politics, to accuse the churches of having canonized politics to the exclusion of emphasis in changes that can be brought about outside the political arena. Personal conversion. Meditation. The renewal of home life. But this complaint reveals an institutional confusion."

Churches, says Mr. Rose, are wholly inadequate as political instruments. "Even if they were adequate," he says, "nothing would be less desirable than for the churches, as institutions, to seek to influence public policy by political means. We have had enough of that." (To which many will add a hearty "amen.")

What, then, ought churches to be doing? Mr. Rose's suggestion is remarkably simple: get laymen out of "church work" and "into the rough and tumble of secular politics." The church, he says, "would do well to stay out of politics while encouraging lay members to immerse themselves in it. Then the church and its minister in his role as preacher can bring biblical and theological criticism to bear on the political options."

Mr. Ross suggests that "the establishment person who is serious about seeking change should run for office. And if he is reticent, let him either encourage others to run and support their campaigns or enter some other phase of politics to exert pressure on existing political institutions."

Perhaps if church members themselves had been less reticent in the past either to run for office or support others' campaigns the churches might have been less likely, as institutions, to enter the "rough and tumble of secular politics." Certainly there is plenty of all kinds of work for laymen to do, inside the church and out, if they are willing to do it.

## MAN'S INHUMANITY TO MAN—HOW LONG?

### HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. SCHERLE. Mr. Speaker, a child asks: "Where is daddy?" A mother asks: "How is my son?" A wife asks: "Is my husband alive or dead?"

Communist North Vietnam is sadistically practicing spiritual and mental genocide on over 1,500 American prisoners of war and their families.

How long?

## ABORTION ON DEMAND IN U.S. MILITARY HOSPITALS

### HON. JOHN G. SCHMITZ

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. SCHMITZ. Mr. Speaker, American law has never admitted the concept that "the king can do no wrong." Certainly the Federal Government was never intended to be above the law, or a law unto itself.

In accordance with the provisions of the Constitution, Federal statutes can take precedence over State law in certain instances. But this has never been extended to basic criminal law. Crimes are defined by State law, with some Federal additions, and subject to the review, for constitutionality, by the Federal courts, which has been so much abused lately.

But this year, a middle echelon Federal bureaucrat has acted on his own to override the criminal laws of 49 out of the 50 States by creating a sanctuary for their violation in U.S. military hospitals. Only one State, Hawaii, permits abortion on demand without even a limit on the age of the fetus to be killed. In every other State, abortions, performed outside specified legal limits, including a limit on the age of the fetus, are crimes, even though carried out by a licensed physician.

By a mere exchange of bureaucratic memorandum within the Defense Department, abortion with no limit except the requirement that a doctor perform it, has now been legalized for every U.S. military hospital. Only July 22 of this year, Surgeon General Alonzo A. Tower of the U.S. Air Force submitted a memorandum regarding sterilizations and abortions in U.S. military hospitals to Dr. Louis Rousselot, Deputy Assistant Secretary of Defense for Health and Environment, which contained the following sentence: "3. Abortion: (a) Abortions will be performed within the limits of local State laws."

On July 31, Dr. Rousselot replied as follows:

> Your proposed implementation of our memorandum of May 20 and July 16 is approved with the exception of paragraph 3(a). In accordance with the policy guidance set forth in our memorandum of May 22, authorized family planning procedures should be provided in military facilities in the United States without regard to local State laws.

Neither the May 22 memorandum nor any other applicable regulations place any restrictions on abortions by doctors in military hospitals. Dr. Rousselot's office has confirmed that there is no limit on the age of the aborted fetus.

Those who support Government-sponsored birth control, but still oppose abortion on demand, should take note that the Government planners now regard both as "authorized family planning procedures." And even those who may not take the abortion issue as seriously as I maintain it should be taken, should grasp the significance of this new Federal intrusion into the jurisdiction of the States. If Federal institutions are to become, by mere bureaucratic memoranda, sanctuaries for acts which are criminal according to the law of the State in which they are located, an extremely dangerous precedent will have been set which could further undermine remaining restraints upon potential tyranny in this country.

On September 29 I introduced a bill to nullify this action of the Department of Defense regarding abortion and to require that military hospitals comply with State laws on abortion. The bill will be cosponsored by at least eight other Congressmen—four Republicans and four Democrats representing districts in California, the Northeast, the Middle West, and the South. Incidentally, the majority of them are Protestants. This is far from being, as abortion advocates would have it, a sectarian religious issue.

Any hope for action on this legislation at this late date in the session depends upon Speaker JOHN W. MCCORMACK, who is by no means hostile to it. Letters to him expressing public concern about this issue might strengthen his hand in giving support to this bill.

Since the continuing clamor of the "population explosion" propagandists has done so much to create a climate of opinion favorable to abortion, every American should be aware of the immense significance of the returns from the 1970 Census, which show that our population has been overestimated by no less than five and a half million. Instead of the 205,700,000 people we were supposed to have, the actual total according to the nearly complete census count is 200,200,000—a level we were supposed to have passed 3 years ago.

---

## OREGON HOSTS NATIONAL DISCUSSION FORUM CONCERNING FEDERAL LAND RESOURCES

### HON. JOHN DELLENBACK

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. DELLENBACK. Mr. Speaker, my State of Oregon has just hosted a National Discussion Forum to review the recommendations of the Public Land Law Review Commission concerning Federal land resources. This was the first public forum on the recommendations of the Commission, which issued its report in July following 5 long years of deliberation and study of the 6,000 laws which have built upon themselves since the birth of this Nation. I should like to commend the Commission chairman, a Member of this body, Representative WAYNE ASPINALL of Colorado, the other Members of Congress on the Commission and the dedicated Commission staff, all of whom gave of their time, talents, and energy to this important project. Recommendations of the Commission are of vital importance to my State of Oregon, which has 52 percent of its land area under Federal control. Praise also is due Oregon's Governor, Tom McCall, for the State's hosting of this important forum, and to Oregon State Representative Sam Johnson of Redmond who has been a member of the Commission and did so much to bring the forum into being.

Gathering for 3 days at the Hilton Hotel in Portland were persons concerned with all aspects of public land management. Such diverse viewpoints as those of the Sierra Club and various forest product associations were represented in six concurrent panels which discussed the topics of land disposition and acquisition; financing intensive resource management; user fees, revenue sharing, payments in lieu of taxes; recreation and wildlife; multiple use policies, and advisory committees and appeal procedures.

A speaker was featured at a forum luncheon held on each of the 3 days. They were Mrs. Nancy Smith, a member of the Public Land Law Review Commission and a member of the board of supervisors of San Bernardino County, Calif.; Roy Utke, president of Western Wood Products Association and general manager of Fruit Growers Supply Co., a companion company with Sunkist; and Phillip Berry, an attorney from Oakland, Calif., and president of the Sierra Club.

Serving as master of ceremonies for the Tuesday luncheon was Carl Stoltenberg, renowned educator and dean of the School of Forestry at Oregon State University. His comments on Mr. Utke's address affirm my reasons for inclusion of that address in the CONGRESSIONAL RECORD.

Roy Utke is typical of the new leadership in the forest industry. He has been a director of Western Wood Products Association, the Nation's largest lumber trade association, for several years, and was elected president in March of this year. He also serves on the board of directors of the National Forest Products Association, headquartered in Washington, D.C. He joined Fruit Growers Supply Co., in October 1947, as supervisor of industrial relations for three mills in northern California, and was named general manager in 1967. Dean Stoltenberg said:

> I believe Mr. Utke's comments are typical of those voiced by participants throughout the course of this conference. Mr. Utke is an outstanding leader of an industry which is producing vital benefits to the public from Federal land resources. He speaks in a clear and forthright manner in his area of expertise. He also listens attentively. His comments today indicate his sincere awareness of the importance of other inputs and other expertise in ultimate decisions concerning how our public lands can best be used to serve all of the people of this country. The breadth of his concern and his open reception of new insights regarding the management of both public and private lands for the production of public benefits is typical of the concerns and awareness of top leaders in the forest industries today.
>
> Mr. Utke, we thank you for your contributions to this conference and also for the insights and expertise which you have shared with us. We also thank you for your receptiveness to new ideas. It is the purpose of

this conference to bring together you and others with varying outlooks concerning the management of our public lands.

Mr. Utke's address follows:

ADDRESS BY ROY UTKE

I am a citizen of the United States who is very much concerned with the condition of this Nation in which we live—including its lands, cities, forests, air, and water. I know of no person affiliated with Western Wood Products Association who feels otherwise.

My own interests are deeply involved in both agricultural and timber land. Fruit Growers Supply Company, where I earn my livelihood, is a lumber and container manufacturer. It is also a separate but companion company with Sunkist, which markets many varieties of citrus fruits. The involvement of a company such as ours in the lumber business is indicative of the changes in American life which occur through the years—changes which have affected our public land as well as those of private industry. Fruit Growers Supply Company is in the lumber business because more than 60 years ago we bought timber land and started sawmills to assure our owners of an adequate supply of shipping boxes for citrus fruit. Today, oranges, lemons, grapefruit, or tangerines are no longer packed in wooden boxes. We still have lands growing timber and a sawmill so we are in the business of manufacturing lumber for homes and supplying those much needed shipping containers from corrugated wood fibre material manufactured in our own separate facilities especially built for that purpose. Citrus sales and the distribution of citrus through this vehicle—the carton—have been supported by the Nation's Consumer—the public—for which we are deeply grateful.

Strangely enough, years ago when we were manufacturing citrus shipping boxes, we were also manufacturing a unique type of furniture. Many of you in my generation will recall how difficult it was to establish a new household before or after World War II. Many a young husband, a returned veteran probably, was attending school. There was no money for furniture, but the young couple had to have bookcases, chairs, even vanities. Many young homemakers obtained these by the simple process of building them out of orange crates—the young housewife decorated the product with a bit of cloth, and serviceable furniture was provided.

Certainly, when Fruit Growers Supply Company was manufacturing citrus crates, it did not think it was manufacturing furniture. That was a by-product created by the using public. An administrative decision relating to public lands may be made with one thought in mind, but the final result may be completely different from the original plan. And sometimes that final result may not be as beneficial to the public as was the conversion of citrus crates into furniture. Such thinking may be applied to forest preservation without access or forests infested with insects. I am thinking of the 191,502 acres of timber destroyed last month by lightning fires in the North Cascades, and the 1,394,280 acres of beetle-infested trees in the Yellowstone Park vicinity. In fact, 111,280 of those acres are inside the park itself. No one responsible for the care of these lands planned for this final result. The plans were made for a far better purpose, and might well have been achieved through the application of accepted technology which makes intensified forest management possible.

The Public Land Law Review Commission reviewed 6,000 laws during five years of intensive study of our nation's public land problems. Thousands of persons testified before the commission. This meeting is the first major national discussion to be held on the recommendations of the commission. It is showing that the recommendations are controversial. They are controversial in that they cannot possibly please all points of opinion of those who concern themselves with the management of our public lands. If the recommendations were all things to all people, then those five long, hard years of study put in by the Commission and its staff would be worthless. However, the recommendations of the Land Law Review Commission were hardly dry upon the paper when those recommendations were attacked in a type of knee-jerk reaction by a segment of the public which thinks that only its position can possibly be correct.

Apparently from this reaction their idea of two sides to a question is their side and the wrong side. Fortunately, some of the most respected members of Congress and of the Senate served on the commission, and their findings will be weighed carefully by their fellow legislators before laws are finally drafted to implement the recommendations of the commission.

We have suffered for some time from the view of many in this country that wilderness is good and managed forests are automatically bad. We have also labored under the thought that common sense would finally prevail in our land management problems, but I am slowly coming to the conclusion that much discussion and good listeners will be needed since common sense does not appear to be too common.

Those in the forest products industry and stockmen who could be most directly affected have not made immediate comments or taken an early position upon the recommendations of the Commission. After all, this document of 342 pages contains 137 primary recommendations plus many other appropriate suggestions. All of these deserve the best of our deliberations, and thoughtful study necessarily takes time.

Those who seem best informed, and those who have thought deeply about this matter, including our Association's Board of Directors, commend Commission Chairman Wayne Aspinall, the congressional and other members of the commmission and its staff for their effort in the difficult task of reviewing the great multitude of land laws accumulated since the birth of the Nation and for its profound report and recommendations to simplify and improve the management of the public lands and their resources. The members and staff of our Association have been asked to make the necessary commitment of time and effort to provide the soundest possible advice on individual recommendations before the next Congress convenes.

My interests as a lumberman can perhaps be considered unique in that I am a resident of a megalopolis—that environmental problem area known as Los Angeles. As an urban resident who commutes to work on crowded freeways, through smog-laden air, I am quite concerned over my environment. I can relate to others who have the same concerns including those of urban rehabilitation and pursuits of a better life. As an urban resident who is in the lumber and manufacturing business, I also am aware that if we are to renovate our cities and rehabilitate many of our older residences, then the best and most reasonably priced material to use is wood. This means that to enhance our urban environment, we will have to alter our forest environment. This is not a permanent alteration, and this is what many urban residents do not realize. Nor do many understand that forestry under proper management plans can enhance the environment in many ways—within the forest and at home. We harvest trees to benefit man, and we re-seed and re-plant either by assisting nature, or by direct methods, to provide a continuing growing stock of new trees. When a city neighborhood becomes old, decrepit and dangerous, corrective action either can tear it down and rebuild it from scratch or rehabilitate it. Is it not then in the public interest when the forest industry seeks to utilize forests which have also become overripe and in need of revitalization? For years we have replaced this type of timber crop on private lands with new, vital and growing forests. We feel strongly that the long range effect of better managed forest operations are well established and lay positively in the public interest regardless of ownership.

There have been periodic predictions of impending timber famine over the last three quarters of a century. One of the earliest was made by another Californian, a Congressman from that State named Loud. When the forest preserves—predecessors of our national forests—were established, Congressman Loud said: "The moment you open the forest reservations to the cutting of timber you begin to destroy the forest reserves themselves." Today, the Forest Service alone annually appraises and puts up for sale more than 12 billion board feet of timber each year, some of it on land producing its second or third crop of trees. In 1928, another warning was given that the nation's forests were being denuded. This was contained in a widely distributed pamphlet written by a man who organized and headed the Philippine Forest Service, Major George P. Ahern. He warned that "by 1937 it will be difficult to find in the entire United States 20 percent of our forests meeting a standard" of well stocked and well managed forest. Managed forests helped prove the predictions of timber famine to be in error. Shortly after the 1937 date, the forest industry provided wood resources in tremendous quantity which helped the nation win a great war. Later in 1952 an intensive National Timber Resource Review conducted by the Forest Service revealed that the nation is growing more timber volume than ever. Today, our nation's forest growth exceeds current use of wood products.

But today, also, the finite extent of the Nation's forest resource is recognized in the face of the needs of a constantly increasing population. The wood resource need in this country in the foreseeable future will require intensive *forestry* practice on all forest lands capable of producing such crops. The concerns for our nation's timber resource and that of housing for a constantly increasing population must be met squarely—and soon—or we will fall in our objectives to meet the interests of this nation's people.

Intensive forestry practices have been a concern for several centuries. Those of you who live in the East are beginning to hear more than those of us in the West about something called "The Third Forest." This third forest is in the Southeastern part of the United States. Simply stated, it means that *three forests have now grown in the South* to satisfy man's needs. The first forest, standing when the first settlement in Georgia was made by Governor Oglethorp in 1723, was harvested and utilized to develop that part of our nation. It was replaced by a second forest, which in turn was utilized by man for further development in the area. Today, the third forest is growing on the timberlands of the South and it, in turn, will serve our needs. Intensive scientific forest management will assure that a fourth forest will appear, as will others, until the end of time.

Some of the best forest around Lake Tahoe is a second forest. The original forest was used to develop the Central Pacific Railroad and the Comstock Silver Mines in the 1800's. There are men who could be still alive who remember the complete liquidation of the first forest in the Mother Lode country by the miners from 1849 through to 1900. These areas now support beautiful stands of coniferous forests which many visitors consider

a forest primeval. Similar examples can be shown in other areas of this great, forested nation.

A forest, being a living thing, follows a life-cycle the same as all other living things. It is born, matures, ages and dies in a natural cycle. This natural cycle continues, it cannot be frozen in its present stage to be kept unchanged.

The beautiful Douglas fir forests of Oregon and other forests of shade-intolerant coniferous species came into being because of ancient forest fires. These fires, as big as or bigger than the Tillamook Burn, or other natural catastrophes, cleared the areas and let the new forest grow in its preferred seed bed of bare soil, warmed by direct sunlight. With human settlement and social development, there is the necessary control of these great fires. If man does not then open the forests, Douglas fir, for example, will be replaced by other less desirable species.

Where man abrogates the responsibilities he has undertaken, then nature moves quickly to show the fang and claw of destruction. An example of this occurred this summer in northern Washington, where 191,502 acres of federal, state and private forestland were burned over by lightning-caused fires. Some of this was in the Pasayten Wilderness, some in the new North Cascades National Park. Other acreage was in areas which the Forest Service had announced were being proposed as roadless and scenic areas. Another example of nature's destruction is the 1,394,280 acres of beetle-killed trees in the Yellowstone Park vicinity of the Rocky Mountains. 111,280 acres are in the Park itself. This area now presents a sorry picture in comparison to the forest that was intended to be preserved for all time. The benefits of multiple use management have been proven. We should not discard this proven principle in favor of non-management or unproven procedures.

Basically, the Land Law Review Commission has recognized that our growing population brings changing conditions and needs. While recognizing the great significance of management to maintain and enhance a livable environment, the Commission does not assume a doomsday attitude regarding the problems at hand. The report, in fact, expresses a "cautious optimism" due to recognition of a "growing awareness of the danger" and recognizes that steps are being taken which should correct any damaging trends.

Before commenting further on the Commission's report, let us refer briefly to the Organic Act of June 4, 1897, in which *it was directed that "No national forest shall be established, except to improve and protect the forest within the boundaries, or for the purpose of securing favorable conditions of water flow, and to furnish a continuous supply of timber for the use and necessities of citizens of the United States."*

The intent of that legislation is as valid today as it was a little over 70 years ago. Congress in creating the Commission and directing its work said: "It is hereby declared to be the policy of Congress that the public land of the United States shall be (A) retained and managed or (B) disposed of, all in a manner to provide the maximum benefit for the general public." The Commission's praiseworthy effort to review and correlate the more than 6,000 laws dealing with the nation's public lands has been a monumental task. Perhaps an indication of just how monumental was the task is the fact that the Commission found that there apparently were 1,000 more laws dealing with public lands than the Commission had previously planned to review.

In doing its job, the Commission has expressed a highly desirable idealism. It will, however, remain for Congress to assess the costs to all users of public land resources in moving from the "here" of present-day laws to the "there" proposed by the Commission. The ultimate goals of the Commission are important, and we in the industry will press for many of those goals.

Let me now expand upon the Commission's report on some specific topics:

Many of the Commission's proposals are based on the assumption that a massive land use planning classification of the federal public lands can be performed promptly and effectively. This may well be too optimistic. Land use planning in sufficient intensity and with sufficient public acceptance to resolve land use conflicts would be a fantastic attainment. It is a commendable objective, the development of which should be fostered, and supported. State or local zoning is still in the formative stage and so far has not been an entirely satisfactory panacea. Despite the state and local problems, if land use planning can be achieved by any reasonable means within the public interest, it would aid greatly in this nation's land problems.

The Commission recommends that Congress establish a network of goals, guidelines, standards and performance requirements for virtually every facet of land use planning and resource management for the public lands. Over the years, it is hoped that Congress will do all that the Commission has recommended. Resource agency performance has no doubt suffered from lack of this guidance from Congress. However, it is unrealistic to expect Congress to act on all these recommendations all at once. By design, a legislative body is weighted against hasty decision and action, and rightly so. The Commission has accomplished a tremendous task, and I am sure that Congress is likely to be greatly influenced by its recommendations.

The Commission recommends public participation in land use planning. This would be by means of public hearings and by consultation and coordination requirements with State and local government agencies and interagency and regional coordination of plans. These are worthy objectives, but the defect in this recommendation is the possibility of delay for the sake of delay which is inherent in any provision for elaborate consultation and coordination.

Construction of the Three Sisters Bridge, in Washington, D.C. crossing the Potomac River has recently been halted by court order because requirements for a public hearing on its design were not met. The start of this bridge project had already been delayed for several years by disputes at every step of the planning and programming process. Those who brought the suit which resulted in the court order appear to have little if any interest in the bridge design. They just want construction stopped. Of course, it is possible to get across the Potomac on other bridges and to endure the traffic congestion which this new crossing would relieve. But, intricate procedural requirements such as now involved in the Three Sisters Bridge situation can become a means to obtain a court order to stop timber sales until a minor procedural defect is remedied. This could be fatal to a local timber-dependent mill, causing loss of jobs and distress in the local community.

It is important that management of our nation's land be vested in professionally trained individuals under stronger and clearer direction from Congress. Land management by poll, by emotional campaign or by promises offered in political campaigns are not in the best interests of either the land, the public or the nation. The physician is allowed to treat his patient without interference. The newspaperman writes his story as he is trained to do. You would not expect the circus performer on the high wire to have the competence of a football player. Therefore, in any public hearing, the conducting agency must, in public interest, weigh most heavily the testimony of those trained and educated in land management.

All public administration is presently going through a major change in which the right to challenge administrative decisions is being greatly expanded by the courts. We all have much at stake in the progress of this transition for the Federal resource managing agencies. A way must be found that will not endanger the ability of the agencies to maintain schedules of planned flow of timber offerings or other resources to avoid serious disruption of useful products to the detriment of the general public.

Forestry with tree harvesting is the one use which provides benefits to every member of this nation's population. These include benefits to those larges masses of people in our urban centers who—in the main—are going to have little or no opportunity to enjoy the other assets of our public lands.

The "merger of the Forest Service with the Interior Department into a new Department of Natural Resources" is one of the recommendations of the Commission which has received many of the headlines. In 1950, before a Congressional Committee seeking to implement a Hoover Commission recommendation for consolidation in Government timber management agencies, one of our predecessor associations, Western Pine Association, testified that we were wholeheartedly in favor of the efficiencies and economies to be expected from a single Federal timber management Bureau, but we were dubious then of removing this function from Agriculture and turning it over to Interior.

One of the benefits from the merger as conceived by the Commission would be to open the way for consolidation of Congressional committee jurisdictions. This is an important consideration for Federal forestry. The experience of our industry with Congress does not indicate that interest in timber and the national forests by both the Interior and Agriculture Committees is entirely unworkable or inadvisable. But it would be much more logical to keep the "service" functions of the Forest Service that relate to timber growing on all stands inside Agriculture with other crop growing services. Federal forest land issues might be well handled in a single department. Of substantial interest would be the creation of an independent federal timber corporation which the Commission sees as a desirable alternative. No doubt, Congress will watch closely the development of the Corporation for the Federal post office service with a view to using it as a model for other efficiencies which can be achieved in government.

The Commission indicated that there are some 40 plus million acres of Federal land which should be classified for dominant timber use. But there are indications within our industry that this figure is far too small. Let me suggest why.

First, there is absolutely nothing wrong with growing timber whenever and wherever timber grows. The better it grows, the better for posterity and the public, intensive timber growing practices with very few exceptions, benefit the other multiple uses. Or—if that term "multiple use" bothers you—the "corollary benefits" in watershed, range, outdoor recreation, wildlife and fish production will be increased.

Second, the prevailing concept of the areas best suited for dominant timber use appear to be those areas of historically high timber production such as the Douglas fir region here in the Northwest and the pine forests of the Southern States. But of great importance for the future is the productive potential for growing timber in hitherto undeveloped forest lands, with no history of production.

In this connection, most predictions from both Federal and private studies indicate that intensive timber management will produce an additional two billion board feet per year from Federal lands in the Douglas fir region. However, intensive forest management studies by the Government indicate this much or more additional volume could be produced each year from Federal timber lands in the Rocky Mountain area if developed and properly managed. This includes an access road system, prompt planting, spacing, and an attitude of management for maximum timber growth. The eventual needs of this country may well require that intensive timber management be practiced in both areas.

Maximum timber production must be encouraged in any area that will grow timber, knowing that the corollary benefits of water, range, access, recreation, fish and game can also be enhanced. The adoption of a rigidly classified "dominant use" could lead to management for one use to the detriment of other desperately needed uses.

Dominant use, if we are speaking of good forestry including tree harvesting, does not preclude enjoyment of most of the other benefits. In particular, good forestry is recognized by all experts as a vital function of wild life management.

The Commission's recommendations must now be acted upon by the Congress. I am sure that our lawmakers will carefully scrutinize each recommendation. They will then move in this Nation's historical way to place into law those recommendations of the Land Law Review Commission Act which direct the provision of the maximum benefit for the general public. Our industry can be expected to provide continued assistance and support.

In our concern today with the pursuit for a better life for all of the citizens of this Nation we must not forget that, as far as natural resources are concerned it is not a case of either food or recreation; either shelter or hiking, but instead food and recreation; shelter and hiking. This Nation has achieved its prominent position in the world through utilization of its natural resources by man's technology. We must turn that technology to the correction of any ills which we find apparent. We cannot for our own well-being and that of the world, afford to discard man's capabilities for wise use of his natural resources in favor of a return to nature. To do so would disregard the techniques and knowledge obtained through education and training from those who serve our governments, our universities and our industry.

## THE 1971 BUDGET SCOREKEEPING REPORT—AS OF SEPTEMBER 23, 1970

### HON. GEORGE H. MAHON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. MAHON. Mr. Speaker, I am inserting certain factual highlights from the introductory section of the 11th in a series of periodic "budget scorekeeping" reports prepared by the staff of the Joint Committee on Reduction of Federal Expenditures. This report reflects the cumulative actions of the Congress on the President's budget estimates—as originally submitted and as revised by him—through September 23, 1970.

This report, distributed to all Members on September 28, reflects all the cumulative actions of Congress to September 23 as identified by the Joint Committee staff—beginning with the actions of each committee as a bill is reported—on regular appropriation bills; on legislation containing so-called "backdoor" appropriations; on legislation providing for mandatory spending; inactions on legislative proposals to reduce budget authority and outlays—the negative spending proposals—and actions or inactions on revenue-producing proposals.

*In briefest summary, as of September 23*

[In billions]

| | |
|---|---|
| ENACTED BY CONGRESS | |
| 1. The Congress, in final actions to date (appropriation bills, +$335 million; legislative bills +$1,754 million) has *increased* budget spending (outlays) by about | +$2.1 |
| 2. The Congress, in final action to date (appropriation bills, +$373 million; legislative bills, +$2,600 million) has *increased* new budget obligating authority by about | +3.0 |
| INITIAL HOUSE ACTIONS | |
| 1. Initial House actions to date (appropriation bills, +$226 million; legislative bills, +$3,225 million) have increased budget spending (outlays) by about | +3.5 |
| 2. Initial House actions to date (appropriation bills, −$746 million; legislative bills, +$6,313 million) have increased new budget obligating authority by about | +5.6 |
| INITIAL SENATE ACTIONS | |
| 1. Initial Senate actions to date (appropriation bills, +$1,045 million; legislative bills +$1,752 million) have increased budget spending (outlays) by about | +2.8 |
| 2. Initial Senate actions to date (appropriation bills, +$1,369 million; legislative bills, +$3,068 million) have increased new budget obligating authority by about | +4.4 |

NOTE.—The supporting detail, bill by bill, is shown in Supporting Table No. 1, September 23 "budget scorekeeping" report.

In reference to variations in the above totals, it should be noted that while some bills have passed through both the House and the Senate—sometimes in identical amounts, sometimes otherwise—other bills have passed the House but not the Senate, and vice versa. Examples: The House has passed 12 of the 1971 appropriation bills; the Senate has passed eight. The House has passed the bill for increased social security benefits above the budget; the Senate has not yet acted.

In elaboration, the following is from the introduction to the September 23 budget scorekeeping report:

INTRODUCTION: STAFF REPORT ON THE STATUS OF THE 1971 FISCAL YEAR FEDERAL BUDGET

HIGHLIGHTS AND CURRENT STATUS OF THE 1971 BUDGET

*Presidential revisions in the budget*

A. New budget authority for fiscal 1971 in the February 2 budget submission was estimated to be $218,030,495,000. By budget amendments, legislative proposals and reestimates (May 19, 1970), the President has increased the estimates for new budget authority for 1971 by $4,080,566,000 to a new total of $222,111,061,000.

B. Budget outlays for fiscal 1971 in the February 2 budget submission were estimated to total $200,771,129,000. By budget amendments, legislative proposals and reestimates (May 19, 1970), the President has increased the estimated budget outlays for fiscal 1971 by $6,082,871,000 to a new total of $206,854,000,000.

C. Budget receipts for fiscal 1971 in the February budget submission were estimated to total $202,103,000,000, including $1,522,000,000 for increased taxes proposed to the Congress. By additional revenue proposals for estate and gift taxes ($1,500,000,000) and leaded gasoline tax ($1,600,000,000) offset by some adjustments downward in his May 19, 1970 reestimates, the President has increased fiscal 1971 estimated receipts by a net of $2,006,000,000 to a new total of $204,109,000,000.

*Congressional changes in the budget*

A. Budget authority for fiscal 1971:

1. *House* actions to September 23, 1970 on all spending bills—appropriations and legislative—have *increased* the President's requests for fiscal 1971 budget authority by $5,567,375,000.

2. *Senate* actions to September 23, 1970 on all spending bills—appropriations and legislative—have *increased* the President's budget authority requests for fiscal 1971 by $4,436,524,000.

3. *Enactments* of spending bills—appropriations and legislative—to September 23, 1970 have *added* $2,973,074,000 to the President's budget authority requests for fiscal 1971.

B. Budget outlays for fiscal 1971:

1. *House* actions to September 23, 1970 on all spending bills—appropriations and legislative—have *added* a net of $3,450,723,000 to the President's total estimated outlays for fiscal 1971.

2. *Senate* actions to September 23, 1970 on all spending bills—appropriations and legislative—have *added* a net of $2,796,629,000 to the President's total estimated outlays for fiscal 1971.

3. *Enactments* of spending bills—appropriations and legislative—to September 23, 1970 have *added* $2,089,161,000 to the President's total estimated outlays for fiscal 1971.

C. Budget receipts requested by the President for fiscal 1971 requiring Congressional actions total $4,622,000,000:

1. *House* actions to September 23 on revenue proposals total $548,000,000 (including a net of $13,000,000 not requested for fiscal 1971 by the President) leaving a balance of $4,087,000,000 for revenue increases requested by the President but a balance of $4,074,000,000 to meet the President's estimated budget requirements.

2. *Senate* actions to September 23 on revenue proposals total $1,011,000,000 (including $693,000,000 not requested for fiscal 1971 by the President) leaving a balance of $4,304,000,000 for revenue increases requested by the President but a balance of $3,611,000,000 to meet the President's estimated budget requirements.

3. *Enactments* of revenue proposals to September 23 total $516,000,000 (including $194,000,000 not requested for fiscal 1971 by the President) leaving a balance of $4,300,000,000 for revenue increases requested by the President but a balance of $4,106,000,000 to meet the President's estimated budget requirements.

*Facts on the budget deficit*

The budget for fiscal 1971 submitted to Congress February 2, 1970 reflected a unified budget surplus of $1.3 billion, made up of an $8.6 billion surplus from the trust funds and a $7.3 billion deficit in the general Federal funds.

The budget for fiscal 1971 as revised by budget amendments, additional legislative proposals, and reestimates, exclusive of any separate direct Congressional actions on the budget, as announced by the President on May 19, 1970, reflected a unified budget deficit of about $1.2 billion. Including congres-

sional actions, as announced by the President May 19, 1970, the unified budget deficit was estimated to be $1.3 billion, made up of an $8.7 billion surplus from the trust funds and a $10 billion deficit in the general Federal funds.

Since the budget for fiscal 1971 was updated by the President on May 19, additional amendments have been transmitted and reestimates of certain designated uncontrollable items have been announced by the President in connection with adjustments in the outlay limitation established by Public Law 91-305. The updated estimates have added about $1,511 million to the May 19 outlay estimates; and of this amount $333 million are in trust fund outlays. This updating of estimated outlays increases the projected May 19 deficit of $1.3 billion to about $2.8 billion, prior to reflecting the Congressional actions and inactions outlined below. This revised deficit estimate is made up of an $8.4 billion surplus from the trust funds and an $11.2 billion deficit in the general Federal funds.

These surplus and deficit projections are dependent upon various factors of an uncertain nature, such as:

1. Experience shows that actual outlays are likely to increase over earlier projections—thus increasing the deficit. For example, as reported earlier, since submission of the fiscal 1971 budget in February the President has revised his official outlay estimates upward by about $6.1 billion. Congressional enactments to September 23 have also added approximately $2,089 million to the total estimated outlays for fiscal 1971.

2. The economic slowdown may decrease actual revenues from the amounts projected—thus increasing the deficit. The staff of the Joint Committee on Internal Revenue Taxation estimated last May that revenue collections for fiscal 1971 will be about $3.2 billion less than the administration was then projecting.

3. The revised budget contained about $2,414 million in estimated outlay reductions for legislative proposals to the Congress such as postal rate increases, sales of surplus stockpile commodities, revisions in various Veterans benefits, Medicaid reform, sale of Alaska Railroad, etc. The effective date of the proposed $1,568 million postal rate increases has been delayed by at least six months reducing that saving by at least $784 million (which is reflected as a Congressional increase in spending above); and only $180 million of the $250 proposed surplus sales have been approved. No other actions have been completed. Thus $666 million of these proposed outlay reductions have not yet been acted upon by the Congress.

4. The budget as revised to May 19, 1970 contains receipt estimates from various revenue producing proposals in the amount of $4.8 billion (including $503 million for trust funds of which $194 million was not requested by the President) which, if not enacted by Congress, will automatically reduce receipts of the Treasury by the amounts estimated—thus increasing the deficit. Congress has enacted, to date, $322 million of the President's new revenue requests plus $194 million in new revenue not requested by the President. This leaves a balance of about $4.3 billion of the revenue requests of the President not yet enacted or, because of the enactment of $194 million not requested by the President, a balance of $4.1 billion yet to be enacted toward meeting the President's estimated revenue requirement.

Taking into account Congressional actions to date on the uncertain budget estimates outlined above, and unless pending budget proposals for outlay reductions and additional revenues are enacted, the unified budget deficit for fiscal 1971 estimated by the President on May 19, 1970 to be about $1.3 billion would be increased to about $8.1 billion. Adding the $1.5 billion for increased outlays from updated estimates adjusting the outlay limitation this unified budget deficit estimate would be increased to about $9.6 billion. Adding the loss of $3.2 billion revenue collections as estimated by the Joint Committee on Internal Revenue Taxation the total unified budget deficit could be as much as $12.8 billion, made up of a $7.6 billion surplus in trust funds and a $20.4 billion deficit in general Federal funds.

These deficit figures are not projections. They are simply arithmetic computations. Additional and pending actions by the Congress enacting revenue measures or increasing or decreasing expenditures will have a direct effect on any deficit computations. In addition, any increase in uncontrollable expenditures, like interest, or any additional savings made by the Executive will also have a direct impact on the projected deficit.

SUMMARY OF ACTIONS AFFECTING 1971

Mr. Speaker, in addition to the summary highlights quoted above, I include a tabulation summarizing the effects of congressional actions and inactions to September 23 on various spending and revenue measures affecting the President's budget estimates. This summary has been compiled from tables 1, 3, and 4 of the comprehensive "budget scorekeeping" report.

The tabulation reflects the effects of congressional actions and congressional inactions in terms of both budget authority and budget outlays. The budget outlay side of the picture has been combined with the actions remaining to be taken on various revenue-producing proposals to reflect the current status of the President's May 10, 1970, fiscal 1971 deficit estimate as that deficit estimate has been affected by congressional actions or the lack of congressional actions to September 23 and by reestimates upward of certain uncontrollable outlays as reported by the President.

Again, the arithmetical deficit figures shown in this summary tabulation are not projections; the many remaining actions of the Congress on various spending and revenue proposals which are pending disposition will necessarily adjust these figures up or down as those actions are taken.

Furthermore, these deficit figures do not reflect consideration of any shortfall in revenues below those projected in the budget estimates.

The tabulation follows:

FISCAL YEAR 1971 BUDGET SCOREKEEPING REPORT—AT A GLANCE—AS OF SEPT. 23, 1970

[In thousands of dollars]

| Spending authorization | Changes from the budget | | | | | |
|---|---|---|---|---|---|---|
| | Budget authority | | | Budget outlays | | |
| | House | Senate | Enacted | House | Senate | Enacted |
| 1. Appropriation bills | −745,549 | +1,368,844 | +373,412 | +226,150 | +1,044,500 | +334,850 |
| 2. Legislative bills with "back-door" spending authorization | +4,774,851 | +1,407,051 | +974,851 | +50,000 | +50,000 | +50,000 |
| 3. Mandatory-type spending authorizations in legislative bills (pay, pensions, etc.) | +599,073 | +876,629 | +840,811 | +2,240,573 | +918,129 | +920,311 |
| 4. Legislation affecting proposals to reduce budget authority and outlays—on which final action has been taken | +939,000 | +784,000 | +784,000 | +934,000 | +784,000 | +784,000 |
| 5. Total changes from the budget as of Sept. 23—for spending authority (the sum of items 1–4) | +5,567,375 | +4,436,524 | +2,973,074 | +3,450,723 | +2,796,629 | +2,089,161 |
| Other adjustments affecting the budget and the deficit | | | | | | |
| 6. Legislative proposals to reduce budget authority and outlays—on which no Congressional action has been taken | | | | +450,564 | +665,564 | +665,564 |
| 7. Balance of $4,622,000,000 in revenue requests or equivalent still pending enactment | | | | +4,074,000 | +3,611,000 | +4,106,000 |
| 8. Impact of spending changes and remaining unmet revenue requests on the deficit (the sum of items 5, 6, and 7) | | | | +7,975,287 | +7,073,193 | +6,860,725 |
| 9. Increase in uncontrollable outlays since May 19, as stated by the President | | | | +1,511,000 | +1,511,000 | +1,511,000 |
| 10. Presidential deficit estimate May 19, 1970, excluding Congressional actions | | | | 1,234,000 | 1,234,000 | 1,234,000 |
| Total deficit—potential without further Congressional changes in revenue or spending, or without reestimates of either (the sum of items 8, 9, and 10) | | | | 10,720,287 | 9,818,193 | 9,605,725 |

## THE POLAR REGIONS AND CONGRESSIONAL OVERSIGHT

### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. DINGELL. Mr. Speaker, the discovery of vast stores of oil beneath the permafrost of the north slope of Alaska and the adjacent seabed of the icy Arctic Ocean has focused the eyes of the world on a region long thought to be virtually useless and of little concern to civilized man except for its effect on our weather. Even those who were aware of the great potential wealth in those barren, inhospitable regions were frustrated by the seeming impossibility of extracting it and getting it to market. But the oil is there and man will get it out as testified to by the historic voyage last year of the giant icebreaking tanker *Manhattan* through the Northwest Passage of the Arctic Archipelago. The frozen stillness of earth's last frontier has been shattered.

As the inevitable commercial exploitation proceeds, this Nation should be sure that it knows what is being done; that it understands, through science, the nature of the environment and the effects of the technology of exploitation; and that there is the organization and oversight necessary to regulate these activities and strike a balance between development and environmental control.

The environmental impact of major Arctic development must come under full consideration.

I have quoted from a thought-provoking article appearing in the June issue of Undersea Technology magazine, entitled "The Polar Regions and Congressional Oversight." The author calls attention to the "almost totally lacking" review by the Congress of the Arctic and Far North ecosystems and interrelationships of economic and political factors. And the situation is similar with regard to Antarctica. He urges that the polar areas receive a serious focus of attention by the Congress and suggests that the proposed new Joint Committee on the Environment, which passed the House in May as House Joint Resolution 1117, might provide an excellent forum to initiate the needed comprehensive study.

The text of the article by John M. Drewry, marine consultant and former Chief Counsel of the House Merchant Marine and Fisheries Committee, follows:

THE POLAR REGIONS AND CONGRESSIONAL OVERSIGHT

(By John M. Drewry)

More and more attention is being focused on the Arctic by the national interests with jurisdiction over the various territorial portions of it. The apparent imminence of economic pay-out from exploitation of the oil discovered on the Alaskan North Slope places fresh emphasis on the need for survey and understanding of the resources of the Arctic. The mineral potential, especially oil and gas, throughout the whole Alaska/Canada northland is considered to be tremendous.

Until recently, hopes for economically feasible exploitation of these resources have been constrained due to the inhospitable environment and resultant high costs. However, the possibility of year-round or even substantial seasonal use of the Northwest Passage is stimulating thoughts of exploitation of all the far-north mineral resources on a large scale.

Strategic considerations affecting the western world *vis-a-vis* the Soviet Union are evident.

Yet, despite these very important factors, U.S. review of the Arctic and far-north ecosystems and interrelationships of economical and political factors by the Congress has been almost totally lacking.

In a paper entitled "The North Today," Prof. Trevor Lloyd, chairman of the Board of Governors of the Arctic Institute of North America, made these observations:

"The North of today is increasingly international and it will be even more so tomorrow. The present upsurge of northern interest is circumpolar, and it may prove more lasting than any in the past. Having at last started to roll, the northwest course of development may this time keep right on, so that, at long last, the North will be drawn into the urban-technological world. Against that time, intensive study and research will be needed to anticipate the physical and social problems that will be encountered."

Three years ago, the Senate Committee on Appropriations requested and received "A Report on Federal Arctic Research" from the Legislative Reference Service of the Library of Congress (90th Congress, 2nd Session, Senate Document No. 71). The late Senator E. L. Bartlett of Alaska requested this study as chairman of the Senate Legislative Appropriations Subcommittee. As a result, Sen. Bartlett had recognized the inadequacy of the current situation and the necessity for meaningful and remedial action. To our knowledge, nothing else has been done.

In 1966, the Atomic Energy Commission published a 1,250-page report, including charts and maps, entitled "Environment of the Cape Thompson Region, Alaska." It covered a comprehensive, $4.5 million environmental study conducted between 1957 and 1962 in the area of Cape Thompson, Alaska, near Kotzebue Sound, where the AEC had proposed blasting an experimental ship harbor of major magnitude. The Kotzebue proposal was part of the Plowshare program and was referred to as Project Chariot. After 1962, nothing came of this tremendous study, except the publication of the Cape Thompson report in 1966.

In light of the North Slope discoveries, the potentialities of the *Manhattan* voyage last summer and the possible uses of the Northwest Passage to both the East and the West, it appears worthwhile at this time for a high-level Congressional review of the previous studies to see whether major port facilities in Arctic Alaska might now serve an even far greater purpose than the Plowshare people originally had in mind. Such major facilities providing refuge, repair and other services would be essential in developing a viable transarctic transportation system.

As the inevitable commercial exploitation proceeds, this nation should be sure that it knows what is being done; that it understands, through science, the nature of the environment and the effects of the technology of exploitation; and that there is the organization and oversight necessary to regulate these activities and strike a balance between development and environmental control.

The environmental impact of major Arctic development must come under full consideration.

Recently the impact problems have received some attention. Injunction action has been brought against the Secretary of the Interior to inhibit the issuance of a pipeline permit. The needs of Arctic Research have been recognized to the extent of consolidating responsibilities in this area within the National Science Foundation. However, NSF has requested only $2 million in Fiscal '71 for its various responsibilities in coordinating and assessing the Arctic research activities, stimulating technological development of the area and facilitating international cooperation in Arctic research.

The Trudeau Government of Canada has formally introduced bills in the House of Commons asking for authority to expand Canada's sovereignty over offshore waters from 3 mi. to 12 mi., to close off certain unspecified bodies of water to foreign fishing fleets and to assert anti-pollution jurisdiction over "safety control zones" reaching 100 mi. into Arctic waters.

ANTARCTICA

Antarctica, in the South Polar region, belongs to this commentary also. At what we call the bottom of the Earth is a continent of nearly 6 million square miles in area, largely contained within the Antarctic Circle. Although the problems of the North and South Polar Regions are quite distinct, there are, nevertheless, relationships and similarities which seem fully to justify their joint consideration.

Since the early 19th Century, there has been a great deal of interest on the part of many nations in this forbidding area. But except for whaling activities in the plankton-rich seas, exploitation opportunities in Antarctica have been sparse.

The International Geophysical Year in the late 1950's focused major attention on Antarctica. U.S. participation in the program which began at that time has been kept alive, but no Administration has wanted either to downgrade it too much or to take any steps toward significant development. In other words, level-funding support has been continued and has kept the show on the road, but there has been little enthusiasm for advancing the cause.

Much good work has been and is continuing to be done under the auspices of NSF's Antarctic Research Program. But NSF funding for the program in recent years has held at about $7 million annually.

The polar regions are vital portions of the environmental systems affecting the so-called "civilized" world. What we may do in these seemingly barren and useless areas could wreak irrevocable harm on future generations.

We believe that the most effective Congressional appraisal of the problems of the polar environmental systems should be accomplished through not more than one committee of each House. Congress is not organized along precise lines of environmental jurisdictions. We do not propose at this time any changes or consolidation of traditional areas of legislative jurisdiction among the existing committees.

The problem of which committee or committees should take the burden of our subject matter is highlighted by last year's water pollution and environmental quality control bills. Two committees of each House were actively involved in hearings and action on both of these measures since each bill met the standards for referral to them. And each committee had sufficient interest to press for action.

Committee jurisdiction over matters dealing with Antarctica presents another example of the problem of which is the "right" committee in a unique situation.

In 1968, George Doumani of the Science Policy Research Div. of the Library of Congress' Legislative Reference Service published an article in the *Bulletin of the Atomic Scientists* entitled "Science Policy for Antarctica." Doumani reviewed the recent background history of U.S. and world interest in the region. He called attention to the periodic legislative proposals on Antarctic matters introduced in Congress since 1938, noting that they had been "referred to different committees at different times with no discernible pattern."

Doumani wondered which congressional committees should assume responsibility for our Antarctic affairs. Should they be referred to the committees dealing with foreign relations, by virtue of Antarctica's "foreignness?" Should the Appropriations Committees play the major role? Or should they be handled by the Judiciary Committees? But, then, since our proclaimed interests in Antarctica are mainly scientific, perhaps they should be referred to one of the committees concerned with science and technology.

He concluded that the Committee on Science and Aeronautics might be best suited. His conclusion is undoubtedly strengthened now that this committee has been authorized responsibility over the National Science Foundation, which, in turn, is responsible for the U.S. Antarctic Research Program. And it is further strengthened by the fact that NSF is the lead agency for the International Decade of Ocean Exploration and the lead agency for a National Arctic Research Program. The Committee on Science and Astronautics also overviews responsibility of matters involving international scientific cooperation.

Despite the strong case that can be made for the House Science and Astronautics Committee and its Senate counterpart to conduct the polar studies proposed here, it does not rule out conflicts with jurisdictions of other existing committees.

Avoidance of friction and a happy solution to the dilemma may soon be found, depending on favorable Congressional action on a House Joint Resolution to establish a Joint Committee on Environment and Technology. The proposed joint committee would be comprised of members of the Senate and House from majority and minority members of the several committees that are concerned in important ways with environmental and technological matters. It would not be a legislative committee, but would rather provide oversight and review and recommend legislative directions.

The bill, with minor amendments, was passed by the House last month, but there has not yet been any action in the Senate. No matter what happens to the proposed joint committee—indeed, no matter to which committee or committees this matter may be referred—time should not be allowed to drain off much longer. The potentials of both the Arctic and the Antarctic have too long been neglected from the standpoint of comprehensive Congressional oversight. The unique characteristics, the vital importance and the current awareness of the polar areas in regard to the national and, indeed, world interest justify a serious focus of attention by the Congress.

---

## UNICO HONORS JOSEPH ZAZZERA

### HON. JOSEPH M. McDADE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. McDADE. Mr. Speaker, on Saturday evening it was my distinct privilege to address the 11th Annual Past President's Night of the Carbondale Chapter of UNICO National. On this occasion the dinner was in honor of past President Joseph Zazzera who concluded an extremely successful year as president of this outstanding organization before turning the gavel over to the current president, Mr. Paul Carachilo.

During the course of the evening Toastmaster William F. Farber reminded us of UNICO's dedication to civic action. Dr. Benjamin A. Cottone, president-elect of UNICO National, stressed the volunteer spirit that UNICO exemplifies and reminded all that the initials of UNICO stand for unity, neighborliness, integrity, charity, and opportunity. At that point it became the duty of Mr. Joseph Lopez to provide a history of President Zazzera's tenure during the years 1969–70. The report was indeed impressive and exemplified the spirit contained in the remarks of Dr. Cottone and Messrs. Carachilo and Farber.

I bring to the attention of the House some of the beneficiaries of UNICO's civic action: St. Joseph's Hospital School of Nursing, Carbondale Chamber of Commerce, our servicemen in Vietnam, the Junior Football League, the United Fund, Catholic Charities, the Salvation Army, the national health program, YMCA, Carbondale Library Fund, Carbondale Teener League, and the Little League of Simpson.

What better example can one find of civic action by a group of public-spirited men? To them I extend my warmest congratulations.

---

## A GREAT WOMAN HAS PASSED OUR WAY—EDNA GELLHORN—A LEGEND IN HER LIFETIME

### HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mrs. SULLIVAN. Mr. Speaker, all of us who are in public life meet and greet unknown numbers of people as we go on our way. Some make an indelible impression upon us and we often recall their activities and contributions to the way of life. One who became a legend in her lifetime has left us—Edna Fischel Gellhorn, of St. Louis. No one who knew her or of her would mention her name without recalling at least a few of her countless activities and her expertise and indefatigable support of causes which she believed to be in the common good. Mrs. Gellhorn reached the wonderful age of 91 years—active to the end in her beloved causes. The League of Women Voters, in paying tribute to her memory, has said:

Edna Fischel Gellhorn, founder of the League of Women Voters, died September 24, 1970. Her contribution to the League was so vast that it can only be matched by the devotion of everyone who knew her.

It was my privilege to know, work with and admire Mrs. Gellhorn over a period of many, many years—she was truly a great, great woman.

The St. Louis Post-Dispatch, in an article has told of some of her activities which I would like to share. It is as follows:

MRS. EDNA GELLHORN DIES AT 91; SUFFRAGIST WORKER, CIVIC LEADER

Mrs. Edna Gellhorn, a national leader in civic reform, charter member of the League of Women Voters and pioneer in the struggle to obtain for American women the right to vote, died of infirmities of age yesterday at her home 5961 Laclede Avenue. She was 91 years old.

A commemorative service will be at 4 p.m. on Oct. 11 at Graham Chapel on the Washington University campus. Funeral services will be private, with burial in Bellefontaine Cemetery.

Mrs. Gellhorn, a tireless worker for public causes, headed the old Missouri Equal Suffrage League in 1919 and 1920. She was head of the St. Louis Equal Suffrage League when the national organization held its jubilee convention here in 1919.

The next year, when the suffrage objective had been achieved, Mrs. Gellhorn became first vice president of the National League of Women Voters. She was elected also as the first president of the newly formed Missouri League of Women Voters.

Mrs. Gellhorn led the Missouri League's campaign in support of the Missouri Constitution that was adopted in 1945. Ten years earlier, she had led a National League drive against the spoils system in Government. She was president of the St. Louis League and a director of the national organization.

Her advocacy of the merit system helped move the St. Louis and state governments toward civil service. She was instrumental in bringing about better personnel practices in St. Louis public schools, and helped found John Burroughs School, a private institution.

"She belongs to almost all the white-hat organizations," a friend once said. The list at one time included the Social Hygiene Association, the Interracial Committee, the Social Security Commission, the Slum Clearance Commission and the boards of Children's Guardians and the People's Art Center.

BACKED UNITED NATIONS

In recent years, she helped organize chapters of the American Association for the United Nations. She was one of the founders of the Citizens Committee on Nuclear Information and was active in its behalf.

Mrs. Gellhorn was the daughter of Dr. and Mrs. Washington E. Fischel, leaders in the Ethical Culture movement here. She was introduced to society when the family lived in the 2600 block of Wisconsin Avenue. She attended Mary Institute, where she was class president, and Bryn Mawr College in Pennsylvania, where she became life president of the class of 1900.

In 1903, Edna Fischel married Dr. George Gellhorn, a Breslau-born German physician who had come to St. Louis three years earlier. He became professor of clinical obstetrics and gynecology at Washington University. He died in 1936.

ENCOURAGED BY HUSBAND

With her husband's quiet encouragement, Mrs. Gellhorn plunged into the suffragist work that led to adoption in 1920 of the Nineteenth Amendment to the U.S. Constitution. Later, she was fond of commenting that "you never find a good woman worker in any cause but that she has a generous husband behind her."

When she became an active worker for the vote, Mrs. Gellhorn already had a reputation for resourceful campaigning in charity drives.

She borrowed eight elephants from a circus to attract customers to a concession booth at a Delmar Garden hospital event. From merchants she begged peanuts to sell. The combination was a financial success even though the elephants got loose and had to be hunted down.

Mrs. Gellhorn's apartment on Laclede Avenue, half a block from Forest Park, remained a center of women's civic activities.

When she reached her seventy-fifth year, Mrs. Gellhorn made a statement in an interview that some of her friends considered an admirable summing up of a career not ended.

"I'm glad I was born in a time of stress. I'm glad to have lived through it. And I have infinite faith in the future."

Surviving are a daughter, Martha, a novelist living in London, who was married to Ernest Hemingway; and two sons, Walter, a professor of law at Columbia University,

and Alfred, dean of the University of Pennsylvania Medical School.

Another son, George Gellhorn, Jr., died in 1968. He was president of the International Finance and Development Corp.

## CAMPUS UNREST AFFECTS RESEARCH

### HON. JOHN WOLD

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. WOLD. Mr. Speaker, we have seen many unpleasant trends developing on the campuses of our country over the past few years. They are also surprising because the sources of these trends are in large measure found among the people who might be expected to inveigh most ardently against them.

I refer to the threat to academic freedom and the free use of guilt by association which American universities have witnessed recently. One example has been the treatment of Government-sponsored research.

Anyone doing business on Government grants seems to be held responsible for every act of the White House; although it is interesting to note that radicals studying as a result of Federal scholarships and loans are not held to the same standards. There have also been frequent attempts to expel such Government-sponsored projects from the campus.

A recent article from the C. & E.N. points up the particular problems which this situation has presented for chemical education, particularly those departments and professors which are funded by the Department of Defense. I ask unanimous consent to include in the RECORD the article "Campus Unrest Affects Chemical Education."

The article follows:

CAMPUS UNREST AFFECTS CHEMICAL EDUCATION—DOD-FUNDED RESEARCH TROUBLES SCIENCE DEPARTMENTS, CHEMISTRY "COMMUNITIES" FORM TO COPE WITH DISSENT

It's been a quiet summer for science and engineering departments in most universities across the country. But there is an air of nervous expectation that when the campuses reopen shortly the widespread unrest, activism, and even violence of the past two or three years will recommence.

Such concern was heard again and again from witnesses at hearings of the President's Commission on Campus Unrest. And it is a view shared by many university administrators, professors, and students interviewed by C&EN's Lloyd Dunlap and Bob Hadsell during the summer.

Although the continuing war in Vietnam seem to be the major source of student discontent, even were the war to end soon student activism wouldn't cease, University of Wisconsin chemistry professor Robert West says. And his opinion is echoed by students and faculty members across the country. The war, the environment, DOD funding, and other yet undefined issues are likely to keep the campuses politicized for years to come.

Apart from the human toll—deaths, injuries, arrests—direct costs stemming from student unrest have become a heavy burden for universities to bear. Damages on campuses nationally exceeded $9.5 million during the past academic year, according to J. Edgar Hoover, director of the Federal Bureau of Investigation. In fact, insurance may be the single most rapidly rising cost for universities today.

TURBULENCE

Departments of chemistry and chemical engineering have inevitably been swept up in the turbulent currents of activism and protest. Their students and professors have joined—to varying degrees—in the debates and demonstrations. In certain critical areas the issues have produced not only an outgoing concern with broad social problems but also a turning inward to grapple with values and purposes that are basic to science teaching and research.

The nature of chemical education is being altered, and some of the changes are ominous: growing enmity among faculty members and perceived threats to a free choice of research topics. Other changes, however, seem to be enabling some departments to move smoothly through periods of crisis, such as the turmoil in May following the Cambodia incursion by the U.S. Chief among these changes is the growing participation of students in departmental affairs, particularly with the formation of "chemistry communities."

Research financed by the Department of Defense is the one target of student protest that holds the greatest potential for disruption of chemical education. Classified research has been a long-standing issue, and most schools have either traditionally prohibited classified research or have in recent years taken steps to remove classified research from their campuses under pressure from students and faculty. But the protests are shifting to research that may be interpreted as war-related or that is DOD-funded—which puts some chemistry professors squarely in the target.

Two universities found the issue had suddenly come to a head in the agitation that followed the Cambodia event and the subsequent killing of four students in demonstrations at Kent State University. DOD-funded research was the subject of faculty resolutions at Princeton University and at the Stony Brook campus of State University of New York.

RESOLUTIONS

Stony Brook moved in the direction of a ban on DOD-funded research when the faculty senate on May 8—four days after the Kent State event—passed a resolution "that it be SUNY/SB policy not to seek research grants and contracts from the Department of Defense. . . ." This resolution was only advisory, however, and was sent to the graduate council, an elected faculty body that deals with academic matters affecting graduate education.

Also early in May, the university cabinet of vice presidents and deans proposed a similar ban on war-related research. The distinction between the proposal and the faculty resolution is that DOD-funded research may be unrelated to war, and war-related research may be funded by agencies other than DOD. The graduate council considered both the faculty and cabinet statements and sent its recommendations to acting president T. Alexander Pond on July 21.

On Aug. 25, prior to the return of Stony Brook president John S. Toll, Dr. Pond sent a memorandum to the faculty saying that he would submit to the faculty senate the graduate council's recommendation that "research on campus be determined by academic and scholarly criteria, not political ones." The graduate council would make recommendations on any research project questioned by a faculty member. The faculty senate is expected to consider the matter in late September or early October.

In the memorandum, Dr. Pond notes that it is already university policy that "no project is acceptable which by the nature of its results is directly, specifically, or intentionally dedicated to the advancement of the methodology or instrumentation of warfare."

ISSUE

DOD-funded research has been an issue with student activists at Stony Brook for the past two years, according to chemistry professor Francis T. Bonner, who has just returned to full-time teaching and research after 12 years as department chairman. The issue figured in raids on files of research records, an explosive situation that nearly closed the campus, and in a narrowly defeated motion by the faculty senate to "phase out by attrition" all DOD-funded research.

CHEMISTRY STUDENTS GRADUATE ON TIME AT KENT STATE

When the campus at Kent State University closed on May 4, five weeks of classes were left uncompleted. But after recovering from the shock of four students being shot to death my an Ohio unit of the National Guard on that day, chemistry students and professors gathered in faculty homes and in laboratories as far away as Gambler, Ohio, and Pittsburgh, Pa., to finish course work by June commencement.

Several classes—particularly advanced courses taken by small numbers of chemistry majors—met in their teachers' homes, says Dr. Milton Manes, acting chairman of the chemistry department during the absence of vacationing chairman Raymond R. Myers. Professors with larger classes rented space in Cleveland or in local Kent, Ohio, churches. About two thirds of the students in a biochemistry course intended primarily for nursing students continued their lectures and clinical training in two Cleveland hospitals.

For students who were unable to remain in Kent, courses were continued by correspondence. Even laboratory data were sent by mail, so students could finish lab reports. Final examinations were also of the take-home type.

Graduate students were permitted to return to their laboratories after about two weeks, but students in several undergraduate laboratory courses managed to continue their experiments elsewhere. Dr. William F. Barker moved his freshman honors lab to the Gambier campus of Kenyon College. Dr. Manes took his students in instrumental analysis to Pittsburgh's Carnegie-Mellon University for a day of lecture-demonstrations.

General chemistry coordinator Norman V. Duffy and graduate students Kenneth Klassen and Richard Hankett made films of 10 experiments that students in the general chemistry course had been unable to complete. The films were shown at weekly "help" sessions.

"So we really kept going," Dr. Manes says. Attendance in his two classes was better than normal, he adds. Some of the students took an "incomplete" grade in their courses, but most graduated on time.

The faculty senate resolution on May 8 to stop DOD-funded research was a consequence of the events of the preceding few days, Dr. Bonner says. Particularly, he says, it was a consequence of the faculty's support on May 6 for the third of three demands of the national student strike proposed on May 2 by leaders of a Black Panther support rally in New Haven, Conn. The demand called for an end to defense research, among other activities. But there was a sense of concern at the faculty senate meeting that academic freedom might be threatened by a committee review of all research for relevance to university purposes, Dr. Bonner says. The criteria of DOD-funding instead removes research from further judgment.

As at Stony Brook, the Cambodia and Kent State events gave a final push to a concern with DOD funding that had been building at Princeton for several years. On May 6 at Princeton University, the "Princeton

chemistry community" of faculty, undergraduate, graduate, and postdoctoral students, and staff passed several resolutions, including two that dealt with research.

One urged Congress "to seek methods to transfer funds for basic research from the Department of Defense to civilian agencies as soon as possible." Not content to leave the matter entirely up to Congress, however, the following resolution stated that "the department [of chemistry] will henceforth discourage all faculty members from accepting any new grants from DOD or any of its subagencies." Faculty who already have DOD funds "are requested to seek other sources of support, as soon as possible."

POLICIES

On the same day, May 6, the Princeton faculty passed a resolution asking the university council to appoint a committee to study Princeton's policies on DOD and other sponsored research in general. The resolution also gives the committee two proposals to consider: "That the university refuse to accept any outside funds for research on campus which is directly and specifically related to weapons and weapons systems," and "That Congress be asked to chanel all funds in support of research to universities through civilian departments and organizations. . . ." The council will send a report on the committee's findings to the faculty by Nov. 1.

The issue of DOD funding is already becoming a divisive one among faculties, setting science and engineering departments against the humanities and social sciences. There is also growing tension between DOD-funded scientists and those without DOD funds.

At Stony Brook, for instance, most of the faculty who voted in favor of the resolution on DOD funding won't be affected by it, Frank W. Fowler, assistant chemistry professor, says. Some of the faculty feel that they are dependent on DOD funds and they are very unhappy, Dr. Bonner adds.

At Princeton, chemistry professor Donald S. McClure, who receives a minor portion of his funds from the Navy, feels that the resolutions of the chemistry community were passed "in the heat of the moment," with no clear thinking before the meeting. There were perhaps 100 students and 20 faculty present, he says, and the faculty was outvoted.

THREATENED

The principle of academic freedom is very much at issue since the events of May, both with respect to limits on a professor's research and with respect to political positions taken to represent not individuals but entire departments, faculties, or universities. It is generally agreed that academic freedom is threatened or at least compromised by group resolutions on research funding or political issues. But opinions vary on the importance of academic freedom when weighed against other issues. The idea of faculty taking a political position is something new. Stony Brook's Bonner says, and it is disturbing to all of us.

The introduction to the resolutions passed by the Princeton chemistry community may be a good expression of the present mood: "The great dangers inherent in institutional political statements are apparent to us. In particular we are loath to appear to commit those of us who must be absent or who may not be in total agreement with us. It seems to us, however, that the dangers to the university and the Republic presented by our Government's internal and external policies constitute such a clear and present peril that great risks and drastic action are warranted."

But the Princeton resolutions aren't viewed as a threat to academic freedom by chemistry department chairman Kurt M. Mislow. The chemistry community isn't the chemistry department, he points out, and this makes the resolutions simply an expression of opinion from a group of people with common interests. A second point is that the resolutions merely request research funding from a source other than DOD, he says, and leave each faculty member free to take DOD funds if he chooses.

Even if the faculty resolution on DOD-funded research at Stony Brook is not accepted by the administration, the atmosphere created by the resolution is not conducive to freedom of choice on academic matters, says chemistry professor Edward M. Kosower. Dr. Kosower is one of two chemistry professors at Stony Brook whose research is funded by DOD. His research, which he describes as "fundamental chemistry for the investigation of the topology of active sites of enzymes," is indirectly related to the action of a drug used to treat malaria, a disease traditionally studied under grants from the Army.

NO PRESSURE

Dr. Kosower says that he is under no pressure from within his research group or from anywhere else to stop taking DOD funds. Nevertheless, he has had "DOD" painted on his office door, and he discovered his name on a sign at a campus demonstration in 1969 during an international meeting at Stony Brook.

Dr. Kosower has filled out an application for a renewal of his DOD grant. This renewal, along with several grant applications from other departments, has become an unresolved test case for policy on DOD research at Stony Brook.

Beyond the specific issue of DOD-funded research, some chemistry and chemical engineering students agree with assistant chemistry professor Maitland Jones at Princeton that the Cambodia event produced no sudden change in political activity of scientists but simply triggered a release of antiwar feelings that had been formed previously. But others side with chemistry graduate student Andrew V. Nowak of Massachusetts Institute of Technology, who says that many people became newly involved in political activities. They may not stay involved, he says, but these people may be on tap in the future for organizations formed by others who have been active all along.

The extent to which political opinions should be sponsored by departments rather than by individuals acting as such was perplexing to many in the activities that followed the Cambodia event. The problems of academic freedom and dissension raised by positions on DOD funding are raised by any political resolutions.

RADICALS PLAY A CATALYTIC ROLE AT STANFORD

In the course of pursuing the subject of unrest on the campus, our editors noted the historical paradox of how small groups can often alter or control much larger groups or institutions. We asked one of our editors, Lloyd Dunlap, to reflect on this phenomenon on one of the campuses (Stanford) in light of his talks with students, faculty, and administrators. What follows is his brief interpretation:

There is, apparently, a willingness by those at the university to doff the cap in recognition of the catalytic role played by the estimated 50 to 200 students who actually took part in violent activity at Stanford. Chemistry graduate student Fred Schwenk, at least, believes that the violence was probably an essential forerunner to consequent campuswide, peaceful activity. Which brings out an important moral conflict: Activist students, even when peaceful and within their Constitutional rights, contribute to the success of the radical fringe by legitimizing, through their participation or acquiescence, the goals of the lawless element on campus.

Dr. Kenneth Pitzer, whose career as a college administrator was cut short perhaps by legal dissent as well as by the more wild and woolly variety (it is doubtful that any 50 to 200 students, standing alone and totally without additional student support, could paralyze any university of 7000) has said of demonstrations: "In fact, [they are] inherently an ugly, sometimes fierce threat to and infringement upon the rights of researchers to research, students to study, and teachers to teach."

Someone, it appears, must eventually bear the responsibility for campus violence and for the erosion of the very rights to research, study, and teach that Dr. Pitzer spoke of.

It is intriguing to speculate as to whether Ken Pitzer might still be in charge at Stanford if it were not for graduate students Carol Clericuzio, Don Marquardt, Fred Schwenk, and their counterparts across the campus. It is also intriguing to imagine the possibility that demands for relevant education and a humane technology are merely steps along the way toward a totalitarianism of "now"—an impatience with any necessity to work and wait for one's rewards.

Chemists at MIT, Yale, Cornell, and Stanford—as well as those at Princeton—took political positions on the Vietnam war after the events of Cambodia and Kent State. Except at Cornell, this was an unprecedented move at each school. But in most cases, professors took great pains to explain that the resolutions didn't represent official departmental positions, and that students and staff, such as technicians and secretaries, had been included in the voting.

War-related issues have shared the stage at some meetings with university governance, an issue that cuts across all the other issues that provoke campus unrest. For every issue seems to involve a struggle for the power to make decisions that will settle the issue one way or another.

RESPONSIBILITY

University presidents have come under increasing pressure from both students and faculty to share in some degree administrative responsibility. At San Francisco State University, president S. I. Hayakawa believes firmly in the approach he has used with apparent success so far.

As a first principle, Dr. Hayakawa tells C&EN, college administrators must be more decisive. Many administrators have simply failed to realize what was happening until it was too late, he says. "My perceptions of what needed to be done turned out to be accurate. When people said, 'We are going to close the college,' many replied, 'We must listen to the young people.' I said, 'I've heard them.'"

Dr. Hayakawa's manner is clipped and certain. No, he does not think the role of the university has changed or will change. Current new left anti-intellectualism will leave little mark, he believes. Fundamentally, he is firmly convinced that universities are "inevitably intellectual institutions" and that today's furor is just an aberrant blip on the chart of higher education's long history.

Dr Hayakawa believes, however, that some tactics regarding young people should be changed. He would like to see draft exemptions for college students abolished, for example.

"People seriously claim," he notes, "that since expulsion means being drafted, being drafted means going to Vietnam, and going to Vietnam means beink killed, that expulsion is equivalent to execution. It's a silly argument, but people take it seriously."

University presidents at MIT, Yale, Princeton, and Cornell receive high marks from their professors for having "anticipated" issues that might have caused trouble. But there have been several notable resignations of presidents during the past few months. At the University of Wisconsin, president F. Harvey Harrington will step down this fall, having found his own tough stance against disruptors not tough enough to please some state legislators.

INJUNCTION

Other university presidents are also turning to the police or National Guard, as did Dr. Harrington, as campus security forces and student judicial systems prove to be inadequate. There is also a growing use of the court injunction as a means for preserving order. The court injunction has ended sit-ins effectively at some schools, but its use in other instances has seemed repressive to some.

At State University of New York at Buffalo, for instance, a sit-in at a basketball game on Feb. 24 escalated into violence in the student union on the 25th, during which both police and students were injured. Demonstrations and fire-bombings continued, and on March 5 a preliminary injunction requested by the school's administration was issued by a state supreme court justice prohibiting interference with normal university functions.

On March 15, 45 faculty members were arrested at a sit-in in the administration building and charged initially with criminal trespass. A charge for criminal contempt in violation of the injunction was soon added, as well as charges of civil and criminal contempt brought by the university. The university's charges were tried in the state supreme court in April, and the resulting conviction for criminal contempt is now on appeal. The charges brought by the Erie County district attorney will probably be tried this fall.

The injunction was used again to arrest four of about 24 people who walked out of Buffalo's commencement exercises in June. The injunction was finally allowed to lapse on July 15. Late in August, charges against the four were withdrawn by the university.

The injunction isn't repressive as worded, but it seems bad as enforced, says Robert Fleming, university advocate. Because of the injunction, the "Buffalo 45" could have been arrested for meeting anywhere on campus, in principle—with the possible exception of the student union, adds Dr. Richard A. Finnegan, professor of medicinal chemistry and one of the 45 arrested.

While administrators struggle to assert their authority, students are gaining an increasing involvement in the affairs of science departments. In some cases the arrangement is formal, as with student-faculty curriculum committees, and in other instances the involvement is through the more informal mass meeting of a "chemistry community." Student involvement has been invited by the faculty at some schools, while at others the channels of communication have been opened spontaneously in times of crisis.

At Cornell University, the "Baker Lab community" originated in the turmoil of a racial confrontation in April 1969 that climaxed with black students emerging with weapons from Willard Straight Hall after a 36-hour occupation of the student union. There were calls for a strike, chemistry department chairman Gordon Hammes says, and everyone connected with the chemistry department met as often as three or four times a week during that period to discuss issues and responses to the issues.

COMMUNITY

The community of faculty, students, and staff evolved from these meetings, and Dr. Hammes credits its existence with easing the transition of Cornell's chemistry department through the difficult period after the Cambodia and Kent State events. There were again calls for a strike—which did not occur—and the community was a ready-made forum for communication, he says.

Resolutions on national policies were passed by the Baker Lab community after the Cambodia event, and political positions had been taken by the community in the past, Dr. Hammes says. But the resolutions are just "a consensus of the community" and not positions taken by the chemistry department, he emphasizes.

The April 1969 crisis at Cornell also led to formation of a "chemical engineering forum," and the engineering students became active in studying and reforming the curriculum, says chemical engineering chairman Charles Winding. The forum includes everyone in the department and is organized with several committees, such as one on faculty-student relations. During the past year, however, the forum didn't meet regularly and has "practically disintegrated," Dr. Winding says. Now the faculty is concerned with how to get the students involved again.

Although campus unrest may have improved communication between science faculty and students at some schools, there is some concern that science and technology are being viewed with increasing suspicion and hostility by nonscientists. The "concerned members of the chemistry department, University of California, Berkeley," stated the case indicting science in a way that even the most radical leftist might appreciate: "We feel," the 263 (out of 286 who voted) chemists said, "that the technology which science has developed, when applied in maintaining and escalating the war in Indochina, is a brutal bastardization of the entire concept of science."

On the other hand, MIT's chemistry department hasn't been the focus of any student protests, says chemistry professor Frederick D. Greene. Much of the research there is related to health matters instead of military matters, he adds. Buffalo chemistry chairman Howard Tieckelmann finds no antiscience attitudes among students at his school, either. Windows of the chemistry building there have remained conspicuously unbroken during demonstrations and riots, and student activists have even been observed surreptitiously attending chemistry lectures while supposedly on strike, he notes.

ATTITUDES

There may be more subtle changes in student attitudes, nevertheless. Graduate student Don Marquardt says that over his stay at Stanford he has detected an appreciable change in attitudes of incoming students whose high school experiences have been quite different from his. Carol Clericuzio, another Stanford chemistry graduate student who participated in a roundtable discussion with other students and faculty members, notes that students are much less "monastic" than in former years. Does this new emphasis on broad social problems mean less attention to classical chemistry? Yes, almost inevitably, the Stanford participants feel.

From outside the campuses, however, there is a growing clamor for local and state control of schools whose administrators seem unable to control unrest. Academic science is sure to be hurt by the reaction of alumni, trustees, and legislators, in the view of Berkeley chemistry professor George Pimentel.

Already in California, he notes, there have been budget cuts across the board. The summer quarter was simply canceled at US, despite the fact that departments had been staffed and had readied services. Ironically, the summer quarter had been instituted as an economy move and was then dropped for the same ostensible reason. Punitive action has taken other forms: Cost of living rates have been held up; the academic senate has had its flow of funds interrupted; the regents have interferred in faculty hiring and there is even some concern, Dr. Pimentel says, that the regents may invade the classroom by censoring course content.

"I feel that it's going to be terribly important for society to realize that this strong political influence from the right is invading the campus and threatening the quality of our educational system," Dr. Pimentel says, "not just at Berkeley but across the country, and is putting fuel on the fire for the far left, which is doing the same thing. Society has got to recognize that you can't have a good educational system if it's going to be a political tool—either for the right or the left."

IMMEDIATE

At the same eastern universities, however, chemistry professors see a more immediate threat to chemical education. MIT professor Greene says that the decrease in support for basic research at MIT and elsewhere, along with the difficult job situation, may be the chief cause of a real change in the number of students going into chemistry. MIT will have only 52 first-year graduate students going into chemistry this fall instead of the usual 65 to 70, and a lack of funds is the reason. Yale will admit 19 instead of the usual 40.

Perhaps the greatest difficulty in trying to predict what the coming academic year will bring is that the universities are so vulnerable to the unpredictable forces of events beyond their campuses. The level of student involvement in fall election campaigning depend on what the Federal Government does, says MIT graduate student Nowak, just as things would have been different in May if U.S. troops hadn't moved into Cambodia.

It is, at least, easy to agree with Harry Mosher, acting head of Stanford's chemistry department at the time of the Kent State incident, when he says, "it's safe to say that things [in the chemistry department] are not the same as they were and that they'll never be the same again."

## OPERATION MAINSTREAM

### HON. CLARENCE E. MILLER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. MILLER of Ohio. Mr. Speaker, there is no doubt we are facing a crucial challenge in this country in providing increased economic opportunities for our citizens. To date many of our efforts have been stopgap measures and have produced only limited benefits.

However, through effective job training programs we have been able to give many low-income persons the necessary job skills to lift themselves up the economic ladder. Helping people to help themselves has been a hallmark of the Department of Labor's Operation Mainstream program.

Operation Mainstream is an adult work training experience program which places emphasis on work as a means of producing income. Its goal is to enhance the productivity and employability of disadvantaged workers and directly aid their job placement. The training activities involve the improvement of the social and physical environment of the community. This program has been particularly successful in Meigs County, Ohio, where it is being carried out under the Leading Creek Conservancy District. A recent article which appeared in the Athens Messenger describes the contribution the OM program is making in securing meaningful employment for area residents.

The article follows:

JOB TRAINING PROGRAM HELPS MORE THAN 100 IN MEIGS

(By Beulah Jones)

RUTLAND.—A new approach to the job problem in Meigs County which has been carried out under the Leading Creek Conservancy District, has resulted in more than 100 job placements with industries in the area.

Jack Crisp, president of the Leading Creek Conservancy Board, and director of the Operation Mainstream-E Program, which operates under the Vocational Labor Department, reported that 27 enrollees have been trained and placed in jobs with local industry since July 6, and that 112 have been placed in jobs since the program began three years ago in 1967.

Crisp announced this week that the Operation Mainstream-E Program now has five job openings at $1.76 per hour for 30 hours per week.

Under the training and job placement program, enrollees are given training in various types of employment during the operation of small bulldozers, timber work, and they receive wages while learning, then are placed in industry in the area.

Crisp reported that they have had excellent cooperation with local firms and have been able to place all of the trainees with the exception of one or two. Crisp said that contrary to the popular notion that there are no local jobs available, there are openings not filled because of lack of trained workers, especially in the field of heavy equipment operators.

Crisp is hoping to secure approval to purchase larger equipment which will be used to train jobless men in Meigs County and to secure employment for them in the area.

The program is also conducting Remedial Education and Counseling classes in such subjects as math and English, budgeting, consumer credit, first aid, planned parenthood, Christmas shopping, geography and film, and local government.

The Meigs County Ministerial Association members have volunteered their time and assistance in counseling, and the remedial educational classes being conducted for the job enrollees and their families. The trainees are counseled on the importance of being at work daily and on time.

Crisp has received letters from firms that have employed some of the trainees expressing concern with the program.

One of the companies, the F. A. Bartlett Tree Expert Co., in a recent reply to Crisp stated appreciation for the help received from the conservancy program in seeking men for jobs.

The letter from L. W. Rimmons, public utility manager of the company stated: "In the past I have been critical of government programs to assist the poor people. My thinking has been that they were directed more at temporary make work projects, rather than aimed at solving the problem.

"I have observed that your program has at least two long lasting results: cleaning off the creek banks has produced very evident results in reducing flooding in the area. In the process, the men are learning to use the equipment necessary to make a living, utilizing the natural resources of the area.

"Four times in the last six months I have taken men from your project to use as foremen. If these men had not had experience with your project they would not have been able to be leaders."

This same company also pointed out that they could use trained power saw operators from time to time in right-of-way clearing jobs. They also indicate an interest in trained men who could climb and trim trees, saying that they would be willing to send a man to train those men under 30 willing to permanently relocate and at the present time could use as many as 25 trained men throughout the eastern United States.

The trainee program also includes a physical examination and those found to have medical problems will be referred to appropriate health service agencies for treatment needed and follow up, including the Bureau of Vocational Rehabilitation.

Projects of Mainstream seek to reclaim areas seriously damaged due to siltation and sulphuric acid run-off. This would be accomplished by four projects; by building small, but efficient silt retention dams; proper use of lime to sweeten the sulfuric acid deposits; removal of trees and brush from the streams to speed up the run-off of water during a heavy rain, allowing the silt and acid to be flushed out and diluted until no longer damaging, and to plant trees on barren strip mine areas, which will result in building the soil and holding moisture.

It appears that the Conservancy District has a proven record of success in the area of Job Development and Job Placement.

This is the only such program being carried out in the county other than the vocational program at the Meigs High School and the Distributive Job Training courses being offered at the school.

These are the types of programs where Meigs County can work to help itself become self-supporting. This points up the need for a survey of available labor and the type of skill and those desiring to use their skills in industry. There should perhaps be a central reporting agency to collect this information and place it where the public may give such information as well as receive it.

## TOWARD UNDERSTANDING

### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. DINGELL. Mr. Speaker, the respected editor in chief of the Christian Science Monitor, Erwin D. Canham, served as a member of the President's Commission on Campus Unrest. In a column appearing in the September 26–28, 1970, issue of the Monitor, Mr. Canham comments on the Commission's work and its impact on him. I found Mr. Canham's comments to be thoughtful and compassionate. I include the text of the column at this point in the CONGRESSIONAL RECORD:

TOWARD UNDERSTANDING

(By Erwin D. Canaham)

WASHINGTON.—Service on President Nixon's Commission on Campus Unrest has come close to being the most stirring extra-curricular episode in my professional life. And that includes membership on President Eisenhower's Commission on National Goals in 1960.

The need for bridging the gap of understanding between the conventional culture and the "new" culture, largely shared by young people, is very serious indeed. It exists all over the world, but especially in an advanced industrial society like the United States.

VIOLENCE CONDEMNED

The contents of the Scranton commission's report are being very fully covered in news columns, on radio and television. What I should like to emphasize here is how a group of nine very different people, with no partisan political overtones whatever, came to grow together into a very closely agreed perception of the problem.

We nine have all sorts of difference in life experience, in race, in age, in style. But after we had looked at the facts, we had very little difficulty in agreeing, even in language. No one of us would have written our report in the exact terms in which it appears. But on the thrust and general thinking we were deeply in accord.

We are all fully in accord in condemning violence and lawbreaking. We are aware of the shortcomings of university administrations, and point them out. We recognize the operation of deliberate troublemakers, although we identify their limited scope. We describe many of the follies and oversimplifications of some protesters. But what is most important is our profound sense of the challenge and significance of the new culture.

The crisis, in our view, is one of violence on both sides—which must be condemned and prevented—and of understanding—which must be awakened.

We urge President Nixon to draw the nation closer together, rather than drive it farther apart. We feel this must be his own instinct, even if the immediate political advantage may seem to be to take a hard line. But a sharp distinction must be drawn between a hard line manifest as effective and wise law enforcement and a hard line which comdemns, angers or even kills students.

VOTES AT WHAT COST?

The law must be enforced. But an anti-intellectual wave is easy to arouse in the United States today. It might gain votes in 1970. It would desperately harm the country in the long run.

At any rate, readers can ponder our report and recommendations for themselves, and reach their own conclusions. Ours came from our on-the-spot investigations and from direct exposure to many people, young and old. We also discussed and formulated our views for many long hours, pooling our observations and convictions.

We hope our report will not be made a political football, for petty advantage. We regret the political attacks which preceded its issuance, based on misinformation and misjudgment.

ENFORCEMENT NEEDED

We do not think we overestimate the gravity of the crisis. We are aware of some very explosive situations on many campuses today. We recommend the most vigorous law enforcement to cope with them. These immediate sparks must be put out. But such sparks exist in the minds of a vast mass of tinder. It is the tinder that concerns us most, the misunderstanding between groups in American society, the divisions in a nation which is proudly diverse but should never be riven by chasms of misunderstanding and of hate.

Speaking for myself, I learned a great deal in these last few months. I learned more vividly than before why blacks feel themselves increasingly the victims of repressive—they say genocidal—policies even though their material conditions are improving in some ways.

Relatively, and in profound spiritual ways, their status has not improved that much. I learned why many young people also feel themselves repressed and alienated, even though objectively society is growing freer. I learned how their deepest goals express the unfulfilled American dream.

I learned that the American nation must move toward deeper mutual respect, away from violence, toward understanding.

## THE PROBLEM OF SMUT

### HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. DULSKI. Mr. Speaker, one of the most aggravating problems of concern to society is the continued and increasing flow of smut into our Nation's homes.

The Committee on Post Office and Civil Service has been tussling with this matter for years, certainly throughout my membership on the committee. The problem is not an easy one to find legal controls that will stand the test of our courts.

But our committee has been successful in several important instances and has approved additional legislation which is awaiting Senate consideration.

The subject of obscenity and pornography is particularly in the limelight today on the eve of the issuance of the report of the President's Commission on Obscenity and Pornography.

In a special order in the House today I have included the text of the minority report which, regrettably, is the only redeeming feature of the Commission's work. The Commission majority chose to ignore the congressional mandate, went off on a tangent and came up with a fiasco.

Instead of recommending ways to control smut, the majority wants our Nation to follow in the footsteps of Denmark and abolish all related laws.

Who can honestly believe that smut will go away because you repeal all the restrictive laws? Will burglaries cease because you make them no longer a crime? Will auto thefts stop because you make them no longer a crime?

Of course not.

One of the great—though reluctant—conveyors of smut is the U.S. mail. This is despite the vigilant efforts of the Post Office Department. It is also despite the efforts of our committee and the Congress to provide the Department with the needed tools to control the flow.

I was delighted to notice the Postmaster General's concern with this subject when he made it the single theme of a speech last night in Nashville, Tenn. His remarks speak for themselves and since they are so timely I am including them with mine:

REMARKS BY POSTMASTER GENERAL BLOUNT, NASHVILLE AREA CHAMBER OF COMMERCE, NASHVILLE, TENN., SEPT. 28, 1970

This is a time of paradox in the United States. It is a time of great opportunity, and a time of grave concern.

We have within our grasp a future of peace and prosperity with justice and freedom for all. But all about us we see the limits of our freedoms being tested.

We see militants of the left and right claiming absolute freedom where framers of our constitution intended relative freedom.

And today you can work your way through the Bill of Rights and at almost any point find those rights abused.

How we respond to these abuses will have a lot to do with the kind of country we pass on to our children.

How we respond to these abuses will help determine whether they shall inherit a nation that is strong, free and at peace with itself, or a nation crippled by its own moral ambiguity and characterized by a greater concern for its appetites than for its integrity.

PROBLEM OF PORNOGRAPHY

One of the most time-consuming and certainly the most unpleasant part of my job involves dealing with one of those abuses—the problem of pornography.

The sea of obscenity that floods America from within the nation and from without is a truly disturbing example of an open society under attack.

Most disturbing of all is that fact that this attack is predicated on our First Amendment freedoms.

The First Amendment to the Constitution, as you know, is one of the keystones of America's structure of ordered liberty. The amendment says, in part, that "Congress shall make no law . . . abridging the freedom of speech or of the press . . ."

Under the cover of this amendment, the dirt merchants have erected a multi-million dollar empire dedicated to human degradation.

We are now testing whether that empire will stand or if it will be destroyed.

The post office is a primary force in the struggle to see it destroyed.

USE OF MAILS FORBIDDEN

The law forbids the use of the mails for conveying obscene materials. The mere existence of the law, however, has not prevented pornographers from making extensive use of the mails for this purpose.

The number of dealers in mail-order pornography has increased in recent years to something over four hundred; of that number, however, only about twenty at any one time are considered major dealers. These are big-league operators, who use direct-mail advertising on a scale comparable to the nation's large mail-order houses.

These mailers commonly send two and three million advertising pieces into American homes during an advertising campaign, frequently with little or no discrimination as to the recipient.

As a consequence, our children are often subjected to pictures and printed matter of the most vile sort.

As a parent and a grandparent, I find that unacceptable, and I find particularly unacceptable the use of the postal system for this purpose.

But there is another dimension to the matter. In any discussion of the problem of pornography, the effect of pornography on the young always seems to emerge as the central issue. Certainly it is of critical concern.

WHAT ABOUT EFFECT ON OTHERS?

But, personally, I am deeply concerned about the effect of pornography on any human being, and on the civilization of which each human being is a member.

If we consider for a moment those values which underlie our American institutions, we find that what America is all about can be summed up in two words: human dignity.

We seek freedom for our people because freedom is the condition most conducive to human dignity. We seek security for the same reason.

We seek prosperity, because prosperity is the condition most conducive to human dignity; because poverty crushes the human spirit.

At our best we honor diversity—because the right to be what he chooses, to act and live as he chooses are all vital to the dignity of the human being.

MEANING OF HUMAN DIGNITY

But who do we mean by "human dignity?" What is it that gives these two words so much importance to us here in America?

Let me tell you in this manner: In the story of Creation, the Bible says: "And Lord God formed man of the dust of the ground, and breathed into his nostrils the breath of life; and man became a living soul."

As a people we believe that each man has a spark of divinity within him; we accept the sanctity of the human spirit and of the human body. And as we preserve and sustain these, we preserve and sustain human dignity.

As we violate these for sensation or for profit, we act against the dignity of man, and we act against all that we have suffered and struggled to build for more than two centuries on this continent.

Pornography is not simply a threat to the best interests of our children.

It is an act of violence against the human spirit.

LEGALIZATION EFFORTS

With disturbing frequency, however, it is being argued that pornography ought to be legalized.

What are the arguments of those who favor such a course?

One of the most important—the one we pay perhaps the greatest attention to—is the argument that censorship of pornography violates the First Amendment's prohibition against interference with freedom of speech and of the press.

If this prohibition were absolute, the argument would be sound.

But it is not absolute.

It was Justice Holmes who pointed out that the first amendment would not protect a man who falsely shouted fire in a crowded theater, for such an act created the sort of clear and present danger that Congress has the right to prevent. In a different way, but to the same effect, we have laws against libel which make freedom of the press relative.

ABOUT THE ARGUMENTS

The argument that pornography cannot be censored without destroying our civil liberties is, it seems to me, fundamentally wrong.

There is the argument that we cannot be sure pornography has an effect on children.

If we are to take this seriously, then we must ask if any book—if any picture—has an effect on children; indeed, such a position questions the effect of education itself, for education asks that a child respond to what he is exposed to.

And how shall a child respond to a photograph of, for example, a human being, without clothing, bound helplessly, and being beaten with whips to the apparent gratification of all involved.

This example, if you will believe me, is relatively innocuous in comparison to much of the smut that is pushed on people in this country. I am far from being a prude, and I don't want to be hypocritical about that. But I have seen things in this job that would make the most sophisticated people sick to their stomach.

EFFECT ON CHILDREN

And yet we're told we can't be sure this has any effect on children. Who's going to swallow that? Who's going to risk swallowing that?

Childhood is a constant testing of what is fantasy and what is reality; it is a time when values are established.

Are we willing to accept, in the service of some dubious argument about the limits of civil liberty, the argument that we cannot be sure pornography has an effect on children, and the logical extension of that argument, that it therefore ought not to be prohibited?

There is the position that if we legalize pornography, it will soon lose its interest for people, and eventually the traffic will end.

Well, one of the members of the President's Commission on Obscenity and Pornography is the Rev. Winfrey Link from over in Hermitage, and Rev. Link's comment about pornography being eliminated through availability was this:

He said, "I don't run an open sewer through my yard and think that after a month the germs won't bother me any more."

I think that's pretty much to the point.

RIGHTS OF ADULTS

And then, of course, we have the argument that there is no evidence that pornography has an adverse effect on adults, and even if it could be shown to have such an effect, adults have a right to abuse themselves in this manner if they choose.

Let's examine that argument.

I think it is false on both counts.

While it is difficult to establish a cause and effect relationship between an anti-social act and an avid interest in pornography, it is possible to suggest that an inclination toward anti-social behavior may be reinforced and even encouraged by pornography.

Cases in the files of the Post Office Department provide sufficient instances of people acting out in fact the fantasies of the pornography they have collected, of people engaging children in unnatural acts, or seducing children into this behavior, to justify a concern that there is some relationship between pornography and anti-social behavior.

CASES IN POST OFFICE FILES

There is a significant risk, I believe, that some people may be led by curiosity to purchase this material, then to purchase material showing even more bizarre behavior, until finally they are led to commit the same behavior.

Now, is it true that these people have the right to subject themselves to these ill effects if they choose?

I don't think so.

Such a position supposes that these effects are kept within the individual. This is not the case.

The evidence suggests that people can become addicted to pornography just as others become addicted to alcohol or drugs. And just as the alcoholic and the junkie are capable of anti-social behavior beyond their own will, so is the person hooked on pornography.

Some have seriously argued that pornography may have a beneficial effect. This is the theory of catharsis, and it maintains that pornography provides a harmless outlet for sexual energy which might otherwise be expended in some objectionable manner.

PORNOGRAPHY AS THERAPY?

The logic of this position would require that sex crimes should go down as the availability of pornography goes up. All the evidence available indicates that this doesn't happen.

I find that reassuring. I am not a psychologist. Neither am I indifferent to the fact that there are a lot of lonely people in this society.

But is the human condition so mean, and the resources of our culture so limited that the only therapy we can provide for repressed and lonely people is pornography?

As I am sure most of you know, Denmark has lifted certain restrictions on pornography. This has had a dual effect on the United States. It has on one hand substantially increased the flow of pornographic material coming into the country.

And it has, at the same time, increased the pressure from proponents of the legalization of pornography in America. Those who argue for legalization make the case that the legalization of pornography has produced a drop in the sex crime rate in Denmark.

Of course it has.

RESULTS IN DENMARK

Pornography used to be a crime there and now it isn't. Therefore the crime rate dropped. Statutory rape used to be a crime; now it isn't. So this contributed to the drop in the crime rate.

If they legalize burglary, it will drop some more. They'll have the same number of burglaries, but these won't be crimes anymore.

We have gone to Denmark and talked to the authorities there and the real sex crime rate has not dropped. Period.

But this is the sort of reasoning we see applied to the matter. It seems to me that we have a very great deal at stake here and I think we had better stop thinking with our glands and start using some sense about these problems.

If I read the President correctly, this Administration is not going to legalize pornography. Whether the courts will do it is a different question. We hope they won't. In the past decade, some of our courts have been persuaded that the virtual impossibility of defining pornography precisely is sufficient reason for granting absolute license.

FEW PRECISE DEFINITIONS

But there are few, if any, precise definitions in Western jurisprudence. What mathematical formula identifies a "fair preponderance" of the evidence in a civil suit? At what precisely defined point is guilt established beyond any "reasonable" doubt? And what is a reasonable doubt? What is an unreasonable doubt?

There is a problem here, certainly. We are giving fallible men the responsibility for making judgments that go to the heart of our democratic freedoms, and one man's smut may be another man's art.

But it is difficult to suppose that by weighing the content of a work and the apparent intent of the creator and the purveyor of that work that we cannot tell what is pornography and what is not. And where we cannot tell, then let the presumption be in favor of the contested work, and we will still be adequately protected.

I know that the First Amendment to the Constitution says, but I think we read our Constitution selectively. I recommend reading the whole thing right from the beginning which establishes the purpose of that Constitution.

THE FIRST AMENDMENT

It says, We the people of the United States . . . in order to promote the general welfare . . . do ordain and establish this Constitution . . . if there is anything conducive to the general welfare in a graphic representation of the most repulsive filth imaginable, I confess it escapes me. It apparently doesn't escape some of our courts, unfortunately.

I am not overly optimistic about our ability to deal conclusively with this problem. For one thing, even with courts firmly disposed to eliminate this problem, there is the sheer overwhelming fact that our court system is too overburdened to deal effectively with these matters.

This fact alone contributes to the proliferation of pornography.

And for another thing, pornography is a business. It's a very big business, and like some businesses it puts a premium on survival at any cost.

So we have to find a way to reduce the profits of that business and to make it impossible for them to operate at any price.

PORNOGRAPHY IS BIG BUSINESS

In the Post Office Department we have put a great deal of effort into this, and I think we are having some success.

We have more than four hundred dealers under investigation. In the fiscal year just ended we indicted sixty dealers and ten more dealers were indicted in the first two months of this current fiscal year.

So far, we have gotten some fourteen convictions.

On the sixteenth of this month, we won a major victory in this battle when the Ninth Circuit Court of Appeals in Los Angeles upheld the conviction of Marvin Miller. Mr. Miller is a major dealer in pornographic materials and enjoyed the distinction of being singled out for the attention of a national magazine recently.

In February, 1969, he was sentenced to five years imprisonment and a fine of $7,500 for himself and $15,000 for his company. The appeals court which upheld this conviction has reversed pornography convictions in the past. We hope and we believe that we are seeing a new attitude here on this matter.

In the last six months of 1969, we had approximately 178,000 complaints from postal patrons about receipt of pornographic material. In the first six months of 1970, these were down to roughly 105,000.

LEGISLATIVE EFFORTS

The President has put the full weight of his office into this battle. He has asked Congress to make it a Federal crime to put pornography into the hands of anyone eighteen years old or under; to make it a federal crime to exploit a prurient interest in sex through advertising; and to broaden the ability of the homeowner to prevent sexually-oriented advertising material from entering his home through the mail.

Now the Congress has begun to respond; it has passed legislation that will enable homeowners to protect themselves from unwanted sex-oriented advertising, and it is, we hope, to enact the remainder of the President's legislative requests in this area.

But as with everything, the deciding factor in this matter is going to be the American public.

If the people decide against pornography, we can do away with it.

If we endorse stringent laws;

if we elect and appoint discerning judges;

and if, above all, we refuse to patronize the pornographer, then

we can put him out of business.

COOPERATIVE EFFORT NEEDED

Movies show violence because it shows a profit. They show cheap sex because it shows a profit.

It is the same with all media.

If it isn't profitable, it doesn't play.

I'm not suggesting a witch-hunt. I'm sure there are a lot of heavy breathing crusaders waiting in the wings for the call to arise. I'm always a little suspicious of those people, and psychiatrists frequently find them interesting.

I think we can do this job without bringing the lunatics and the smear artists out of the woodwork. At bottom, the answer rests on a very simple foundation, and that is taste.

It is still considered sophisticated in some quarters to scoff at American culture, but for a young nation we have contributed greatly.

Whitman, Robinson, Masters, Sandburg, Frost, Marianne Moore, and T. S. Eliot are all American poets.

Clemens and Melville and Fitzgerald were American writers.

Whistler and Cassatt, Eakins and Pollock and Ben Shahn are American painters.

Copeland and Gershwin are American composers. Blues and jazz are American contributions to music. The greatest symphony orchestra in the world is an American orchestra.

We have virtually stamped out polio.

Our cancer research is among the most advanced in the world.

We have gone to the moon.

OUR MANY CONTRIBUTIONS

These are the things that reflect America. This is the heritage we must pass on. There is no room in America for the commercial degradation of the human spirit.

There is no room in America for those who use our freedoms to destroy the very habits of mind and spirit that give meaning to these freedoms.

It is true, as the poet said, that—

Not only under ground are the brains of men—Eaten by maggots.

Shall we then pay allegiance to those things we have in common with any animal?

Or shall we hold ourselves above the animals, where God placed us, and pay allegiance to that spark of divinity in each of us—the spark of divinity that this nation was founded to protect and to exalt?

Ladies and gentlemen, in the awful balance between human degradation and human dignity, let us put ourselves down on the side of dignity as our people have always done.

## MR. HOOVER'S OPEN LETTER TO STUDENTS

### HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. WYMAN. Mr. Speaker, J. Edgar Hoover's recent open letter to college students is an excellent statement of concern at the highest of Federal investigative levels that the natural intent ideology of youth should not be subverted by advocates of violence from the new left. I am sure the Congress to a man is responsive to the just interests and concerns of young people. In the same sense, I am confident that our governmental system permits adequate expression of those concerns and the fruition of those that are meaningfully constructive in improving the quality and conditions of life in America for all citizens to benefit from.

The door to the offices of Congress is open to the youth of America at all times. Speaking for myself as one Member, I can only say that I value and respect the recommendations of both individual young persons and groups, and will work to see that those which have socially constructive values are implemented—to the extent this is possible in the legislative branch.

I hope all young people will take the time to read and ponder Mr. Hoover's message because it is their world and future that the extremist minority that advocates violence and campus chaos seeks to destroy.

The open letter follows:

AN OPEN LETTER TO COLLEGE STUDENTS FROM JOHN EDGAR HOOVER

U.S. DEPARTMENT OF JUSTICE,
FEDERAL BUREAU OF INVESTIGATION,
*Washington, D.C., September 21, 1970.*

As a 1970 college student, you belong to the best educated, most sophisticated, most poised generation in our history.

The vast majority of you, I am convinced, sincerely love America and want to make it a better country.

You do have ideas of your own—and that's good. You see things wrong in our society which we adults perhaps have minimized or overlooked. You are outspoken and frank and hate hypocrisy. That is good too.

There's nothing wrong with student dissent or student demands for changes in society or the display of student unhappiness over aspects of our national policy. Student opinion is a legitimate aspect of public opinion in our society.

But there is real ground for concern about the extremism which led to violence, lawlessness, and disrespect for the rights of others on many college campuses during the past year.

The extremists are a small minority of students and faculty members who have lost faith in America. They ridicule the flag, poke fun at American institutions, seek to destroy our society. They are not interested in genuine reform. They take advantage of the tensions, strife, and often legitimate frustrations of students to promote campus chaos. They have no rational, intelligent plan of the future either for the university or the Nation.

The extremists are of wide variety: adherents of the Students for a Democratic Society (SDS) including the Weatherman; members of the Young Socialist Alliance (YSA), the Trotskyist youth group; the Communist Party's Young Workers Liberation League (YWLL). Or they may be associated with the Student Mobilization Committee to End the War in Vietnam (SMC), a Trotskyist-dominated antiwar group.

Many are not associated with any national group. The key point is not so much the identification of extremists but learning to recognize and understand the mentality of extremism which believes in violence and destruction.

Based on our experience in the FBI, here are some of the ways in which extremists will try to lure you into their activities:

1. They'll encourage you to lose respect for your parents and the older generation. This will be one of their first attacks, trying to cut you off from home. You'll hear much about the "failures" and "hypocrisy" of your parents and their friends. The older generation has made mistakes but your parents and millions of other adults worked hard, built, sacrificed, and suffered to make America what it is today. It is their country too. You may disagree with them, but don't discredit their contributions.

2. They'll try to convert you to the idea that your college is "irrelevant" and a "tool of the Establishment." The attack against the college administration often is bitter, arrogant, and unreasoning. SDSers, for example, have sought to disrupt the colleges by demanding the right to select professors, determine the curriculum, and set grading standards.

3. They'll ask you to abandon your basic common sense. Campus extremism thrives on specious generalizations, wild accusations, and unverified allegations. Complex issues of state are wrapped in slogans and cliches. Dogmatic statements are issued as if they were the final truth. You should carefully examine the facts. Don't blindly follow courses of action suggested by extremists. Don't get involved in a cause just because it seems "fashionable" or the "thing to do." Rational discussion and rational analysis are needed more than ever before.

4. They'll try to envelop you in a mood of negativism, pessimism, and alienation toward yourself, your school, your Nation. This is one of the most insidious of New Left poisons. SDS and its allies judge America exclusively from its flaws. They see nothing good, positive, and constructive. This leads to a philosophy of bitterness, defeatism, and rancor. I would like you to know your country more intimately. I would want you to look for the deeper unifying forces in America, the moods of national character, determination, and sacrifice which are working to correct these flaws. The real strength of our Nation is the power of morality, decency, and conscience which rights the wrong, corrects error, and works for equal opportunity under the law.

5. They'll encourage you to disrespect the law and hate the law enforcement officers. Most college students have good friends who are police officers. You know that when extremists call the police "pigs" they are wrong. The officer protects your rights, lives, and property. He is your friend and he needs your support.

6. They'll tell you that any action is honorable and right if it's "sincere" or "idealistic" in motivation. Here is one of the most seductive of New Left appeals—that if an arsonist's or anarchist's heart is in the right place, if he feels he is doing something for "humanity" or a "higher cause," then his act, even if illegal, is justifiable. Remember that acts have consequences. The alleged sincerity of the perpetrator does not absolve him from responsibility. His acts may effect the rights, lives, and property of others. Just being a student or being on campus does not automatically confer immunity or grant license to violate the law. Just because you don't like a law doesn't mean you can violate it with impunity.

7. They'll ask you to believe that you, as a student and citizen, are powerless by democratic means to effect change in our society. Remember the books on American history you have read. They tell the story of the creative self-renewal of this Nation through change. Public opinion time after time has brought new policies, goals, and methods. The individual is not helpless or caught in "bureaucracy" as these extremists claim.

8. They'll encourage you to hurl bricks and stones instead of logical argument at those who disagree with your views. I remember an old saying: "He who strikes the first blow has run out of ideas." Violence is as ancient as the cave man; as up-to-date as the Weatherman. Death and injury, fear, distrust, animosity, polarization, counter-violence—these arise from violence. The very use of violence shows the paucity of rational thought in the SDS, its inability to come up with any intelligent critique of our society.

Personally, I don't think the outlook for campus unrest this year is as bleak as some prophets of pessimism proclaim. The situation at some colleges is serious, but certainly not hopeless.

Along with millions of other adults, I'm betting on the vast majority of students who remain fair-minded, tolerant, inquisitive, but also firm about certain basic principles of human dignity, respect for the rights of others, and a willingness to learn. I am confident our faith has not been misplaced.

## THE BEST ADVICE I EVER RECEIVED

### HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. SCHWENGEL. Mr. Speaker, in a column entitled "The Best Advice I Ever Received," Maj. Gen. Joseph G. May, adjutant general of Iowa wrote the following.

This is an excellent, reflective dissertation from which all could benefit. I encourage all my colleagues to read it:

THE BEST ADVICE I EVER RECEIVED

When I was appointed a second lieutenant, I received the following advice from my first battalion commander (Col. Charles Radosevich, deceased), which I have used as a guiding principle during my military career:

"As a leader of men you will never be more than their evaluation of you, and it is that evaluation that will be your real efficiency report. The individual soldier has a very sensible view toward leadership. From most of them you can expect courage to match your courage, guts to match your guts, endurance to match your endurance, motivation to match your motivation, esprit to match your esprit and a desire for achievement to match your desire for achievement.

"You can expect a love of God, country and duty to match your love of God, country and duty. They won't mind the heat if you sweat with them. They won't mind the cold if you shiver with them.

"From time to time you'll receive orders appointing you to a command, but remember this . . . There are no orders, no letters,

no insignia of rank that can appoint you a leader . . . Leadership is an intangible thing. Leaders are made . . . they are not born . . . and leadership must be developed within yourself.

"You can't wear leadership on your sleeve, shoulder, cap or calling card . . . be you a lieutenant now . . . or a higher rank in years to come. You've got to convince the men in the ranks of this fact . . . and they'll meet you more than halfway.

"You don't accept troops . . . They were there long before you got there . . . They accept you . . . and when they do you'll know.

"It won't be with a beating of drums or the waving of flags . . . nor can you expect to be carried off the drill field on their shoulders. But maybe it will be something as subtle as someone raising a canteen cup of beer at a company party and saying, 'Lieutenant, you're O.K.' . . . Just that . . . and nothing more. Then you'll know you've passed the test."

---

## SPEECH OF HON. DURWARD G. HALL

---

## HON. TIM LEE CARTER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. CARTER. Mr. Speaker, on Monday, September 21, 1970, U.S. Representative DURWARD G. HALL spoke to the members of KEMPAC, Louisville, Ky. His remarks were appropriate; they covered the spectrum of medical needs of our country and also proposed developments in the medical field. I commend them for your perusal:

SPEECH BY REPRESENTATIVE DURWARD G. HALL

I thank you so much for your kind words of introduction, after hearing myself so eloquently eulogized, I feel that the only decent thing left for me to do is to expire.

Seriously, it goes without saying that I am more than pleased to be with you this evening. Your State of Kentucky has contributed so much to the history of this Republic, that I always look forward to my visits.

Kentucky gave us Churchill Downs and the run for the roses. Kentucky gave us the baron of basketball, Adolph Rupp. Kentucky gave us great statesmen like Abe Lincoln, Henry Clay, and Jefferson Davis.

It was Kentucky's Alben Barkley who teamed with Missouri's Harry Truman to pull off the political upset of the century.

And, of course, I would be remiss if I did not pay tribute to another great Kentuckian, a man who coined a phrase that ranks with "I've just begun to fight", and "don't give up the ship." I refer to those imortal words that ring throughout the land, "it's finger lickin' good", by Colonel Sanders. Bourbon, my ancestors and AMA friends—Ingram and Long—Joe Sandford and Tim Lee Carter.

All joking aside, I would like to spend the remainder of my time discussing what I deem to be the proper role (if *any*), for the Federal Government in the area of health insurance.

There is little doubt that the concept of national health insurance is being built into a major issue for the 1972 presidential and congressional elections. More than 300 bills suggesting changes in medicare and medicaid have already been tossed in the hopper during this session of the Congress.

As of now, the health care "sweepstakes," counts at least six major entries in the field, with more in various stages of development.

There is the AMA "medicredit" bill, the UAW-Kennedy proposal, one by Governor Rockefeller, another by Senator Javits, Congresswoman Griffiths has another, and the list goes on. *Even I* am going to offer an idea or two that could possibly end up as a compromise version of all.

To date, of all the plans that I have had an opportunity to review, the AMA's "medicredit" appears to be the most preferable, mainly because it neither disturbs the medical care system, but properly improves it, nor does it displace the in-being insurance industry with a federally operated program.

The AMA's proposal is designed to encourage all people to be protected against illness through health insurance policies. They would hope to achieve this end by a system of tax credits.

The AMA has suggested that all families having an income tax liability of $300 per year or less, be given a certificate that could be used to pay health insurance premiums. This certificate would buy a policy from the private carriers, with certain specifications on what the policy would have to provide. Those families with larger income tax liability would have available an income tax credit. The resulting benefit would be 100 percent of the health insurance premium when the income tax liability is $300 or less. The benefit-ratio would then grade downward for persons with higher income tax liability.

The acceptable *minimum* health insurance policy for those with income tax liability of more than $300 would be similar except that a system of cost-sharing would be permitted.

The cost of the AMA's plan has been estimated to run something like $10.2 billion per year, to the Federal Government. If this plan were to be adopted, the elimination of *medicaid* would result in a savings of $2.6 billion, giving a net cost of about $7.6 billion. There are those who say that the figure is too low, and that the cost would probably run considerably higher. I might add that, historically, the House has not dealt favorably with "tax credit" plans.

Incidentally, the AMA plan would incorporate a proposal for *peer review*, by the *State* medical societies.

Most of the national publicity in the health field of late has been focused on the so-called "committee of 100" proposal. This plan, introduced in the Senate by Teddy Kennedy, is the brainchild of the late Walter Reuther, and is the most sweeping, and expensive of all. I might add that in my opinion it is also the *worst*.

This plan, national in scope, would apply to all residents of the United States. The benefits provided would be most comprehensive, and would have few limitations, and cost sharing provisions. The benefit structure would be so devised as to strongly favor comprehensive *group practice prepayment plans*, and to discriminate *against* individual practitioners.

Among the services to be provided *without cost sharing* would be:

Hospital, nursing home (except for a 120 day maximum per illness), physicians' services, drugs, dental up to 15 years of age, even eyeglasses and ambulances. The list is almost without end.

The various providers would be reimbursed in a manner that would strongly control costs; in essence, by a "strait jacket" method. The total funds available, after first using 2 percent to 5 percent for developing group practice prepayment plans (GPPP's) would be *apportioned* on an *"appropriate"* basis to the ten regions of the Nation. The money available in each region would then be apportioned to the various institutional providers of services on a "cost" basis based on *advance* budgeting. Whatever money would be left over, would be divided up among those physicians not in the GPPP's, or agreeing to provide services on a capitation basis in proportion to their charges.

The Kennedy-UAW Committee for National Health Insurance, now chaired by Leonard Woodcock, the new president of the United Auto Workers, would be financed from three sources. 35 percent by employer payroll taxes (on total payroll, without a maximum taxable earnings base): 25 percent by contribution of individuals, at a uniform rate on the first $15,000 of earnings and other income; and 40 percent from general revenues, that's you—the taxpayer! In other words, the Federal Government subsidy would be equal to two-thirds of the combined employer and individual taxes. Total cost of this package has been conservatively estimated to be a "whopping" $40 billion annually to the Federal Government, and that figure may be way too low.

Now, I have offered *another* plan, that would, I think, do the job that has to be done correctly as need be, while at the same time holding down the cost.

As one of the three physicians in the House of Representatives, I have long been concerned with the health of the American people, and legislation proposed to the Congress to deal with it. Recently, I have felt it incumbent on me to offer legislation based on my personal knowledge of the field of medicine, and that legislative expertise (if I may use the sophisticated term), that I have gained from ten years in the Congress.

I now have on my desk a bill which I will soon offer that is designed to serve a *two fold* purpose. It will provide for those who are unable to provide for themselves, and will also assist those who *are* able to meet their health care responsibilities; yet run the risk of being "wiped out" should an extensive *catastrophic* illness or injury occur.

First, let's examine part I, which is directed toward the "medicaid" type recipient. This part will in fact do away with the *medicaid* program should it be enacted.

Research has shown that the average cost, per individual, paid out by *medicaid*, is in the neighborhood of $400 per person, per year. Let me stress that this is the *national average*, the figure is arrived at by simply dividing the total number of people receiving public assistance (about 1 million), and dividing by the amount of money paid out, which is about $4.5 billion. Of that $4.5 billion (60 percent), was the *Federal share*, with the remainder paid by the states.

For these individuals, my bill specifies that the Federal Government will purchase for them an insurance policy, from the regular, established, private, insurance companies. This *would mean* of course, that the Government would keep up the premiums.

In order to preserve the Federal-State relationship, *the States would* participate in the program, whenever the recipient used up the benefits provided in his federally furnished policy. This would mean that the States would assume the financially devastating, but rare expenses of the catastrophic cases (injury as well as disease), based on the $400 national average figure, the States share would be roughly 15 percent.

Figuring prominently in such a plan would be the eligibility requirements. They would, quite naturally, be based on the economics, definition, and cost-of-living figures, of the area in which they lived. Where living is high such as New York, the eligibility requirement might be as high as $4,500 for a family of four. Where the living is a bit easier, it could be as low as $2,600. In all probability, an average national amount of about $3,500 would emerge. (That will get you on the federally established poverty roles anyway.)

I feel that the States would be more than willing to go along with a proposal such as this for three reasons:

1. It would *cost them* considerably *less* in "pay out" than they are spending. Now days most all State governments are singing the economic "blues."

2. They could *plan*, budget, and appropriate for it much easier. They would have a pretty accurate and dependable basis on which to calculate and work.

3. The States would be acting in their *tra-*

*ditional role* of assuming long term care such as tuberculosis, mental illness, etc.

Although the Federal share would be increased by about $1 billion annually, the Federal Government should be agreeable to such a plan because sudden fluctuations and vagaries would be eliminated. It would improve planning and budgeting, if nothing else. It would avoid big State "steals"!

As far as national health coverage is concerned, part II of my bill involved itself in that area by offering assistance to those who are financially able to purchase their own health plan, but could find themselves in financial difficulty in the event of a *catastrophic illness.*

Research has shown that the average *quality* health insurance policy gives protection of up to about $5,000. That assures the *average* beneficiary of good *quality* care. However, they can become vulnerable when those dollars are used up. The daily newspapers frequently point up examples of such occurrences. If these individuals are to be included, it will require a financial contribution on their part, albeit an insignificant amount. Remember, as you medical doctors know best, the catastrophic case is relatively *rare,* exceptionally costly to the family—even to the point of ruinous accidents, living vegetable cases, and chronic illness, but *most* publicized; yet percent least part of medical expense.

1. For those who contribute to social security, there would be an additional .4 percent placed on their taxable earnings. This amount paid by the individual worker, would total something like $40 a year if he was in the $10,000 bracket.

2. Those who are not in the social security framework would pay, on their income tax return, .4 percent of their taxable earnings.

3. All persons with gross non-earned income in excess of $2,000 would pay on their income tax return, .4 percent of those earnings. There would be the proviso, that no one individual would pay more in total, than .4 percent times the maximum taxable earnings base under social security.

I have been given estimates that about $2.5 billion could be collected annually under such a system.

This money would be placed in a "pool" from which the Social Security Administration would be able to reimburse 90 percent of the medical expenses per family, in excess of either $5,000 annually *or,* if larger, 25 percent of the gross income.

For individuals 65 and over, because of their "medicare" protection, the benefit would be 90 percent of the medical expenses (per family) actually paid by the individual (or family) in excess of either $1,000 annually or, if larger, 25 percent of the gross income. In other words, a Part I Medicare policy is now worth approximately $4000 annual when used to maximum.

All government efforts to date have been directed at *first* medical dollar coverage, with the relatively large administrative costs involved in processing small claims, that eat away at the substance of the program. *My aim,* is to protect the public from disastrously *high* costs, and at the same time, give meaningful relief to those hardest hit by extensive medical expenses, while making the greatest possible use of the dollars available.

It appears that the time is fast approaching when drastic changes in the nation's health programs will be brought about by the Congress. The programs offered to date from the *socialistic* Kennedy-United Auto Workers Committee for National Health Insurance proposal costing $40 billion annually, to the AMA's package tabbed at $7.6 billion. Mine is still under all, estimated at about $4.6 billion.

It is important that the initiative be taken by *responsible* people, lest we find ourselves "waiting at the church" while some "glib talking, irresponsible, socialist-oriented, super salesman," foists off another unworkable ill-advised, and costly piece of legislation on the American people. It is my intention to do my utmost to keep such a travesty from occurring, and I suggest that you do the same.

In a little more than a month, a most important election will be held. Let me recommend that before you go to the polls, you look carefully into the qualifications of the individual whom you intend to support, and more importantly, where he stands on the issues of the day. This is elementary to casting any vote, but it must be said over and over. A.M.P.A.C. and K.E.M.P.A.C. gentlemen, as far as the health of the people of this republic is concerned, we must be able to make the best deal possible. For the nation, the States, the family, and the needy individual. We must do it prudently and unemotionally. I am speaking of quality health care for all people, not just those in absolute need. Certainly not for the greedy! The time for action is now. I hope we are up to the task.

## PURPOSEFUL ACTIVISM

### HON. LAURENCE J. BURTON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. BURTON of Utah. Mr. Speaker, while a minority of our young people are out protesting, the majority of our young Americans are engaged in a motley assortment of worthwhile projects. These young people should be given credit for committing themselves to such admirable social service projects as: tutoring, recreational programs in nursing homes, work with mentally retarded, and sundry community action programs. These industrious young people should be recognized in this time of news-grappling radicals. I submit to the RECORD an article praising productive "student activism":

[From the Provo (Utah) Daily Herald, Sept. 18, 1970]

CONSTRUCTIVE STUDENT EFFORT

Students who participate in campus demonstrations are far outnumbered by those taking part in constructive activities aimed at improving conditions in the community around them.

A survey of the 101 universities holding membership in the National Association of State Universities and Land-Grant Colleges reveals that student involvement in social service projects will be at an all-time high this fall.

Activities have expanded to the extent that many campuses have set up centralized offices to match student volunteers with community needs.

Rutgers University, for example, has appointed a community development specialist who will take over the coordination of student volunteers this fall. North Carolina A&T University has set up a similar position.

Other universities with central offices for volunteer placement include Pennsylvania State University, the University of Kansas, the University of California at Irvine, Clemson University, Delaware State College and the University of Arizona.

In addition, new courses, many of which call for community service as part of their requirements, are also springing up.

Some examples of the "new activism":

At Michigan State University 10,000 students (one out of every four MSU students) worked through its Volunteer Program Office last year.

At the University of Illinois, 800 students assisted 40 different community agencies in a variety of projects, including tutoring, recreation work and programs in nursing homes, mental health and retardation.

At the University of California in Santa Barbara, 3,000 students donated nearly 160,000 hours in community service.

At Michigan State University, students opened a 24-hour refuge center, "The Raft," where juvenile runaways could come for shelter or just to "rap"—talk—with someone who tried to understand them. A student agency at the University of Colorado has a "rapline" people can call when they need help.

At Montana State, architect students are helping Blackfeet Indians plan community buildings and University of Connecticut students are taking performing artists and exhibits into prisons to interest prisoners in vocational or avocational opportunities in the arts.

The list is a long one—at least 101 universities long. It's something to keep in mind to balance against the news telling of the latest campus riot.

## "NATIONAL WOMEN IN EDUCATION DAY"

### HON. ALPHONZO BELL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. BELL of California. Mr. Speaker, I have introduced today a resolution calling upon the President to designate the first day of November each year as "National Women in Education Day." In a time of vigorous public debate over issues of public importance, the great majority of our Nation's women are pursuing educational and community service goals which will better enable them to exercise their franchise and the leadership which they have gained through responsible use of their vote.

In an effort to encourage women to continue their educational pursuits, Aware International—Association for Women's Active Return to Education—has offered scholarships for both part-time and full-time study to women beyond the usual college age. This year, Aware International is celebrating its 50th year of distinguished service and activity.

In addition, its members are joining the celebration of other anniversaries of importance to women this year including the 50th anniversary of women's suffrage.

It is a privilege to contribute to this effort by commending to my colleagues the resolution calling for observance of "National Women in Education Day."

JOINT RESOLUTION

Authorizing the President to proclaim annually the day of November 1 as "National Women in Education Day."

Whereas, it is recognized that a complex, technological society such as the United States requires expanded knowledge, acquired both formally and through experience, by all its citizens;

Whereas, the genius and skill of our Nation's youth is dependent in great measure upon the wisdom and technical knowledge of

the Nation's women during the critical formative years;

Whereas, historically women have had less opportunity than men to participate to their own full educational potential;

Whereas, the women of this Nation have continually and persistently, at a cost of great personal sacrifice in many instances, expended energy, money, and time in acquiring advanced education from the Nation's great institutions of learning;

Whereas, further achievements by women will be encouraged by recognition of the contributions of the educated women of this Nation; Now, therefore, be it

*Resolved by the Senate and House of Representatives of the United States in Congress assembled,* That the President is hereby authorized and requested to issue annually a proclamation designating the first day of November as "National Women in Education Day" and calling upon the people of the United States to observe such day with appropriate ceremonies and activities.

## SAN DIEGO BAY MODEL FOR THE UNITED STATES

### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. DINGELL. Mr. Speaker, the September 25, 1970, issue of the New York Times carried an excellent article by Mr. E. W. Kenworthy on the effort to clean up San Diego Bay. Mr. Kenworthy's article makes it clear that our water pollution problems can be resolved if we but utilize the knowledge and technical means which are at hand.

So that my colleagues may have an opportunity to read this article, I include it at this point in the RECORD:

SAN DIEGO CLEANS UP ONCE-DIRTY BAY AS MODEL FOR UNITED STATES

(By E. W. Kenworthy)

SAN DIEGO.—In this sea-washed city where the sun shines an average of 353 days a year and the mean high temperature of the coldest and warmest months varies by only 14 degrees, autumn comes imperceptibly.

The warm waters of San Diego Bay are blue and sparkling and clear. They are also clean—with a purity well above the anti-pollution standards set by the State of California.

As recently as the summer of 1963, however, the bay was not blue. It had a brownish-reddish cast, imparted by the proliferation and death of phytoplankton, the salt-water equivalent of the algae that is causing the eutrophication of so many fresh-water lakes.

The transformation from the 1963 condition was cited last month by the President's Council on Environmental Quality as one of the two outstanding examples in the nation of water quality recovery by a municipality. The other example, cited in the council's first annual report, was Seattle's cleanup of Lake Washington.

These two cities have demonstrated that waters receiving sewage can be cleaned up by a combination of aggressive and imaginative leadership by a few citizens and a willingness by the electorate to pay off the bonds. In Seattle the charge is $2 a month per household; in San Diego it is $1.50.

LITTLE FEDERAL HELP

Both cities undertook the job long before environmental decay became a national issue, and they finished it with almost no Federal subsidies. The Federal Government contributed about $8.5-million to Seattle's $145-million program and about $2.5-million to San Diego's $60-million program.

San Diego Bay is a crescent-shaped basin 15 miles long and one-quarter to 2½ miles wide, with a single outlet to the Pacific at Point Loma. It is the home port for one-fourth of the Navy's active ships and 100 tuna fishing vessels and is a port of call for about 700 commercial ships a year.

On weekends the bay is dotted with white sails and churned by the wake of power boats. The bayside beaches opposite the United States Naval Station, where aircraft carriers, cruisers and destroyers are berthed, are crowded with swimmers and water skiers. The sea-walls of harbor and shelter islands are lined with fishermen.

Posh motels have recently been constructed on harbor and shelter islands.

In 1963, though, the plankton "bloomed" wildly as a result of the nutrients—phosphates and nitrates—supplied by the sewage that was dumped into the bay from San Diego and its suburbs. The sewage discharge had risen from 37 million gallons a day in 1951 to over 60 million gallons a day. Most of the sewage received inadequate primary treatment (the settlement of solids) from a single, overloaded plant. The City of Coronado was dumping into the bay 2.5 million gallons of raw sewage a day, and the Naval Amphibious Base was dumping 200,000 gallons.

In addition, there were 3.7 million gallons a day of industrial discharges, mostly from tuna canneries and a kelp processing plant, plus an undetermined amount from naval and commercial ships.

PLANKTON DECOMPOSITION

The oxygen in the bay waters was consumed not only by these sewage and industrial wastes but also by the decomposition of plankton after death.

Water clarity—as measured by the distance from the surface that an eight-inch disk can be seen—was an average of six feet and was down to one foot in some areas.

Along one stretch of the waterfront in the central city, solids had formed a sludge mat on the bay floor 900 yards long, 200 yards wide and seven feet deep.

Most serious of all, from a public health viewpoint, was the density of coliform bacteria. In 1956, because of an alarming increase in the coliform density, San Diego, Coronado and the Naval Amphibious Base were ordered by the state's Regional Pollution Control Board at San Diego to chlorinate sewage discharges. While this emergency program reduced coliform intensity in some areas, it was not able to keep up with the city's increased discharge, and in some areas the count was 10 times the permissible level. Several beaches were quarantined.

The prelude to the San Diego success story was long, arduous and often disheartening. It began in 1949 when the State Legislature passed a water pollution control act, providing for nine regional pollution control boards to be appointed by the Governor.

The San Diego regional board was set up in 1950, and two men immediately stood out as leaders. They were Dr. J. B. Askew, the county health officer, who served for 19 years, 13 as chairman; and the late Harold E. Miller, a sanitary engineer who was the board's first executive officer and who later became executive officer of Seattle's metro sewerage system.

In 1952, the board employed the State Departments of Health and Fish and Game to make environmental studies of the bay. They revealed dangerous bacteriological concentrations, oxygen depletion and sludge deposits.

The same year a team of three engineers hired by San Diego County at the instigation of the regional board prepared a study of sewage disposal needs.

The engineers, Mr. Miller and the regional board all agreed that the problem could only be dealt with on an area basis; that interceptors should be built around the bay leading to a primary treatment plant on the ocean side of Point Loma, and that the treated effluent should be dumped far offshore in deep water through diffusers—openings in the pipe that would scatter the discharge.

In 1953 the city and county accepted the engineers' recommendations. The city decided that it should finance, construct, operate and own the core facility and negotiate contracts with surrounding incorporated suburbs and sanitary districts for tie-ins to the system.

NEW SITE IS SOUGHT

In 1954 the city went to the voters with a $16.5-million bond issue. There was no significant political or industrial opposition to the project because it was obvious the bay was so grossly and dangerously polluted that, as Dr. Askew said in a recent interview, the system either had to be enlarged or a whole new system had to be built.

Nevertheless the bond issue was defeated. Dr. Askew attributed this to three things—first, many people thought the planned plant on Point Loma was too close to a residential area; second, there was considerable opposition to the plan for paying off the bonds through an ad valorem property tax rather than by a standard monthly charge for each household, and finally, the inclusion on the ballot of a referendum on fluoridation of drinking water helped to defeat the sewerage bond issue.

As a result, the city spent $100,000 a year over the next five years for oceanographic and biological studies with the hope of finding an alternative site. Another engineering concern was engaged in 1958 to prepare a new plan.

By this time, the situation in the bay had become so bad that, despite emergency chlorination programs, the beaches had to be put under quarantine and the Navy issued warnings to all personnel about bodily contact with bay water.

The new engineering report moved the plant almost to the end of Point Loma. Where the old plan would have run the outfall only 7,500 feet into the ocean at a depth of 125 feet, the new plan called for discharge 11,450 feet—over two miles—from shore at a depth of 200 feet through two Y-shaped diffuser legs, each 1,368 feet long.

In 1960, the voters overwhelmingly approved a $42.5-million bond issue. Construction began in 1961 and the system began operating Aug. 15, 1965. The system now serves seven cities and six sanitary districts and all the naval shore installations.

The final cost of the core system was $51-million, and, with ancillary projects, the total cost was $60-million. The metro now serves a population of about one million; it is designed to serve 2.5 million.

The results of the project were prompt, according to Dennis A. O'Leary, executive officer of the San Diego Regional Water Quality Control Board.

FROM BROWN TO BLUE

"Almost immediately," he said in a recent interview, "remarkable change occurred. We had expected slow improvement, but the bay quickly began to clear as if there had been a few, great tidal flushings. Where the bay had been brown and red, it became blue and sparkling."

The phytoplankton disappeared at the outset. As early as April, 1964—eight months after the system began operating—sculpin, sole, sand bass, steelhead trout, silver salmon, bonefish, black sea bass, barracuda, bonito, yellowtail, octopus, shark, seal and porpoise "were swarming back into the bay," according to a 1965 report by the United States Public Health Service.

Dissolved oxygen is now at safe levels, water clarity ranges from 10 to 30 feet and the

sludge beds have been cut in half. Most important, coliform density has decreased so that the beaches are now safe for swimming, although it remains high near naval piers where ships continue to dump raw sewage.

The discharge of sewage, galley and laundry wastes from naval ships and of toxic industrial wastes from the North Island Naval Air Base is the biggest remaining problem in the cleanup of the bay.

The Navy in 1968 announced a five-year, $253-million plan to eliminate raw discharge from vessels. Congress, which must appropriate the funds said in this year's Water Quality Improvement Act that all boats—naval, commercial and pleasure—must be fitted with waste disposal devices.

Outside the Navy, the most troublesome industrial wastes come from Kelco, a kelp-processing plant, and from tuna-packing plants. But a tie-in with the metro system is expected to be completed within a year.

A year ago an official from the Federal Bureau of the Budget asked Dr. Askew, "What institutional mechanisms did you employ to get this cleanup of San Diego Bay?"

Dr. Askew smiled and said: "We said to the people of San Diego, 'you regard yourself as a high-quality community, then let's have a high-quality response to your problem."

## A STERN DRUG BILL

### HON. JOHN S. MONAGAN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. MONAGAN. Mr. Speaker, the response to the passage of the new drug bill has met with an extremely favorable public reaction.

People are increasingly dismayed about the growth and depth of the drug problem and the evidence that the Congress is deeply concerned about this matter and seeks to provide legal means of coping with it has been received with general approval.

An excellent analysis of the bill appeared in the Waterbury, Conn., Republican on September 29 and this editorial describes the bill so clearly and conveys its message so completely that I am happy to reproduce it here for the benefit of my colleagues.

Let us hope that with the passage of this bill we have constructed a foundation upon which we can build a competent system for controlling the traffic and illegal use of drugs. The article follows:

HOUSE VOTES STERN DRUG BILL

Responding to the menacing drug crisis in the nation, the House has passed a bill by a 341 to 6 vote designed to impose stiffer penalties on narcotics traffic but with reduced penalties for users. The legislation, which is similar to that passed by the Senate last January, should provide additional impetus for controlling drug abuse while relaxing punitive sentences for the unfortunate user.

The differences between the House and Senate will be reconciled by a joint conference committee. One important measure incorporated in the House bill is the muchly debated "no knock" provision. This gives federal agents with warrants permission to break into homes or offices if they believe those inside would destroy illicit drug supplies if notice were given.

The "no knock" provision has been opposed on the basis that is is a violation of privacy. The limitation placed on the provision by restricting the privilege only to federal narcotics agents who must first obtain a search warrant makes it unlikely that it will be misused or abused. A surprise entry and search is often the only way narcotics agents can obtain evidence of drug pushing.

The bill reduces possession of narcotics for one's own use from a felony to a misdemeanor, but stiffens punishment for those convicted of distributing drugs for profit. Pushers who can be connected with the Mafia or other syndicate drug peddling will draw extra-long sentences.

The House bill wisely differentiates between the unfortunate user and the profit-motivated pusher, who indiscriminately destroys lives through distribution of his pernicious wares. Stern application of the search and punitive powers incorporated in the bill should do much to curb the drug traffic which has reached epidemic proportions in this country.

## AWARD-WINNING SHAKER HEIGHTS HIGH SCHOOL PRESENTATION OF EURIPIDES' "THE TROJAN WOMEN"

### HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. VANIK. Mr. Speaker, although the August recess provided an opportunity for Members to return to their congressional districts and work on local problems, it unfortunately prevented the House from having an opportunity to see the performance in Washington of Euripides' "The Trojan Women," staged in the Nation's Capital by the drama department of the Shaker Heights, Ohio, High School of my congressional district.

The Shaker Heights High School drama department, under the brilliant directorship of Mr. John C. Barner, presented the play—by invitation—to the National Convention of the American Educational Theatre Association which met at Gallaudet College on Sunday evening, August 23, at 8:30 p.m. It was my hope that if Congress had been in session, an additional performance could have been given in one of the caucus rooms of the House Office Buildings for Members and staffs as a demonstration of what creative drama work can be performed at the high school level by a high quality educational system.

I was privileged to be present for the Washington performance at Gallaudet College. It was an exciting and stimulating experience.

The 58 Shaker Heights High School students in the play spent much of the summer working at odd jobs on the East Side of Cleveland to raise the money to come to Washington to present the play. The students, together with a parents' advisory committee raised a total of some $3,000 necessary to obtain the two buses, scenery truck, and cover room and board in Washington. In sum, the sending of the students to Washington was a total community effort—and an effort the community can well be proud of.

The excellence of the Shaker Heights presentation is just another example of the work of this remarkable school district. Just 2 years ago, Lomond Elementary School in the Shaker Heights system was rated as one of the 10 best primary schools in the Nation. Several weeks ago, it was announced that the Shaker Heights High School had more National Merit Scholar winners than any other school in the State of Ohio and, with 36 winners, probably established an all-time record in Ohio.

I believe that the quality of the production and the work which went into it can best be seen by in the words of the students and faculty themselves.

Printed below is a fact sheet about the play, about the translator, Mr. Henry A. Strater, teacher of Greek and Latin at Shaker Heights High, and the director, Mr. Barner.

I wish to congratulate the entire Shaker Heights school system for its successful educational endeavors.

I might add, Mr. Speaker, that I am sure that the fine tradition of the Shaker Heights system will continue and I would be more than happy to match the Shaker drama department from my congressional district against any other in the country.

FACT SHEET—THE TROJAN WOMEN—SHAKER HEIGHTS HIGH SCHOOL DRAMA DEPARTMENT

(About the play: From Thucydides' "History of the Peloponnesian War," as presented by Miss Agnes Knight, Classics Instructor, Shaker Heights High School.)

"The Trojan Women" was written at a time when the streets of Athens were filled with thousands of women and children to be sold in the slave markets.

The year before the Athenians had sent an embassy to the little island of Melos, a neutral area, demanding that it submit to Athenian control. They needed it for strategic purposes in their struggle against Sparta. The people of Melos did not wish to give up their liberty. The Athenians in the hands of the war party, crushed the little island, killed all the men, and brought back the women and children as slaves. Thucydides, the historian, regards this action as a crime of war, with no excuse for this inhumanity. Melos fell in 416 B.C. The following spring the fleet of the sackers of Melos was sent out against Syracuse in Sicily. "The Trojan Women" was presented in Athens at the same time. Two years later the whole Athenian fleet was destroyed.

Euripides does not mean Melos when he says Troy. The story is of the Trojan War. Strife, hatred and trouble are forecast in the speeches of Cassandra, and Poseidon promises destruction of the fleet of Menelaus, Ajax, and Odysseus.

Yet Euripides' heart was filled with compassion for the suffering women and children in the slave markets of Athens. Their crying and their pitiful small desires inspired "The Trojan Women." There is little desire for revenge in the play. It is a crying, a presentation of the suffering caused by war.

The Athenians, after the destruction of their own fleet, in the midst of their own anger and turmoil at home, looked upon Euripides with hatred. Had he cast an evil omen on them? They knew that his play represented their own times (all times?) as well as the Trojan War, and so they forced him into exile. Otherwise he would have met the fate of Socrates—the hemlock cup.

ABOUT THE TRANSLATOR

Mr. Henry A. Strater, the translator, is a teacher of Latin and Greek at Shaker Heights

High School. He is married and has two children, ages 1½ and 3. At his age of 35, he has a Master's Degree in Classical Language from John Carroll University and a similar degree in English from Case Western Reserve Unity, both in Cleveland. Beginning in September, 1970, he will be on a sabbatical leave from Shaker Heights High School to complete his Ph. D. in Classical Languages from Ohio State University.

QUOTE FROM "TRANSLATOR'S NOTE"

Several years ago Mr. John Barner suggested that I work out a fresh translation of Euripides' "Trojan Women." His arguments were both that I had some experience in acting and directing amateur theatricals and that I knew classical Greek. We agreed that any new translation had to fulfill two conditions: it had to be faithful to the spirit and ideas of the original, and it had to be playable and understandable.

As I worked on the translation, we decided on several things which may appear strange when this new translation is compared to others: assignment of lines to the chorus, use of a small men's chorus, modernisms, colloquialisms, the simplification of names, and the absence of many geographical allusions . . . .

Thus, our translation has accomplished its aims: it is as clear as possible for the audience to understand, yet it is true to the spirit, and for the most part, even to the letter of Euripides' original.

About the director:

The director of "The Trojan Women," John C. Barner, is the head of the drama department of Shaker Heights High School. He holds a Master of Fine Arts Degree in Drama from Carnegie-Mellon University and has taught at Shaker for nine years. In 1959 he was elected the first Director of the Secondary School Theatre Conference, a new division of the American Educational Theatre Association. Ten years later, 1969, he was given The Wally Peck Memorial Award by the Secondary School Theatre Conference for "outstanding service to Secondary School Theatre" at their convention in Detroit. He and his wife, Agnes, will be attending the AETA Convention at the Washington Hilton while his students present the play for that Convention.

---

## THREE ARTICLES OF NATIONAL INTEREST BY DR. STEFAN T. POSSONY

---

## HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. ASHBROOK. Mr. Speaker, the CONGRESSIONAL RECORD of September 22 carries a series of articles by Dr. Stefan T. Possony on various national issues of topical importance. As indicated at that time, Dr. Possony is presently the director of the international political studies program at the Hoover Institution on War, Revolution, and Peace at Stanford University. During World War II, he served with the French Foreign and Air Ministries, and upon coming to the United States in 1941, he joined the Institute for Advanced Studies at Princeton. Later he served with the Office of Naval Intelligence, was on the faculty of the National War College in Washington, D.C., and in 1955, he became an associate of the Foreign Policy Research Institute at the University of Pennsylvania. Dr. Possony has testified over the years before various congressional committees and has taught courses on communism, psychological warfare, geopolitics, political philosophy, and on strategy and revolution in the 20th century. The author of many books on historical and military subjects, he is in addition the strategy and military affairs editor of the American Security Council, a research and educational association dealing solely with issues affecting our Nation's security.

The following articles on the use of propaganda, aspects of military victory, and reflections on international law are both topical and informative which, of course, comes as no surprise when reflecting on Dr. Possony's extensive background and scholarship:

PROPAGANDISTS AND PROPAGANDA CARRIERS

We did a good job defending ourselves against nazi propaganda but during the current era Americans appear to be highly confused by such problems as propoganda detection and defense against propaganda. In academic curricula propaganda is no longer given the attention it received in previous years. Newspapers have de-emphasized factual news reporting and they report but rarely on communist propaganda campaigns against the United States.

Let us look at the structure of organized propaganda.

An organized propaganda effort is run by a small number of professionals operating like orchestra leaders. It is successful when large numbers of publicists freely take over parts or all of the propaganda messages and distribute them through the media and if, furthermore, the audiences accept those messages and communicate them to their friends.

"Organized music" needs composers, talent agents, orchestra administrators, conductors, soloists, orchestra instrumentalists, audiences, publicity agents, and media such as concert halls, radios and records. Organized propaganda is structured in a similar manner.

The originators and planners of the propaganda effort are performing like a general staff and they are directing regional and local staffs.

Communists propaganda operators have at their disposal their own media (e.g. the communist press and international broadcasting), and they have contacts in the media owned by non-communists. Some of those contacts are dedicated overt and covert communists, and others are sympathizers and non-communists that can be influenced on certain issues. The propaganda organization also has at its disposal communicators (e.g. writers) who have access to certain media and who may be overt or covert communists or sympathizers, or professionals for hire.

Communists propaganda directives may originate in party congresses and conferences, the central committee of the CPSU and of other parties, and the speeches and writings of prominent leaders within the International Communist Movement. Many directives are announced openly and the "general line" is usually announced by a CPSU Congress speaking for the International Communist Movement (or at least for its soviet controlled wing).

The operational meaning of those directives is understandable to those who master communist semantics. It is invariably misunderstood by those texts naively.

There also are secret directives which by different methods are transmitted through secret channels.

The formulators of communist propaganda in the field may invent their own themes and arguments, and they make full use of previous experiences. They are apt to continue and sharpen campaigns which proved successful and to take over and adapt appeals which were used effectively by non-communists.

Communist propaganda has been extraordinarily steady and repetitive. It is designed to drive home a limited number of simple and seemingly plausible points and through those points change the "categories" or the framework of political thinking. The basic ideas have been driven home indefatigably for half a century.

However, the communists display great ingenuity in adapting their basic message to changing "concrete" conditions in their numerous target countries and groups. They accept contradictions and they insist on constant renewal of the "packaging" and the semantic refinement of their messages. They also are adapt at the art of variation. Now campaigns are launched frequently to stimulate and keep audience attention. Faithful disciples of Lenin, the communists are excellent sloganizers.

Propaganda is always transformed into agitation, i.e. live and burning issues. And "agit-prop" serves to recruit and organize, whereupon the enlarged organization intensifies its psychological operation.

Originally communist propaganda was easily recognized because of its over-use of Marxist-Leninist terminology. Since 1935, however, when the Communist International decided to forgo the use of "sectarian language", the communists have been systematically using their so-called Aesopian language, especially in messages addressed to non-communists. This means they are expressing their points through terms which are known and accepted and which instead of causing resentment, evoke positive associations. Thus, outside the party, the communists rarely talk about "armed struggle", "revolutionary war", or "world revolution", let alone "dictatorship", but they stress terms like democracy and peace. They also concentrate on matters and events which are regarded as critical by large numbers of non-communists, such as peace which the communists interpret in their own fashion.

The result is that in many ways, communist propaganda tends to merge with the propaganda of non-communist groups. This happens especially whenever non-communist groups propose policies which the communists think could help them to achieve operational objectives. In many instances they "amplify" the themes pressed by non-communist politicians whose attitudes are to their liking.

The primary purpose of Aesopian language is "to gild the lily," just as a hospital is doing when it reports a half-dead patient is "resting comfortably" or is in a "fair condition".

A second purpose is to change the meaning of terms. Thus, according to communist doctrine peace is predicated upon a socialist order and cannot be attained before the final victory of communism. Aesopian language, in addition to creating the impression that the communists are "peace-loving" now, here, and everywhere, also issued to convey the idea that the lovers of peace, if they want to be consistent, better embrace the cause of communism: For unless communism rules, there cannot be peace; and unless communism is accepted voluntarily, war will be inevitable. Such war, of course, will not be due to the communists but to the imperialists. Those who resist communism are imperialists by definition.

A third purpose of Aesopian language is to deceive about communist objectives and realities.

Thus, the jobs of Aesopian-style CP propagandists are face-lifting, disguising, and seducing.

Communist propaganda, far from beating the drums for the communist ideology, is designed to black out understanding of communism and to present the red wolf as a white sheep.

Operationally, communist propaganda, including the non-Aesopian part, serves to *activate* party members and sympathizers and to transform them into fighters, organizers, and propagandists. Propaganda also is used by the communist to *paralyze* their opponents by inciting them against one another and disarming them materially and morally. Thirdly, propaganda is employed to *neutralize* the "masses" in order to make them believe it is not worthwhile, or necessary, to resist communism as well as harmful to side with "anti-communists" (who, being "anti", obviously don't and can't have any constructive thoughts in their head).

In the narrow sense of word, communist propaganda is that type of communication which is originated by communist parties and propagated through communist communicators and communist media. In the broader sense communist propaganda includes that type of communication which is originated by communist parties and is propagated by non-communist communicators through non-communist media; the communist origin of that communication as well as its function within the overall communist propaganda effort (and within communist strategy) is concealed.

Occasionally, the communists may make use of anti-communist communicators and media.

"Narrow" communist propaganda handles communist themes and arguments exclusively. "Broad" communist propaganda handles additional themes and arguments that overlap with and parallel specific non-communist communications for the purpose of amplifying those and conditioning audiences for better receptivity. Pseudo anti-communist propaganda may be supported by communists in order to polarize a target society. Note that while the communists want to build a strong external left, they also want an extreme right and they want the extremists to fight one another, otherwise the polarization of society cannot be achieved.

Communist propaganda, therefore, is perpetrated by communists on specific communist subjects and on subjects which have no apparent relation to communist programs. Communist propaganda also is perpetrated by non-communists on communist subjects as well as on subjects which appear to be unrelated to communist issues.

Communist propaganda also serves to "taboo" certain subjects and to hide various facts. Non-communist media often participate in CP stratagems of concealment and diversion.

This particular pattern is not exclusive with the communists. During World War II, for example, British and American propaganda agencies were using what was then called white, gray, and black propaganda.

The methods by which communists enlist non-communists or even anti-communists to do their bidding differs from case to case. Communists systematically infiltrate public opinion media and they may utilize agents to subvert communicators and communication channels. It is, however, far more effective if, because of its intrinsic merit of persuasiveness, the overt or covert communist message is taken over spontaneously by non-communists.

Propaganda which is not self-propelled and which fails to develop chain reactions does not propagate widely and thus cannot reach the "masses". (Nevertheless, it may influence small key groups.)

The persuasion power of communist messages depends in large part upon prior conditioning of the communicators. This conditioning was achieved by earlier propaganda and by the impact of the repetitive and basic long run propaganda upon the educational systems.

The effectiveness of the steady and permanent communist psychological effort is precisely that gradually the number of those conditioned to be receptive to communist propaganda is increasing.

In the short run, the effectiveness of communist propaganda depends significantly on the number, skill, and dedication of non-communist propaganda *carriers*. This effectiveness is enhanced because the density, variability, and attractiveness of the messages depend on the number of carriers and because those carriers appear to be above suspicion.

The carrier's services to the communists will be the greater the more naive they are about communism, the less they understand communist intentions and techniques, and the less they are interested in determining the sources of the ideas they are pushing.

Through the carriers communist propaganda is being marketed by means of "capitalist methods".

When carriers who inadvertently "swallowed a line" and are honestly non-communists, are told they are peddling communist propaganda, they either are incredulous or offended, or they regard the "coincidence" as irrelevant or as less important than their "own" message. Some carriers like to exclaim, "it is about time the communists realize what's right". Others frankly welcome communist support for their activity—every support is acceptable. Still others ridicule the "alleged tie".

Carriers are differentiated by sophistication and honesty. Some carriers are under the direct influence of overt or covert communists, and they may know or ignore the true color of their advisers.

To repeat: short-range communist propaganda which deals with current issues is successful to the extent that it is propagated by non-communist carriers and that the source as well as the utility of that propaganda for communist strategy remains hidden.

Communist propaganda must not necessarily be mendacious. It can be truthful or may appear to be truthful, especially in those cases when it is camouflaged as a communication for a non-communist cause.

Communist propaganda is rarely disseminated through financial arrangements such as bribes or stipends to non-party writers.

The communists fare best when they can latch on to an argument which is perfectly meritorious in and by itself and which its proponents are obligated to continue advocating, e.g. social betterment. This is one of the reasons why the communists—since the times of Marx—have been trying to ride the coat-tails of liberalism and moderate socialism and why they adopt suitable non-communist reform ideas and exploit those to strengthen their own case directly or indirectly.

Does this mean that the advocates of sensible progress and reform have no choice but to become communist propagandists? Of course not. Does it then mean that the communists, simply because they exist and engage in communist and non-communist propaganda, have polluted free speech? I don't doubt that much communist pollution of free speech has taken place.

But the communists cannot really be blamed for this pollution, because they have only been doing their job, which is precisely that of subverting democracy. The blame rather rests on those who haven't been doing *their* job of strengthening democracy. Liberals are not "liberals," and even "liberals" and socialists usually are not disguised communists. But if non-communist progressives are unable to make the distinction clear, they haven't thought through their own program; and if as a group they are unwilling to draw a visible separation line, they haven't kicked out the infiltrators; or they don't realize that unavowed or temporary, or *any* alliances with the communists are a sure way to joining the "great majority" of the politically dead.

The communists always have taken pro-labor postures—they claim to be the "vanguard of the proletariat." Hence it was only "natural" that they would support the labor movement. Why should a labor organization reject much-needed help? It did not take the American labor leaders too long to find out that communist support for wage demands and social programs was nothing but a CP operational tactic. The communists were instigating unrest, not in order to improve the welfare of the workers, but to promote class warfare and revolution, and they were forever ready to sacrifice the interests of the workers for CP interests. Whenever there was a suitable opportunity, they provoked unnecessary troubles and strikes that were designed to harm the country rather than increase the take-home pay. They also used "labor struggles" in the hope of establishing power positions and to create command leadership over the labor force by means of which they might acquire a capability to paralyze and seize the country. Fortunately, most of the American labor unions eliminated communist influence before it grew too strong.

Labor is the social "class" in the United States which best understands communism, its deceptions, and its perils; and which also knows that communist economics and totalitarian rule are medieval reaction and oppression, not modern progress and liberation.

The communists need labor but labor not only does not need the communists but it had to get rid of them to defend its own interests. American labor leaders realized that communist solicitude was that of the fox who robbed the raven of his cheese. They also knew the communists wanted to unload the dirty work of defeating the U.S. on the American labor movement. They understood—and they acted. The labor movement is stronger for having broken the communist stranglehold.

---

### Military Victory?

In a letter to Joseph Alsop, Senator Edward Kennedy concluded that the motivation of American political leadership in moving into Cambodia was the "illusion that a military victory can be won in Vietnam". Was that so, really? What would have happened if we had not moved? From the very start, this war *always* was an Indochinese war. Before the North Vietnamese were able to attack South Vietnam in force, they had, for logistics reasons, no choice but take eastern Laos; and before they could attack the Vietnamese heartland, they had no choice but move through eastern Cambodia. The Tet offensive of 1968, which had such an enormous impact upon American domestic politics, was, to a large extent, based on the Cambodian "spring boards". (The expression is General Giap's.)

Throughout the period of conflict in South Vietnam there was no let-up in military operations throughout Laos; and there were military operations in Cambodia, except that those were of a non-violent nature. Thailand also has been involved since 1965 and so have most of the remaining countries in Southeast Asia.

Before the American initiative, the Cambodians kicked out Sihanouk and the Chinese communists, seemingly with North Vietnamese concurrence, embarked on a strategy designed to put Sihanouk back into power as a communist puppet. Communist forces struck to keep the Sihanoukville supply line open and to occupy key areas of the country, including the capital. Thus, the shooting war was expanded into Cambodia *before* a single American soldier ever crossed the border.

In the face of this situation which we did not create, we could, of course, have remained passive. In this case, whether or not Sihanouk returned to Cambodia, or a more

authentic communist ruler was installed, the North Vietnamese would have taken over the entire eastern border of Cambodia and they would have gained an advantage which, in all likelihood, would have proved decisive.

Through his initiative of April 1970, Mr. Nixon spoiled this communist undertaking and he freed a large portion of the South Vietnam border and territory from immediate pressure. As a *bonus* the chances for the communists to develop strong aggressive power below the 13th or 14th parallel have been reduced, or else the force requirements for the communists have been considerably increased. In addition, a new possibility has been created for South Vietnam to establish effective common defenses with Thailand and Cambodia.

That this one initiative does not solve all problems is self-evident. However, in the absence of this initiative, our problems would have been far worse, and the capabilities of the communists would have been far greater. Withal, it wasn't the President who expanded the war into Cambodia, but the President reacted to the fact that Cambodia suddenly had become an active military theater; and that geographic enlargement of fighting was no illusion but a hard reality.

There has sprung up in this country a party which advocates "military victory" and another party which advocates "political settlement". The former consists of persons called "hawks", the latter of "doves". In zoology, the cross-breeding of two species of birds is impossible, but in politics it can be done. Nevertheless, this classification makes little or no sense. The dividing line must be traced along a different front.

If there were no military operations, there would be no conflict and no need for a political settlement. If military operations had no political objective, they would not take place. A purely military strategy cannot exist even in a most violent and total war for survival, while an exclusively political strategy against an aggressive opponent cannot have any effectiveness and cannot endure. By its very nature, strategy is a composite of political and military operations (as well as of many additional types of undertakings). Every successful strategy is derived from political direction of the entire effort in the pursuit of a political goal. A strategy oblivious to political factors and dominated by military and purely operational considerations will invariably fail but if the political leadership prescribes rules which negate operational effectiveness, deny tactical requirements, and preclude military success, such strategy will fail, too.

From the beginning, our strategy in Southeast Asia was hampered by political limitations which did not necessarily prevent victory but which rendered military success very difficult of attainment. Is military victory therefore an illusion? It would be more correct to say this: "Given the rules under which the war in Southeast Asia is being fought, military victory probably presupposes excessive expense and long endurance."

I hasten to add that, naturally *every* war must be fought under some political limitations. But several limitations have been imposed which created unnecessary handicaps and a few key limitations were poorly conceived, e.g. gradual and slow escalation.

The problem is, negatively, to allow for the irreducible minimum of both military and political expediency, and positively, to determine the best harmony between military and political necessities.

During the first few years of conflict, we were unsuccessful in harmonizing political with military strategy. If we were compelled to fight a really powerful opponent in the style of the Vietnam engagement, we would be soundly trounced. Our command and decisionmaking structures are far below the customary level of American efficiency.

A carefully nurtured super-skepticism is rampant in this country about the efficacy of the military operations we have been conducting in Vietnam. If there is a communist attack somewhere, Mr. John Q. Public is told that again, again, and again our efforts had been for naught. But if there are no enemy attacks, the enemy is said to lie low for a while and will resume the offensive whenever and wherever he chooses—there just is no hope that we might have weakened him.

I suspect that some of this skepticism is due to some reporting of battlefield events. Some of the most brilliant battles in all history were fought in Vietnam, yet Americans never heard about them. Still, seasoned civilian reporters and social scientists should understand that even after crippling defeats, guerrilla forces remain capable of launching counter-attacks and that, especially in thinly populated jungle and mountain areas, surprise blows cannot be prevented.

Any study of military operations in South Vietnam shows that the situation has improved very dramatically and that in most areas the country has been pacified, while five years ago the guerrillas attacked almost at will. This assessment has appeared self-evident to all recent travelers. There is no need to accept the so-called statistics which are being produced to "measure" pacification, nor to assume that the enemy cannot step up operations again, or that the South Vietnamese have fully succeeded in digging out the communist infra-structure. The truth is that our military undertakings have been highly successful and that in the course of five years the overall posture of VC and the North Vietnamese forces has been weakened step-by-step. This is a long time, yes, but this type of war is time-consuming. We started way behind, we never were at full strength for any length of time, and we have been de-escalating for two years. While we were attriting the enemy, we simultaneously, of our own free will, attrited ourselves.

The great costs to the Vietnamese economy which result from military operations are a subject of continuous lament. Of course, destructions are objectionable, but they are hardly avoidable. We must cost the damage, but we must also look at positive developments, such as road building, agrarian reform, augmentation of agricultural yields, increase of electric power production, improved communications, and some expansion of medical services. Note that the labor force grows annually by 300,000 persons (*Neue Zuercher Zeitung*, May 2, 1970, p. 17).

The economic difficulties of Vietnam can be deplored endlessly and they continue to be awesome, especially inflation and a highly negative balance of payments. But it is also true that standards of living have been improving and that large investments have been made, e.g. in transportation. Whether the country has reached the take-off point of rapid economic development remains to be seen, but the old traditions of low productivity are being discarded and economic progress is beginning. Nothing of this kind would have happened if the Vietcong had not been defeated militarily. It is, therefore, a bad mistake to underrate the importance of the military factor. For that matter, war is rarely profitable but it *often* accelerates economic development.

The term "victory" has multiple meanings. If communist aggression either ceases or Hanoi agrees to stop further military attacks, we achieved our objective and we would be successful, regardless of how this success was described. It is *not* our objective to destroy North Vietnam, which would be easy, *nor* to knock out the communist dictatorship at Hanoi, *or* to unify Vietnam under Saigon. Whether we have chosen our objective wisely, can be argued. But the statement that military victory is not possible really means that Hanoi will never stop aggression and that there is nothing we can do about this. In that case a political settlement also would appear to be an illusion, in fact a far worse illusion than the notion of military victory.

The assertion that we do not actively pursue a political settlement is false. We were trying to get such a settlement even *before* we deployed into Vietnam. President Johnson's peace rhetoric in 1964, while addressed to the American electorate, also was directed at Hanoi. Every step of escalation and de-escalation we took, every truce we accepted, every troop withdrawal we announced, every economic incentive we offered, and every diplomatic initiative we tried was an attempt to achieve a political settlement. All this has been utterly unsuccessful. Hanoi never yet was interested in a political settlement.

This situation does not show any signs of changing. In a remarkable speech in the House of Lords, the Earl of Avon, former British prime minister and foreign secretary, called attention to the "added complication" of the relationship between Moscow and Peking which "has never been worse". "Representatives of the two countries might not wish at this particular time to sit down at a table in the company of others." (*Congressional Record*, May 28, 1970, p. 17531.)

*Accordingly, we find ourselves in a position where both a military and a political decision seem to be excluded.* In similar situations, the historical remedy always has been to change military strategy. We have done so by switching to Vietnamization and the more active promotion of Asian self-defense. From a strictly military point of view, this new strategy is not ideal, that is, Vietnamization and Asianization while absolutely necessary, have been long overdue and may require complementary operations and continuing American support. The critics say this strategy won't work. This does not seem the judgment of Hanoi which shows itself to be furious about Vietnamization. The fact is this strategy can be made to work if we pursue it with energy and support it with the requisite moral and material resources. The question, therefore, is this: will we adopt this strategy in a serious fashion or will we, because we have grown to detest the Indo-Chinese conflict, make it fail?

The critics suggest that since the country allegedly rejects more assertive military moves, we better change political strategy and offer conditions which Hanoi would accept. The main consequence of the Church-Cooper Amendment, as passed by the Senate, would be to prevent—in any event, to delay—Southeast Asian self-defense. If this road toward self-defense is to be narrowed or blocked, what alternative solution did the sponsors of the amendment propose? What are the prospects of a political breakthrough?

---

### Double Think on International Law

A heavy barrage of criticism has been directed at President Nixon that by having American forces cross into Cambodia, he violated international law. This cross-border operation was described as an "invasion" and when criticizing Senators were told that use of this term was most inaccurate, some became impatient about semantic "quibbling". The term "invasion" was very handy for the critics because if there *was* invasion, Mr. Nixon must have started a new war; and if that was the case, he not only had violated international law but also constitutional law.

One writer asserted that Mr. Nixon was the first President "in the history of the United States deliberately to order American forces to invade another nation on his own, without seeking Congressional approval and support".[1] The statement is ascribed to Mr. Richard Goodwin who was an assistant to President Johnson at the time when Mr. Johnson "sent American Marines storming

[1] Three precedent cases are reported in *Congressional Record*, June 3, 1970, p. 18096.

ashore in the foreign nation of Santo Domingo and then advised Members of Congress after it was a fact", to quote Senator Hansen (*Congressional Record*, May 15, 1970, p. 15731).

The Columbia Society of International Law, whose members are *students* at the Columbia University School of Law, analyzed the legal aspects of the Cambodian action: "The United States is in fact applying the very kind of power politics for which we condemn the Soviet Union. But the consequences of their invasion of Czechoslovakia cannot compare to the devastation and prolonged civil war which will now engulf this defenseless country." "The United States invaded a small country without its consent or invitation, in total disregard of its sovereign rights."

Students who write this sort of nonsense in a term paper should be asked to repeat the course or to look for another instructor.

In a linguistic sense, the crossing by a military force of a frontier can be described as an "invasion" of the country into which that force is moving. But that is not the legal meaning. During World War II, the Germans passed military units through Sweden and Finland, but they did not invade those two countries because the governments had granted rights of passage. The Germans also crossed through Denmark to Norway, but this *was* an invasion because the two governments were hostile to one another and because Germany took over the country and administered it for its own benefit.

In 1944, the United States and Britain carried out the Normandy "invasion", but they did not, for that matter, legally invade France, despite the fact that the then government of France under Marshal Pétain did *not* approve of the operation. This case was not even argued: it was clear that the Nazi had invaded France and that the French government, though legally constituted and widely recognized, was acting under duress.

Another example, in 1938, the Nazis invaded Austria and in 1939, they invaded Czechoslovakia. In both cases they claimed they had the consent of, and even had been invited by, the ruling governments. Yet both operations were held by the Nuremberg Military Tribunal to be invasions in the legal sense of the word. The Nazis had previously maneuvered pro-Nazi types into the government and both governments had been coerced.

The United States would have "invaded" Cambodia if there had been a hostile relationship between the American and the Cambodian government, if the U.S. had infiltrated the government of Cambodia, and if the American operation had been directed at the country's sovereignty. This, of course, was not the case. The American operation was directed against a *non*-Cambodian military force which was in Cambodia against the will of the Cambodian government, which had established control over a portion of the Cambodian territory, which had been invited to leave, and which was refusing to leave. Moreover, this force, which was illegally in Cambodia, undertook aggressive military operations against South Vietnam with which country Cambodia was at peace. Thus, Cambodian neutrality was suspended, at least in that part of the Cambodian territory that was occupied by the foreign belligerent force. Hence the rights of self-defense of *all* parties aggrieved by this occupation became activated.

If the Cambodian operation was a breach of international law, the United States and Britain should have been indicted *together with the Nazis* at Nuremberg, for the invasions of Austria, Czechoslovakia, Denmark, Norway, Holland, Belgium, and France.

Whether or not the Cambodian government invited the American initiative or acquiesced into it, formally or informally, is not reliably known at this time because secrecy is maintained. Accusations about alleged breaches of international law of this type tend to be presumptuous because no court has been set up to adjudicate them. If such a court were established, it would follow proper legal procedure and examine the evidence. This evidence is not available to self-appointed accusers.

In the present case, the Cambodian government, as observable in the daily press, acted *as though* it wanted the U.S. and South Vietnamese initiative but did not care to issue a formal invitation. Moreover, the U.S. government, for reasons of security, apparently did not provide full information beforehand. In similar circumstances it is unreasonable to require that the enterprising government should ask for a formal invitation to enter at a specific place and a specific time.

There is, of course, no rule in international law which says that a military penetration into foreign territory must be by explicit formal invitation or agreement, or else it is illegal. The intervening party is not expected to nullify its operation by giving warning to the opponent, nor to provide the enemy with an opportunity to entrap the advancing forces. International law is not in contradiction to common sense. Accordingly, it recognizes that whenever such a procedure is infeasible, it is not required. The point is amply covered by article 38/1/b and c of the Statute of the International Court of Justice.

For example, did any one in 1944 expect the King of Denmark to send a formal invitation from nazi-occupied Copenhagen to London and Washington asking Britain and the United States to please chase out the nazis?

The question is, therefore, whether the government of the pentrated country is hostile or unfriendly to the penetrator, whether the two countries are on amicable terms, and whether this particular government desires or consents to the penetration, regardless of the method by which that attitude is communicated. The legality of this government as well as the intentions of the penetrator also would have to be investigated in order to test whether the penetration was legal. Naturally, assertions have been made that the CIA created the Lon Nol government but to be valid, assertions must be plausible (which they are not) and they must be substantiated (which they are not, either).

The assent by the government of the penetrated state is useful but not necessary; and such a government's opposition to penetration would *not* diminish or invalidate the legal rights of the state under attack by a force operating from supposedly neutral territory. The right of self-defense is not circumscribed by borderlines; and neutrality, to be respected, must be real and not spurious.

Originally, the communists penetrated into Cambodia by consent and, therefore, technically speaking, they did not then invade the country. However, they were asked to leave both by Sihanouk and Lon Nol; and when they refused to leave, they forfeited the rights of passage that had been granted to them. At that juncture, they became *an invading force*. If they had remained within the areas that were assigned to them, the dispute *might* have been regarded as being in resolution. But they became invaders *again* because they seized *additional* territory and started to exercise rights of sovereignty in the areas which had been leased to them only for a specific purpose.

The communist intrusion into Cambodia became really meaningful to us because (1) the North Vietnamese built on neutral territory military facilities and staging bases; (2) they were using those bases for training and sanctuaries; (3) they conducted military operations from those bases; and (4) they were initiating new operations that were threatening to South Vietnam, the state they had attacked before and, in fact, never ceased attacking.

In operating from Cambodian bases against South Vietnam the communists were violating the neutrality of Cambodia *for the purpose of aggression*.

In legal theory, it was the job of the Cambodians to defend their own neutrality and to chase out the violators. In practice, this theory can almost never be applied, because a strong neutral does not lease his territory to a foreign power for purposes of aggressive military operations, while the weak neutral lacks strength to repel the aggressor. Hence the presumption usually would be that the violation was *imposed* upon the neutral power and it is *only* on the presumption of coercion that the intruded state can be deemed to have adhered to its self-proclaimed neutrality. In the absence of coercion, the temporary cession of territory for aggressive purposes would mean that the intruded state has made common cause with the aggressor and, therefore, is a hostile belligerent. In any event, if the neutral state is unable to protect its own neutrality, the aggrieved belligerent is entitled to take measures *against the violator* and to re-establish the *status quo* in the neutral state. After March 18, Cambodia tried unsuccessfully to evict the intruder; and it rejected a request by China to allow North Vietnam to continue using the staging bases.

The violation of Cambodian neutrality provided legal title for counter-action by the United States and South Vietnam. In 1940, the Germans invaded Holland and Belgium, two neutral countries, and they were later found legally guilty of aggression in this case. Upon penetration by the Wehrmacht, the French and British armies also penetrated into Belgium and Holland, but this act did not constitute a violation of international law but was an act of collective and individual self-defense. Since it also was directed against an aggressor, it executed provisions of international law.

The rules say that counter-measures against the violator of neutrality must be proportionate to the violation. The United States has adhered to this rule very strictly. In fact, the American intervention has fallen short of being fully proportionate. The meaning of the rule is not that, for example, counter-measures against a staging base must be restricted against that base or that if the violation was executed by one division, counter-measures must be limited to one division. The essential meaning is that the state taking counter-measures is not entitled to invoke defense against violations of neutrality as a pretext for appropriating territory.

Another rule which has not been referred to, so far as I read the Senatorial debate, is that the party which takes counter-measures is not supposed to interfere with, or assume the sovereign rights of the state whose neutrality was violated. The U.S. has strictly adhered to this rule, too. In support of the objectives of the Phnom Penh government, the U.S. is most interested in the Cambodians resuming full control over their entire territory and re-establishing genuine neutrality.

The point has been raised that the communist staging bases had been in Cambodia for years and that international law authorizes action against a violator of neutrality only in case of an *immediate* danger. This rule exists and it has a very specific meaning. In 1940, when the nazis attacked Norway, a neutral country, they claimed they were entitled to act because Britain was about to invade and violate Norwegian neu-

trality, which would have posed a threat to German security. The Nuremberg court did not assign too much validity to evidence the defendants adduced to show that Britain indeed had been planning to move into Norway. This evidence was perhaps stronger than it appeared to the court, yet German documents also showed that the nazis were planning the invasion *before* the British showed any interest in Norway.

In any event, the British had taken early action only against German violations of the neutrality of Norwegian coastal waters. The British mined those waters but they made no overt move to invade Norway. The Germans might have honestly misread the British intention which was to stop German traffic in neutral coastal waters and to bring help to Finland in its war against the USSR, for which purpose they might have wanted to secure rights of passage through Northern Norway. Yet except for a British reprisal against a German violation, there was no conclusive proof, let alone an overt act through which the British were violating Norwegian neutrality and which had to be repelled. Consequently, when the Germans attacked, *they* became the violators.

The Germans also claimed they were entitled to violate Belgian neutrality because the British and French, who were patiently waiting at the Belgian border, had announced they would defend Belgium against German invasion. But no illegal French and British move occurred. Since there was no clear and pressing necessity, the German claim could not be sustained.

However, the requirement of an *urgent* need for self-defense measures which involve penetration into neutral territory, does not apply under all circumstances. The British were able to react quickly against the German invasion of Norway. If they had not been assembling a force they wanted to send to Finland, they would have been unable to react at all for several months. As it was, they were unable to expel the Germans in 1940. But this did not mean they lost the legal title to take action against the German breach of Norwegian neutrality. Nor did it mean the German occupation became legal because it remained undisturbed for several years or that the British "invasion" of 1945 was illegal because it occurred five years after the original breach.

In the present case, the communists have been violating Cambodian neutrality since 1965. South Vietnam and the United States were entitled to take immediate countermeasures but this was merely their legal right. They were *not* obligated to take those measures immediately lest their rights be forfeited. As long as the violation continued, their rights remained active. Hence, they could take counter-measures when it suited their purposes or when they had the requisite capabilities. The communist occupation of the sanctuaries did *not* become legal because it lasted for five years.

When the counter-measures were instituted, this was in response to a major *current* change, namely the Cambodian request that the staging bases be liquidated, communist refusals to heed the request, attacks for the purpose of enlarging the bases and to overthrow the Cambodian government, the communist meeting in China which disclosed enemy intent, and communist preparations for, as well as initiation of large scale attack. Moreover, the customary cross-border attacks had not ceased. Hence, *enough* urgent reasons for counter-measures were visibly in existence.

The comparison of Cambodia with the Soviet invasion of Czechoslovakia in 1968 is invalid. The USSR was not involved in conflict with any power in which Czechoslovakia was a neutral. The neutrality of Czechoslovakia was not violated for the purpose of an attack on the USSR, or for any purpose; and Czechoslovakia itself did not make any military preparations, nor commit any hostile acts against the USSR. On the contrary, Czechoslovakia still was an ally of the Soviet Union. The government of Czechoslovakia had in no way, directly or indirectly, consented to the Soviet intrusion. The Soviets invaded, not to eliminate a threat to themselves, whether immediate or delayed, but in order to change the government of Czechoslovakia. They have since continued a *de facto* occupation through which the sovereignty of Czechoslovakia has been curtailed. The Soviet invasion of Czechoslovakia constituted aggression against an allied country.

Professor Kahin of Cornell University has disputed President Nixon's statement of April 30, that the United States and South Vietnam did not move against the communist bases in Cambodia before "because we did not wish to violate the territory of a neutral nation". According to Mr. Kahin, there were several hundred incidents in 1964 and 1965 as well as a few limited intrusions, and air and artillery attacks. The International Control Commission stated in July 1965 that "none of those incidents were provoked by the Royal Government of Cambodia". (*Congressional Record*, May 19, 1970, p. 16073).

This again is topsy-turvy reasoning. Since the American initiative was not directed against the government of Cambodia, but against the communist violators of Cambodian neutrality, the fact that the Cambodians did not provoke any of the border violations is irrelevant. Our policy was never to cross the border save in exceptional cases of "hot pursuit" of communist non-Cambodian attackers.

According to the data produced by Mr. Kahin, the overwhelming majority of the incidents took place during 1964 and 1965, that is *prior* to the United States assuming a major share of the strategic responsibility. Since he did not quote more than a handful of incidents of the later period, it would seem that indeed the United States was very meticulous in keeping on the Veitnam side of the incessantly violated border.

In many areas this border is very poorly demarcated. It was consistently crossed by communist guerrillas who were attacking South Vietnam and were seeking refuge and rest in Cambodia. As those forces became involved in a fight, it was only natural that South Vietnamese and American troops might have pursued them into Cambodia. For that matter, international law clearly authorizes hot pursuit in such instances, including artillery and air attack. Hot pursuit does *not* constitute any violation of neutrality.

As to the B–52 strikes mentioned by Mr. Kahin, if they were not related to hot pursuit, they might, of course, have resulted from error. Technically, this would have been violations but not hostile acts, because the policy was *not* to bomb targets in Cambodia. Incidents of this sort would normally be settled through compensation.

Naturally, the United States and South Vietnam were legally entitled *at any time* to bomb North Vietnamese troops using operations bases in Cambodia for attacking South Vietnam. We chose deliberately not to bomb them. Therefore, an occasional attack which occurred in spite of our self-chosen policy does not show that we intended to violate Cambodian neutrality. (I have argued on the hypothesis that the facts were as Mr. Kahin presented them. To evaluate the case properly the details of B–52 attacks would have to be analyzed.)

There are numerous borders in the world where border incidents occur with great frequency. Such incidents may happen without specific orders from the respective governments, and they usually are not indicative of policy. Planned incidents which serve specific tactical purposes display a pattern which is quite different from that which prevailed at the Vietnam-Cambodian frontier.

The conditions of the Vietnam-Cambodian border have been such that incidents were bound to happen almost on a daily basis. Mr. Kahin's data do not show any excessive frequency, certainly not after 1965. Hence he did not demonstrate an American intent to violate Cambodian neutrality, but rather proved the contrary intent. The mere occurence of incidents happening spontaneously or in line with hot pursuit does not in the slightest invalidate President Nixon's statement.

The critics who argue that Mr. Nixon started a new war shouldn't really be too happy with Mr. Kahin's theory that we have been operating in or against Cambodia all along. In this case nothing of any consequence could possibly have occurred on April 28.

If we just look at the facts, it is quite clear that the United States and South Vietnam tolerated that the communists were operating from their staging bases in Cambodia till April 28, 1970, and that at that time the two governments invoked several international rights to stop this abuse. Thereupon, the Cambodian army joined forces with American and South Vietnamese units and confronted the communists.

This is the simplest refutation of the pseudo-legal double-think on "invasion." The critics must be short of ammunition if they feel compelled to create artificial issues.

---

## A REASONED PLEA

---

### HON. SAM STEIGER

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. STEIGER of Arizona. Mr. Speaker, a constituent in the Third Congressional District of Arizona, Mr. Ted J. Lopez, sent me a copy of a letter he recently wrote to one U.S. Senator, known for his opposition to United States assistance of South Vietnam.

I believe that his thoughts reflect that of the majority of Americans, and I would like to share them with you:

PHOENIX, ARIZ.

Senator MCGOVERN,
*Washington, D.C.*

DEAR SENATOR: I know that you are a dedicated man and I also know you mean well. However, I also know that even a dedicated Senator can be wrong.

I am a retired M/Sgt and I want to take this opportunity to thank you and the rest of the American people for giving me the privilege of serving my country as a member of the US Army and the US Air Force for 26 years. I served in World War II, and the Korean War and yes, the Viet Nam war, too. I was retired two years ago.

You know Senator, every morning when I raise my flag in front of my beautiful home, I thank the Lord for the freedom we enjoy as Americans—freedom bought and paid for by our fighting men. I also thank God that people like you are in the minority or we would still be fighting World War II. I am sincere when I say this—I wonder what would have happened in World War II or the Korean War if we would have had people like you and Senator Church.

I am sure you are sincere when you say you want to bring our boys back from Viet-Nam and who doesn't want them home? If you are really concerned the best and only thing to do is back our President. I know how badly our boys want to come home—I know because I have been there three times, I also know that since they are there through no

fault or choice of their own, it is your duty and mine and every "real American" to support them to the fullest extent.

We all know Mr. Kennedy, a very dear and personal friend of mine, made a terrific blunder when he committed us to this situation and then Mr. Johnson made it worse by committing more and more troops without a definite goal of victory until we passed 500,000. Let's compare what Mr. Nixon has accomplished in comparison to Mr. Kennedy and Mr. Johnson—he did not commit any greater numbers of American troops; instead he started cutting down and is continuing to cut down to where we will have about half as many troops committed by the end of the year.

Whether you like it or not President Nixon's Vietnamization program has been a complete success—even though you and a few others have reneged your support.

When Mr. Nixon took a gamble in the operation of Cambodia out of necessity for the protection of our troops; people like you made a lot of noise because you were so certain it would fail. But now that it has proved to have been such a terrific success, you don't have the courtesy to admit publicly your mistake and throw your support behind our President to unite our country; instead of that you have tried to tie his hands.

I am a member of the American Legion Post 41, the second largest in the nation and we would like to ask that you support our President. As you know, Mr. Johnson left him with a bucket of worms in the Viet-Nam situation and he is doing an excellent job of coming out of it. All he needs now is your support and mine as he already has the support of 90% of the real American people. The other 10%, I am sure he doesn't want and I am sure that you do not either.

Sincerely,

TED J. LOPEZ.

## GWENDOLYN POINDEXTER

## HON. LOUIS STOKES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. STOKES. Mr. Speaker, it is always a pleasure to acknowledge the unique talents and accomplishments of gifted individuals in our communities. I would, therefore, like to bring to the attention of my colleagues the outstanding achievements of Cleveland's very dedicated educator and delightful puppeteer, Miss Gwendolyn Poindexter.

Miss Poindexter has been a teacher in the Cleveland inner city for over 10 years, and has worked extensively with preschool children and their families. She has piloted a variety of community organizations for disadvantaged youngsters while serving as supervisor for four Headstart Centers in recent years.

Miss Poindexter's teaching ability is surpassed only by her sheer wizardry with puppets. Since 1960, she has directed a traveling theater offering informative lectures and entertaining performances for all age groups. Her presentations reflect her varied talents—her puppets are handmade; she designs and manufactures their costumes; and she writes the scripts and designs the scenery. Without question, this young lady has both inspired and delighted all those who have been privileged to witness her productions.

Miss Poindexter has served as director of puppetry workshops for the Cleveland Summer Arts Festival for the past 3 years. By 1969, her workshops had an enrollment of over 300 youngsters from the Cleveland area. While continuing in her teaching capacity for the Cleveland Board of Education, she has directed several classes in the history of puppets and the art of puppetmaking for settlement homes and cultural centers. Miss Poindexter has made a number of appearances on radio and television stations throughout the city. She has also entertained audiences at a variety of schools, hospitals, churches, banks, and community centers. Miss Poindexter has been praised as often in the Cleveland newspapers as in the many letters of thanks that she has received from her audiences. I feel, Mr. Speaker, that more individuals should be given an opportunity to witness Miss Poindexter's magical talents.

## REMARKS MADE BY VICE ADM. A. G. RICKOVER IN THE INTRODUCTION OF CONGRESSMAN WILLIAM R. ANDERSON

## HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. COLMER. Mr. Speaker, under leave to extend my remarks, I submit herewith the remarks made by Vice Adm. H. G. Rickover in the introduction of Congressman WILLIAM R. ANDERSON. The occasion was the dedication of the submarine overhaul facility at the Ingalls Shipbuilding Corp., a division of Litton Industries, in my hometown of Pascagoula, Miss., on Saturday, August 22 last. My object in placing the remarks of this distinguished American in the RECORD is not a self-serving one considering the compliments paid the Mississippi delegation in the Congress. Rather, it is to again express my admiration for Admiral Rickover, a great American, a dedicated scientist, and, in my humble judgment, a real genius.

Admiral Rickover is not only the father of the nuclear submarine, he is one of the great geniuses of our time. It was a great honor to have him down at Pascagoula on this momentous occasion. I am confident that he would not have been there had he not been in accord with the objective to be achieved by both the Navy and Ingalls.

Admiral Rickover's remarks follow:

I have been asked to introduce to you the main speaker for this occasion. However, I would be remiss if I did not first acknowledge the presence among us of two other distinguished guests, my friends Congressmen William Colmer and Jamie Whitten.

Mr. Colmer has served this district since 1932 with great honor and distinction. He has risen to the Chairmanship of the House Committee on Rules, one of the most responsible, influential, and difficult jobs in the Congress—indeed, in our entire Government. He performs this arduous role with dedication, skill, and purpose. I have been privileged to know Mr. Colmer for many years. He is a true politician, in the sense that politics is the highest calling a human being can engage in. This is so because it is through politics that we get things done; that the world is kept moving. To be a good politician one must possess far more than intelligence; he must also have the human touch, the innate ability to know how people think and feel, and what must be done for their welfare. Mr. Colmer is that kind of politician. In our form of government the basic function of a Congressman or Senator is to represent the people of his district or of his State; he also has a duty to the United States as a whole. Balancing these two interests can present a difficult task for a legislator, but Mr. Colmer has handled this task with wisdom and integrity. He has looked out for his district *and* for the United States.

Mr. Whitten has represented Mississippi's second district since 1941. A man can be a doer or a critic. Today, when more and more critics are competing loudly for popular attention and applause, Mr. Whitten remains what he has always been, a *doer;* a man of dedication and vision. He has been on the House Appropriations Committee since 1943, first on the subcommittee for naval appropriations, and later on the subcommittee for all defense appropriations. During World War II Congressman Whitten personally visited combat theaters in Europe and the Pacific, conferring with such leaders as Admiral Nimitz and General MacArthur. Like Mr. Colmer, Congressman Whitten has added immeasurably to making our nuclear Navy possible. In 1959, Mr. Whitten was author of the motion to override the second Presidential veto of the Public Works Appropriation bill. The passage of this bill resulted in the opening of Pascaguola Harbor and enabled the atomic submarines from this Yard to reach the sea.

I also want to pay brief tribute to your two distinguished Senators, James Eastland and John Stennis. Both of these gentlemen in their many years of service to your state and to our nation have demonstrated extraordinary statesmanship and wisdom. I am particularly grateful to Senator Stennis, Chairman of the Senate Armed Services Committee, for the time and effort he has devoted to strengthening our Navy, and for the unflagging and wholehearted support he has given to the Naval Reactors Program.

Above all, the four gentlemen I have just named share in common a deep and dedicated love of our country; they have made major contributions to the defense and to the domestic welfare of the United States. As an official of our Government and as a private citizen, I shall always be grateful for their leadership and support. I am proud to be associated with these men who have brought such honor to your State.

I will now introduce our principal speaker, the Honorable William R. Anderson, Congressman from the Sixth District of Tennessee. Mr. Anderson, a native Tennessean, graduated from the Naval Academy in 1942 and immediately entered the submarine service. He participated in eleven submarine patrols in the Pacific, for which he was awarded the Bronze Star and other combat awards.

I have been personally associated with Congressman Anderson since 1956, when he entered the Naval Nuclear Propulsion Program to become Captain of the *Nautilus*. Under his command, the *Nautilus* became the first submarine to transit under the Arctic ice on a nonstop, submerged, transpolar voyage from Pearl Harbor, Hawaii, to Portland, England, a distance of over 6,000 nautical miles. For this feat, Captain Anderson received the Legion of Merit and his ship was awarded the Presidential Unit Citation.

Mr. Anderson left the Navy in 1962 to enter upon a career much more hazardous than the submarine service—that of elective politics. He has performed with distinction in this career as well, being elected to the Congress in 1964 and returned to office

in the two succeeding elections. Mr. Anderson's best known legislative achievement is his authorship and promotion of the law enforcement education bill, enacted in 1968, which opened broad opportunities for young men and women in police and corrections careers. His most important current effort is directed toward programs for rural revitalization and small community development.

Congressman Anderson is a vigorous advocate of a strong defense establishment and a staunch supporter of our nuclear Navy. It is his valuable support, and the support of other dedicated members of the Congress, on which we must rely to maintain an adequate defense posture in the critical times ahead.

I have the honor of presenting to you the Honorable William R. Anderson of Tennessee.

## VETERANS OF FOREIGN WARS ISSUES PROCLAMATION

### HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. ABBITT. Mr. Speaker, these are times when many freedom loving Americans find themselves greatly ashamed at the actions of some of their fellow citizens who seem to have lost much of their respect for the American flag and our democratic system of Government.

It is, therefore, encouraging to see some organizations which are taking a lead in encouraging a reaffirmation of their faith in the Constitution and our whole system of Government. Jacob J. Pearson Post 637 of the Veterans of Foreign Wars of the United States, located at Hopewell, Va., recently issued a proclamation in support of the Constitution and reaffirming what many of us steadfastly believe. The text of this resolution is so pertinent to our needs today that I would like to have it incorporated in the CONGRESSIONAL RECORD at this point. I commend Post Commander Andy W. Amburgey and other members of the Jacob J. Pearson Post 637 for recalling to our memory these great receipts upon which our country was founded.

The text of the resolution follows:

VETERANS OF FOREIGN WARS, HOPEWELL, VA.
PROCLAMATION

Whereas, on September 17, 1787, after five months' labor the majority of 55 delegates from 12 states, meeting in Philadelphia, approved the first U.S. Constitution consisting of preamble and seven articles;

Whereas, generations of Americans, sheltered by the concepts of the Constitution, have found both motivation and a continuing sense of destiny in the ideals of human dignity and worth for which our Nation's founders fought and died;

Whereas, today, with the ideals of the Constitution being disregarded, there is an even greater need for dedication to a high sense of patriotic purpose;

Whereas, the sustaining force of patriotism is the source of positive values which endow our lives with pride and purpose, and enable us to pursue our destiny, as guaranteed by the Constitution, as a people and a nation;

Now, therfore, I, Andy W. Amburgey, Post Commander of Jacob J. Pearson Post 637, Veterans of Foreign Wars of the United States, in recognition of the wisdom and foresight of the designers of our constitution, and of its vital importance to us, as a nation, do, on this date hereby proudly proclaim that the more than 900 members of Jacob J. Pearson Post 637, both individually and collectively reaffirm their faith in the Constitution of the United States, and publicly rededicate themselves to supporting this noble document, the very cornerstone of our nation and I urge our citizens to keep faith with our heritage by fostering an enduring belief in, and constructive use of, its ideas; and to safeguard our heritage through our willingness to take whatever steps and make whatever sacrifices are necessary for our national safety.

Done this day, September 16th, 1970, at the Post Home, Hopewell, Virginia, in witness thereof I have hereunto set my signature and the official seal of my office.

ANDY W. AMBURGEY,
*Post Commander.*

## HUNGER AND MALNUTRITION

### HON. GRAHAM PURCELL

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. PURCELL. Mr. Speaker, the Democratic Study Group Task Force on Food and Agriculture and on Consumer Affairs conducted 2 days of hearings here in Washington, D.C., on September 18 and 19 to give additional exposure to the problems of hunger and malnutrition in this country.

The House Committee on Agriculture, of which I am a member, and the Senate Select Subcommittee on Nutrition and Human Needs had previously afforded food industry representatives the opportunity to address themselves to the Congress about their efforts in resolving the crisis.

The problem is one nesessarily requiring the combined resources, efforts, and cooperation of the public and private sector.

Whatever can be said in the way of criticism of the industry, it cannot be said that it is refusing to cooperate in resolving the hunger and malnutrition problem.

In testimony of this fact I would like to place in the RECORD the statement submitted to the DSG panel by Mr. R. Hal Dean, chairman of the board and chief executive officer of the Ralston Purina Co. Mr. Dean leaves no doubt that this leader in the field of animal nutrition is successfully translating its basic animal nutrition knowledge into workable, low-cost human food products and food systems which will meet people's protein needs and food preferences here and abroad. The company has products available for the USDA's school lunch and commodity distribution programs, is participating in the Rutgers University study, and is considering the production of a 50-percent protein, full-fat soy product in cooperation with one of the West African countries. Additionally, other high protein products are being perfected for human consumption. These are significant steps forward, and efforts such as these by responsible private industry should be acknowledged and praised.

The statement follows:

STATEMENT OF R. HAL DEAN BEFORE THE HEARING OF THE DEMOCRATIC STUDY GROUP TASK FORCE OF FOOD AND AGRICULTURE AND ON CONSUMER AFFAIRS

My name is R. Hal Dean. I am chairman of the Board and Chief Executive Officer of the Ralston Purina Company.

I welcome the opportunity to review Ralston Purina Company's interest and activity in the area of hunger and malnutrition. This statement will deal with our previous and current activities with the Federal government as well as an updating of our product development work.

In the last several years both the Congress, the Administration and the food industry have become increasingly mindful of the problem of hunger and malnutrition in this country. Accordingly, various representatives of the food industry have had the opportunity to report on their efforts to the Congress. In the last 18 months, we addressed ourselves to this very question on two separate occasions.

In April, 1969, I strongly testified before the House Committee on Agriculture and endorsed legislation (H.R. 7919) introduced by the Honorable Thomas S. Foley, Congressman from the State of Washington and Chairman of the DSG Task Force on Food & Agriculture. This legislation called for the establishment of an Assistant Secretary of Human Nutrition in the Department of Agriculture. Although the bill has not been enacted it has served, in my opinion, as one of the catalysts which prompted the Administration to establish a Food and Agriculture Nutrition Service in the USDA. This Service has significantly strengthened the Administration's efforts relating to human nutritional needs.

We are extremely pleased to have played a small part in this development. We share this Committee's deep interest in the Administration's positive action in this area and hope the Food and Nutrition Service will continue to sensitize our government's leadership in the fight against hunger and malnutrition.

On July 22, 1969, I testified before the Senate Select Committee on Nutrition and Human Needs.

At that time, I outlined to the Chairman, Senator George S. McGovern and the members of his committee, our company's corporate interest and capabilities in the area of protein research and nutrition. While we have diversified considerably, the company today is the world's largest producer of formulated livestock and poultry feeds with plants and physical facilities in more than 40 states and 30 foreign countries. Our principal corporate objective has been the efficient production of meat, milk and eggs by the use of highly nutritious and balanced feed rations coupled with improved animal breeding, farm management and sanitation practices. Seventy-six years of experience in animal nutrition research has established our company as a leader in the field of animal nutrition.

As a broadly based, protein resourcing corporation our interests, experience and capabilities are tied directly to the subject of protein research and nutrition. In recent years, our research people have been working to translate our basic animal nutrition research knowledge into workable, low cost, human food products and food systems which will meet today's needs.

Although we are working closely with, and keeping abreast of developments in single cell and fish protein concentrate research, we feel soy protein sources hold the most realistic near term promise for solutions to today's protein hunger and malnutrition problems. Through this research, we have

developed isolated edible soy proteins for human consumption. However, research is continuing in order to improve flavor, texture and economic viability.

Recently significant breakthroughs have been achieved which have enabled us to overcome a number of these problems. As a result, we now have the capability of producing a substantial variety of "engineered" or structured food products. These products can serve effectively as vehicles for high impact nutrition as well as desired supplementation of vitamins and minerals. In other words, today, we can totally engineer the food product and "build" into it the specific nutrition required to meet a specific deficiency. I want to point out that Ralston Purina Company is not by any means the only company engaged in research in this important, exciting field.

Furthermore, it is important to keep in mind that these new protein products have been and are being developed to meet specific dietary needs. They are not designed, nor intended, as replacements for food staples we know today.

Approximately one year ago we proposed specific nutritional programs in Phoenix, Arizona and East St. Louis, Illinois, in conjunction with local Office of Economic Opportunity personnel. In each case, we had submitted detailed specifications, cost data and guidelines to implement the nutritional feeding programs. Unfortunately, sufficient funding has not been forthcoming from OEO or USDA and the projects have been held in abeyance.

Before we discuss the current Ralston Purina Company activity and planning, I would preface my comments by referring to a recommendation of the November, 1969 White House Conference on Food, Nutrition and Health. The following is a quote from the conferees of Panel Number 6 of the White House Conference:

"By even conservative estimates snack foods occupy a prominent position in the diet of American youth, being in many cases a significant source of young people's daily nourishment. This is also true of large segments of population below the poverty level, chiefly in U.S. urban centers.

"Industry has the freedom to add to the nutritive value of these products, as there are no standards of identification for them. Because the nutritional value of some snack foods is often negligible, it would be desirable for the food industry to consider the question of enriching the nutritional content of such foods. This would be especially pertinent in the development of new snack items intended for the adult market.

"It is recommended: That industry accelerate its efforts to make available nutritious snack foods."

It is extremely encouraging to those of us in the food industry that the report of this White House Conference has touched on several key issues inherent in the problems of supplying nutritious foods to the American public—specifically, those Americans, young and adult, who are in deepest need on the subject of nutrition.

Our research and experience in the market place has proven that products cannot be sold to the public solely on the basis of their nutritional content. People want nutrition . . . but most people are interested in taste, and other real or imagined benefits from food. In addition, we know that there is a great deal of confusion in the public's mind on the subject of nutrition.

Based on this accepted body of knowledge and the aforementioned admonition of the White House Conference, our company has actively pursued the necessary Research and Development to produce a highly nutritious snack food.

Again, building on our expertise in the vegetable protein field, we have produced, thoroughly researched and placed in selected test markets, a high protein/low cost, culturally acceptable snack product. The test product carries the Ralston Purina brand name of "Potato Crispers$_R$." It was introduced in August, 1970, in test markets in Ft. Wayne and South Bend, Indiana. To date, consumer acceptance has been excellent. I have taken the liberty of having samples of the product available for your personal review.

The product looks and tastes like potato chips . . . but it has four times the protein and 30–40% less fat than potato chips. Ounce for ounce Potato Crispers$_R$ contain as much protein as choice T-bone steak, 80% more protein than fresh eggs and five times as much protein as fresh milk.[1]

We feel this product offers great promise not only for the needy or malnourished, but also for the average consumer.

Turning to additional specific activities, our company is working closely with the USDA to develop products for the School Lunch Program, the Commodity Distribution Program and the Rutgers University School Feeding Project. In addition, we are working with the Appalachian Regional Commission and are undertaking long-range planning concerning food habits and product preferences of ethnic groups.

We feel that application of edible protein products into workable public/private sector nutritional programs is of the utmost importance. Recent serious discussions regarding the private sector's role in solving the problems of malnutrition are extremely encouraging. We feel we have the resources, the expertise and the desire to make these programs work. However, if help is needed from the private sector, government must understand the need for proper funding and collateral cooperation.

In the area of the School Lunch Program, an activity where we feel we can make significant contributions, our management has been encouraged by several recent expressions directed to private industry by the USDA.

In a recent address to State School Lunch Directors and Supervisors, Mr. Edward J. Hekman, Administrator, Food and Nutrition Service, U.S. Department of Agriculture, said:

"The Department of Agriculture believes that a properly balanced diet of conventional foods can provide adequate nutrition. However, we are also aware of changes in dietary habits as well as changes in the nutritional quality of processed foods. *Thus, we are interested in 'engineered foods' to the extent that such new foods can offer improved nutrition to the general public. Engineered foods are defined as those foods which are so prepared and processed that they:*

(A) Improve nutrition.
(B) Reduce cost.
(C) Offer greater convenience in meal preparation.
(D) Improve acceptability.
(E) Improve stability.

Mr. Hekman went on to say:

"But, we want to see the engineering of foods for nutritional improvement oriented toward acceptance by the general population through the commercial market—not solely for government purchase."

This type of language is indeed encouraging. It should be noted, however, that there is an area of concern in moving these new foods to the commercial markets. In establishing labeling regulations and product "Standards of Identity" it is important that the products be described in clear and straightforward language that informs the consumer without danger of prejudice.

The product we have introduced in test markets, Potato Crispers$_R$, meets the criteria as outlined by Mr. Hekman. Furthermore, other products, in various stages of Research and Development are also designed to answer the requirements as outlined by the USDA. Some are designed as meal supplements, one in particular is designed as virtually a whole meal.

We are extremely hopeful that these products will be accepted and implemented immediately in nutritional study programs.

The contractual agreement between USDA, OEO and Rutgers University for school lunch feeding programs offers additional encouragement. Our company is currently preparing a proposal for high-protein products to be used in the Rutgers Study.

We are encouraged that this study is being undertaken to explore new ways to provide the necessary nutrition for school children on a Type A lunch . . . especially in schools with limited food handling facilities.

Again, referring to Mr. Hekman's speech, he reminded the School Lunch Directors and Supervisors of the following regulation, published in the Federal Register last January:

"The Child Nutrition Division of the Food and Nutrition Service *may approve variations in the food components of the Type A lunch on an experimental or on a continuing basis in any school where there is evidence that such variations are nutritionally sound and are necessary to meet ethnic, religious, economic or physical needs."* [2]

One of the products we are exploring for the Rutgers Study . . . when consumed with an 8 oz. glass of whole milk . . . meets the nutritional requirements for a Type A lunch.

This engineered food product is being designed to provide more nutrition for less tax dollars. In addition, of course, it offers: 1) extreme ease of handling, 2) lower cost, 3) high level of acceptability, 4) reduction of clean-up and waste, and 5) a variety in the basic menu (it will be available in three varieties).

Again, I might reiterate the need for intense cooperation which is needed between the public and private sector. We feel private industry in general and Ralston Purina Company specifically can make a sizeable contribution to nutritional development of our most important asset, our youth.

In closing I would like to mention that our company, due in part to our sizeable international operations, realizes that protein deficiencies exist in varying degrees around the world and the geographic boundaries of this, or any country, offer no special immunity to those who suffer from malnutrition and hunger.

During the past ten years we have been helping to translate our knowledge of animal agriculture and nutrition into developing nations to increase their productivity and reduce consumer prices of farm products. At present, we are discussing a joint venture with the government of a West African country to build a plant to process a full-fat, soy protein product.

This facility will produce a nutritious soy product yielding 50% protein. It will be used in school feeding programs, hospitals, military feeding and possibly consumer markets.

Solving the problems of hunger and malnutrition is a big job. However, a great deal is at stake. It will require the combined resources, efforts and cooperation of the public and private sector.

Our involvement in these projects, here and in the developing nations, demonstrates our sincere interest, enthusiasm and desire to make a meaningful contribution toward the elimination of the problems of hunger and malnutrition. Our proposals for the School Lunch Program, our active participation in the Rutgers University Study and

[1] Comparisons are based on data from *USDA Agricultural Handbook #8.*

[2] USDA, Food and Nutrition Service, National School Lunch Program, Title 7 Agriculture, 210.10 January 20, 1970, Federal Register (35 F.R. 753).

the introduction of our new protein snack product offer concrete evidence of Ralston Purina's affirmative and positive action. We ask only for the continued encouragement and cooperation that will be needed to solve the multitude of problems that are before us.

Thank you.

---

## HOUSING AMERICANS

---

## HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. HAMILTON. Mr. Speaker, the Christian Science Monitor has just completed an excellent in-depth analysis of the housing pinch being faced by most Americans today.

I commend the following five-part series to the attention of those of my colleagues seeking an understanding and a solution to what has been widely labeled as "the American housing crisis":

[From the Christian Science Monitor Sept. 19–21, 1970]

SO YOU WANT A HOUSE?—FORGET IT

(NOTE.—Does the United States housing pinch really hurt as much as one hears? The poor have always been badly housed. But now that even middle-income Americans feel it, some see the housing crisis as a potentially hot political issue. First of five articles.)

(By Merelice Kundratis)

SAN FRANCISCO.—Over half the Nation's population might as well forget about wanting to buy a house—or live in an apartment big enough to meet their needs.

The housing crisis is that bad.

If it hasn't hit you yet, hang on. At the rate things are going, it will—as soon as you want to make your next move. And this applies to people at all income levels.

Major business firms, because of the crisis, are transferring personnel less frequently. Families simply refuse to make the move. One young Texas family recently had to pay twice as much in California for a home that compared with the one they were leaving.

Residents in wealthy Wilmette, Ill., note that only a year ago, it was impossible to find a house. Now, an upper-income executive simply couldn't sell his high-cost home.

That is not to say there isn't plenty of demand for housing. But it's the people making between $8,000 and $12,000 a year who are especially in trouble.

Most homes are not being built for families making less than $1,000 a month. Besides that, all of their bills—car, new furniture, etc.—must be paid off, says Lee Williams of Doelger Builders here.

APARTMENTS ALSO SHORT

Some 32,000 houses have been sold by Doelger, Mr. Williams explains. Ten years ago, he continues, the homes were in the range of $21,000. Their cost has increased $1,000 a year.

Buyers today might even have the down payment when they come in, but Mr. Williams still has to say, "I'm so sorry. We simply can't help you." Too low an income disqualifies them for financing.

President Nixon, in the "Second Annual Report on National Housing Goals," noted that the "median price of all conventionally built new homes now being offered for sale is about $27,000." Nearly half of all American families, he further noted, cannot afford more than $15,000.

So the swing is to apartments, where the shortage—for middle- as well as low-income levels—is equally acute.

Single careerists in New York who have progressed to maintaining their own apartments find they have to revert to dormitory days and double or triple up to pay today's rents.

Here in the cosmopolitan city of spectacular hills, residents gripe bitterly about skyrocketing rents. Their next complaint—a common one throughout the nation—landlord neglect.

Time after time, renters say: "My landlord doesn't have to worry about keeping my apartment nice and making repairs. He does not care whether I move. He could rent it again without any trouble."

Poor people are used to such neglect. But it is becoming almost as common among middle-income tenants. And the reaction is the same—little incentive to fix up a place. Says Sheila Datz, who came here from Boston:

"I was going to get carpeting for my apartment. But now I won't bother. I looked three months for my last apartment, lived there one month, the rent was raised, and I had to move. When my present lease is up, I might have to move again."

Sheila wouldn't want to return to Boston, however. Since she left a year ago, chaos has hit Boston rents—despite a recently formed rent-review board. Swamped by college students, that eastern city contends with tougher and tougher housing shortages each fall—and higher and higher rents.

One Boston secretary saw her rent climb 33 percent in the last two years.

In Chicago, Anne and David are gritting their teeth and looking at new high-rise, in-town apartments costing $300 a month for one bedroom.

New Yorkers, in turn, must be willing to pay that much for just a studio apartment in downtown Manhattan.

EVEN REWARDS OFFERED

In housing, as in most big-city problems, New York sets pace—a dubious honor indeed as the city's vacancy rate hovers at a frighteningly low 1 percent and the race is on for ratholes.

Few large cities come near the 4 or 5 percent vacancy rate considered normal for the smooth movement of this nation's highly mobile population.

One young man in New York had a fairly firm idea of what he wanted in an apartment. He joined four other prospects that a real estate agent was taking around in a group. When they walked into one apartment, he quickly glanced around from the doorway and immediately blurted, "I'll take it," leaving the others with their jaws dropped. He got it, and was glad he did.

At another Manhattan—Manhattan, Kan. (adjacent to Fort Riley)—newspaper want ads include such wry remarks as "reward for information leading to the rental of an apartment."

Here in San Francisco, a Chinese shopkeeper talks about commuting 20 minutes to his business. With his large family, he cannot afford the $150 monthly rent for cramped, rundown quarters in famed Chinatown.

And every city has its enclaves of the elderly struggling to make a home out of the cheap rooms they rent on fixed, limited incomes.

Here are some of the sobering statistics that are affecting these people:

Almost two years ago, the President's Committee on Urban Housing assessed the nation's need at a minimum of 26 million additional units in 10 years (by 1978). That means 2.6 million a year.

In 1969, the nation managed to produce only 1.49 million units—the largest number, however, since 1963. And in 1970 it is doing only slightly better.

The 26-million goal does not include an additional 2 million units that should be rehabilitated without public assistance.

While the 10-year goal does cover replacing dilapidated housing with standard units, it does not attempt to solve the overcrowding that already exists in standard units.

Although the United States on an average outdoes other nations in providing comfort and space in housing, an overwhelming number of Americans are still ill-housed.

RURAL POOR ASK HELP

Naturally the poor are the hardest hit. And 6 million of the 26 million goal are chalked up as subsidized housing. That 6 million housing units—even though it is more than the country has ever tried to produce—is a bare minimum.

A hue and cry also is rising from the rural poor who live in areas where bad housing and unemployment conditions have driven people to the cities. Some 100 participants at a 1969 national rural-housing conference stressed the need to raise the level of government-assisted units from 6 to 13 million—with 7 million located in rural areas and small towns of less than 25,000 population.

Perhaps few problems have been as ignored, while at the same time being talked and legislated about, as housing. There have been plenty of programs—but little money and national commitment.

George Romney, Secretary of the Department of Housing and Urban Development, stresses: "In my view, we face a full-scale national housing crisis.

"I consider it an emergency," he continues, "because of the important role housing plays in meeting the physical and social needs of people. After all, food, clothes, and shelter—those are the three fundamentals.

"In terms of a satisfactory environment for a family and the rearing of a family," Mr. Romney points out, "a good home is a very vital need."

MOBILIZATION STRESSED

A year ago, when Gov. Francis S. Sargent of Massachusetts similarly called attention to the housing crisis, one response came from the executive director of Boston's Urban League. Melvin H. King, a longtime advocate of better housing both in New England and in the South, wrote:

"If you say it is an emergency, then you would call out the National Guard and mobilize all the resources of the commonwealth to solve the problem. Now, if there really was a 'state of emergency,' you would 'draft' all the architects, engineers, building construction people, bankers, and insurance companies and mount a massive program that would have housing built on around-the-clock basis."

Mr. Romney contends the job could be done "if the nation is convinced it should be done." But he admits: "We have not made the commitment to meet the housing and urban needs that we made in the space program earlier. If we are going to get the job done, it's going to take that sort of a commitment."

Other housing experts note, as does Secretary Romney, that such a commitment becomes more likely as more and more Americans are hit by shortages and appalling costs. There's little doubt also among public officials that unless there is noticeable relief, housing is bound to become a powerful political issue.

$421 BILLION NEEDED?

To meet the goal set for the remaining 8 years of the 10-year period will cost (excluding land) an estimated $421 billion: $20 billion for mobile homes, $321 billion for private housing, and $80 billion for government-subsidized units and rehabilitations.

Mobile homes, once dismissed as a real alternative to home-buying, are perhaps the best gauge of how severe the housing crunch has become. Business is booming in the mobile-home industry.

Typically, a mobile home sells for about $6,000 including furnishings and drapes, though some more elegant units can total $15,000 to $20,000 or more. Even the 12x60 unit for $6,000, however, is much homier than the camp trailers that used to characterize mobile living as gypsy living.

With sales over the 400,000 mark in 1969—and expected to top that this year—mobile homes made up 90 percent of all homes sold for under $17,500. Future growth depends somewhat on developing more mobile-home parks which, in turn, depends largely on overcoming the sleazy reputation that parks have in some areas.

PARK IMPROVEMENT NOTED

Offensive parks, in fact, still exist. But new developments are much more likely to resemble the "Colonial Mobile Manor" of Olen and Carmen Dalton in San Jose, Calif.

To rate its five stars in Woodall's Mobile Home Park Directory, the manor abides by such requirements as having wide paved streets, curbs and landscaping, attractive entrance and recreation hall, modern homes with porches and foundation "skirts," and facilities like a swimming pool, shuffleboard, etc.

Communities also complain that parks do not pay taxes equal to the burdens they place on local services. Park owners hotly retaliate by pointing out that although mobile homeowners pay only a personal-property tax rather than a real-estate tax, the park itself pays local taxes (collected by renting its lots).

"Parks pay more than their share," insists Mrs. Dalton. "Since the park is private property, the community does not have to worry about upkeep. Parks pave their own streets, put in their own fireplugs, provide their own police patrol."

In addition, most mobile-home residents are either young couples without children or with preschool children, or retirees. In neither case would they add to the burden of the local school system.

CLUBLIKE ATMOSPHERE

Mr. and Mrs. Dalton are complete converts to mobile-home living. They enjoy the country-clublike atmosphere which sets their park—and the park's rents—a notch above the aveargе parks. Most of their plots, prepared for "double-wide" units, rent for $77 to $84 a month. Median monthly fee in the nation was between $30 and $39 in 1969, according to Woodall.

California alone has 4,800 mobile-home parks—about a fifth of the nation's total—with a heavy concentration in the San Jose area, which is also the fastest growing urban area in the United States. But there remains an acute need for family parks that provide playground and recreational facilities for children. So here, as in apartments, families feel the pinch more.

House-hunting for any individual has never been easy. When the hassle of moving is over, it's natural to sigh, "I've got mine," and then forget others.

Now that "others" are quickly becoming a majority of the nation's population, it remains to be seen whether fierce competition for limited and sometimes dreary living quarters will polarize the combatants—pitting against each other students, families, senior citizens, minority groups, and middle-class Americans—or whether the nation can rally support to tackle housing woes at all levels.

To date, the trend is toward polarization. And housing promises to explode as a divisive issue instead of the broad-based problem that it actually is.

## 70 PERCENT OF THE PEOPLE ON 2 PERCENT OF LAND

(By Merelice Kundratis)

CHICAGO.—Out in Western Kansas, far from the flurry of urban chaos and in the midst of acres and acres of farmland, Paul V. Johnson lives 18 miles from the nearest town. The next farmhouse is 1½ miles down the road.

In the prairie, short, wiry Charles Todd raises cattle and grows wheat and soybeans on a farm settled in 1876 by his grandfather.

These men know what is meant when the United States is described as "land rich." The level of density—number of houses or people per acre—is not a problem where they live.

And yet, Mr. Todd and Mr. Johnson are part of this nation's housing crisis. They both have children (seven and three, respectively) who have left the farm. As college students, as new families, as new urban dwellers, many farm children illustrate the shifting national population.

With modern farm equipment, it takes fewer and fewer workers to run larger and larger farms. The average age of farmers gets higher while young people turn to the cities for jobs.

All Americans would have to group into an area the size of Texas and Oklahoma combined to match the density of West Germany or Britain, says the 1968 report of the President's Committee on Urban Housing. And anyone crossing this nation would certainly wonder why housing experts talk about land shortages, land demands, and the high cost of land.

POPULATION IMBALANCE

But housing gets built where the jobs are—in our near urban areas. About 70 percent of the population is piled on 2 percent of the land.

That makes the city land story different.

Miles of new highways cut wide swaths through what used to be urban residential areas. City land that could help solve the housing crunch is turned into outdoor parking lots—again showing more deference for the car than for people.

And in city after city that has seen the ravages of urban "renewal," empty land stands idle while housing-development funds dry up because of rising construction costs, or red tape snarls people's hopes that better homes that they can afford will be built where their old ones were razed.

Los Angeles sprawl blankets with houses and highways whatever natural loveliness once existed. Land is used, misused, abused, and expensive.

As part of the soaring cost of an average single family house, land has leaped from 11 percent in 1950, to 18 percent in 1960, to 25 percent in 1970. In dollar amounts, that means an average house lot jumped from $1,144 to $2,808 to $6,200 in those 10- and 20-year periods.

The National Association of Home Builders (NAHB), which compiles such statistics, explains that galloping increases are due in part to higher costs of land improvements—putting in streets, curbs, sewage pipes, and underground utility lines.

LAND-COST SPIRAL CITED

Some specific examples of the dizzy land-cost spiral during the last 10 years: a house lot in Boston up from $3,694 to $9,210; Dayton, Ohio, from $3,589 to $8,228; Beaumont, Texas, from $2,309 to $5,294; Lafayette, Calif., from $5,090 to $10,752; and metropolitan Washington from $4,353 to $9,268.

There are at least two aspects to land problems: finding land and then putting it to good use. In both aspects, people first need to be convinced there is in fact a problem.

"It has been said that the United States has no shortage of land," wrote Max S. Wehrly, former executive director of the Urban Land Institute, in the Professional Builder. "I think the continuation of this notion—as it applies to urban areas especially—has been responsible for much of our wasteful and inefficient use of land for urban purposes. It's time we revised our thinking in this respect."

George Romney, secretary of the Department of Housing and Urban Development (HUD) agrees: "People generally in this country don't think we have a land problem yet. The people who have to buy a lot to build a house—they do. But then they forget about it."

To reach the national goal set in 1968 of adding 26 million badly needed housing units by 1978, an estimated 8 million acres of land could be needed. If land costs continue to shoot up, that could be a major obstacle to a goal that already seems unlikely after only two years of the 10-year program.

TRANSPORTATION NETWORK

Improved transportation networks—enabling people to go greater distances to their jobs—can open up land formerly too remote for housing. But that raises questions not only about the distances people are willing to commute daily, but also about community planning and how best to use the land.

Entire new towns complete with their own employment opportunities are on the drawing board. And little by little, planners no longer are cutting automatically an acre of land into four squares and stripping them bare to make room for four houses.

Scattered throughout this nation are imaginative examples of houses tastefully clustered together so residents can enjoy sweeping spaces and recreational facilities on land that otherwise would have been eaten up by housing sprawl.

But the nation still is a long way from being convinced that the American dream of a one-family house on its own quarter acre of land can be improved.

Inevitably tied in with the question of land use is the practice of zoning. Zoning regulations were devised mainly to protect residential areas from the intrusion of industry.

But they now protect certain kinds of residents from other kinds of residents—often in the name of the right to self-government.

Chicago attorney Richard F. Babcock, who wrote the book entitled "The Zoning Game," predicts zoning will become an even more complex issue in the courts than school desegregation.

"I am absolutely firmly convinced," says Mr. Babcock, "that there will be no major change in zoning locally until the court does take a stand." He further indicates the issue will be untidy and chaotic.

The power to regulate local zoning—which in turn has resulted in keeping out the elderly, young couples, and others who cannot afford housing limited to two-acre plots—is derived from the state. And Mr. Babcock confesses to being uncomfortable about letting people preserve their own way of life by using a government law meant to promote the "general welfare" of its citizens. He maintains that general welfare is broader than the private decision of a community arbitrarily to outlaw higher density on its land.

Though land costs account for the most inflationary portion of house prices (and are probably the most ignored portion), it is not the whole story. There also are the rising costs of construction materials and labor (sometimes lumped together as "structure"), overhead and profit for the developer, and financing (initially for the builder and then the buyer).

BUILDERS, LABOR INDIGNANT

Working with what statistics it can compile, NAHB has developed its "best estimates possible" for the breakdown of the cost of a single-family house. NAHB's data show that, while the dollar amounts of all aspects of

house prices have gone up, the structure and the overhead and profit have declined as a percent of the total cost.

In fact, both builders and organized labor are especially indignant when they are blamed for the high cost of housing.

"The actual cost of constructing a house," counters Louis R. Barba, president of NAHB, "has risen slower than the cost of living over the past 10 years." He insists that "money is by far the principal problem facing housing today."

Financing the construction of a house has in fact increased from $1,070 in 1960 to $2,900 in 1970, from 7 percent of total building cost to 12 percent, NAHB statistics show.

Echoing Mr. Barba are two labor leaders.

"Labor wages are not comparable to other factors creating the housing shortage," maintains John E. Evans, director of the AFL–CIO's department of urban affairs. He insists that high interest rates on mortgage loans inhibit housing production more than any other factor.

In addition to high interest rates, the increasing costs of land and construction materials also are to blame for the housing shortage, says Peter Terzick, general treasurer of the United Brotherhood of Carpenters and Joiners of America.

HOUSING PRODUCTION

Still, average hourly earnings and fringe benefits in the building trades have climbed in the last five years from $5.40 to $7.51. Mr. Evans emphasizes, however, that building tradesmen rarely work year-round. On the other hand, he does not point out that overtime work to make up for the very things that hold back year-round construction is not uncommon.

Both small builders and organized labor insist that when the problem of high interest rates is brought under control, conventional on-site construction will get into full gear again. There is no doubt that they are right—and that the housing-production will enjoy a much-needed upturn.

But if past experience is any indication, the upturn will not be enough. It might result in a surplus of certain kinds of houses (mainly those for upper-middle-income buyers). But many people in lower-income brackets still won't have decent places to live at prices they can afford.

Resistance to streamlining housing production in the factory crops up from a collection of fears. Small builders—the backbone of the housing industry—actually have done an exceptional job in the past and do not want to be driven out by the big corporations now entering the housing business.

ARCHAIC BUILDING CODES

Union construction workers—already wary of the vagaries of one-site jobs being dependent on weather, deliveries of construction materials, and a healthy building rate—view factory-built housing as still another threat rather than a way to stabilize their own jobs into year-round employment.

One way in which unions can exercise some influence against mass production is by supporting archaic building codes. Like zoning, building codes started out as a needed protection.

No one wants to move into a house that could collapse or is fire prone. But with some 5,000 different codes in the nation—each developed and administered by the local building inspector—new, cost-saving materials and building methods often don't get the chance to prove themselves. And union members with outdated skills lobby to preserve old materials and methods sometimes to the detriment of housing improvements.

Lou Chaitman, executive vice-president of the Builders Association of Greater Boston, suggests that codes should specify performance rather than specific materials. Many building materials might accomplish the same strength and safety, he notes.

Mass production, of course, is hindered by variations of, for example, some 76 different codes for the towns and cities in Greater Boston and the 85 different codes in the Chicago area.

CONTRACTS SIGNED

Gradually, however, union resistance is being tempered somewhat as unions sign precedent-setting national contracts with industrialized housing manufacturers to provide union labor in the factory and at the site of assembly.

If this nation sets out in earnest to accomplish its goal of 26 million housing units, today's labor shortage—which already enables unions to bargain for sizable salary increases—will be mild compared to future need.

The housing industry, especially if it moves significantly into the factor, could be one of the nation's most promising fields for providing training and work to the unemployed.

Bringing together labor, big business, and local communities that are willing to study zoning and building codes is unlikely to bring about major reductions in the cost of housing. But such cooperation could deal with the other side of the housing-problem coin—simply, the drastic need for more of it. Eliminating some fears and restrictions could help spur the rate of housing production.

## How Do Homes Become Just Plain Slums?

(By Merelice Kundratis)

WASHINGTON.—Jeremy was wading in the water on a sunny day, happily kicking up splashes.

His play area was the gutter in a slum section of this hot, teeming city. The water came from a fire hydrant. Jeremy's family lives in some of Washington's crowded, substandard slum housing.

The scene can be repeated across the United States. Tourists come to see San Francisco's cable-car hills, elegant shops at Ghirardelli Square, and bustling Fisherman's Wharf. But on a not-too-distant hill, with a magnificent view to rival any of the city's tourist hills, sits Hunters Point project, dreary and dilapidated World War II "temporary" housing, still in use.

Slum housing of itself isn't "news" in the sense of being a novel discovery. But out of the compaction of many people into small areas of this nation's cities comes news daily—news of crime, drug and alcohol abuse, of sickness and mortality rates, of poor race relations, and of poor job-training, education, and employment opportunities.

There is nothing particularly mysterious about how slum housing gets that way. But neither is the process as simple as some would like to believe.

MANY FACTORS INVOLVED

Slum housing cannot be blamed, for example, just on lazy, uneducated, or destructive, residents. Nor simply on profit-milking, absentee landlords. Nor only on inadequate city services for overcrowded areas. Nor on insurance companies and banks that "red line" a neighborhood as a bad risk. Nor just on suburban "snob zoning" which prevents families of lower incomes from choosing to move to better housing.

They are all involved. They are all to blame. They all must be changed together for genuine progress.

Of this nation's 66 million housing units, more than 10 percent are substandard, four million lack indoor plumbing, and 2.7 million are in dilapidated condition. (A house is classified as substandard if it is: (a) sound but lacking full plumbing; (b) deteriorating and lacking full plumbing; (c) dilapidated.)

The 1960 census figures showed that the percentage of nonwhites occupying substandard housing was 58.9 in Pittsburgh, 56.9 in New Orleans, 51.6 in St. Louis, 45.9 in Dallas, 42.8 in Chicago, and 42.4 here in New York. The 1970 census will of course update these statistics.

New York's "refugees in residence"—more simply known as squatters—talk readily not only about struggles to find decent housing but also about overcrowding in standard units.

NOWHERE—TO GO

Samuel and Janice Jackson and their five-month-old son were living with Mr. Jackson's family—eight people in five rooms. For three months after the baby's birth, Mrs. Jackson looked for housing they could afford.

Then in July, they simply moved into a four-room, fifth floor walk-up which was being kept vacant on East 11th Street.

"I don't know of any apartments under $300—unless you want junk," says Mrs. Jackson. "People are here because they have nowhere else to go—not because it's just something to do."

A five-year resident in the same building, Miss Susan Hirsch, says she is glad the squatters filled empty apartments.

"Empty apartments," she explains, "are vulnerable to derelicts and prostitutes. They encourage others to leave. This is a good building which shouldn't be deserted."

MANY FAMILIES WAITING

A "good building" by New York standards would shock visitors. It can be old, dark, crowded. But if it is still solid and clean, it is "good."

The neighborhood is being considered for higher density zoning. So this building's landlord is said to be leaving apartments vacant because he hopes to tear down the building and replace it with a high-rise—which his present tenants couldn't afford.

With 130,000 families on a waiting list for New York's public housing, the desperation of squatters is being viewed here with some toleration. Most squatters, furthermore, pay rent even before landlords request it.

Some suggestions proffered by Mrs. Frances Goldin, vice-chairman of the Metropolitan Council on Housing, apply equally to other cities where similar suggestions often are made:

Call a moratorium on housing demolition.

Open up the 50,000 abandoned units in the city, most of which, she contends, are sound structures.

Build for low- and middle-income families on every piece of vacant or badly used land. Mrs. Goldin cites such examples of badly used land as abandoned warehouses and schools, parking lots, and "four corners with four gas stations at one intersection."

BUILDINGS DESERTED

Chicago, Philadelphia, Washington, and Boston are among other major cities suffering the scourge of abandoned buildings which—if they aren't already—quickly become rundown and a source of increasing neighborhood blight.

Such abandonment is most usually blamed on those landlords who have gotten what profits they want out of a building which they would then rather desert than fix up.

What is supposed to happen instead is a process known in the housing field as "filtering." As a house ages, its inhabitants move on to more expensive housing. Then the house passes down to the next economic level.

But for the filtering process to work to everyone's advantage, houses at all price levels must be available.

With today's housing crunch, the prices even of decaying houses are climbing. Moreover, if the transfer is from a white owner to a black, the price goes still higher since

housing shortage for a black is aggravated by discrimination outside ghetto areas. He often has no choice except to live in a ghetto.

URBAN RENEWAL INVOLVED

When poor families move into a changing neighborhood, they often must double up to afford the rents. Also, urban-renewal programs have torn down more units than have so far been replaced—forcing additional overcrowding in what remains.

Meanwhile such city services as street cleaning and garbage pickup usually remain at the same level for two to three times the number of dwellers.

Inadequate city services, aging houses going unrepaired, and poverty itself—having to choose between buying cleanser or food for the baby—can make cleanliness hard to come by in the slums, even for people who earn their living as domestics and custodians.

As recently as three years ago, it was impossible to obtain house insurance, mortgage insurance, or home-improvement financing in racially changing or deteriorating neighborhoods. While it is still a problem, some insurance companies and banks now are trying to reverse, instead of foster, this galloping pace toward squalor and abandonments.

---

ENDING RURAL SQUALOR

ELK GROVE, CALIF.—Farm worker Oscar Romero, his wife, Martha, and their seven children used to live crammed into four rundown, small rooms—till they came here to build their own house.

Without question, migrant farm workers are often the most wretchedly housed in the United States. They are among the 14 million rural Americans—including American Indians and Appalachian whites—living in shacks, hovels, tents, and car bodies.

While this series is focusing largely on urban-suburban housing needs, the lack of attention given shabby rural housing should be noted. Alleviation of rural squalor could stem some of the migration which substantially increases the city's burdens.

One modest program, however, looms as a major development in rural housing today. Small clusters of migrant workers from Florida to California are getting together to help each other build their own places to live.

MUCH TO LEARN

It's a long haul. There's a lot to learn about building, and much of the construction must be done by floodlight at night when workers are not out harvesting crops.

Women and children pitch in when they can during the long months of construction. Last New Year's, on a drizzly cold day here, migrants worked on their houses.

Is it worth it?

"Oh yes," smiles Mr. Romero without hesitation. His wife happily nods agreement.

Now it is a languid, hot August day. Mrs. Romero shows her visitor around the four-bedroom home which the family moved into just three weeks previously. She chats quietly, easily—about how she helped build, how much the bedroom space means to her and her children, how she'd like to fix the backyard, how she enjoys her modern kitchen.

When she returns to her family in the dining area, Mrs. Romero resumes speaking Spanish. They are Mexican-Americans.

Down the street, Antonio Guzman is still working on the finishing touches of his house—varnishing baseboard strips.

"If it were not for this self-help program," he stresses, "I would never own a home. A farm worker would never make that much."

Mr. Guzman was elected board member of the local nonprofit corporation set up to receive the funds that make self-help housing possible. There are some 26 such groups across the nation. A year ago there were only about 15 groups. Each group might sponsor several small developments such as the 17 houses here in Sacramento Valley's Elk Grove. The houses must be built in communities with populations under 5,500.

The self-help program is funded by the federal government's Office of Economic Opportunity (OEO), mostly through its migrant division. In cooperation with the Farmers Home Administration of the Agriculture Department, OEO has been a major spur to helping the rural poor get housing.

TRAINING PROVIDED

The OEO provides community organizers to get interested and qualified families together. Then it provides technical, financial, and maintenance training and supervision of the 8 to 12 migrant families who want to build their houses.

The families work as a team. No one goes ahead on his house until each stage is completed on every house—with the workers moving as a group from foundation to foundation, flooring to flooring, erecting walls on one house then the next, etc.

Work by the migrants is called "sweat equity" and is accepted in lieu of a down payment. About 1,000 to 1,500 hours of labor are credited with $2,000 to $4,000 worth of sweat equity.

"They don't walk away from a home when they've put that much work into it," notes F. Mike Cardenas, energetic executive director of the housing corporation here.

Mortgage credit to pay for the land and building materials comes from the Farmers Home Administration. In California, a four-bedroom self-help house could cost just $7,500 plus sweat equity.

Last year, Congress also appropriated $2,125,000 through the Farmers Home Administration for technical assistance, thus supplementing the OEO's work. But as desperately as the money is needed, it has yet to get spent. Critics charge that the Farmers Home Administration sets unrealistic and restrictive qualification guidelines not only for the technical-assistance funds, but sometimes also for the mortgage credit.

At the same time, there is general recognition that:

The Farmers Home Administration is grossly understaffed.

A single Farmers Home Administration county agent must administer 26 different loan programs.

Only one of these loan programs deals with the self-help, low-income housing program.

Cooperation from the Farmers Home Administration depends largely on the inclinations of local county agents, some of whom dislike working with poor and minority groups.

Other county agents place low priority on the program merely because, until recently, housing was a miniscule part of the Farmers Home Administration budget and they still are geared more to the farming and agricultural needs of farm owners.

With an estimated OEO funding since 1965 of some $8 million, 1,146 self-help housing units have been built, 606 are under construction, and 612 mortgage applications are being processed.

But when one talks about 500,000 migrant workers—with more than half the nation's substandard housing in rural areas—2,000 new homes constitute just a start. Still, it exceeds in number the 1,600 units now slated for the Nixon administration's much-touted, technologically experimental "Operation Breakthrough."

PROGRAM CRITICIZED

In fact, over 100 participants at a 1969 national rural-housing conference called Breakthrough "an endless pursuit of some technological Holy Grail which it is hoped will enable us to house the poor without "cost." They concluded:

"We remain convinced that housing the poor is more a political than technological problem. We are skeptical of the prospects of any cost-cutting breakthroughs being as significant as an end to the moral inertia which prevents the public, the President, and the Congress from launching an adequate housing program."

In short, those committed to alleviating this nation's hideous rural housing feel as frustrated as those fighting for decent urban housing.

---

MANY A WOLF ON THE WAY TO GRANDMA'S HOUSE

(By Merelice Kundratis)

WASHINGTON.—Tight money brought the housing crisis to the middle-class American. And the housing shortage could become an explosive political issue.

It is not surprising, therefore, that tight money is one of the first aspects of the housing crisis that the Nixon administration tackled with its recently signed Emergency Home Finance Act of 1970. Of course the federal government has taken other steps to lessen the severity of the housing crisis. But the money question came first.

While many housing and economic observers say it is "too optimistic" to expect a significant drop in mortgage-interest rates—which in some areas are up to 9½ and 10 percent—even having more money available for home mortgages in an improvement.

A spokesman here at the Department of Housing and Urban Development (HUD) described the administration's simultaneous bouts with inflation and the housing shortage.

LONG-TERM LOAN SOUGHT

When Mr. American home buyer wants a mortgage, he most often goes to a savings-and-loan institution or a mutual savings bank. He is looking for a long-term loan. The institutions, in turn, get their money through savings accounts that are short-term.

If the saving public can get a higher return elsewhere, for example on corporate bonds, the savings that ordinarily go into those savings institutions that provide mortgage money is sidetracked to better investments.

The demand for what mortgage money is left drives up interest rates. And, in fact, mortgage money can virtually run out regardless of what anyone is willing to pay for it.

When inflation hits, a government usually tightens money throughout the economy—cuts its flow and raises its prices. The first victim of a tight-money policy is housing. So while maintaining a generally strong anti-inflation stance, the administration also is channeling money into the home-mortgage market with emergency home-finance measures.

MONEY PUMPED INTO MARKET

Through three agencies—Fannie Mae, Ginnie Mae, and the Federal Home Loan Bank system—more than $12 billion has been pumped into the mortgage market since the start of this administration in 1969, says the HUD financial spokesman. (Fannie Mae and Ginnie Mae are HUD's pet names for FNMA, the Federal National Mortgage Association, and GNMA, the Government National Mortgage Association.)

One of these three agences might buy up old mortgages, thereby providing money to lending institutions for new mortgages. Or it might loan money directly to a savings institution, again providing another source of mortgage money besides savings accounts.

In addition to authorizing funds for these functions, the Emergency Home Financing Act expands the types of home mortgages that can be so bolstered. And in an unusual program the act also provides a three-year annual subsidy of $105 million for middle-income families, bringing borrowing rates down to 7 percent in some cases.

Without question, however, curbing infla-

tion is priority No. 1. And George W. Romney, Secretary of HUD, concurs with President Nixon's Aug. 11 veto of the HUD bill (which the House subsequently sustained).

Congress had appropriated $3.643 billion for housing programs—$650 million more than the administration's requested $2.993 billion.

While the administration's request had increased appropriations for certain subsidized housing programs over last year, it did not break the mold of according relatively low priority to this nation's acute housing need. During his term, the President has vetoed four bills as being inflationary—all of them for domestic programs.

Administration emphasis is largely on home-ownership programs and encouraging private builders in the housing field—even for public housing. As with former administrations, this one faces a congressional reluctance to fund programs for the poor.

Morton A. Baruch, director of HUD's low- and moderate-income housing division, notes that mortgaging and rent-supplement programs for moderate- or middle-income families have a history of getting funded. Low-income subsidies usually get sliced.

One housing program on which the administration's request was cut back by Congress is Operation Breakthrough. Most of the ballyhoo about Breakthrough is because the program encourages better technology to get houses built and promotes a big-business approach to developing a national market for industrialized housing.

When the nation can reach the moon, and industry can roll major items off a mass-production line, what's delaying housing? This is the question that challenges and excites industry.

But another aspect of Breakthrough could be even more crucial to this nation's housing health: planning.

PLANNING ESSENTIAL

Without planning, better technology and marketing could simply speed up past mistakes—hastening housing sprawl or piling the poor on top of each other more quickly.

Alfred A. Perry, national director of Operation Breakthrough, stresses that "good planning means a community provides for the entire life span of its citizens." It also allows, he says, "for people to live, work, and play in the same community."

Few argue against the logic of his statements. But when it comes to specific steps, such community planning would require a change of heart that would mean:

Suburbs like Newton, Mass., would fight for, instead of against, low-income housing for the elderly.

Posh towns like Lincoln, Mass., would zone for apartments that its own schoolteachers could afford instead of restricting building to expensive single-family houses on two-acre plots.

Communities like San Jose, Calif., would allow, rather than voting to block, public housing for poor Mexican-Americans who labor at nearby farms.

SHOWCASE EXAMPLES

By providing showcase examples for people to see, Mr. Perry maintains, Breakthrough will demonstrate that good planning is to a community's advantage. It is hoped this will enable communities to realize:

Industrialized (factory-produced) housing is safe, attractive, and no more expensive than conventional housing.

This housing can be built swiftly and efficiently, and on a year-round basis.

Land for such sports as riding, golfing, and hiking could be available nearby if housing were clustered rather than sprawled in "cookie cutter" fashion.

Various types of housing can blend well and that a community can provide housing for all its citizens—laborers as well as lawyers—families, single careerists, young couples, and retirees.

Some states—such as California, New York, Michigan, and Massachusetts—are taking significant steps toward housing breakthroughs by legislating statewide building codes that preempt local codes, charging suburban communities to help provide low- and moderate-income housing, and by floating sizable bond issues to finance home building.

While housing and urban experts generally admit there is some good legislation on the books, they still contend that the commitment and funding fall woefully short of the crying need.

---

PIONEERING BUILDERS FIND PIONEERING BUYERS

(By Merelice Kundratis)

SACRAMENTO, CALIF.—Mrs. Carey contends that prefab housing is cheap and temporary.

Mr. Morgan thinks trailer parks consist of transient campers who ruin a community.

Mr. and Mrs. Jennings are afraid that the federal government's Operation Breakthrough housing program will dump poor people on their doorstep.

Misconceptions like these make innovations hard to come by in the housing industry. And housing innovators—in the face of such criticism—have become defensive.

Manufacturers of factory-produced housing, for example, shy away from the word "prefab" and its negative connotation of ugly, postwar housing. Instead, they talk about "industrialized" housing.

Olen and Carmen Dalton in San Jose, Calif.—and other owner-managers like them—resent having their attractive mobile-home park called a trailer park. Some mobile-home fanciers refer to their homes as "relocatable" rather than "mobile."

City, state, and federal officials of Operation Breakthrough stress the benefits of the program for the whole community—not just for low-income residents.

SKEPTICS ON HAND

Changes that capture attention (and controversy) in housing production today most often are linked with technological advances—updating "horse and buggy" techniques. But like the early days of the car, many skeptics of factory-built housing are hooting the equivalent of, "Get a horse!"

In housing terms, that could include: Leave building codes alone! Make mine single-family with an acre of grass around it! Don't use any new kinds of building materials! Work carefully! (that means slowly).

David Stirling Jr. of Stirling Homex Corporation (a major modular-housing producer) puts it this way: "There must be pioneer consumers for pioneering industries."

Mobile homes were unquestionably the forerunner of "boxes," modules, or sections, as the factory-produced units are variously called.

There are other, in fact more flexible types of industrialized housing such as component parts with columns, frames, floors, and wall panels.

But finding a lot of buyers for industrialized housing—enough to make mass-production profitable—must be preceded by widespread education and promotion. That's only one of the aims of Operation Breakthrough, the administration's program to encourage factory-built housing by setting up showcase sites, evaluating and certifying them, and developing new markets for them.

Almost from the start, Operation Breakthrough ran into trouble on its showcase sites—even though it was thought the 11 sites chosen from among 218 proposals would be bursting their buttons with pride. But local ire percolated over misconceptions that the housing would be "cheap" and that it was exclusively for low-income residents (some of it is).

In fact, perhaps one of the more disappointing conclusions drawn so far about industrialized housing is that it might not save money at all. Often what is gained by bulk purchases of materials is lost by transportation costs to the site of assembly.

So the speed with which housing is produced in the factory could be its most valuable contribution.

In a recent interview, George Romney, Secretary of Housing and Urban Development (HUD), insisted that local resistance to Operation Breakthrough diminished when "we gave them the facts."

OBJECTIONS VOICED

Still, when Congress cut HUD's budget for research and technology (President Nixon then later vetoed, for further cuts, what Congress passed), the two most angry communities were the first Operation Breakthrough sites to go—sites near Wilmington, Del., and Houston.

Showcase sites that remain will demonstrate multifamily and single-family units; low-rise, medium-rise, and high-rise housing; garden apartments; and town houses. The sites are in Jersey City, N.J.; Memphis, Tenn.; St. Louis, Mo.; Seattle, Wash. (two sites); Kalamazoo, Mich.; Macon, Ga.; Indianapolis, Ind.; and here in Sacramento, Calif.

Walter J. Slipe, Sacramento's assistant city manager, explained—while driving around the site—why he thought the former state fairground was acceptable to both HUD and the local neighbors. Out the car window—behind a high wire fence—stretched flat, unkempt land with overgrown weeds, a dead tree grove, and unfinished demolition.

Mr. Slipe noted that the site is:

Rundown enough so that the community looks forward to its being upgraded.

Not so rundown that it is beyond hope.

In the city with utilities, medical facilities, sewage lines, and transportation already available.

Open land which the state was willing to sell and which will not involve any displacement of people.

For all Operation Breakthrough's limitations, including dwindling of production from 3,000 to 1,600 units, the program still draws praise from its participating housing producers. Homex's Mr. Stirling says Operation Breakthrough attacks "tremendous attention to housing and identifying the need for changes."

Stirling Homex Corporation has already successfully identified its paying market—multi-family town houses—and its major consumer, government-assisted programs. The company has projects in 10 states and recently shipped modules by rail all the way to Corinth, Miss., from its Avon, N.Y., plant.

But Homex actually has stuck with traditional materials and styles so that its units abide by local building codes. In Rochester, N.Y., people living in Homex town houses didn't realize (and didn't mind when they found out) that their homes were factory built.

Mrs. Annie Floyd simply said about her home: "I'm crazy about it. I couldn't ask for more." She and her three children moved into their five-room Homex town house from what she described as a "filthy," two-room apartment where they had had to share the bath in the hallway.

Acceptance of building methods that are more out of the ordinary is slower in coming as Neil B. Mitchell Jr. of Neil Mitchell Associates in Cambridge, Mass., can attest. His time-consuming experience of meeting obstacles in a Detroit housing plan showed that an open market for different—although tested—building procedures was not around the corner.

PRODUCTS PROVED

However, in Lancaster, Pa., Mr. Mitchell found what Homex found in Akron, Ohio, "pioneer consumers for pioneering indus-

tries." And this enabled them to prove their products.

Hartford, Conn., is running a kind of mini-Breakthrough project of its own by comparing four types of industrialized housing with conventional housing. From its 10 scattered sites, the city expects to learn about costs, materials, labor, and length of construction time.

HUD correctly hopes that industrialized housing will double this nation's present housing production very soon. The need is at least that great to begin to catch up with the nation's stated goal of 26 million units added by 1978.

For all the promise the factory holds, however, the President's Committee on Urban Housing noted less than two years ago: "We only caution that such systems do not offer a broad and universal cure for housing ills in a free society."

Slow acceptance of new ideas is discouraging. But even more discouraging is the limited scope of those innovations which do exist. Few people, compared with the total overwhelming need, are touched by them.

Meanwhile, conventional builders point out that they, too, are always updating their onsite procedures—including using prebuilt parts. Small-volume builders are still the back-bone of housing construction—65 percent of all builders in 1969 each built less than 25 single-family houses.

ROOM FOR BOTH

Major companies now involved in housing—companies like General Electric, U.S. Steel, Westinghouse, Alcoa—bring new elements to the housing industry. These include ability to tap new financing available to such corporations (outside the traditional mortgage market), management techniques and efficiency not found in smaller builders, and large-scale marketing experience.

It is too soon to tell whether housing will be taken over by big business. So far, the trend has not been strong. And in fact, given the nation's acute housing shortage, there is room—and need—for both conventional and industrialized builders.

One can assume the administration will continue to emphasize the necessity to put a lid on inflation, the steps it is taking to ease the tight money situation in home mortgages, and the role of private enterprise and big business in housing.

If so, the nation can anticipate construction of more middle-income housing and a stabilization of costs. But with the majority of Americans then settled once again, there could still remain no broadbased commitment to:

Develop rural areas sufficiently to stem migration.

Halt unplanned suburban sprawl (unless the ecologists discover housing and land planning as they have detergents, automobile exhaust, and dirty furnaces).

Rid the cities of rotting decay and overcrowding.

Put decent housing within economic grasp of all the poor.

Encourage use of new materials and building methods.

In short, recognize—and make politically popular—the concept that the accessibility of well-planned, varied housing in rural areas, the suburbs, and the cities is a goal worth spending for.

## GROWING TREES FOR AN EXPANDING POPULATION

### HON. DAVID PRYOR

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. PRYOR of Arkansas. Mr. Speaker, I marvel over the flexibility of America's rural people and their ability to meet changing conditions with new ideas and new directions. In my State of Arkansas, these traits, reminiscent of pioneer ingenuity, are reflected by the agricultural families who are keeping pace with demands placed upon them by a changing economy and society. Planning and management reveals the kind of thinking that will meet their needs and that of the country today and in the years ahead.

As an example, a lot of Arkansas farmers have moved into production of timber in an unprecedented number, indicating their long view of the future both from an economic and an environmental outlook. This is a crop which was given scant attention until after World War II, but today is a booming reality that will help maintain many rural communities as the timber matures and enters the national market. In 1950 only 251 tree farms were counted in Arkansas, and as of this year the 2,000th Arkansas tree farm is being commemorated.

Tree farms not only provide income to the landowner, but develop the industries and communities which are required to process and distribute the wood products. With this type of resource development rural America, particularly in my State, is going to have a better chance to grow and take its place within the improving decade of the 1970's.

This compartively new endeavor is a result of individual private initiative combined with State and Federal cooperation—an outstanding instance of what the future can hold for the country in other phases of our national life.

Dedication of the 2,000th tree farm in Cleveland County, Ark., on September 16 was indeed a milestone to which we can all offer our jubilant applause. Other States may well follow the example of my State because the demand for timber by the year 2000 will be enormous. Nearly 70 percent more softwood and 40 percent more hardwood will be needed only a generation and a half from now, compared with the 1968 output.

I was pleased to note that executive assistant to the Secretary of Agriculture Fritz Behrens was present at the 2,000th tree farm dedication and delivered the address that spelled out the unprecedented development which is receiving the commendations of not only State and Federal officials but private industry and the American Forest Institute as well.

For the information of my colleagues and rural development officials in other regions I call attention to the report presented by Mr. Behrens at the dedication which I submit herewith for inclusion in the CONGRESSIONAL RECORD.

GROWING TREES FOR AN EXPANDING POPULATION

Many with us today are tree farmers and foresters; many of you are land owners; and most of you, I'm sure, are more than a little concerned about the future of our land and our environment.

I hope that what I have to say may be of interest to all of you.

That all of us are here—tree farmers, foresters, land owners, farmers, businessmen, government officials like Virgil Cotheren, your own State Forester, and myself, from the Federal level, is, I think, worth noting because the forests are important to all of us.

When many Americans think of forests today, they think of some place far off, miles away from their homes where the air is clear, where streams run clean and hillsides are softened with a deep green blanket.

Americans today are concerned about environment and there is concern that our forests may soon disappear, that our forest land will take on the appearance of an ill animal's mangy coat, and that there will soon be little land left where one can hear the constant movement of air thru pine trees, hear the rustle of leaves, or enjoy the brilliant hues of fall.

We must be concerned for our forests—just as we must be concerned for the rest of our environment; but we must not make the mistake of thinking that the only way to have our forests is to rope them off from man's use.

America's demands on her forests are greater today than at any time in her past—and our requirement for forest products and other values and uses continues to grow rapidly. But I don't think this need spell doom for our forests and I would like to tell you some of the reasons why I feel this way.

Let me begin by repeating a bit of history.

Soon after he landed in the new world in 1607, Captain John Smith wrote home asking for permission to explore the vast commercial possibilities he saw in the forests.

Smith's request was granted and a few months later Polish and Dutch millwrights were hard at work in a crude sawmill at Jamestown; thus, American's first industry was born as logs for stockades, ships' hulls, decks and masts, furniture and wood for homes began to meet men's needs in the new world, not only in Virginia, but back in England.

It is an interesting comment on wood's versatility and universal appeal to man that many of these same needs are being fulfilled from our forests even today.

This forest, America's *first* forest, did much to stimulate the industrial revolution during the early 1800's when sawmills sprang up throughout the south to make lumber for churches, schools, roads, homes, factories and farms. Many of these buildings, now part of a proud heritage, are standing today.

But by 1909, a few years as history goes, Gifford Pinchot, the head of the United States Forest Service, predicted that America's forests were facing extinction. The end, he said, would come "by 1930 at the very latest."

Of course we know that despite the doomsayers of the day, our forests have not vanished.

That they have not disappeared from the face of our nation is in great measure due to a farsighted young lumberman named Henry Hardtner, who with other men of vision, between 1910 and 1915, introduced the practice of forestry in the South and other parts of the Nation.

Hardtner's first forestry efforts began to turn the hillsides green again as men began to apply common sense to harvesting, reforestation, and as they learned that it would be profitable to grow trees.

So, contrary to earlier predictions, there was no funeral for the Southern Forest in 1930. By the 1930's, lumber production began to inch up and then soared to meet the requirements of World War II.

Heavy wartime demands were not a setback for the South's Second Forest because the tree farm movement, with the support of State Foresters and the Forest Service, promoted the practice of forestry by private landowners and aided them in obtaining technical assistance. In 1942, Arkansas, along with three other states, became the cornerstones of the American Tree Farm System.

By 1947, Col. W. B. Greeley, former chief of the United States Forest Service, was able to report after a tour of southern forest lands that "the southern forests are now

supplying a greater volume—and a greater value—of forest products than they ever yielded in the heyday of virgin timber."

Since Col. Greeley's report in 1947, production of pulpwood in the South has quadrupled, and production of southern pine lumber which declined in the 1950's began to rise.

I think the growth of the tree farm program here in Arkansas speaks rather well for the South. From 251 tree farms in 1950, the program expanded nearly four times to include 856 tree farms in 1960. Today, of course, we commemorate the 2,000th Arkansas Tree Farm.

In this February 10, 1970, message on Environmental Quality to Congress and the American people, President Nixon said:

"At the turn of the century, our chief environmental concern was to conserve what we had—and out of this concern grew the often embattled, but always determined, 'conservation' movement. Today, 'conservation' is as important as ever—but no longer is it enough to conserve what we have; we must also restore what we have lost."

The American tree farm movement is indeed a great step toward this goal.

The third Forest concept developed by the forest products industry of the South anticipated some of the goals set out by the President and the industry is indeed to be commended for its farsightedness—a tradition begun by Quincy Hardtner and carried forward by those who followed him.

The objective of the Third Forest is to increase growth of southern forests to meet year 2000 needs. Annual growth will have to total 13-billion cubic feet—nearly 70 percent more softwood and 40 percent more hardwood growth than in 1968. This must be achieved on a shrinking land base; in the face of increasing demands for clean air, clean water, beauty, wildlife, and recreation; and within a highly competitive labor market.

But the efforts by industry, by states, and by the Federal Government to meet the goals within this framework can't be emphasized too much. In the South, particularly, forest resource development and full use is of paramount importance, both for its own welfare and that of the Nation. It is the key to rural development and employment opportunities which can reverse the tide of migration to beleaguered cities.

However, the surface of full forest development and use has barely been scratched. So we must get on with the job now.

I would like to sketch a very brief picture of what we can expect in the way of demand for forest products in the years to come—from today through the next thirty years.

Our own United States Forest Service estimates project an 80 percent increase in the demand for forest products by the year 2000. Demands for pulpwood, plywood and veneer are expected to increase more than two-and-a-half times the 1962 level. And demands for lumber are expected to rise about 47 percent during this period.

When you look at where our timber comes from today, you learn that one-half of the wood harvested nationally comes from small, non-industrial private ownerships—owned by some 4 million people from all walks of life, including many absentee owners.

Some of these individuals—among the nearly four million of them—realize what all of us must learn if we are to meet tomorrow's forest products needs; that our forests can benefit all the people best when they support a wide range of *multiple uses*, including hunting and fishing, camping, wildlife management, watershed management and, of course, production of timber on a sustained yield basis to provide employment in local communities, and to produce the raw material to meet the housing needs of an expanding population.

We can enjoy all these things in our forests and have an adequate timber supply for future needs, but we must do two very important things.

We must bring additional land into managed timber production, and this means, for the most part, additional medium and small-sized tracts of privately owned land. It is in the area of privately owned land that we have the greatest opportunity to benefit from reforestation and scientific management.

Next, we must learn to manage all the forest land we have in the most efficient way possible—through genetic research, planting and harvesting techniques, and through more effective means of disease and insect control.

In the Department of Agriculture and other areas within the Federal Government we are at work on several fronts.

We have proposed a program of incentives to insure higher levels of forest production, management and environmental quality on non-industry, private lands.

This program would provide federally funded financial assistance to individuals who install certain timber production, wildlife, and evironment enhancement projects.

The program is somewhat different from some of our other Departmental programs in that it is designed to increase production instead of reduce a surplus.

In the areas of genetic research, we have developed a cottonwood which matures in about one-third the time formerly required. This tree can be expected to flourish on about thirty percent of the forest land here in Arkansas. The results in terms of greater profitability and increased production are obvious.

The Cooperative Forest Management Act of 1950 provides funds to the states to provide forest management assistance, but the workload is too great and additional efforts must be devised to broaden this assistance. Also to be remembered is the fact that public initiative is meaningful only in terms of private enterprise. It is individual interests, responsibility, and anticipation of future forests that truly motivate our national interests.

Through its Tree Farm System, the American Forest Institute is working to provide programs for tree farmers in the areas of harvesting assistance, marketing assistance, and forest management.

I hope that I have made clear that while the Department of Agriculture shares the concern for our forests and environment, I feel that common sense by all of us, and wise forest management by those of us involved in timber production, can meet our physical needs while still providing us with the forest beauty it is our nature to enjoy—and which we have a right to expect.

Our forests, both public and private, with their trees and wildlife, are our one renewable resource. With care they can go on providing us with material for homes and wood products, as well as recreation benefits forever. No other raw material can make this claim!

We will continue to have communities of men on this earth and they will continue to need the wood of our forests for homes, for paper, for chemicals, and other wood products. The world's society consists of communities of people. Many of these communities produce trees. *All* of them depend on the simple wood fibre from the forests for the newspapers they read and the homes they live in.

Experience has shown us we need not rope off our land for one single use; we need to manage it well, for many uses. The dedication of this 2000th tree farm in Arkansas is evidence that we know there can be achieved a balance in the demands *on* and the production *of* the forests of America.

## THE PASSING SHOW THE TRUTH ABOUT THE GREAT

### HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Monday, September 28, 1970*

Mr. DERWINSKI. Mr. Speaker, John Dienhart, the editor of the Economist Newspapers is a veteran journalist who has always kept news coverage in historical perspective. This is reflected in his column of Wednesday, September 23 in the Suburbanite Economist in which he reports on the interesting traits of a number of renown individuals:

THE PASSING SHOW—THE TRUTH ABOUT THE GREAT

(By John W. Dienhart)

Some idiosynchrasies of the great and near great:

While talking with a member of his cabinet, President Woodrow Wilson used to write limericks. He said his doing so enabled him to concentrate on the subject of their conversation.

President Herbert Hoover was a doodler. He scrawled geometric and other designs with a pencil while talking on the telephone.

President Theodore Roosevelt was so sensitive to criticism that when he had decided to propose a policy or project to Congress he first would invite a trusted Washington newspaper correspondent to listen to his ideas while he shaved. The correspondent would reveal the details in his dispatch to his paper, but he would attribute the authority to a "source close to the White House". If the proposal encountered Congressional or editorial opposition, Roosevelt would disclaim any knowledge of it. His scheme was called "a trial balloon".

Presidents Harry Truman and Warren G. Harding were avid poker players. They would invite poker-playing senators and congressmen to spend an evening in the White House and play until long after midnight. Congressman John Kluczynski was one of them.

President John F. Kennedy was a cigar smoker, but he never smoked in public. He was fearful a photographer would catch him with a long cheroot between his lips and that it would make him appear undignified. But in his Oval office in the White House he practised no such restraint.

President Dwight D. Eisenhower liked to cook vegetable soup and Brunswick stew. On fishing trips he would prepare a kettle of either, let it stand overnight and feed it to his companions the following day. Ike contended the taste was improved by allowing the mixture to marry overnight. Ike also invariably ate steak for breakfast.

President William Howard Taft had a huge bathtub installed in the White House to accommodate his 300 pounds. President Wilson, his successor, had it yanked out.

President Richard M. Nixon is an avid sports fan and enjoys visiting with athletes in their locker room.

President Lyndon Baines Johnson thrilled in throwing barbecues for scores at his Texas ranch. He also likes Mexican food, and when President Kennedy's French chef turned up his nose at preparing chile, tamales and such, Johnson let him go and brought to the White House kitchen a woman chef from Texas.

William Randolph Hearst, who owned a string of 21 newspapers, dozen * * * luxury fit for a king. His dining room seated more than a hundred, and between the huge solid silver candalabera were bottles of catsup

mustard and other condiments in their original containers. He said the reason he did not use silverware for the stuff was to constantly remind himself and his guests that they could someday suffer financial reverses.

Walter Winchell, the columnist who coined such words as whoopee, which became common usage, wore a tattered dressing gown and had a pencil stuck between two fingers of his right hand when he wrote his daily output.

Winston Churchill consumed a fifth of Napolean brandy a day, and he burned half a dozen long, Havana cigars rolled especially for him.

President Franklin D. Roosevelt liked Irish whiskey, and when he took his frequent trips on a navy cruiser, a case of his favorite brand was sent abroad. During Roosevelt's record tenure of the White House, Sunday evening meals always were scrambled eggs and bacon prepared by Mrs. Roosevelt in a chafing dish at the table.

## CONSERVATION AGENCIES

## HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the CONGRESSIONAL RECORD an admirable speech by the Honorable Ralph A. MacMullan, Director of the Michigan Department of Natural Resources, entitled "Conservation Agencies' Views on Agricultural Chemicals."

This fine address, given before the International Association of Game, Fish, and Conservation Commissioners in New York City recently merits the careful consideration of everyone concerned with a decent and wholesome environment:

CONSERVATION AGENCIES' VIEWS ON AGRICULTURAL CHEMICALS[1]

(By Ralph A. MacMullan, Director Michigan Department of Natural Resources)

I am grateful for the opportunity to speak for the conservation agencies on what is still one of the most troublesome problems of wildlife management. I have been speaking out against the "hard" or persistent insecticides for several years now. We launched the attack in Michigan in January, 1968, with publications of "The Case Against Hard Pesticides," an article which has been re-issued and reprinted widely—perhaps more than half a million copies. And much has been written and done since then in Michigan and elsewhere. Consequently, I will not burden you with what I now consider a foregone conclusion—that the persistent chlorinated hydrocarbon insecticides must and will go!

I am going to devote myself this afternoon to other aspects of the problems posed by agricultural chemicals, and to propose some solutions. I regret we have to be tough again, and perhaps appear unorthodox, as we have in the past. But the conventional has not worked and will not work. Witness where we are today.

First let me outline some of the factors which work to inhibit a solution of the problems posed by pesticides. Foremost among these is the pitfall of calling them "agricultural chemicals" a trap into which we all fall, including your program committee in labeling the topic now before this two-man panel. The adjective "agricultural" seems to convey a righteous, holy, "American," and therefore thoroughly justifiable basis for acceptance.

"Agricultural chemicals" they may have once been. Today they are equally "urban chemicals" and "silvicultural chemicals." Today they are "environmental chemicals." So agriculture may be unfairly blamed for the unsavory attributes of certain of the pesticides, as when dieldrin used to mothproof rugs and clothing in dry-cleaning is allowed to escape into rivers. Let's be frank about it and identify these chemicals in legal parlance—they are "economic poisons."

Now to another problem. When pesticides were used mainly on the farm, it was entirely reasonable to have their control delegated by legislatures and the Congress to Departments of Agriculture. With heavy urban and forest use and knowledge of the global mobility of the hard pesticides, it is now no more reasonable for control of pesticides to rest within a Department of Agricultrue than it is to have a U.S. Forest Service within a Department of Agriculture.

When pesticides were used mainly on the farm and were thought to stay there, and to affect only the applicator and the consumer, it was perfectly reasonable to have use of pesticides regulated by Departments of Agriculture with some control over residues by the Food and Drug people. Later, when volume of pesticide use increased and the mobilit of pesticides and their effects on wildlife became clear, advice of wildlife biologists was solicited. However, control was slight, and the biologists' advise was rarely heeded by a Department of Agriculture with an ear attuned to increased farm production, and apparently deaf and blind to the rest of the environment.

Under the sanctity of "agricultural need," it was only natural that substantial protection to the pesticide chemical industry was built into the laws authorizing the use of these chemicals. As the market and hence production grew, the agency registering these chemicals developed a thoroughly understandable "protective" attitude and resisted any efforts toward restricting the "miracle" chemicals. Even now when some of the less toothsome attributes of certain pesticides have become evident, the built-in protection of notices, appeals, committee review, and more appeals ad infinitum, ad nauseam, prevents or delays the withdrawal of uses of many of the noxious hard pesticides.

Developing parallel with the "pesticide protective" philosophy of the law and within the regulating agencies. Is an understandably similar attitude in the land-grant and other state agricultural colleges. Students were being trained as farmers, or for positions in the pesticide industry, or in the cooperative extension service, or as professors teaching entomology or farm crop management, all with liberal overtones of chemical insect and weed control. Thus students become professors and then administrators—deans and/or directors of experiment stations—who perpetuate the attitudes and system. This condition is not being improved by personnel interchange between pesticide companies and the colleges. Even worse has been the muzzling of biology or wildlife professors in universities with powerful agriculture colleges. Only since biologists have labelled themselves "ecologists" has a breakthrough been possible.

I have alluded to the role of the pesticide industry in these processes. The chemical industry is the woof that crosses the warp, and colors the combined fabric of farmer, government agency, and agricultural college. After all, pesticide manufacturers exist only to see pesticides. Everything they can do to maintain or increase sales will be done. Anything that would decrease sales will be resisted in the fang and claw melee for survival in the market place. They will not hesitate to employ Madison Avenue sales tactics of half-truths which ignore unpleasant realities so long as the glowing claims made are also true. They are not immune to another Madison Avenue failing of over-selling, over-recommending. Not so long ago a two-page advertisement in national magazines urged farmers to broadcast dieldrin for corn root insects every year. Chemical industry "scientists" have impeccable credentials, but they must still earn their pay.

Another problem related to the pesticide industry is the manner in which pesticide salesmen become advisors to the farmer. Aided by attractive, effective sales brochures and primed with ready answers, they perpetuate the "we gotta spray" syndrome. In a survey of farmers in a Midwestern cornbelt state, they far outranked the cooperative extension service as a source of information on pesticides.

All of this sounds very discouraging and it would be if it were not for a growing number of courageous college professors, biologists, and ecologists; lawyers and Congressmen and legislators; natural resource agency heads; environmental action councils; and just ordinary John Q. Citizens, following the lead of Clarence Cottam and George Wallace, who question the platitudes and steamroller tactics of the agrico-chemico-business behemoth. They are now sufficiently "fed up," numerous, and vocal to make their voices heard in state legislatures and the halls of Congress, in the courts, and in offices of government officials.

Significant beginnings are being made. Our President has proposed a new Environmental Protection Agency which would take over the pesticide regulation function of the Department of Agriculture. Our host state, New York, has established an Environmental Conservation Department which has been given responsibility for pesticide regulation. In the upper Great Lakes region the governors of five states have set up a Cooperative Interdisciplinary Pesticide Committee for more rational use of pesticides. Environmental Quality Councils are blossoming out in state after state and reviewing the problem of agricultural chemicals. In others, pesticide review boards involving several disciplines, are placed in departments other than agriculture, or act independently of any department.

Some states and provinces, notably Wisconsin, Michigan, Washington, Florida, California, Arizona, and Ontario, have grown weary of waiting for federal action and have made great strides toward eliminating or reducing use of the persistent chlorinated hydrocarbon biocides. We hear much of the new accord in Washington, D.C., whereby the Departments of Agriculture, Interior, and HEW will put the federal pesticide house in order. But all we seem to note in the press is the continued determination of the Department of Agriculture to maintain the same overcautions, foot-dragging system of notices, appeals, committee meetings, more appeals, cancellation of pesticide registrations which permits continual sale on appeal, rather than suspension.

I have been talking very generally about agricultural chemicals and pesticides and complaining loudly about the system which sustains them. It may seem that I eschew all such materials. Nothing could be farther from the fact. I recognize that many agricultural chemicals are necessary tools of the farmer, home owner, and public agency. Many, by virtue of their quick and effective action and short life, will be useful public servants. What I am pleading for is change in a system which enables continuation of ecologically undesirable blemishes on the environment of my state, my country, and the North American continent, if not the entire Space Ship Earth.

Changing the system will require the hard work of many, combined, concerned conservation and environmentally oriented persons and groups. Changing the system wil

[1] Presented at the International Association of Game, Fish, and Conservation Commissioners Annual Meeting, New York City, September 17, 1970.

require an overhauling of legislation to require a thoroughly ecological approach to registration of new pesticides and to permit prompt review and withdrawal without interminable delays of those already registered whenever their ecological unacceptability is demonstrated. We must have legislation to prohibit use, as well as sale, of pesticides which are not registered or for which registration has been withdrawn. Changing the system will mean admitting the ecologist to the discussion table at each and every step of deliberations on the acceptability of a pesticide.

Changing the system means adopting the premise that we cannot risk admitting a new pesticide into the environment without full knowledge of its ecological impact. We must know more about many pesticides now in use. We must know more than which bugs they will kill, or how they affect the applicator, or how they affect a few laboratory animals. Simply put, it means that contrary to the precepts of common law, some pesticides must be presumed guilty until proven innocent. We have no other choice. The risk is too great.

Changing the system will not destroy agriculture and the chemical industry. Changing the system will mean the continued use of pesticides, but with sharp shooting, rifle-like chemicals, not with shotgun, blunderbuss or bludgeon biocides. Changing the system will mean a careful, calculated integration of biological, cultural, and physical means of pest control with the conventional, all-too-frequent, chemicals-only attack. Changing the system will mean the training of a new breed of pest control educator, agency administrator, and sales organization. May the agriculture colleges of this country rise to the occasion and provide the sensitive, ecological training that will make this possible. Changing the system must mean a cleaner and more viable environment for wildlife and man alike.

Not until we capitalize on the combined know-how and concern of the total scientific community, will there be relief. So in the Conservationist's view I see the agricultural chemicals as both a threat and a promise, a millstone and an opportunity, the former if we permit present day progress to wither away, the latter if we use these useful tools with discretion, moderation, and only when needed. The choice, fellow administrators of natural resources, may well be yours. Most of us have accepted the challenge and have actively entered the fight for a cleaner environment. Here is one significant way you can exert your influence to assure posterity of a world worth living in, with the diversity of wildlife we have come to prize. We who have chosen to act on pesticides invite your support.

## REVENUE SHARING IS ESSENTIAL TO SOLVE THE URBAN PROBLEMS

### HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. ANDERSON of California. Mr. Speaker, I have recently received a letter from the mayor of Los Angeles, the Honorable Sam Yorty, regarding appropriations for the Department of Housing and Urban Development.

Mayor Yorty, an experienced administrator of the Nation's second most populous city, feels that increased Federal funds are needed, in order "to solve the urban problems" in our country.

Mr. Speaker, our cities need financial help. The property tax cannot be increased—the local taxpayer cannot shoulder a greater burden. Thus, the cities, in order to continue necessary services, must come to the Federal Government for help.

We can help by approving a revenue sharing bill, and we can help by increasing the Federal financial share to our troubled cities.

Local officials know the problems; they are optimistic about solving the problems if they have the funds, and a greater portion of those funds must come from the Federal Government.

At this point, I place Mayor Yorty's letter in the CONGRESSIONAL RECORD:

OFFICE OF THE MAYOR,
*Los Angeles, Calif., September 15, 1970.*

Hon. GLENN M. ANDERSON,
*Longworth Building,*
*Washington, D.C.*

DEAR GLENN: I want to express appreciation for your position and vote on the HUD Appropriation Bill.

It is extremely important to the City of Los Angeles and other cities that the Congress express a positive commitment to solve the urban problems in this great nation.

Many of the fine accomplishments of our urban development programs would be in jeopardy should the Federal Government fail to maintain its commitment to the cities. Los Angeles asked for $14.8 million in Neighborhood Development Program funds which was slashed $7.3 million. This meant that, instead of a planned 1,032 units of inner-City low and moderate income housing, for example, only 732 will be started. Relocation plans have been scaled down from 670 families to 467.

For this reason, I urge you to oppose any reduction in the HUD portion of the Independent Offices and HUD Appropriation Bill, especially the $1.35 billion urban renewal portion. Other less essential and low priority areas could be reduced.

Your support of the cities and local governments is respectfully and urgently requested.

Sincerely,

SAM YORTY,
*Mayor.*

## OATHING IN THE DISTRICT OF COLUMBIA

### HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. RARICK. Mr. Speaker, a precedent in degradation of everything sacred has now occurred in Washington, D.C. Last Thursday, a so-called community leader was purported to be sworn in as a trustee of the District of Columbia Library Board, using in lieu of a Bible, the autobiography of Malcolm X.

President Nixon's appointed Commissioner of the District of Columbia, affectionately called "the Mayor" by the liberal news media, and other executives of our Nation's Capital were present and participated in this sacrilegious "swearin" service. By their willing presence, we must assume that they condone such disgraceful activity. Some may wonder how they can provide leadership for the crime problem which blights the seat of our Government? If these are the kind of leaders the people of the District of Columbia must look to, no wonder they have lost their way and gone astray.

Following the "new oathing" ceremony the affiant is quoted as having said, "For the life of Malcolm—right on."

The revolting mockery was even carried as news by NBC on channel 4 television.

This woman is a member of the Library Board which receives Federal grants? Is she a de jure appointee or is her position now de facto?

And, to think that these recipients of the American people's tax dollars are to be the beneficiary of home rule for the District.

Will the new nonvoting delegate for Congress be allowed to refuse taking his oath of office in the traditional manner and choose to use a like mockery?

A newsclipping follows:

[From the Washington Post, Sept. 24, 1970]

APPOINTEE "RIGHT ON" THE DISTRICT OF COLUMBIA LIBRARY BOARD

Lola Singleterry, a Southeast Washington community leader, was sworn in as a member of the D.C. board of library trustees yesterday, using a copy of the autobiography of Malcolm X instead of a Bible.

At the end of the oath of office, administered by Maltin Schaller, executive secretary to Mayor Walter E. Washington, Mrs. Singleterry said, "For the life of Malcolm—right on!"

Mrs. Singleterry, 35, was appointed to the nine-member board by Mayor Washington to replace Dr. Albert W. Atwood, the 91-year old chairman who retired this year. Her appointment followed complaints that the library board did not reflect a cross-section of the community.

## DRUG ABUSE AND YOUTH

### HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. COHELAN. Mr. Speaker, my good friend and valued colleague, Representative RICHARD HANNA, has been a leader in the House on the problems of drug addiction. His concern in this area is reflected in his contributions to Federal legislation dealing with drug abuse.

Just recently, Representative HANNA has continued his attack on the proliferation of drugs by sending his constituents an informative pamphlet outlining the effects of drugs. This pamphlet is a valuable addition to the search for an adequate drug education program.

I feel that my colleagues should be fully informed of this effort and I am enclosing for their information Representative HANNA's letter and summary of the pamphlet:

A SPECIAL REPORT: DRUG ABUSE AND YOUTH

DEAR FRIEND: I know you share my concern over the alarming abuse of drugs by many young people. Many of you have asked me what you, as a concerned citizen, can do to help solve this problem.

The first and most important thing you can do is become as familiar as possible with the means, methods, and symptoms of drug use, and its effect upon our young.

With this in mind I am providing you with

this booklet which is designed to provide vital and understandable information on the drugs, narcotics and chemicals that are being most frequently abused and which are easily available to young people on the illegal "street market"; also how the user will look, act, and then detailing some of the harm done.

Everything said in this summary brochure is substantiated by both medical and law enforcement authorities. No longer do we have to rely on speculation, scare campaign or dubious personal opinions. There is now enough factual data available to make the "Case Against Drug Abuse" uncontestable.

We as concerned citizens have long told our young "Don't use Drugs." But now we can authoritatively say with the aid of this brochure, why drugs should not be used and the irreparable harms that can result if they use them.

The increase in juvenile drug-related arrests is staggering, with almost every urban and suburban community acknowledging 'a drug problem.' This problem should not be the sole responsibility of governmental officials, teachers, administrators, doctors, counselors and enforcement personnel. Given correct information we can all be a powerful force in intelligently and effectively advising young people on the technical subject of drug abuse.

RICHARD T. HANNA,
*U.S. Congressman,*
*34th Congressional District.*

---

A SUMMARY FOR PARENTS AND STUDENTS ON THE SUBJECT OF TEENAGE DRUG ABUSE

(In outline form, some of the dangerous drugs, narcotics and volatile chemicals that are being used by some of our teenagers and sub-teenagers—also, briefly detailing some of the harm that results.)

There is an alarming increase in the abuse of drugs by some of our young people. Yet there is a real lack of practical knowledge by parents on the dangerous drugs, narcotics and volatile chemicals that are being used.

This brochure is designed to provide vital and understandable information on the drugs, narcotics and chemicals that are being most frequently abused and which are easily available to our children on the illegal 'street market'; also how the user will look, act, and then detailing some of the harm done.

Everything said in this summary brochure is substantiated by both medical and law enforcement authorities. No longer do we have to rely on speculation, scare campaign or dubious personal opinions. There is now enough factual data available to make "the Case Against Drug Abuse" uncontestable to any reasonable mind.

We as parents have long told our children "Don't use Drugs." But now we can authoritatively say with the aid of this brochure, why drugs should not be used and the irreparable harms that can result if they use them.

This brochure outlines and diagrams some of the stimulants, depressants and hallucinogens. It is the first in a series of five nonprofit summaries providing parents with current, correct, and understandable information on drug abuse.

The increase in juvenile drug-related arrests is staggering with almost every urban and suburban community acknowledging 'a drug problem.' This problem should not be the sole responsibility of governmental officials, teachers, administrators, doctors, counselors and enforcement personnel. Given correct information, parents can and must be a powerful force in intelligently and effectively advising their children on the technical subject of drug abuse.

## HORTON COMMENDS MR. AND MRS. ALEX SAPERSTONE FOR THEIR HELP TO OTHERS

---

### HON. FRANK HORTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. HORTON. Mr. Speaker, I imagine we all are familiar with the adage that it is more blessed to give than to receive. It is always inspiring, however, to learn of that adage proving its truthfulness to individuals who have found exceptionally great joy in giving of themselves to the cause of helping others.

Mr. and Mrs. Alex Saperstone of Irondequoit, in the Rochester area, are such people. A little more than a year ago they got involved in volunteer work at the Jewish Home and Infirmary and have learned to their great satisfaction that their lives have changed because of their good deeds. They honestly feel that the efforts they put into the work are small compared to the great satisfaction and reward they get in return.

The Rochester Democrat and Chronicle recently saluted Mr. and Mrs. Saperstone in the "Nanci Spotlights the Doers" column. It was brought out that their involvement with volunteer work came about by chance.

While attending the formal opening of a new wing at the home, they were both impressed by the great opportunities the home offered for volunteers to assist in making life more interesting and fruitful for the aged living there. Simultaneously, they realized that here was an opportunity for them to give of themselves and their talents, and they acted upon the inspiration.

Since reaching their decision, the Saperstones devote their Tuesday afternoons to work at the home. Being an amateur barber, Mr. Saperstone gives haircuts to the bedridden patients while Mrs. Saperstone uses her skills with bookkeeping and other clerical work.

For others who might want to do volunteer work, Alex Saperstone has this thought.

I'm sure people would do more if they had any idea of the great amount of satisfaction that comes from giving a little of yourself. There are times I'm tired and don't especially want to get off the couch. But then I see how thankful the old folks are. That's the reward that makes it worthwhile.

The Jewish Home and Infirmary is a beautiful and efficiently operated place. I have visited it many times, Mr. Speaker, and it is a real inspiration to see the aged men and women there being encouraged to live continuing interesting and full lives. With the additional help of good people like Mr. and Mrs. Alex Saperstone, even more joy is being brought into the lives of the patients.

I commend the Saperstones for their fine work and I feel that my colleagues in the Congress join me in wishing them continued happiness in their own lives as they add to the pleasures in the lives of others.

I would like to share the Democrat and Chronicle's salute to the Saperstones with my fellow Members of the House of Representatives.

The newspaper article follows:

THERE'S JOY IN GIVING

"We both suddenly reflected on all the people who have helped us throughout the years and decided it was about time we did something in return."

The "we" is Mr. and Mrs. Alex Saperstone, 76 Northfield Road, Irondequoit, who devote time each week to work at the Jewish Home and Infirmary, 1180 St. Paul St. The Saperstones have been doing volunteer work there for a year and it's changed their lives.

"It's the feeling we have gotten from giving of ourselves-together," Mrs. Saperstone says.

They got involved in volunteer work quite by chance.

"We went to the opening of the new wing at the Home about a year ago. Suddenly we just looked at each other and knew we wanted to get involved in helping people there in any way we could."

Mrs. Saperstone says the timing was right. "Our children were grown, my husband was semiretired and we found ourselves with extra time on our hands."

Saperstone, 58, is semi-retired from his frozen food business and has been an amateur barber for years, giving free haircuts to friends and neighbors. Mrs. Saperstone did bookkeeping before she was married and kept her husband's books for his business while raising their family.

Every Tuesday for three hours in the afternoon, he gives haircuts to bedridden patients, and she helps out with bookkeeping and other clerical work.

"Sometimes if I get done early, I go up to the ward and sit and talk with some of the patients, help feed them, do anything I can," she says.

The Saperstones agree that the hardest part of volunteer work "is just getting started."

"So many people feel they have to devote a lot of time, or they just don't know where to get information to begin."

"I'm sure people would do more if they had any idea of the great amount of satisfaction that comes from giving a little of yourself. There are times I'm tired and don't especially want to get off the couch. But then I see how thankful the old folks are. That's the reward that makes it worthwhile," Saperstone said.

They feel that working with older persons "makes you think a lot about yourself and your life."

"You have to think, maybe someday I'll be in that position, and you realize how dependent they are on others for the very basic things. I feel very grateful that I'm in the position to do something for someone else."

Says Mrs. Saperstone, "There's a woman there whose room is loaded with plants she cares for, she crochets, and she's always smiling and doing for others. Then there are other older persons who sit, doing nothing for hours on end, taking no interest in anything."

"I feel it's a lesson that we're all going to grow old. We can either be constructive about it or retreat into ourselves and make no one happy."

For the Saperstones, volunteer work is turning out to be a "great pleasure and a joy of giving."

"We didn't know what would happen when we started, but after a year we can say that what we put into it is small compared to the great satisfaction and reward we get in return."

The Sapperstones have been married 29 years. They are avid square dancers, belong to the Echo Squares and dance twice a week. They also play bridge and love to fish.

## RESULTS OF FIRST DISTRICT QUESTIONNAIRE

# HON. ARNOLD OLSEN

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. OLSEN. Mr. Speaker, I have tabulated the results of my annual questionnaire which was distributed throughout my district earlier this year. I feel that these results give a true indication of the sentiments of the residents of western Montana. I would like to share them with my colleagues along with my thoughts on many of the vital issues facing the country today. I ask permission to include my Washington Report containing both my letter and the questionnaire results immediately following these remarks:

ARNOLD OLSEN'S WASHINGTON REPORT—1970 POLL RESULTS

ADMINISTRATION POLICIES ADD RECESSION TO INFLATION

(By Arnold Olsen)

Early last year I predicted the Nixon Administration's policy of high-interest and tight money would benefit only the big, Eastern banks and would bring growing inflation, unemployment and recession. Unfortunately, that prediction is now reality.

The Administration itself has fallen victim to the economic tailspin. First the President predicted a $1.3 billion surplus this fiscal year. Now the Administration admits a $4 billion miscalculation and expects a deficit of $2.91 billion.

Take a look at what is happening. Increased interest rates resulting from turning the fiscal reins over to the big banks have added more than a billion dollars to the taxpayers' load in fiscal 1970, and it will probably be twice that much next year. More than half a billion dollars more was laid out by our government for unemployment compensation in 1970 due to rising joblessness under the President's policies, and Administration spokesmen say unemployment will continue to skyrocket.

The recession is here, whether or not the Administration admits it. As a result, tax revenue for this year is down approximately $1 billion. Next year it will likely drop $2 billion. Unemployed workers and unprofitable businesses don't pay taxes.

My efforts in the Congress have been directed at achieving a reversal of the inflationary, recessionary spiral. I have worked hard in support of efforts to:

Reduce spending for wasteful, unnecessary defense programs and "overkill" supplies of war tools.

Reduce spending for foreign aid, especially military-type assistance.

Withdraw American troops from Southeast Asia, sharply reduce troop numbers in Western Europe, and reduce the possibility of additional military involvements abroad.

Set in motion federal machinery to make more money available at lower interest rates for home building. (Emergency Home Finance Act).

Contrary to Administration efforts to blame big spending on the Congress, the record proves that Republicans and Democrats in the Congress were effective in trimming nearly $7 billion from the President's own appropriations budget last year. We hope to reduce spending still further this year.

The Congress has provided more for education, health, housing and Social Security than the President wanted, but it more than offset these increases by reducing appropriations in such areas as foreign aid and Pentagon spending.

The records of the Administration and the Congress demonstrate the contrast between the President's emphasis on defense and big business and the Congress' emphasis on the real needs of the people.

I was pleased, for example, that we were able to reject an all-out effort on the part of the Administration to provide nearly $1 billion in federal funds to bail out the big banks holding notes and debts against the Penn Central conglomerate. Such action would have repaid the big banks but it wouldn't have solved the bankrupt railroad's problems.

OLSEN NEWS NOTES

VETO OVERRIDE

Arnold Olsen joined forces with a bi-partisan group of Congressmen to over-ride the President's veto of hospital construction appropriations. Olsen called the over-ride "a most encouraging sign. Such domestic programs as health research, hospitals and education must be top priority items. They cannot take a back seat to massive and wasteful defense spending on such things as missiles, useless military aircraft and other tools of war."

SEEKS STOP TO DRUG FLOW

Arnold Olsen has introduced legislation authorizing the President to suspend economic and military aid to countries which refuse to act to halt the flow of drugs into the U.S.

LEADS BATTLE FOR INCREASED SOCIAL SECURITY

Arnold Olsen was among leaders in recent House action to improve Social Security benefits. Key features of the bill are a five per cent increase in monthly benefits, an automatic cost-of-living increase provision, and an increase in retirement exemptions. Olsen pledged to continue his fight to have restrictions on outside income eased or eliminated.

INTRODUCES EMERGENCY HOME FINANCE ACT

Arnold Olsen joined in the introduction of the Emergency Home Finance Act to make more mortgage credit available for housing. "One of the first victims of the Administration's high-interest and tight-money economic policy was the housing industry," Olsen asserted. "The Congress can and must act to get badly needed housing construction under way."

URGES TIGHTER AUTO-EXHAUST CONTROLS

Arnold Olsen is sponsor of legislation to control auto exhaust and establish enforcement procedures. The measure calls for the creation of national emission control standards and the designation of penalties for violations.

WAR STATISTICS SUPPORT 18-YEAR-OLD VOTE

Defense Department figures show that half of American fatalities in Vietnam were 21 years of age or younger. "25,916 young men have been killed in Vietnam who never had the opportunity to vote," Olsen said. "Young people who are being asked to put their lives on the line for their country should have an active voice in electing government officials who formulate our policies relative to war and peace."

OPPOSES BILL TO INCREASE TIMBER HARVEST

Arnold Olsen opposed House consideration of the National Forests Conservation and Management Act and was successful in having it sent back to the Agriculture Committee for further deliberation. Charging that the bill was misnamed, Olsen said on the House floor that the legislation was "timber harvest oriented," and insisted that revised legislation provide clear safeguards for conservation and other multiple use interests. "What we desperately need now is a tree-planting bill, not a tree-cutting bill," he said.

SUPPORTS MEAL PROGRAM FOR ELDERLY

Arnold Olsen is sponsor of a bill "to provide for establishment of a low-cost meal program for senior citizens in a social setting."

The Congressman said demonstration projects under the Older Americans Act and other local projects now operating demonstrate the potential for such a program. The legislation would combine federal and state funds to establish a wholesome, low-cost meal program for persons 65 and over at strategically located community centers. He cited government studies revealing that lack of mobility, skill, knowledge or desire causes frequent cases of inadequate nourishment among the elderly.

MY 1970 QUESTIONNAIRE RESULTS

[Results in percent]

1. Do you support President Nixon's approach to achieving peace in Viet Nam?

| | |
|---|---|
| Yes | 58.3 |
| No | 41.7 |

2. If U.S. troop level has not been substantially reduced by the end of 1970 do you favor:

| | |
|---|---|
| a. Continuing military operations at present level while pursuing further negotiations | 5 |
| b. Immediate withdrawal, the only consideration being the safety of our troops | 46.2 |
| c. Increased offensive operations | 13.5 |
| d. Phased withdrawal of U.S. troops with transfer of responsibility for the war to the South Vietnamese, regardless how long it takes | 35.3 |

3. Tax cuts may create a budget deficit which could have an inflationary effect. In which of these areas of federal spending would you make cuts?

| | |
|---|---|
| a. Space program | 70.7 |
| b. Education | 11 |
| c. Aid to cities | 24.1 |
| d. Welfare | 42.1 |
| e. Health research | 6.3 |
| f. Military spending | 69.4 |
| g. Pollution programs | 7.1 |
| h. Highway construction | 21.1 |

4. Interest rates have spiraled to the highest level since the Civil War and the housing industry has been brought to its knees. Should the President:

| | |
|---|---|
| a. Relax credit restrictions to avoid possible recession | 45.9 |
| b. Maintain credit restrictions until inflation is halted | 54.1 |

5. Some experts insist inflation cannot be controlled without applying price and wage controls. Would you favor such controls?

| | |
|---|---|
| a. Now | 48.7 |
| b. As a last resort | 39.2 |
| c. Never | 12.1 |

6. Regarding foreign aid, do you favor:

| | |
|---|---|
| a. Its complete elimination | 27 |
| b. Continuation only of self-help aid for developing countries | 65.9 |
| c. Continuation of self-help as well as military tools for developing nations | 7.1 |

Answer only if you selected "b" in question number six. If the only foreign aid bill to come before the Congress included some military assistance, would you vote to

| | |
|---|---|
| a. Reject the entire bill | 54.1 |
| b. Accept a bill with some military assistance | 45.9 |

7. Assuming the need of continuing the Armed Forces in some form, would you favor

| | |
|---|---|
| a. Continuation and improvement of the existing lottery draft system | 41.4 |
| b. Elimination of the draft and establishment of an all-volunteer Army | 58.6 |

8. Do you favor

| | |
|---|---|
| a. Emphasizing increased Federal expenditure to control pollution? | 18.9 |

b. Emphasizing laws requiring polluting industries to install controls at their own expense?---------- 81.1

(Many respondents checked both boxes.)

9. Do you favor

a. Extension and improvement of the existing farm program with firm price support loans?---------- 37.2

b. The administration's proposal to give the Secretary of Agriculture power to set price support loans on a sliding scale from zero to 90 percent of parity?---------- 19.1

c. Elimination of all farm programs?-- 43.7

10. Are you engaged in farming?

Yes---------- 18.5
No---------- 81.5

11. The proposal to lower the Montana voting age to 19 will be on the ballot this November. Do you favor extending the voting privilege to those over 19?

Yes---------- 60.9
No---------- 39.1

12. The present U.S. troop level in Western Europe is approximately 310,000. Do you believe this force should be

a. Maintained ---------- 18.3
b. Slightly reduced---------- 23.7
c. Sharply reduced---------- 58

13. Freight rates are traditionally lower in areas where water transportation facilities compete for freight shipments. Water routes to the Gulf of Mexico and the Pacific Ocean serving Montana are engineeringly feasible. Do you favor their development?

Yes---------- 46.5
No---------- 53.5

14. In your opinion, what are the three greatest problems facing our nation today?

Problems cited related to

Vietnam ---------- 41.4
Pollution ---------- 40.7
Economy ---------- 36.6
Crime and violence---------- 21.8
Civil Rights---------- 11.3
Student unrest---------- 10.6
Welfare ---------- 8.3
Militarism and Defense waste---------- 7.8
Communism ---------- 7.3
Taxes ---------- 6.4
Poverty ---------- 5.7
Congress ---------- 5.6
Drugs ---------- 5.6
Education ---------- 5.2
Moral decay---------- 5.1

(The preceding figures represent the percentage of the total qustionnaires returned which cited each category.)

## OLD-FASHIONED FUN AND FRIENDLINESS AND GENEROSITY

### HON. DONALD G. BROTZMAN

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. BROTZMAN. Mr. Speaker, a couple of Saturdays ago some residents of my hometown, Boulder, Colo., got together to show what can be accomplished in an atmosphere of unity and amity. The Mapleton Hill area of Boulder is one characterized by lovely old homes and stately shade trees. Unfortunately, many of the trees have been damaged through disease and last year's unusually harsh winter. As the editorial from the Boulder Daily Camera which follows notes, more than $3,000 was raised by the various activities held in conjunction with a festival, and a city took advantage of its excellent opportunity to get together and work for a common good:

MAGNIFICENT SUCCESS

It was one of the most heart-warming events seen in a long time in Boulder. The Mapleton Hill festival Saturday brought thousands of people together in old-fashioned fun and friendliness—and generosity.

Purpose was to raise funds to replant trees along the historic parkway, where many old maples have disappeared or are deteriorating because of disease and storms. More than $3,000 came in during the six-hour festivities that included folk dancing, singers, band and other music, kids' carnival, book and art displays, ice cream social, sales of a wide variety of items—and many other activities.

The financial success of the affair was gratifying. But perhaps more important was its effect on the people. Almost without exception they sparkled with smiles and enthusiasm. Many renewed old acquaintances. Many strangers became friends. There was a light-hearted spirit in the air and a general feeling that something precious had been recaptured—something that tends to be lost in the bustle of pressures of daily affairs.

One of the volunteer workers, who spent the entire six hours "on the job" without a break, commented, "Instead of feeling fatigued, I felt refreshed." Numerous people said Boulder needs more of this kind of thing.

In this era of demonstrations, here was one that made a lot of sense. What a difference there is between a group of protesters making demands and a group of citizens pitching in to solve a neighborhood problem. The one tends to divide people and ruffle tempers; the other unites them in amity and constructive action.

We do indeed need more of this sort of initiative.

## APPRAISAL OF CURRENT TRENDS IN BUSINESS AND FINANCE

### HON. GARNER E. SHRIVER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. SHRIVER. Mr. Speaker, during the past 2 or 3 weeks there have been repeated and heartening signs that the economic condition of the Nation is not nearly so bad as some would like the American people to believe, now that November elections are just around the corner. I think that the following article, taken from yesterday's Wall Street Journal, presents both the optimistic and pessimistic points of view regarding the state of the economy, and is, all in all, a fair analysis of where we stand. I request permission that the article be inserted into the RECORD so that my colleagues can read it and judge for themselves. The article follows:

APPRAISAL OF CURRENT TRENDS IN BUSINESS AND FINANCE

A professor who has advised U.S. Presidents on economic matters set forth the deeply pessimistic scenario he envisages for the U.S. economy in the years just ahead. There will be bouts of inflation, he forecast, followed by half-hearted attempts to restrain the inflation, followed by worse inflation, followed by more half-hearted attempts at restraint, followed by still worse inflation. Where will it all end? a visitor asked. It will end, the professor said, when the inflation becomes so painful that the country will be willing to suffer a severe recession, possibly even a depression, in order to stop it.

The interview took place a year ago. At the time, the Government was attempting to restrain the worst bout of inflation in the post-World War II era. The Federal Reserve was keeping a tight lid on the nation's money supply, usually defined as currency in circulation plus private checking accounts. And the Administration was trimming defense spending in an effort to hold down overall Government expenditures and balance the budget.

The restraint clearly has had an impact. Prices still rise briskly and interest rates still are high. But price increases are smaller and interest rates lower than in the recent past. It's true that unemployment has risen. But the jobless rate remains low for a period when inflation appears on the wane; the rate is lower than in the early years of the long economic expansion of the 1960s.

In many respects, things seem to be looking up—despite strikes, troubles abroad, pollution and other worries. Most forecasters believe that inflation will continue to diminish, general economic activity will gradually pick up and unemployment will soon begin to decline. A recent survey of 194 members of the Nation Association of Business Economists, mostly men who advise corporations about the outlook, came up with this consensus for 1971: A 2.8% rise in gross national product, adjusted for price changes, a steady slowing in the annual rate of consumer price increase and 4.8% unemployment by year's end.

If anything like this materializes—and the association's track record is good—it would represent a happy development. Price-adjusted GNP declined in late 1969 and early 1970. Consumer prices, on the average, are expected to increase at an annual rate of nearly 6% over the course of this year. The unemployment rate has recently been above the 5% mark.

It is only when one recalls the scenario suggested by the economics professor that doubts about the outlook creep in. His pessimism was based mainly on a conviction that no Administration and no Congress—Republican or Democratic—would possess the political courage to apply economic brakes hard enough and long enough to allow prices to become close to stable.

At first glance, recent activities of economic policy makers hardly contradict this view. Last fall's exercise in restraint has ended. The money supply, so rigidly contained a year ago, has soared in some recent weeks. The Federal budget, far from being in balance, is in deepening deficit. Alan Greenspan, a New York economist who occasionally advises the Nixon team on budgetary matters, recently estimated that the deficit would top $12 billion in the current fiscal year and could exceed $15 billion in fiscal 1972.

Is another half-hearted attempt at restraint concluded and another bout of inflation, possibly worse than the last, about to get under way?

Some economists are beginning to voice concern. Raymond J. Saulnier, an economics professor at Barnard College in New York, recently stated that although a full-blown recession has apparently been avoided, "success in the war against inflation is quite another thing." After being sluggish early in the year, general business activity has begun to pick up, he said, yet prices continue to climb at a troublesome pace. In such circumstances, he warned, "it will be all too easy" for the price rise to accelerate in coming months.

A still more concerned view comes from Eliot Janeway, a New York economist who, unlike many of his colleagues, correctly forecast the recent stock market slide. Much

easier monetary policy at the Federal Reserve and deepening budget deficits add up to "an explosive inflationary combination," Mr. Janeway recently warned in a letter to his clients.

A more widely shared opinion, however, is that we are not off to the races again.

Wage-price controls, it should be noted, play no part in this optimism. Nearly 96% of the business economists who forecast diminishing inflation in 1971 also voted against wage-price controls. Their general view was expressed in a recent economic letter of New York's First National City Bank: "Controls are a tranquilizer at best, dispensed to dull the symptoms of the inflationary disease rather than to eliminate the cause."

The belief that inflation will continue to diminish is based instead on the fact that the economy has been operating far below its potential for a considerable time. Government estimates show that output of goods and services can grow at about 4.5% per year without placing undue strain on resources of labor and material. They further show that even before the General Motors strike, economic output was running at an annual rate about $40 billion below capacity. Accordingly it may be premature to fear that inflation is about to get worse.

Henry C. Wallich, the Yale economics professor, is among those who share this view. "The economy has been slowed to the point of suffering a slight contraction," he recently stated. Now with "a substantial margin of excess capacity in the economy," he added, "resumption of economic expansion need not interfere with the subsidence of inflation."

To be sure, highly expansionary economic policies, if carried on indefinitely, would lead eventually to worse inflation. But there are reasons to doubt this would happen. For one thing, present efforts of policy makers to speed up the economy partly reflect concern about the November elections. Once the elections are over, there should be less pressure to expand business at an excessive rate.

ALFRED L. MALABRE, Jr.

## THE IMPENDING COMMUNIST TAKEOVER IN CHILE

### HON. JOHN G. SCHMITZ

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. SCHMITZ. Mr. Speaker, the impending Communist takeover in Chile is the subject of one of my recent weekly newsletters, which I include at this point for the RECORD:

THE IMPENDING COMMUNIST TAKEOVER IN CHILE

"Ours is the only road for the country to take and not fall to the Communists."—President Eduardo Frei of Chile, 1964.

With these words the first Christian Democrat Party ever to rule in Latin America came to power in Chile in 1964. Six years later the Communists are on the verge of coming to power through the electoral process in the person of Salvador Allende, an outspoken Castroite who won a plurality in the recently held presidential elections. Why did the Christian Democrat road, welcomed so enthusiastically by U.S. policy makers at the time as the real answer to Communism in Latin America, turn into a runway for Red power?

The Christian Democrats did everything a good "liberal" regime is theoretically supposed to do effectively undercut the Communist movement in their country. They began radical land reform programs which took the land away from the local "exploiters" and gave it to the government in the name of the peasants. They immediately embarked on a program of "bridge buliding for peace" with the Communist bloc nations, by establishing diplomatic relations with Poland, Hungary, Czechoslovakia, Rumania, Bulgaria, and the Soviet Union.

They conducted an extended dialogue with the Communist Party of Chile and waged a continuous campaign of vilification against the Right, which was pictured as the real danger to the country. They "eased tensions" with Cuba by giving refuge to the remnants of "Che" Guevara's beaten guerrilla band fleeing from Bolivia, and allowing the Latin American branch of the Cuba-based Tricontinental Organization (OLAS) to set up branch headquarters in Chile. They "reformed" everything they could get their hands on.

How could the Communists be so crass as to win the next election? How could the people of Chile be so ungrateful as to vote the Christian Democrat candidate, picked to succeed Frei, third in a field of three? According to all good "liberal" theory, things are not supposed to work out this way.

If this turn of events in Chile is illustrative of anything, it shows that Twentieth Century liberalism, sometimes known as the socialism of the mentally unkempt, is not the answer to the Communist threat. In fact, it is nearer to the answer to the Communists' dreams. The electoral victory of the Communist-Organized, directed, and dominated coalition candidate in Chile should once and for all put the lie to the shibboleth that a government can undercut Communist programs by being "responsive"—the new favorite word—to the demands of various groups of leftist agitators. It should vividly bring forth the truth that compromises with Communists are compromises towards Communism. The Communist victory in Chile once more reveals the "liberal" incapacity to deal with the Reds and get anything but the worst of the bargain for the people they are representing.

It is not too late, however, for Chile to bring itself back from the brink on which it totters. Since none of the three candidates received a majority, the Chilean Congress must vote, October 24, on who shall become President. This is a saving grace which those who wish to do away with the Electoral College in the United States might well ponder. The Chileans and the United States, in its position of possible influence, must recognize several points.

The first point is that, although Allende received a slight plurality, his total vote represents something less than one-ninth of the total population of Chile. He does not represent anywhere near a popular majority or reflect the desires of a major portion of Chile's citizenry. But if the Chilean Congress regrets his plurality as a mandate and elects him president, there will in all probability be no more free elections in Chile. The wave of the future can already be seen in the recent statement by the Inter-American Press Association, headed by such distinguished men as James S. Copley of the Copley newspapers, that "Freedom of the press in Chile is being strangled by Communist and Marxist forces and their allies."

The second point to be stressed is that the hope for avoiding violence by allowing the Communists to take over is baseless. If the Communists do take over, there will be a tremendous amount of violence against all groups posing a present or potential danger to the totalitarian system which is Communism. The Communist policy of liquidate and rule is basically the same everywhere not, then Peru, which already has a far-left and always.

The third point we must understand is that if Chile falls to the Reds, peacefully or not, then Peru, which already has a far-left government, and Bolivia, which has a blossoming guerrilla war underway, will be ripe for Red domination. Although the sound of dominoes falling in South East Asia may not worry some, a collapse in Latin America should worry everyone.

Allende does not represent a majority of the people of Chile. His regime will usher in a wave of violence and directly threaten other nations in Latin America. The Chilean Congress should vote no on Allende, no on slavery and the national purge, and should know that it will have the support of the United States in doing so.

## UNDER SECRETARY VENEMAN ADDRESSES CENTENNIAL CELEBRATION AT UNIVERSITY OF IOWA'S COLLEGE OF MEDICINE

### HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. SCHWENGEL. Mr. Speaker, I recently had the pleasure of listening to an outstanding address by the Under Secretary of the Department of Health, Education, and Welfare, the Honorable John G. Veneman. The occasion for his address was the 100th anniversary of the founding of the University of Iowa's College of Medicine. His comments on the challenges and the opportunities facing the medical profession are most thought-provoking, and I commend them to my colleagues:

REMARKS BY UNDER SECRETARY JOHN G. VENEMAN

I would like to wish the College of Medicine a very happy hundredth birthday!

You have witnessed a number of trends in medicine come and go over the past 100 years. Medical education has had to keep up with these trends, and you at the University of Iowa have never failed to recognize your responsibilities. At the Department of Health, Education, and Welfare, we have welcomed the opportunity to cooperate with you, and we look forward to an equally pleasant relationship in the future.

The struggle to develop a great medical institution such as this one is almost unimaginable. When one considers the progress of medicine over the past 100 years—from the traveling remedy salesman and country doctor to monitoring the blood pressure of a man on the moon—only a fool would speculate on where we will be 100 years from now.

But one thing is apparent to all of us: The current morass of problems facing the country's health industry could constitute the greatest challenge with which we have ever had to contend.

We spend more than $60 billion a year for health in the United States, yet tens of millions of Americans are not getting the care they need because they can't afford it.

We pride ourselves on having the finest biomedical research establishment in the world, yet we are tragically inept at running research knowledge into improved health care.

We operate more than a hundred schools of medicine, yet we do not have enough doctors to care for the sick and keep the healthy well.

We have added hundreds of thousands of hospital beds in the last quarter century, yet vast areas of this country and the people in them are without adequate health care facilities.

These are but a few of the challenges we face. We are past the stage when an aspirin

and a band-aid will help. We need what I think you in the healing arts call "heroic measures".

In the health field, the call for change has been loud and clear. It is finally being heard in governmental circles—and for a good reason.

The stake of government in this enterprise is reflected in the fact that it is currently purchasing more than 37% of the total output of the health care system. This figure indicates that the use of its purchasing power is probably the government's primary source of leverage to initiate changes in the organization and delivery of health care.

For example, only four years ago, nearly 70% of health expenses for the elderly were privately paid. Today, Medicare and Medicaid, are paying 72% of the health bill for the Nation's aged.

Medicare, Medicaid, and private health insurance now finance health care for 85% of our population. These economic entrees to the health care system have been seized upon by a public that knows the value of good health. These same economic entrees have forced us to face a critical and worsening imbalance in supply and demand.

These programs have placed demands on our resources that cannot be satisfied. Unless we in the United States are able to make better use of what we have in the way of health manpower, facilities, and funds, we will—without a doubt—see some emergency scheme develop that will serve neither the people of this country nor the health industry in any acceptable way.

But I don't plan to give you an essay on the nature and scope of this country's health problems. For me to do that in this distinguished company would be superfluous.

I would, however, like to give you an idea of the thinking behind some steps we are proposing to help *gain control of the problems* that confront us all in the area *of health care.*

To overcome our problems will require some very substantial changes in the health system of this country. But it need not require a radical change in the basic structure of the American health enterprise. What we have to do is correct the defects in the system, while building on its proven strengths. I believe firmly that we now have an excellent opportunity to do precisely that.

These are among the major objectives of the Social Security Amendments of 1970 that have passed the House of Representatives and are now before the Senate Finance Committee.

We have asked the Congress to amend the Social Security Act so that the health programs carried out under it can directly work toward improving the delivery of health care.

For example, we are seeking the authority to limit reimbursement to providers of health services for capital costs that are not in accord with an approved state or local health facility plan.

We have talked for years in this country about the need for comprehensive health planning, regional planning, and rational expansion and replacement of health facilities. But the truth is we are only beginning to make progress toward this objective.

This legislation would put teeth into the comprehensive planning concept by requiring prior approval of major capital expenditures as a condition of full reimbursement.

We have also asked the Congress to authorize what has come to be known as the health maintenance organization option. Under this option, Medicare beneficiaries would be able to choose to obtain comprehensive health care from a single source for an annual fee paid in advance.

We envision that a wide variety of organizations could be established to provide a form of pre-paid health care. Under Medicare, hospitals, medical societies, university medical centers and other health organizations might well organize themselves as health maintenance organizations and establish group plans. As in the most successful of pre-paid practices, health maintenance organizations would aim at keeping patients out of the hospital unless they absolutely had to be there—keeping people *well,* not just caring for them when they are *ill.*

Let me say, at this point, that reform of our system of health care is not the exclusive responsibility of government, it depends upon *all* of us.

We recognize that medical schools have their problems, especially with finances. But I believe it is time the medical schools began to search their consciences to determine whether their dollars are being used to the greatest benefit of the people of this country.

While we in the government attempt to change our priorities, you in the colleges should do the same.

Last year, we attempted to cut back certain medical research funds that were going into grants which, in our view, served no useful and relevant purpose. But the lobby effort by the medical community was a vigorous one—and those research funds were reinstated.

I ask you now if you have not honestly seen a great deal of money—which should have been used to implement policies which would help people—spent to conduct irrelevant research projects?

For example, an application came into the National Institutes of Mental Health and was approved for over $23,000 to a particular hospital for research into the toilet training of exceptional and normal children.

Changing these priorities is not the sole responsibility of universities or of the government.

The private doctor, cloistered in his private office, lobbying through the traditional institutions, is no longer in step with the times.

For some time, consumers and providers of services have been urging us to reform our delivery system.

Now an additional voice is being heard. Many of our young doctors and medical students are no longer satisfied with a system of health care delivery which does not serve the people as it should.

I had the opportunity last year to meet with a group of medical students at Harvard. I saw first-hand that they were no longer talking among themselves about where they would practice, where their residency would take place and ultimately how much money they would make. They were asking questions instead about health services in the ghettoes, how they might work to cut the cost of health care, how they might work to increase health services in rural areas, how medical schools might increase their output of doctors to meet our crucial health manpower needs. This attitude is encouraging and I came away with the feeling that those of us in government who are trying to alter the health care delivery system had found a new ally.

But medical students and young doctors are at a disadvantage in the medical community. They face the barriers of age, experience and power that characterize the "establishment" in every occupational group.

They will have to work within those institutions which have always lobbied and represented the medical community so well and so aggressively. But they will have to up-date the awareness and concern of those groups of contemporary health problems—with both the patients and their own financial well-being in mind.

The institutions and organizations of the medical community must respond to the challenge of the times. If they refuse, their punishment will be to live under the judgment of men less knowledgeable than themselves. Indifference to the social issues of medicine will ultimately guarantee governmental intervention. The price of freedom from intervention is responsible action in the public interest.

This is not a threat, but a realistic assessment of current trends.

Many people are very skeptical about this kind of approach to dealing with defects in the American system of health care. Some individuals insist that the system is sound and should be left alone. Others demand that we throw out the baby with the bath water and replace our pluralistic health enterprise with some monolithic scheme in which the Federal Government controls everything.

I think both points of view are wrong. The deep troubles of the health care enterprise have been nurtured by many factors, not the least of which is past failure to plan and prepare for the soaring demand that many thoughtful and observant people knew was coming. But I do not believe that past neglect means that we now have to start over and pursue some course of action that would be entirely alien to the traditions that this College of Medicine has helped to shape.

I simply cannot subscribe to the idea that we must now break—utterly and totally—with the past. If that were the case, the history of this institution would be meaningless. The men and women whom it prepared for careers in the field of health would be all but useless at a time when we need them most.

I cannot tell you whether the next hundred years of growth at this College of Medicine will be harder than the last. In a Century, medicine has moved from an infant science to one of the most powerful forces affecting life on this planet. To train men and women in the wise and humane use of that force is an awesome responsibility.

But to bring the achievements of medical science into the lives of people who have lived and suffered without them is perhaps an even greater responsibility. The medical colleges of this country, along with the rest of us who labor in the field of health, have to help bear that burden. But it is the students and young people who will determine whether we succeed or fail.

If the American health enterprise fails, it will not fail through lack of discovery but through lack of will.

Medical students . . . and all students . . . in every field of endeavor have shown they do not lack for will.

From what I have seen of their knowledge and compassion, I am convinced that we will succeed, and that long before you celebrate your two hundredth birthday, health will be secure among the basic rights of all Americans.

---

## VICTIM OF DDT

### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. DINGELL. Mr. Speaker, I insert into the CONGRESSIONAL RECORD an excellent editorial appearing in the West Side, Detroit, Mich., Courier of Thursday, September 10, 1970.

That excellent editorial points out the perils, hazards and evil of unwise and often unnecesary use of DDT.

What a shame.

VICTIM OF DDT

Recent carefully documented research has proven that the widespread use of the insecticide DDT has wiped out the free-flying peregrine falcon in most of the nation, leav-

ing only a few dozen in the western mountains, also threatened with extinction.

The cause of the birds' demise was not discovered in time to save them and experts believe there is enough DDT residue left in the nation's fields and streams to doom the remaining birds. Thus only in islands far from these shores, or in Alaska, is this magnificent falcon likely to survive.

The disappearance of the duck hawk, as this bird is known in some areas, shows what science can do when care is not taken in the application of new poisons and insecticides. How many Americans have become sick from overdoses of sprays and poisons? How many fish have been killed? How many other animals and birds have been poisoned to death? The experts estimate their number in the millions.

## ALCOHOLISM AND SST

### HON. DAVID PRYOR

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. PRYOR of Arkansas. Mr. Speaker, I would like to direct to the attention of my colleagues a thoughtful editorial, "Alcoholism and SST" that appeared in the September 20, 1970, issue of the Arkansas Gazette. Alcoholism is a disease which afflicts 5 million persons in the United States and which for entirely too long has been the subject of neglect. I wholeheartedly endorse the bill S. 3835 adopted on August 10, 1970, by the Senate authorizing an appropriation of $395 million over a 3-year period to combat this disease.

It would seem to me that if the Congress can vote a Government subsidy of $290 million to develop a supersonic transport plane which, according to a Cabinet task force report, may produce unacceptable noise levels and environmental pollution and which would contribute only meagerly to both our technological development and our international prestige, we can certainly approve an adequate appropriation to wage a vigorous fight against alcoholism. For 2 years, I have opposed the SST appropriation. I have found it difficult to subscribe to the view that such a funding item should occupy a high place on our national priority list during this time of severe inflation and swollen Federal budgets.

I feel that we should give serious consideration to supporting a high level of funding to reduce alcoholism which, as pointed out in this timely editorial, costs industry, business, government, and households billions of dollars a year.

Recognizing the seriousness of the problem of alcoholism, the South Arkansas Mental Health Center in El Dorado, Ark., submitted an application several months ago to the National Institute of Mental Health for a staffing grant for the treatment of alcoholism as well as drug addiction. The proposed program of the center represents a highly innovative and creative approach to tackling this grave national problem. I would like to take this opportunity to commend the staff of the South Arkansas Mental Health Center for having come up with such an imaginative proposal which I hope will be funded in the near future.

Under leave granted to extend my remarks, I include the Arkansas Gazette editorial:

ALCOHOLISM AND SST

Alcoholism by all accounts costs industry, business, government and households billions of dollars a year in this country. Indeed, the loss of taxes on lost income because of the disease surely must cost government many millions of dollars.

Even so, relatively little attention is given at the federal level to reducing the incidence of alcoholism as a disease that affects millions of Americans. This year, finally, the Senate has moved vigorously to help create what the president of the National Council on Alcoholism calls "an adequate federal, state and local mechanism for the treatment of alcohol abuse and alcoholism." The bill passed by the Senate would provide $395 million over a three-year period to finance various steps combating the disease.

Nixon administration officials, however, are engaged in trying to get even that amount reduced in the cause of reducing the federal budget. An administration spokesman has supported in testimony before a House subcommitte the idea behind the Senate bill, but he has not supported the level of spending set by the Senate.

The same administration is supporting the spending this year alone of $290 million on further development of the supersonic transport, which is costing a total of well over $1 billion, despite the shaky justification that has been offered by federal involvement in the SST.

One argument cited for the SST is that eventually it will return in revenues all the federal money spent in its development and therefore is a good long-range investment. Many economists have questioned that argument. What we can be a good deal more sure about, however, is that money spent on reducing alcoholism clearly will eventually be returned to the federal government in the form of taxes on regained income and productive capacity. The bonus in that case will be for many Americans freedom from a disease that they might still have without the federally financed programs that offered them the opportunity for a cure.

## HON. WILLIAM R. ANDERSON SPEAKS IN MISSISSIPPI

### HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. COLMER. Mr. Speaker, on August 22 last, at the dedication of the new submarine overhaul facility of the Ingalls East-Division's Shipyard in my hometown of Pascagoula, Miss., the Honorable WILLIAM R. ANDERSON, of Tennessee, made a splendid, instructive, and appropriate speech. We were also honored on that occasion by the presence of my able and distinguished colleague from Mississippi, Congressman JAMIE WHITTEN, the senior democrat on the House Appropriations Committee. Mr. WHITTEN has, on many occasions, not only demonstrated his interests in national defense but also in the continued growth of Mississippi's greatest industry, Ingalls Shipbuilding Corp.

Mr. WHITTEN spoke in his usual effective manner without manuscript or notes and, he too, was well received by his fellow Mississippians.

I was delighted that Congressman ANDERSON was our principal speaker on that occasion, not only because he is a learned and valuable member of the important Rules Committee which channels all important and appropriate legislation from other committees of the House for floor consideration, but also because of his knowledge and expertise in the operation of nuclear submarines. It will be remembered that Congressman ANDERSON, although a comparatively young man, is a retired captain of the U.S. Navy. It will also be recalled that it was Captain ANDERSON to whom the Secretary of the Navy intrusted the important as well as perilous mission of steering the Navy's atomic powered submarine, the *Nautilus*, under the icecap of the North Pole. Incidently, to the best of my knowledge, this mission, successfully performed by the former Captain ANDERSON, is the only one of its nature in the history of the world.

Because of my high respect for my colleague and because of the informative and important contents of Congressman ANDERSON's speech on that occasion, I take pride and pleasure in submitting it to be included in the CONGRESSIONAL RECORD for posterity.

The speech follows:

DEDICATION OF INGALLS EAST DIVISION'S NEW SUBMARINE OVERHAUL FACILITY, PASCAGOULA, MISS., AUGUST 22, 1970

I am honored to participate in this occasion and to stand in the presence of three men who have made vast contributions to our nation.

Congressman Jamie Whitten, the distinguished Chairman of the House Appropriations Subcommittee on Agriculture, has withstood broadside after broadside from the big metropolitan Congressional delegations in Congress in his work to enhance the vitality and economic prospects of our farmers, small towns and cities. Despite increasingly heavy odds, he has come out the victor. His victories are all the more noteworthy because he has accurately foreseen that a revitalized rural America is the best answer to the problems which plague our overcrowded cities. Thus, he has served our entire nation, and served it well.

As a Tennessean, I am acutely aware of the contribution of inexpensive TVA-produced public power to the development of the Tennessee Valley region. Recently, TVA announced an earth shaking 25 percent increase in power rates. Most of the reason for the huge rate increase is the fact that the cost of coal for TVA's numerous coal fired generating plants has virtually doubled in the short span of one year. This means that nuclear power for commercial, industrial and home consumption has, almost overnight, become cheaper than electricity produced from coal. Three years ago no one even dreamed this would be the case. Because of cost factors and the grave air pollution problems inherent in coal fired plants, this nation needs vast nuclear generating facilities, not in the 1980's or '90's as projected a few years ago, but right now—in 1970.

Admiral Rickover is known as the Father of the Nuclear Submarine. History will record his remarkable contributions to his country in a much larger context. He is, in fact, Father not only of nuclear propelled naval ships, but Father of nuclear power for peaceful purposes as well. It all started with his studies at Oak Ridge more than two decades ago when the only coooperation he received was from the atom itself. In making prac-

ticable the Polaris deterrent force he has made the most significant contribution of this age to our national security; we will soon recognize the equally important contribution to our domestic economic security and well-being derived from his pioneering work in nuclear power generating plants.

You will recall Judge Howard Smith of Virginia, long a Member of the House, long the famous Chairman of the Committee on Rules. Bill Colmer, your own distinguished Representative, succeeded Judge Smith three and one-half years ago. For quite a few years Mr. Colmer sat on Judge Smith's right—the ranking Democrat—next in line of succession. If any one man knows another man well, Judge Smith knows Bill Colmer. I want to share with you what Judge Smith told me this past week.

He said, "I love Bill Colmer. I think so highly of him I can hardly express it in words. From my long and close affiliation with him, both on the Rules Committee and in the House, I saw him as one of those rare public men who put sound principle before political maneuvering. He is a man who stands up for what he believes in. What he believes in, he sticks to. He will stand up to the lobbyists; he will stand up to other Members; he will stand up to the Speaker—yes, even the President of the United States. He is a man of great courage—great convictions—great strength."

All of us in the House, and especially those of us privileged to serve on the Rules Committee under Bill Colmer, share fully Judge Smith's love and high esteem of your Congressman.

We are here today to dedicate facilities which add to the capability of this shipyard to contribute to our national defense.

Ingalls has made a notable record in the shipbuilding industry since its beginning in 1938. During World War II they made a major contribution to the war effort by building over 60 naval vessels. After the War, Ingalls concentrated on commercial shipbuilding but in 1952 resumed naval construction. In 1955 Ingalls established its Nuclear Power Division and subsequently entered the important field of nuclear powered submarine construction. To date they have built eight nuclear powered attack submarines and have contracts to build four more.

Today we are observing a new landmark in Ingalls development—the introduction of facilities with which the shipyard can overhaul and refuel nuclear submarines. These include the new graving dock which is already being used, and several highly specialized service and shop facilities. With these modern tools Ingalls will participate in the highly demanding but very vital task of repairing and maintaining our nuclear submarine fleet.

Nuclear power has given these ships almost unlimited range and endurance and, speaking from personal experience, there are no ships anywhere that are run harder. Operating throughout the oceans of the world for months at a time these ships need highly expert attention when they are taken off the line for their infrequent overhauls. The task may not be as appealing as building a ship from keel up but in many ways it is far more demanding. Certainly it is a vital task if these first line ships are to continue to serve our nation in peace or war. It is certainly appropriate that we give recognition to this new capability at Ingalls and to the part it will play in our defense efforts.

Looking more broadly at the U.S. submarine program, I am deeply concerned that our present efforts are not sufficient to meet the challenge from the Soviet Union. In unmistakable terms the Soviets have mounted a naval program that is overtaking the U.S. in almost every area. They are doing this even though the Soviet Union already is the world's foremost land power and does not need a world-wide navy for her defense purposes. Her naval buildup is solely for the purpose of projecting Soviet influence abroad and neutralizing the presence of western navies primarily that of the United States.

As demonstrated during two world wars, the United States depends upon free use of the seas for our very survival as a nation. Without a navy capable of maintaining this freedom against all threats we cannot hope to be invincible in time of war. Thus the efforts of the Soviet Union to counter our naval strength strike at the heart of our defense posture. The challenge is particularly acute in the field of submarines. The Soviets since World War II have placed great emphasis on submarines. They have produced more than 570 new ones in the 25 years through 1969, while the United States produced only 105.

Currently the Soviet Union has a total of some 355 modern submarines, more than 75 of which are nuclear powered. All of their units have been built since World War II. In comparison, the U.S. total is 147, 88 of which are nuclear powered. Most of the remaining U.S. Diesel units are of World War II vintage. Russia has scrapped or sent to reserve status submarines more modern than ones the U.S. is still operating.

The Soviets have invested tremendous resources in facilities to build and overhaul submarines. They have the largest and most up-to-date submarine construction yards in the world with a capacity well above that available in the United States. They are estimated to be capable of producing 20 nuclear powered submarines a year while working only eight hours a day. Obviously, this construction rate could be greatly expanded by simply working additional hours.

Since we were the first nation to have nuclear powered submarines, we have come to expect a lead in this area. In fact, this has always been used as a major reason why we did not have to compete with the Russians in total numbers of submarines. Yet, because of our lagging building program in past years we are now faced with the loss of our nuclear submarine lead by the end of this year. The momentum of the current Soviet effort means that we will be increasingly outnumbered in the years to come.

While we are losing our superiority in numbers of nuclear submarines, we are also losing our lead in almost all aspects of submarine technology. The United States has only produced one new nuclear submarine design in a decade; the Soviets have put out a number of new nuclear designs in just the last two years.

Today, our technological lead has been reduced in almost all aspects of submarine performance characteristics, submarine sensors, and submarine weapons. Take, for example, speed. For many years our submarines were assumed to have a marked speed advantage over the Soviets. Today this is no longer true. Every submariner knows that speed advantage can be all-important.

Another area of real concern is submarine weapons. The Soviets have wide-spread deployment of the long range anti-ship cruise missile which represents one of the most serious threats to our surface naval and maritime ships. This unique weapon is installed in some 65 submarines all capable of sitting astride our vital sea lanes and interdicting our ocean commerce. The United States has no comparable weapon. Rather, we continue to put all our eggs in one basket, relying almost exclusively on torpedoes as our principal tactical submarine weapon. Even now we are unable to give our fleet the modern torpedo it needs. Our current designs do not have the speed, range, acquisition or depth capability required to counter the modern, fast, deep-diving Soviet submarines. Further, our inventory of these weapons is also woefully inadequate. The Mark 48 torpedo program was supposed to remedy this but has encountered continuing delays. The failure of this one program seriously impairs the effectiveness of our entire submarine fleet.

In other key aspects of submarine technology, such as reliability, sonar and quietness of operation, the Soviets are well on their way to attaining equality with us, and in some cases may already be superior.

Last year, Soviet submarines stretched their operations for longer periods and at greater distances than ever before. They have now established mobile task forces in which their submarines are repaired and maintained from large tenders while underway, thus greatly expanding their operating capability and range. This is a new and unique contribution to the art of submarine warfare. With this system, the Soviets can now move a naval task force into the Indian Ocean, the South Atlantic, the South Pacific, or any other area they wish.

Most importantly, the Soviet Union has developed an awesome technical and industrial capacity to continue the expansion and improvement of their submarine fleet and extend their advantage over us in the coming decade. They have developed a huge technical force of trained engineers to support their naval program. They have from six to seven times the number of students studying naval architecture and marine engineering as we do in the United States.

In summary, these facts mean that the balance of world naval power is swinging rapidly in favor of the Soviet Union. It is critically important that the Administration, the people of America, that we all recognize the seriousness of this threat, and that we begin at once to structure our own submarine program to meet it.

Admiral Rickover has repeatedly and eloquently testified regarding our urgent needs along these lines.

The Congress has continued to urge a greater effort to build a modern U.S. submarine force and to keep it strong, but the Defense Department has often ignored this advice and has allowed much of the vital lead we once had in this field to be lost. Apparently, the lesson still has not been learned, for just this fiscal year the Department of Defense submitted only a minimal request for three high speed submarines. The House of Representatives has increased that number to four. But this is only a small part of a much bigger task. If we in this country are going to prevent the Soviet Union from becoming the dominant naval power in the world, it is clear much more will need to be done. If we do not face up to the task, peace will continue to be an increasingly elusive goal.

## COAL EXPORTS

### HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

*Monday, September 28, 1970*

Mr. VANIK. Mr. Speaker, I want to take this time to urge the President and the administration to exercise authority under the Export Control Act to limit the exportation of low-sulfur coal which is currently being shipped in huge quantities to Japan. Last year, we exported over 20 million tons of low-sulfur coal to Japan. This year we are exporting low-sulfur coal to Japan at a rate approximating 28 million tons per year, an increase of 40 percent.

The skyrocketing increase in the export of quality coal has created acute shortages in this country resulting in

prices which have almost doubled. These export policies have forced domestic utilities into the use of high-polluting, high-sulfur fuels. This will result in higher utility bills and dirtier air in the urban areas of America.

Under the terms of the Export Control Act, it is the policy of the United States to exercise controls to such extent as is necessary to protect the domestic economy from the excessive drain of scarce materials and to reduce the serious inflationary impact of abnormal foreign demand. These conditions presently exist with respect to low-sulfur fuel and warrant the exercise of controls.

Unless export controls are immediately applied to low-sulfur coal, the fuel crisis in America will be out of control and the pollution problem will be critically compounded.

---

## EPA AND NOAA—OR CEQ?

### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, September 29, 1970*

Mr. DINGELL. Mr. Speaker, the October 1970 issue of the Environmental Journal, the National Parks and Conservation magazine, carries an article entitled "EPA & NOAA—or CEQ?" The article presents in considered terms a discussion of the proposals to create an Environmental Protection Agency—EPA—and a National Oceanic and Atmospheric Administration—NOAA—and contrasts these proposals "to the central need" for enhancing the role of the Council on Environmental Quality—CEQ.

So that my colleagues will have an opportunity to read this article, I insert its text at this point in the CONGRESSIONAL RECORD:

EPA AND NOAA—OR CEQ?

Government reorganization is a chronic affliction in the nation's capital. The Earth movement, triggered by a chain reaction of environmental crises, has renewed concern about federal coordination of more than 80 environmental programs. Jurisdictional confusion in key areas severely handicaps federal programs.

Who is responsible, for instance, for balancing promotion and protection within a department or agency? For protecting estuaries and coastal waters? For avoiding future oil spills? For controlling pollution of the open sea? For dealing with regional air pollution? For the environmental damage done by federal highways? For making the Army Corps of Engineers enforce the 1899 Refuse Act? For the damage done by development-thirsty giants such as the Corps, the Bureau of Reclamation, and the Bureau of Mines? For regulating the dumping of waste at sea and underground? For determining tolerable noise levels? For the adequacy of reforestation efforts? The first annual report of the Council on Environmental Quality (CEQ) takes up 326 pages to raise these questions and many others.

In July President Nixon announced a reorganization of environmental programs by executive orders. Many programs would remain scattered among the departments. Others would be transferred to a new agency in the Department of Commerce, or to a new independent agency. Executive Reorganization Plan No. 3 would create the Environmental Protection Agency (EPA). Plan No. 4 would create the National Oceanic and Atmospheric Administration (NOAA) in the Department of Commerce. Both plans will become effective automatically on October 3 unless Congress votes disapproval, in which case there would be no deadline for further discussion and action.

EPA would be an independent agency whose administrator would be of sub-cabinet rank. It would have 5,650 personnel and an estimated budget of $1.4 billion in fiscal 1971. The following would be moved to the new agency: the Federal Water Quality Administration, Interior Department pesticide studies, the National Air Pollution Control Administration, the Bureau of Solid Waste Management, the Bureau of Water Hygiene, some functions of the Bureau of Radiological Health, certain pesticide programs of the Food and Drug Administration, authority to study ecosystems (from the new Council on Environmental Quality), certain functions of the Atomic Energy Commission and the Federal Radiation Council governing radiation criteria, and pesticide registration functions and related activities of the Agricultural Research Service. The President sees EPA and the Council on Environmental Quality as complementary, not competing.

NOAA is supposed to bring together in a single administration (the Department of Commerce) the major federal programs dealing with the seas and atmosphere. These programs presently exist in four departments and one agency. NOAA would have over 12,000 personnel and an estimated budget of about $270 million in fiscal 1971. It would be made up of the following parts of the federal corpus: the Environmental Science Services Administration (already a major prestige unit of the Department of Commerce), most of the Bureau of Commercial Fisheries, the Marine Minerals Technology Program, the marine sports fishing program of the Bureau of Sports Fisheries and Wildlife, the Office of Sea Grant Programs, elements of the United States Lake Survey, the National Oceanographic Data and Instrumentation Centers, and the National Data Buoy Program.

The Presidential initiative is to be commended. Conservationists are deeply concerned, however, that *further* jurisdictional confusion may result from the Administration's two plans. EPA and NOAA merely transfer some existing environmental programs. Jurisdictional conflicts remain unsettled and should be resolved by the Council on Environmental Quality.

The President listed as contributors to the plans the President's Advisory Council on Executive Organization (the Ash Council); the Commission on Marine Science, Engineering and Resources (the Stratton Commission, appointed by President Johnson); the President's special task force on oceanography headed by Dr. James Wakelin; and "the information developed during both House and Senate hearings on proposed NOAA legislation."

But in House and Senate subcommittee hearings considering EPA and NOAA, it was revealed that neither committee had been asked for an opinion by the White House before fixing the final form of Plans 3 and 4. Furthermore, Roy Ash and CEQ chairman Russell Train admitted that neither adviser had influenced or been briefed on the final plans.

However, the president of the National Agricultural Chemicals Association, Parke C. Brinkley, expressed satisfaction in *his role* regarding EPA's formulation. "When this plan [EPA] was first brought to our attention, our reaction was negative," Brinkley candidly stated. "After careful reflection, however, we accept the plan. We say that though there have been instances where pesticides have contributed to environmental problems, pesticides have done far more to clean the environment than to despoil it . . . The emotion stems from the discovery of pesticide residues in nontarget species but without regard to the benefits achieved when these calculated risks are taken.

"We then look forward to the opportunity to deal principally with one agency where there will be an opportunity for prompt communication between the regulators and the regulated . . . The Agency must accept a premise that is not particularly popular at the moment and that is that there is a desperate need to continue pesticide use for the protection of food, the protection of the public health, and for the improvement in the quality of the environment."

What caused the pesticide industry's lobby organization to change its position on EPA? Why does it now seem confident that the new agency will accept the industry's premise that pesticide use is vital to food supplies, public health, and "the quality of the environment"? (This latter phrase is meaningless in such a context.)

Dr. Spencer Smith, a registered conservation lobbyist for over 15 years, pointed out the major issues: "The basic problem . . . is what functions do you include [in EPA] and what functions do you exclude and what are your criteria for doing either . . . We understand that EPA is neither perfect nor immutable, but . . . we wish the program were more perfect and less immutable than the proposal the committee is now considering."

What troubles most conservationists is that only 10 environmental programs out of nearly 80 throughout the federal government are being transferred to EPA. And even these few will have to defend themselves from the budget knife without a spokesman in the cabinet. The feared results will be an 18-month delay in research findings and effective regulation while EPA gets organized and functioning. Increased fragmentation of environmental research, standard-setting, and enforcement will result from many closely related programs remaining behind in other agencies and departments. Congressman John Blatnik of Minnesota, who favors an independent research-enforcement agency, argued, "All we are asking [of EPA] is a reasonably good start, a strong foundation to build upon." He fears that under the existing plan many programs will be "lost between the administrative cracks." Blatnik is chairman of the House Subcommittee on Executive Reorganization.

Not included in EPA are many key environmental programs such as the water and sewer grant program in the Department of Housing and Urban Development, DOT'S noise pollution program, the environmental effects of the mining research program in the Bureau of Mines, HEW's consumer protection and occupational protection programs, the highway beautification program, the Army Corps of Engineers, and HEW's National Institute of Health Sciences. Congressman Benjamin Rosenthal (D-NY), a member of Blatnik's subcommittee points out that the HEW 1969 Annual Report clearly states: "The mission of the National Institute of Health Sciences is to identify the chemical, physical, and biological factors in the environment that can adversely affect man, to learn how these operate, and to provide scientific bases for the development of control measures by other agencies." Yet this important unit is not to be transferred to EPA.

NOAA's creation presents a different host of problems. Dr. Smith calls Reorganization Plan No. 4 "completely irrational and without justification by the Administration's own criteria." The Department of Commerce has always made its major mission one of promotion and development of natural resources, not protection and regulation of these resources. Locating NOAA in the Department of Commerce, Smith thinks, would place these objectives in direct conflict. "It involves promoting a particular resource use and concommitantly being held

responsible for regulating the environmental effects of such activity." History seems to have made clear that executive branch agencies have extreme difficulty balancing promotion and regulation of a specific resource.

Senator Gaylord Nelson (D-Wis), while supporting the basic concept of EPA, has introduced a resolution to disapprove Plan 4 pending thorough congressional consideration of alternatives. He took exception to remarks by CEQ's Russell Train and Under Secretary of Commerce Rocco Siciliano at the July 9 press conference announcing the plans. Train, when asked why NOAA was not put in EPA, replied: "Because the new EPA is intended to focus on the control of pollution . . . ocean programs, obviously, go far beyond that, development efforts of all sorts." To a similar question Siciliano replied: "As far as NOAA is concerned, let's make a comparison. One is a standard-setting enforcement-type agency which needs independence and this is your EPA. The other is a research, development, protection, and conservation function which we are doing already in the Commerce Department. . . ."

Senator Nelson is concerned that NOAA does not unscramble the jurisdictional tangle of federal agencies having marine responsibilities. "The Corps of Engineers lets all kinds of waste dumping go on beyond the 3-mile limit off our coasts, because it is unsure of its authority in this area, and for inshore waters, the Corps recently did not even know how many permits it had issued. Plan Number 4 does not deal with this serious inadequacy in federal policy."

Senator Nelson, who has introduced two bills to protect the environmental integrity of the oceans, feels that it would be far better to reorganize and strengthen the Department of Interior or to build on the foundation of EPA than to place NOAA in the Department of Commerce.

Maine's Senator Edmund Muskie, chairman of the Senate Public Works Subcommittee on Air and Water Pollution, is concerned about the money and manpower commitment behind the Administration's Reorganization Plans 3 and 4. Muskie is troubled by the President's remarks on July 9. "It is not practical, however, to itemize or aggregate the exact expenditure reductions which will result from this action," Nixon said. Muskie argues that "We should not expect expenditures for these already underfunded, undermanned programs to decrease."

An alternative approach to Senator Nelson's resolution to place NOAA in EPA was introduced by Congressman John D. Dingell (D-Mich). Dingell, who is chairman of the Merchant Marine and Fisheries subcommittee on Fisheries and Wildlife Conservation, introduced two resolutions recommending House disapproval of Reorganization Plans 3 and 4. He favors subsequent legislative action to coordinate environmental programs and jurisdictions.

Reorganization Plans 3 and 4 bear further implications. At present, environmental programs are represented at the cabinet level, although the cabinet members in question often have to serve both promotion and protection interests of their clientele. EPA would be headed by an administrator below cabinet rank, similar to the directors of NASA and the AEC. Both these agencies, however, have been essentially promotional, not regulatory, agencies. They have received almost undivided support and significant funds because promotion usually means spending federal money in one or more congressional districts. Promotion-prone agencies reap political support. But this tends not to be the case with regulatory agencies when their performance is effective. The EPA director would be unlikely to possess clout equivalent to that of the NASA and AEC directors.

Coordination of *all* environmental programs, as opposed to transfer of several programs to a new agency, should be the keystone of an urgently needed environmental executive reorganization. *Not needed* is another congregation of an incomplete list of existing federal programs to be transferred to an umbrella agency possessing no new coordination authority. *Needed* is more strength within the newly created President's Council on Environmental Quality. This enhanced authority of the CEQ should range from coordination of operating environmental programs to stop-order authority against environmentally destructive construction projects or programs to more sophisticated research capabilities that would better assist the CEQ in exercising its enhanced authority. The CEQ should and could become the focus of environmental research, planning, and coordination at the Presidential level, with review and stop-order authority. Executive reorganization is tangential to the central need for SEQ policy coordination and enforcement authority.

# HOUSE OF REPRESENTATIVES—*Wednesday, September 30, 1970*

The House met at 11 o'clock a.m.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

*Thou shalt love the Lord thy God with all thine heart and with all thy soul and with all thy might.*—Deuteronomy 6: 5.

Almighty and ever-living God, by whose mercy we have come with our Hebrew brethren to the beginning of another year, grant that we may enter it together with humble and grateful hearts. Confirm our resolutions, we pray Thee, to walk more closely with Thee and to labor more faithfully for the good of our fellow men according to the teaching of our law and the example of our Lord.

We invoke Thy blessing upon our country. Enlighten with Thy wisdom and sustain with Thy power those whom the people have set in authority, our President, our Speaker, Members of Congress, and all who are entrusted with our safety and our freedom. May peace and good will live in the lives of our citizens and may religion spread its blessings among us, exalting our Nation in righteousness.

In Thy holy name we pray. Amen.

## THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

## MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Arrington, one of its clerks, announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the House to the bill (S. 3558) entitled "An act to amend the Communications Act of 1934 to provide continued financing for the Corporation for Public Broadcasting."

The message also announced that the Senate had passed with an amendment in which the concurrence of the House is requested, a bill of the House of the following title:

H.R. 17604. An act to authorize certain construction at military installations, and for other purposes.

The message also announced that the Senate insists upon its amendments to the bill (H.R. 17255) entitled "An act to amend the Clean Air Act to provide for a more effective program to improve the quality of the Nation's air," disagreed to by the House; agrees to the conference asked by the House on the disagreeing votes of the two Houses thereon, and appoints Mr. RANDOLPH, Mr. YOUNG of Ohio, Mr. MUSKIE, Mr. SPONG, Mr. EAGLETON, Mr. COOPER, Mr. BOGGS, Mr. BAKER, and Mr. DOLE to be the conferees on the part of the Senate.

The message also announced that the Senate insists upon its amendments to the bill (H.R. 17604) entitled "An act to authorize certain construction at military installations, and for other purposes," requests a conference with the House on the disagreeing votes of the two Houses thereon, and appoints Mr. JACKSON, Mr. STENNIS, Mr. ERVIN, Mr. CANNON, Mr. BYRD of Virginia, Mr. THURMOND, Mr. TOWER, and Mr. DOMINICK to be the conferees on the part of the Senate.

The message also announced that the Senate agrees to the amendment of the House with an amendment to a bill of the Senate of the following title:

S. 3479. An act to amend section 2 of the Act of June 30, 1954, as amended, providing for the continuance of civil government for the Trust Territory of the Pacific Islands.

## REQUEST FOR PERMISSION FOR COMMITTEE ON THE JUDICIARY TO FILE REPORT ON S. 30, THE ORGANIZED CRIME CONTROL BILL

Mr. RODINO. Mr. Speaker, I ask unanimous consent that the Committee on the Judiciary may have until midnight tonight to file a report on the bill (S. 30) relating to the control of organized crime in the United States.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

Mr. GROSS. Mr. Speaker, reserving the right to object, and if I may have the attention of the gentleman from New Jersey, I assume this has been cleared with the minority members of the committee?

Mr. RODINO. Mr. Speaker, if the gentleman will yield, I have every reason to believe so.

Mr. GROSS. Well, Mr. Speaker, I wonder if the gentleman under these circumstances will withhold his request briefly?

The SPEAKER. Will the gentleman withhold briefly his unanimous-consent request until he is able to contact the ranking member on the minority side and the Republican leadership?

Mr. RODINO. I shall be glad to do so, Mr. Speaker.

## THE WHINERS AND COMPLAINERS OUGHT TO THANK THE PRESIDENT'S COMMISSION ON CAMPUS UNREST

(Mr. RIEGLE asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. RIEGLE. Mr. Speaker, some of those who blindly criticize the findings of the President's Commission on Campus Unrest—whether they realize it or not—are slapping the President in the face. After all, the men who wrote this report were selected by the President; given their charter of responsibility by the President; and their findings are the direct responsibility of the President.

Actually, the whiners and complainers ought to thank the President—and thank the Scranton Commission—because it has done an excellent job—and has made a correct and compelling set of recommendations.

The truth, gentlemen, is never the enemy—and we ought to be big enough to face facts—even if we dislike them.

Like it or not, the President of the United States has the greatest opportunity, and responsibility, to provide moral leadership for our country. He asked for that responsibility, the voters gave it to him in good faith, and we do him no favors when we suggest otherwise. And do not sell him short—I think he wants that responsibility.

The fact is that the President of the United States can do more than any other person to help the country understand the campus unrest problem. The country desperately needs his full leadership in this area. All of us can do more to help solve this problem—including the President—and it is time that each of us step up to that challenge.

If the political arsonists now out throwing firebombs of inflamed rhetoric and explosive anger would stop complaining long enough to offer even one constructive suggestion, the country would be much better off. The caustic condemners and complainers who know all the problems and none of the answers, ought to listen to the President's Commission on Student Unrest—at least until they have something more constructive to offer themselves.

## JOINT ECONOMIC COMMITTEE'S ENERGY HEARINGS POSTPONED

(Mr. PATMAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. PATMAN. Mr. Speaker, the following release has just been issued:

Representative Wright Patman (D-Tex.), Chairman of the Joint Economic Committee, today announced that hearings on "The Energy Outlook: An Overview of Price and Supply," previously announced for October 5, 6, 9, and 10, would be postponed until a later date. Mr. Patman explained that, because of the press of other Congressional business prior to the anticipated October 15 recess, it had been found that it would be difficult for the Committee members to devote adequate time to these hearings. It was decided that the extensive investigation of the energy sector of the economy which the Committee plans to undertake could better be initiated at a later date.

Mr. Patman emphasized his appreciation to the government officials and other experts who had agreed to testify and expressed the hope that they would again be available to assist the Committee when the hearings are rescheduled.

## PERMISSION FOR COMMITTEE ON THE JUDICIARY TO FILE A REPORT ON S. 30

Mr. RODINO. Mr. Speaker, I renew my unanimous-consent request that the Committee on the Judiciary may have until midnight tonight to file a report on the bill S. 30, the proposed Organized Crime Control Act.

The SPEAKER. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

## TO STRENGTHEN LAW RELATING TO COUNTERFEITING OF POSTAGE METER STAMPS

Mr. ROGERS of Colorado. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H.R. 14485) entitled "An act to amend sections 501 and 504 of title 18, United States Code, so as to strengthen the law relating to the counterfeiting of postage meter stamps or other improper uses of the metered mail system," with Senate amendments thereto, and concur in the Senate amendments.

The Clerk read the title of the bill.

The Clerk read the Senate amendments, as follows:

Page 1, line 3, after "That" insert "(a) notwithstanding the amendment made to".

Page 1, line 3, strike out "is" and insert "such section is".

Page 1, strike out lines 5 and 6 and insert:

"§ 501. Postage stamps, postage meter stamps, and postal cards"

Page 2, line 15, strike out "Department," and insert "Department or by the Postal Service,".

Page 2, line 16, strike out "said department" and insert "the Department or Postal Service".

Page 2, line 22, strike out "Department," and insert "Department or the Postal Service,".

Page 2, after line 24, insert:

"(b) Section 6(j)(6) of the Postal Reorganization Act is repealed."

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

Mr. GROSS. Mr. Speaker, reserving the right to object, I assume from the Clerk's reading of the Senate amendments that they are germane to the bill, but will the gentleman from Colorado state that the amendments adopted in conference are germane to the bill?

Mr. ROGERS of Colorado. Mr. Speaker, will the gentleman yield?

Mr. GROSS. Of course I yield to the gentleman from Colorado.

Mr. ROGERS of Colorado. Mr. Speaker, they are germane. You see, we had to bring the bill into conformity with the so-called postal reform bill.

Mr. GROSS. Mr. Speaker, I thank the gentleman for his explanation, and withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

The Senate amendments were concurred in.

A motion to reconsider was laid on the table.

## EXPRESSING THE SENSE OF CONGRESS WITH RESPECT TO THE CONQUEST OF CANCER AS A NATIONAL CRUSADE

Mr. ROGERS of Colorado. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk House Concurrent Resolution 675 entitled "Concurrent Resolution expressing the sense of the Congress with respect to the conquest of cancer as a national crusade", with Senate amendments thereto, and concur in the Senate amendments.

The Clerk read the title of the concurrent resolution.

The Clerk read the Senate amendments, as follows:

Page 2, line 4, after "That" insert "it is the sense of".

Page 2, line 4, strike out "appropriate the funds" and insert "that sufficient funds be appropriated".

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

Mr. HALL. Mr. Speaker, reserving the right to object, is it the opinion of the gentleman presenting handling the resolution that the second senate amendment would make this an open ended funding of this cancer crusade bill?

Mr. ROGERS of Colorado. That is already the case. There has been an open end authorization for cancer research in existence for many years. The second Senate amendment does not affect that at all. Any and every appropriation must go through the regular appropriation procedure.

Mr. HALL. Mr. Speaker, I think it is important to establish that legislative record.

Mr. ROGERS of Colorado. Yes, sir.

Mr. HALL. I will ask the gentleman from Colorado further if this is the piece of legislation coming back from the other body that was proposed by our colleague, the gentleman from New York (Mr. ROONEY), which is known as the Rooney Cancer Crusade resolution.

Mr. ROGERS of Colorado. Yes, it is.

Mr. HALL. I thank the gentleman. Mr. Speaker, I withdraw my reservation of objection.

Mr. ROONEY of New York. Mr. Speaker, I am highly gratified by the unanimous adoption of House Concurrent Resolution 675 with the Senate Amendments which I introduced in the House in its original form on March 4, 1970. I am glad that my colleagues in both Houses have joined in the Crusade for the Conquest of Cancer by 1976, the 200th anniversary of the independence of our Nation.

I am aware that it is difficult, if not impossible, to set a precise time as the target date for the solution of a disease like cancer. I am also sure, however, that

our national dedication to such a goal and such a target date may well provide the added motivation necessary for its success. The sense of Congress is now clear: It is to provide the means for the men and women in the scientific community to address themselves to the solution of cancer without stint and without unreasonable limitation on the resources at their disposal. With this knowledge and the confidence that will flow from it, they can proceed at a more rapid rate than has ever been possible before. They will know that the research they start will be carried to a conclusion and that new men with new ideas will enter the field of cancer research and give added impetus to the total effort. With these forces brought into play, it is my conviction that the goal will be reached as we in the Congress carry out the intent of this resolution.

There is a study of the cancer problem now going on under the auspices of the other body. The panel making the study will report its findings soon. It is a panel of brilliant men and women, scientists of stature and laymen who are leaders in industry and finance. Their recommendations, I am sure, will be worthy of our earnest consideration. The resolution which you have just adopted in final form will spur congressional support of the recommendations they make. I am confident that next year, the year of 1971, will be the year which medical historians will record as the beginning of the end of cancer.

The SPEAKER. Is there objection to the request of the gentleman from Colorado (Mr. ROGERS)?

There was no objection.

The Senate amendments were agreed to.

A motion to reconsider was laid on the table.

## REQUEST FOR PERMISSION FOR COMMITTEE ON EDUCATION AND LABOR TO SIT DURING SESSION TODAY

Mr. BOGGS. Mr. Speaker, I ask unanimous consent that the Committee on Education and Labor be permitted to sit today while the House is in session.

The SPEAKER. Is there objection to the request of the gentleman from Louisiana?

Mr. GROSS. Mr. Speaker, reserving the right to object, has this request been concurred in by the minority?

Mr. BOGGS. It is, by the ranking member of the committee who has also asked permission that they sit today.

Mr. HALL. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman.

Mr. HALL. Mr. Speaker, I have just left an important, vital, and previously scheduled committee meeting in order to convene with Members for essential legislation, at an unusual hour agreed to by unanimous consent, after much coordination and staffing yesterday.

I see no particular reason why if we are going to expedite our business regardless of the cause, that these committees should sit. What is proper for one is proper for the other. If the gentleman will yield for that purpose, Mr. Speaker, I do object.

The SPEAKER. Objection is heard.

## NATIONAL VOLUNTEER FIREMEN'S WEEK

Mr. ROGERS of Colorado. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the joint resolution (H.J. Res. 1154) authorizing the President to proclaim National Volunteer Firemen's Week from September 19, 1970, to September 26, 1970, with Senate amendments thereto, and concur in the Senate amendments.

The Clerk read the title of the joint resolution.

The Clerk read the Senate amendments as follows:

Page 1, line 5, strike out "September 19," and insert "October 24,".

Page 1, line 5, strike out "September 26," and insert "October 31,".

Amend the title so as to read: "Joint resolution authorizing the President to proclaim National Volunteer Firemen's Week from October 24, 1970, to October 31, 1970."

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

Mr. GROSS. Mr. Speaker, reserving the right to object, and I shall not object, I merely want to ask the gentleman if this proposed resolution, and it is my understanding that he has two or three additional and similar resolutions, authorize the expenditure of any funds whatsoever.

Mr. ROGERS of Colorado. It does not in any manner whatsoever, I can assure the gentleman.

Mr. GROSS. Nor do any of the other amendments that the gentleman is prepared to offer today?

Mr. ROGERS of Colorado. That is true as to those already offered and adopted and those to be considered hereafter.

Mr. GROSS. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

The Senate amendments were concurred in.

A motion to reconsider was laid on the table.

## NATIONAL CLOWN WEEK

Mr. ROGERS of Colorado. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the joint resolution (H.J. Res. 236), authorizing the President to designate the week of August 1 through August 7 as "National Clown Week", with Senate amendments thereto, and concur in the Senate amendments.

The Clerk read the title of the joint resolution.

The Clerk read the Senate amendments as follows:

Page 1, line 5, after "August 7" insert ", 1971".

Amend the title so as to read: "Joint resolution authorizing and requesting the President of the United States to issue a proclamation designating the week of August 1 through August 7, 1971, as 'National Clown Week'."

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

The Senate amendments were concurred in.

A motion to reconsider was laid on the table.

## AMENDING JOINT RESOLUTION ESTABLISHING "NATIONAL EMPLOY THE PHYSICALLY HANDICAPPED WEEK"

Mr. ROGERS of Colorado. Mr. Speaker, I ask unanimous consent that the Committee on the Judiciary be discharged from further consideration of the Senate Joint Resolution (S.J. Res. 110) to amend the joint resolution entitled "Joint resolution to establish the first week in October of each year as National Employ the Physically Handicapped Week," approved August 11, 1945 (59 Stat. 530), so as to broaden the applicability of such resolution to all handicapped workers, and ask for its immediate consideration.

The Clerk read the title of the Senate joint resolution.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

The Clerk read the Senate joint resolution as follows:

S.J. RES. 110

*Resolved by the Senate and House of Representatives of the United States of America in Congress assembled,* That the first two sentences of the joint resolution entitled "Joint resolution to establish the first week in October of each year as National Employ the Physically Handicapped Week", approved August 11, 1945 (59 Stat. 530), are amended to read as follows: "That hereafter the first week in October of each year shall be designated as National Employ the Handicapped Week. During such week appropriate ceremonies shall be held throughout the Nation, the purposes of which will be to enlist public support for and interest in the employment of otherwise qualified but handicapped workers."

The Senate joint resolution was ordered to be read a third time, was read the third time and passed, and a motion to reconsider was laid on the table.

## AUTHORIZING THE PRESIDENT TO DESIGNATE JANUARY 1971 AS "NATIONAL BLOOD DONOR MONTH"

Mr. ROGERS of Colorado. Mr. Speaker, I ask unanimous consent that the Committee on the Judiciary be discharged from further consideration of the Senate joint resolution (S.J. Res. 223) to authorize and request the President to issue annually a proclamation designating the month of January of each year as "National Blood Donor Month," and ask for its immediate consideration.

The Clerk read the title of the Senate joint resolution.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

The Clerk read the Senate joint resolution as follows:

S.J. RES. 223

*Resolved by the Senate and House of Representatives of the United States of America in Congress assembled,* That, in recognition of the vital contribution of the voluntary blood donor to medical care, the President is authorized and requested to issue annually a proclamation designating the month of January of each year as "National Blood Donor Month", and calling upon the people of the United States and interested groups and organizations to observe such month with appropriate ceremonies and activities.

AMENDMENTS OFFERED BY MR. ROGERS OF COLORADO

Mr. ROGERS of Colorado. Mr. Speaker, I offer amendments.

The Clerk read as follows:

Amendments offered by Mr. ROGERS of Colorado: On page 1, line 5, strike the word "annually".

On page 1, line 6, strike out the phrase "of each year" and insert in lieu thereof "1971".

The amendments were agreed to.

The Senate Joint Resolution was ordered to be read a third time, was read the third time, and passed.

The title was amended so as to read: "To authorize and request the President to issue a proclamation designating January 1971 as 'National Blood Donor Month.' "

A motion to reconsider was laid on the table.

## APPOINTMENT OF CONFEREES ON H.R. 17604, MILITARY CONSTRUCTION AUTHORIZATIONS, 1971

Mr. RIVERS. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 17604), to authorize certain construction at military installations, and for other purposes, with a Senate amendment thereto, disagree to the Senate amendment, and agree to the conference asked by the Senate.

The SPEAKER. Is there objection to the request of the gentleman from South Carolina? The Chair hears none, and appoints the following conferees: Messrs. RIVERS, HAGAN, CHARLES H. WILSON, NICHOLS, DANIEL of Virginia, BRAY, CLANCY, KING, and FOREMAN.

## PRESIDENT'S COMMISSION ON CAMPUS UNREST HAS DRAWN A BLANK

(Mr. SIKES asked and was given permission to address the House for 1 minute, and to revise and extend his remarks.)

Mr. SIKES. Mr. Speaker, the President's Commission to study campus unrest has drawn a blank. The report is an exercise in phonetics and nothing more. It simply passes the buck for campus problems back to the President who, in the opinion of most people, has plenty to do without trying to police the campuses. Admittedly, there is much to be done to preserve order on the campuses and admittedly the President, as Chief Executive, has a measure of responsibility, but there is much more to the problem than the report would indicate. The report should have dealt with the immediate need for forceful action on the part of college administrators.

Colleges have been opening all over the land for the fall term. A straightforward approach by college heads to stress the attitudes and activities which are expected of the students is imperative. The students should be made to realize that they have responsibilities to help preserve law and order. They should be told that agitators will not be welcome. Much of the trouble in recent years has stemmed from the fact that college heads simply failed to assume the responsibility entrusted to them in dealing with problems of student unrest.

It is equally important that useful alternatives be provided to the students. It is to be assumed that most students will have their time fully occupied with academic requirements. That is why they are in college. When they have time on their hands, it is doubly important that sound outlets be provided for their energies. There are many worthwhile programs which offer such outlets, and leadership and participation on the campus in these activities should be encouraged.

The most serious danger is a do-nothing attitude toward campus disorders on the part of those responsible for college administration.

## PROVIDING FOR CONSIDERATION OF H.R. 17538, HIGH-SPEED GROUND TRANSPORTATION EXTENSION

Mr. O'NEILL of Massachusetts. Mr. Speaker, I call up House Resolution 1223 and ask for its immediate consideration.

The Clerk read the resolution as follows:

*Resolved,* That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 17538) to extend for one year the Act of September 30, 1965, relating to highspeed ground transportation, and for other purposes. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interstate and Foreign Commerce, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. O'NEILL of Massachusetts. Mr. Speaker, I yield 30 minutes to the gentleman from Ohio (Mr. LATTA) pending which I yield myself such time as I may consume.

Mr. Speaker, House Resolution 1223 provides an open rule with 1 hour of general debate for consideration of H.R. 17538 to extend the High-Speed Ground Transportation Act.

The purpose of H.R. 17538 is to extend existing law relating to high-speed ground transportation for 1 year. It authorizes an appropriation for fiscal year 1971 in the amount of $21.7 million for research and development and demonstrations in high-speed ground transportation.

Five years ago the Congress passed high-speed ground transportation legislation. We recognized then, as we know even better now, that fast, efficient, mass transportation had to be developed to replace the polluting and congesting increase of the automobile in American life.

American technology is the greatest in the world. It has not been directed to many of the pressing domestic needs of the Nation. High-speed ground transportation can be successfully developed, built, and utilized.

This authorization will enable many of the research projects which have been developed to be built. It will provide for engineering research and development and demonstration projects.

The research and development of reasonably priced, efficient, high-speed ground transportation will benefit the economy and the ecology of the entire United States.

This 1-year extension and the additional funding will furnish the opportunity to effect the transition into transportation equipment and assist in the programing of future requirements.

Mr. Speaker, I urge the adoption of House Resolution 1223 in order that H.R. 17538 may be considered.

Mr. LATTA. Mr. Speaker, the purpose of the bill is to extend for 1 year—through fiscal 1971—existing law with respect to high-speed ground transportation.

The bill authorizes appropriations of $21,700,000 during the year for research and development and for demonstration projects in the field.

During this year the Department of Transportation will begin to use its new laboratory facilities at Cambridge, Mass., and its high-speed ground test site in Colorado. New equipment will be purchased with some of the funds as the Department's test programs expand.

The administration supports the bill as evidenced by letters from the Secretary of Transportation. There are no minority views.

Mr. O'NEILL of Massachusetts. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

## CALL OF THE HOUSE

Mr. GROSS. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. BOGGS. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 323]

| | | |
|---|---|---|
| Abbitt | Fish | Murphy, N.Y. |
| Andrews, N. Dak. | Fisher | Nedzi |
| Ashley | Ford, Gerald R. | O'Konski |
| Aspinall | Foreman | Olsen |
| Ayres | Friedel | Ottinger |
| Betts | Fulton, Tenn. | Pepper |
| Bingham | Gallagher | Pickle |
| Bray | Gilbert | Pirnie |
| Brock | Green, Pa. | Pollock |
| Brooks | Harsha | Powell |
| Burton, Utah | Hays | Reifel |
| Bush | Hébert | Robison |
| Button | Ichord | Rosenthal |
| Cabell | Jones, N.C. | Rostenkowski |
| Cederberg | Keith | Roudebush |
| Celler | Kleppe | Satterfield |
| Chisholm | Landrum | Scheuer |
| Clark | Lloyd | Shipley |
| Clay | Long, La. | Skubitz |
| Colmer | Lowenstein | Staggers |
| Conyers | McCarthy | Stephens |
| Cramer | McClory | Stratton |
| Crane | McKneally | Taft |
| Daddario | Macdonald, Mass. | Teague, Tex. |
| Dawson | MacGregor | Thompson, N.J. |
| de la Garza | Mann | Tunney |
| Derwinski | Martin | Watson |
| Diggs | Melcher | Weicker |
| Dowdy | Meskill | Wilson, Charles H. |
| Edwards, La. | Miller, Calif. | Wold |
| Fallon | Minshall | Zablocki |
| Farbstein | Mizell | |
| Feighan | Morse | |

The SPEAKER. On this rollcall 332 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

## GENERAL LEAVE TO EXTEND

Mr. ROGERS of Colorado. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the bills and joint resolutions that were previously adopted.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

## PERMISSION TO FILE SUPPLEMENTAL REPORT ON H.R. 2175, RESIDENTIAL COMMUNITY TREATMENT CENTERS

Mr. KASTENMEIER. Mr. Speaker, I ask unanimous consent to file a supplemental report, containing a Ramseyer, on H.R. 2175 dealing with residential community treatment centers.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

## ROSH HASHANAH

(Mr. ANDERSON of Illinois asked and was given permission to address the House for 1 minute.)

Mr. ANDERSON of Illinois. Mr. Speaker, we welcome the advent of the Jewish New Year, Rosh Hashanah, marking the beginning of the year 5731 as recorded by the Hebrew calendar.

The Jewish New Year this autumn comes at a time when our Government is actively concerned about the events surrounding the Holy Land, where the religions of the Jewish people and other great faiths originated. We give thanks to God for delivering safety the hostages. whose safety concerned all Americans.

The cause of America is served by the spirit of the Jewish New Year. We reflect on the past and seek guidance to meet the trials of the future. In this wholesome pursuit, this quest for renewal, we can fully identify with our fellow citizens of the ancient Hebrew faith.

It is a source of pride to this Congress that our President is now abroad seeking to perpetuate peace, justice, and freedom. His leadership has been constructive. I wish to refer to the practical steps just taken by this House to provide the necessary items of defense to Israel to deter aggression in the Middle East. We feel this is a constructive contribution to the preservation of peace.

I wish to extend my sincere greetings to the Jewish community on this solemn and sacred occasion. I would like to join in praying for peace for Israel and all mankind. May the coming Jewish year see a new era of human understanding and compassion. Let us cherish and preserve our own Nation's great moral heritage which is so much based upon the teachings of the Old Testament.

Let us strive for a year of progress, human dignity, peace, and law and order—at home as well as abroad. And let us give thanks anew to the Divine Creator of us all, the compassionate God whose trust we seek to keep.

## AMERICA'S DIPLOMACY IN THE MIDDLE EAST

(Mr. STEIGER of Wisconsin asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. STEIGER of Wisconsin. Mr. Speaker, we have heard remarks in recent days from commentators and writers who should know better about America's "gunboat diplomacy" in the Middle East.

Surely, Mr. Speaker, it is not gunboat diplomacy to take the steps necessary to bring about peace anywhere in the world without imposing America's will on those nations at the brink of war.

Gunboat diplomacy was the use of the Navy for seizing rights for Americans in other nations.

In no way does that apply here.

America's move and the President's decision were made in order to maintain peace in the Middle East and in the world.

Can there by any nobler purpose for the use of a nation's armed might?

Mr. Speaker, some Americans have grown accustomed to the sight of their Nation backing off at the first sign of danger. Some, today, even demand that we retreat to the shores of an isolationist America. The President is not one of those.

It is to his credit and the Nation's honor that he recognizes America's proper role in the world and that he does not cringe at the sight of danger.

## PROVIDING FOR CONSIDERATION OF H.R. 18679, TO AMEND THE ATOMIC ENERGY ACT OF 1954

Mr. YOUNG. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 1227 and ask for its immediate consideration.

The Clerk read the resolution as follows:

*Resolved*, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 18679) to amend the Atomic Energy Act of 1954, as amended, to eliminate the requirement for a finding of practical value, and for other purposes. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Joint Committee on Atomic Energy, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

The SPEAKER. The gentleman from Texas is recognized for 1 hour.

Mr. YOUNG. Mr. Speaker, I yield 30 minutes to the distinguished gentleman from Illinois (Mr. ANDERSON) pending which I yield myself such time as I may consume.

Mr. Speaker, House Resolution 1227 provides an open rule with 1 hour of general debate for consideration of H.R. 18679 to eliminate the requirement for a finding of "practical value," and for other purposes.

The purpose of the bill is to revise the Atomic Energy Act of 1954, as amended, to accomplish three principal objectives, as set forth below.

The bill would abolish the statutory requirement for a finding of practical value before nuclear powerplants can be licensed for industrial or commercial purposes and would clarify the prelicensing antitrust review process applicable to the Atomic Energy Commission's regulation of nuclear plants used for industrial or commercial purposes.

H.R. 18679 would require the Government to enter into an arrangement with the National Council on Radiation Protection and Measurements and the National Academy of Sciences for a comprehensive and continuing review of basic radiation protection standards and for recommendations by these scientifically preeminent bodies respecting basic radiation protection standards.

The bill would reaffirm, with even greater clarity, the original intention of the Joint Committee on Atomic Energy underlying a provision of the Private Ownership of Special Nuclear Materials Act. This has to do with the statutory basis for AEC's charges for enriching services incident to the production of nuclear fuel.

Mr. Speaker, I urge the adoption of the rule in order that the bill may be considered.

Mr. ANDERSON of Illinois. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, this rule would make in order, with 1 hour of general debate under an open rule, H.R. 18679. The gentleman from Texas (Mr. YOUNG) has already, I believe, very well summarized the three principal features of this legislation.

This bill contains the following three features:

First. The abolition of the concept of a finding of practical values and clarification of the prelicensing antitrust review of nuclear power plants by the AEC.

Second. Slight revision of the statutory language which governs AEC's basis for charging for uranium enriching services, to assure that, as heretofore, AEC will continue to charge for enriching services on the basis of recovering the Government's full costs averaged over a period of years.

Third. The imposition of a requirement that the Government arrange with the National Council on Radiation Protection and Measurements and with the National Academy of Sciences for a continuing and comprehensive review of basic radiation protection standards and for recommendations by these scientifically preeminent bodies respecting basic radiation protection standards.

The report was a unanimous report, and I am sure that the substantive features of the legislation will be fully explained by the chairman and ranking member of the committee.

I know of no objection to the rule, Mr. Speaker, and I reserve the remainder of my time.

Mr. YOUNG. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

---

## PROVIDING FOR CONSIDERATION OF H.R. 19444, PROVIDING FOR GUARDS TO ACCOMPANY AIRCRAFT OPERATED BY U.S. AIR CARRIERS

Mr. YOUNG. Mr. Speaker, by direction of the Committee on Rules and on behalf of our distinguished chairman (Mr. COLMER), I call up House Resolution 1231 and ask for its immediate consideration.

The Clerk read the resolution as follows:

H. RES. 1231

*Resolved*, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 19444) to authorize for a temporary period the expenditure from the Airport and Airway Trust Fund of amounts for the training and salary and expenses of guards to accompany aircraft operated by United States air carriers, to raise revenue for such purpose, and to amend section 7275 of the Internal Revenue Code of 1954 with respect to airline tickets and advertising, and all points of order against said bill for failure to comply with the provisions of clause 3, rule XIII, are hereby waived. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Ways and Means, the bill shall be considered as having been read for amendment. No amendments shall be in order to said bill except amendments offered by direction of the Committee on Ways and Means, and said amendments shall be in order, any rule of the House to the contrary notwithstanding. Amendments offered by direction of the Committee on Ways and Means may be offered to any section of the bill at the conclusion of the general debate, but said amendments shall not be subject to amendment. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

The SPEAKER. The gentleman from Texas is recognized for 1 hour.

Mr. YOUNG. Mr. Speaker, I yield 30 minutes to the distinguished gentleman from Illinois (Mr. ANDERSON), pending which I yield myself such time as I may require.

Mr. Speaker, House Resolution 1231 provides a closed rule with 1 hour of general debate for the consideration of H.R. 19444, providing for revenue to cover the costs of guards on American airlines.

Mr. Speaker, I urge adoption of the rule.

Mr. ANDERSON of Illinois. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, in this case the Committee on Ways and Means requested a closed rule of the Committee on Rules on the proposition of the theory that to do otherwise would open up the entire Internal Revenue Code, because this is a bill that does change the tax code with respect to the tax on passenger tickets on American airlines. It is a matter that relates, I would emphasize, solely to the question of financing the costs of the guards who are now on U.S. air carriers. The authority to put those guards on those air carriers was already, we were told, with the Secretary of Transportation. Therefore this is merely a bill dealing with the question of financing.

The waiver of points of order comes about because of the committee's obvious inability to comply with the Ramseyer Rule. This is the only reason for the request that all points of order be waived against the bill. It is because of the failure to comply with the provisions of clause 3 of rule XIII of the rules of the House.

Mr. HALL. Mr. Speaker, will the gentleman yield?

Mr. ANDERSON of Illinois. I am glad to yield to the distinguished gentleman from Missouri.

Mr. HALL. I appreciate the gentleman from Illinois yielding.

My question is trying to rationalize his first statement about the waiver of all points of order with his immediate past statement concerning the waiver of points of order only for failure to comply with clause 3 of rule XIII, which we all know is the Ramseyer Rule.

I have read this resolution, and as I read it, any other point of order except those based on clause 3 of rule XIII would be in order in the consideration of H.R. 19444.

Mr. ANDERSON of Illinois. The gentleman is absolutely correct in his interpretation of the resolution. If I indicated otherwise, I would certainly hasten to correct the impression, because the rule does use the words "all points of order," but solely with reference to this failure to comply with the Ramseyer Rule. The gentleman is correct that other points of order could be raised and would lie against the bill.

Mr. MILLS. Mr. Speaker, will the gentleman yield?

Mr. ANDERSON of Illinois. I am glad to yield to the distinguished chairman of the Committee on Ways and Means.

Mr. MILLS. I can assure my friend from Missouri that there are no other points of order that could be made to the bill except the one point of order cited. It is a moot question, because no other points of order could be made.

Mr. HALL. Will the gentleman yield further?

Mr. ANDERSON of Illinois. I am glad to yield.

Mr. HALL. Certainly in the interests of economy and the saving of printing, I feel it is not necessary to reprint every word of this change, every time we have up for consideration the entire tax code, or even that portion that this resolution might amend. I think that is good. I do find fault, of course, as the gentlemen both know, with the purported chronic and almost constant elimination of the rights of individuals to raise points of order against any and all tax bills.

The gentleman in his opening statement said that points of order were waived because the Committee on Ways and Means requested it and they were afraid that it would open up the entire tax proposition to amendments and, of course, this is why no amendments are in order except by the Committee on Ways and Means or the chairman thereof.

But, I wanted to make the legislative record to the effect that should there be any other points of order in this particular legislation that this rule makes in order, they could be lodged at least in the Committee of the Whole, or otherwise, if they did not conform to clause 3 of rule 13.

Mr. ANDERSON of Illinois. I certainly have a great measure of sympathy for what the gentleman from Missouri has just said. I personally, find it exceedingly difficult myself, as do other members of the committee to deal with these constant requests for closed rules. But this certainly did not seem to the majority of the Committee on Rules to be the time to depart from that rule in matters of this kind.

Mr. Speaker, I wish to take this opportunity to commend the committee and to commend the administration which I think acted very expeditiously on a very important and critical problem. Of course we all recognize that it is not the entire solution to the problem. Yet, in view of the very volatile situation that exists in the Middle East

and the hijacking of American air carriers, it seems to me that the administration has come up very quickly with the best solution that can be devised. However, we cannot control this matter with respect to foreign air carriers, but we hope this legislation will be a precursor to further efforts on their part to deal effectively with the problem.

Mr. Speaker, I know of no objection to the rule and have no requests for time.

Mr. YOUNG. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

---

## HIGH-SPEED GROUND TRANSPORTATION EXTENSION

Mr. DINGELL. Mr. Speaker, I call up the bill (H.R. 17538) to extend for 1 year the act of September 30, 1965, relating to high-speed ground transportation, and for other purposes, and ask unanimous consent that the bill be considered in the House as in the Committee of the Whole.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

The Clerk read the bill, as follows:

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That (a) the first sentence of section 11 of the Act entitled "An Act to authorize the Secretary of Commerce to undertake research and development in high-speed ground transportation, and for other purposes", approved September 30, 1965 (49 U.S.C. 1641), is amended (1) by striking out "and", and (2) by striking out the period at the end thereof and inserting in lieu thereof a semicolon and the following: "and $21,700,000 for the fiscal year ending June 30, 1971.".

(b) The first sentence of section 12 of such Act of September 30, 1965 (49 U.S.C. 1642), is amended by striking out "1971" and inserting in lieu thereof "1972".

Mr. DINGELL. Mr. Speaker, I move to strike the last word.

Mr. Speaker, this bill extends existing law relating to highspeed ground transportation—Public Law 89–220, September 30, 1965—for 1 year.

It authorizes an additional $21.7 million for fiscal year 1971. The original authorization was $90 million for 3 years. If appropriated, the present request of $21.7 million would bring the total appropriations to $97.7 million for the 6-year period.

Hearings were held before the Subcommittee on Transportation and Aeronautics on June 11. Favorable testimony was received from the Federal Railroad Administration. The legislation was also supported in writing by the Department of Transportation and the Bureau of the Budget. No opposition was received. On June 16, the subcommittee reported the bill unanimously without amendment, as did the full committee on June 23.

The Office of High-Speed Ground Transportation has been given the responsibility for implementing the legislation over the past 5 years. Many research projects have been completed and are now ready for transition into efficient transportation equipment. The extension sought here and the additional funds will permit the transition. The Department of Transportation has acquired NASA's research center at Cambridge, Mass. It will be used for research and development, and the high-speed ground test site in Colorado will serve as a proving ground for new vehicles. The committee believes that this work is of high importance to the Nation, and through it we can advance high-speed rail, tracked air cushion and tube vehicles which will be able to operate at speeds up to 150, 300, and 500 miles per hour respectively.

Mr. Speaker, the committee has strongly endorsed the legislation. We know of no opposition. The level of expenditure in its entirety comes within the recommendation of the Bureau of the Budget and the President's budget.

It would be my hope, Mr. Speaker, that the bill be speedily passed as it is presented to the body.

Mr. SPRINGER. Mr. Speaker, I move to strike the requisite number of words.

Mr. Speaker, the bill before us today is a 1-year extension of a research and demonstration program in high speed ground transportation which has now been going forward for 5 years. Most people think immediately of the Metroliner train which now runs between Washington and New York or the turbo train which links Boston and New York when this subject comes to mind. These projects are a part of this effort and have contributed greatly to the experience with high quality rail service in the northeast megalopolis, but they are only two units in a great effort.

While these more apparent and more newsworthy projects went forward, other work was being done by the Office of High Speed Ground Transportation to assist in developing entirely new means of ground transportation for the Nation. Great progress has been made in working with unconventional forms of locomotion such as the air-cushioned vehicle and the linear induction power system. Vehicles of these kinds can be expected to perform satisfactorily at speeds up to 300 miles per hour. Tube-type vehicles, which are technically feasible, would operate as high as 500 miles per hour. The extension of authority and the money authorized in this bill would keep this work going.

When the original authorization was made 5 years ago it was contemplated that we should make a good start including initiation of the Metroliner. Our expectations have been realized. This is remarkably good in view of the progress in unconventional systems which could only be hoped for but hardly predicted so soon.

The Department of Transportation acquired the electronic research center at Cambridge, Mass., formerly operated by NASA, in which to conduct continuing research on advanced systems and other technology of ground transportation. Also in the making is a test site in Colorado which will provide facilities for trying out new vehicles.

In comparison with research efforts in other fields such as health, this whole program has been very modest in its demands upon the Treasury. Its results, however, have been exceptionally satisfying. Certainly ground transportation for passengers has already become one of the acute problems of the Nation. We all know that it will get much worse before it gets much better. The answer must lie in new and improved types of vehicles and systems which can carry people rapidly, safely and comfortably between distant points by means of surface transportation.

The future demands an efficient system of rail passenger service or some replacement therefor. As time goes on we will need all the development which air travel can hope for, but we shall also need new means of traveling on the surface as well. This program, despite its appearance as a minor, almost invisible item in the huge Federal budget holds our hopes for this accomplishment. It is proceeding in orderly fashion at about the rate it can make best progress, and I recommend support of the measure as it has come from the Committee on Interstate and Foreign Commerce.

AMENDMENT OFFERED BY MR. ADAMS

Mr. ADAMS. Mr. Speaker, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ADAMS: Page 1, line 10, strike out "21,700,000" and insert in lieu thereof "$36,650,000".

(Mr. ADAMS asked and was given permission to revise and extend his remarks, and to include extraneous material.)

Mr. ADAMS. Mr. Speaker, at the conclusion of my remarks I shall include a letter from the Department of Transportation to the distinguished gentleman from Texas (Mr. PICKLE) dated September 14, 1970.

Mr. Speaker, I am offering this amendment which was discussed in committee and which is actually an amendment which was developed by the gentleman from Texas (Mr. PICKLE) to add to this bill approximately $14,950,000.

This was discussed at great length in the committee and at that time the gentleman from Texas was unable to receive a specific statement from the Bureau of the Budget regarding it, and he also did not have a particular letter from the Department of Transportation as to precisely what was needed during the next fiscal year. I have asked that they be included at the conclusion of my remarks, the letter which the gentleman from Texas (Mr. PICKLE) has now received from Mr. Myles Mitchell of the Department of Transportation. Listed in this is a specific breakdown of the amount of money that should be appropriated for the fiscal year 1971 for the development of high-speed ground transportation, and in particular, certain vehicles.

I would point out to the Members on the floor today, and those who are from the New England area and those who are particularly involved in the urban areas of the Nation—in California, Chicago, Washington, D.C., Philadelphia,

and many others such as my own city of Seattle, that this particular bill is the one that has created and provided money for the development of vehicles such as the Metroliner and the train presently running to Boston, the TurboTrain.

We know we are going to have to have money for the improvement of these vehicles.

In addition to that, we are trying to develop a low cost rail intercity vehicle or hovercraft vehicle. We presently have a bill pending before the Committee on Rules, and we will try to bring it to the floor of the House within the next 2 or 3 weeks, and hopefully, before that, provides for intercity rail transportation.

This would involve a government corporation. It is sponsored by the present administration. It was supported by the prior administration.

This bill, with a government corporation, would designate areas where rail passenger trains would run between the major cities in order to solve the problem we presently have—the inability to transport people between our urban cities.

Again, the airplane is only capable of carrying approximately 10 percent of the people in and out of the city, with our present configuration of airports and their connections to the cities.

We are at the present time in a position where certain cities have had to say—no more combustion-engine vehicles.

So we are going to try to maintain the train. To do that we need this bill, and in particular we need the development of vehicles which will be able to run on these rights-of-way that we have in an efficient fashion.

The gentleman from Texas (Mr. PICKLE) has informed me, that he has discussed this matter with the Bureau of the Budget. They are not in a position to make recommendations on particular bills of this nature. But they do not indicate to him any opposition to it.

It was discussed in the full committee, and the only reason it was not made a part of the bill and put in at that time was because we did not have the recommendation of the amount of money, which we now have, and that amount of money is the precise amount of money that is in the amendment I have offered.

I think I would just close by saying this: There are three vehicles presently being developed in the United States—the linear induction motor vehicle, the Aerotrain and TurboTrain. The Department of Transportation is presently working on these.

I would hope that the committee would accept this amendment. It carefully details how the money would be spent and I think we need it over the years in developing these vehicles.

Mr. DINGELL. Mr. Speaker, will the gentleman yield?

Mr. ADAMS. I yield to the gentleman.

Mr. DINGELL. On behalf of the committee I cannot accept the amendment the gentleman offers. I would point out that this is an important amendment. Its function is to afford a level of funding for the project that the gentleman has alluded to, a level at which the money can be spent efficiently.

I believe that construction is highly desirable and I would hope that at an early time our funding of our rapid and high-speed ground transportation endeavors would be at a level that would begin to pay off before we finally find ourselves in a major environmental crisis and a major transportation crisis, which is a matter which immediately impends over the head of this Nation.

Mr. ADAMS. I thank the gentleman very much. I just want to point out that the reason for the fundings at this time of some of the vehicles I have mentioned is, for example, the air cushion research vehicle, what they call TACV, will take 5 years to develop. What they are trying to do with this is to develop a vehicle that will travel at the rate of 300 miles an hour and will not require the actual building of rails and the very, very expensive type of right-of-way development presently required by rail transportation. The Metroliner, for example, which has already been developed under this program, is currently carrying 3,000 passengers a day. It took almost 5 years to develop.

The only train we now have available to send out through the Midwest and through the areas of the United States that we hope to provide for rail passenger service is the turbotrain, and that is part of this program. I hope the committee will adopt the amendment.

Mr. Speaker, I include at this point the entire letter which I have referred to:

DEPARTMENT OF TRANSPORTATION,
FEDERAL RAILROAD ADMINISTRATION,
*Washington, D.C., September 14, 1970.*

Hon. J. J. PICKLE,
*House of Representatives,*
*Washington, D.C.*

DEAR MR. PICKLE: In response to your inquiry of September 11, 1970, soliciting recommendations whereby intercity high speed ground transportation can be advanced in a meaningful manner with increased funding emphasis, I offer the following information.

The Office of High Speed Ground Transportation has, over the past several years, conducted the necessary studies leading to improved intercity ground transportation. These studies included both the engineering viability of various potential systems and the resulting economic impact should they be exploited. Engineering research and exploratory development has been initiated on those candidate systems which appear to offer the maximum benefit to the public. A balance between programs for near-term application and advanced systems was used to provide an immediate payoff while the longer range, advanced systems are being developed. An example of this process is the Metroliner Demonstration and the 300-mile per hour Tracked Air Cushion Research Vehicle (TACRV). The Metroliner is currently carrying over 3,000 passengers daily whereas the TACRV will take five to six years to develop.

The Office is now in a position to move more rapidly in the area of hardware development and prototype testing on components subsystems and complete systems of several concepts which will lead to an early solution to our existing intercity ground transportation dilemma. Unfortunately, hardware development requires considerably more funds than engineering studies. It is, therefore, very difficult to move forward with intercity ground transportation on several fronts simultaneously without appropriate consideration of the balance between other transportation modes and their funding requirements.

As you know, the President's budget supports the FY71 appropriation request of $21-688,000 for the Office of High Speed Ground Transportation. This amount was determined by evaluating the needs and priorities of intercity ground transportation against other national needs within the overall budget constraints. This Office endorses and supports the request.

You requested that I submit to you a listing of programs and associated funding whereby we could, in a prudent manner, accelerate our activities should monies be made available. The enclosed summary is in response to that request.

I would add, however, in addition to the funding constraints, that a detriment to the advancement of intercity ground transportation is the lack of an industry motivating force. They do not have sufficient visibility downstream with regard to system implementations. Currently, the High Speed Ground Transportation Act of September 30, 1965 and extensions thereto do not provide legislative authority beyond the development of candidate systems and demonstrations. This, of course, inhibits the realization of the Congressional purpose that there be maximum participation by private industry.

I hope the above provides you with the needed information.

Sincerely,

MYLES B. MITCHELL,
*Acting Director, Office of High Speed Ground Transportation.*

---

OFFICE OF HIGH SPEED GROUND TRANSPORTATION PROGRAMS

METROLINER DEMONSTRATION PROGRAM

The OHSGT has determined that an engineering program to solve the technical deficiencies of the Metroliner is required before the demonstration will reach fruition. The Government is negotiating with Penn Central in this joint venture. It is anticipated that the Government's share will be approximately $3 million to fix a single six-car consist this year. An additional $5 to $8 million will be required next year to modify the remainder of the fleet.

TURBO TRAIN DEMONSTRATION PROGRAM

The only rail passenger equipment of advanced design available for nonelectrified railroads which can be produced immediately is the Turbo train of United Aircraft Corporation. United has offered to sell 11 Turbos (each of 325 seat capacity) for $27.5 million, or $2.5 million apiece. The trainsets could be produced in 14 months and would incorporate modifications found desirable as a result of DOT's Boston-New York Demonstration.

The fleet of 11 trains would equip a total of from three to five demonstrations of intercity service in selected corridors around the country.

ADVANCED SYSTEMS

Several advanced systems currently being exploited by OHSGT could be accelerated in FY71. Most of the activity would, however, be devoted to the subsystem or component level. They are listed, with funding, as:

| | |
|---|---|
| 1. Suspended Vehicle Systems | $400,000 |
| 2. Tube Vehicles | 750,000 |
| 3. Automobile Related Systems | 800,000 |
| 4. Rail Technology | 3,000,000 |
| 5. Communications | 300,000 |
| 6. Tunneling | 1,800,000 |
| 7. Single Sided Linear Induction Motor | 2,000,000 |
| 8. Power Conditioning | 250,000 |
| 9. Intercity TACV Demo. Planning | 1,000,000 |
| 10. Regional Ground Transportation System Demo. Planning | 3,000,000 |

HIGH SPEED GROUND TEST CENTER

High speed ground transportation development and testing of advanced systems will be done at the High Speed Ground Test Center at Pueblo, Colorado. Several of the programs, as well as the development of the Center, are being deferred for several years to conform with the budget limitations. An acceleration in some areas would be beneficial. They are:

1. Completion of the Linear Induction Motor (LIM) Test Track—Construction of the initial segment of the test track is underway. It is approximately six miles in length. Completion of the LIM track loop (15 mile balance of 21 miles) would allow the LIMRV tests to be extended to its maximum potential of 250 mph. This novel concept—marrying the best of wheel-rail technology with the new propulsion and braking systems growing out of advanced systems research is a very attractive intermediate mode of ground transportation. At the same time, upper limits of rail guidance can be better established through use of this facility. The cost of this extension would be approximately $6 million.

2. Federal Rail Test Track—Construction of a conventional rail test track is planned for FY73. Advancing this activity to FY71 would be very beneficial to both the Government and the rail industry. The purpose of the test track is to provide a controlled, flexible facility for checking out new equipment and concepts, experimenting with track standards for both comfort and safety and better defining construction and maintenance cost associated with higher speed running. It will also provide the ability to experiment with the stability of continuous welded rail track, which is prone to sudden type failures and is thus difficult to test in service. The program cost is estimated at $3 million.

3. Facilities—The present master planning of the Test Center calls for facility development as program activity accelerates. However, three items which should be augmented are the initial six-month operating contract, the construction of the control center, and the building for administraive offices. Additional funding required is $2 million.

Also, Mr. Speaker, I ask that the gentleman from Texas (Mr. PICKLE) may revise and extend his remarks at the conclusion of my remarks.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

Mr. PICKLE. Mr. Speaker, earlier today, my good friend and colleague, BROCK ADAMS, introduced an amendment in my behalf to H.R. 17538, the High Speed Ground Transportation Act. A long standing prior commitment prevented me from being present on the floor during the debate.

Although H.R. 17538, the bill extending the High Speed Ground Transportation Act for another year passed unanimously in both the full committee and the subcommittee, I reserved the right to make an amendment on the floor requesting more money be put into the bill if it could be shown that additional funds could be prudently used. At my request, Mr. Myles Mitchell has written me pointing out specific programs upon which more money could wisely be spent in fiscal year 1971.

I am offering this amendment to increase the authorization for funding of the Office of High Speed Ground Transportation because I believe that we should be concentrating our efforts in research and development of new types of land transportation equipment. Of the $21.7 million authorized in H.R. 17538, only a little over $18 million is authorized for research and development. I wonder if we are not putting priority on the wrong type of transportation spending.

Yesterday Congress authorized billions of dollars for urban mass transportation and the Commerce Committee has recently reported out the railway passenger bill authorizing the spending of several hundreds of millions of dollars. I support both of these bills, but we may have the cart before the horse. Both the railway passenger bill and the urban mass transit bill are involved with traditional, conventional equipment. I do not feel that this is the way real progress is made. We should be concentrating our efforts on trying to find faster, more efficient ways of moving groups of people. In the 1970's we should launch a program in developing new transportation means in the same manner that we undertook the space programs in the 1960's.

By introducing this amendment, I am not out of line with the original intent of the Commerce Committee. Even if the $21.7 million authorized by H.R. 17538 plus the $14.9 million authorized by my amendment were fully appropriated, the total appropriation would only be $111.6 million of a total $164 million authorization.

I wish to submit for your information a list of priority programs presented to me by Myles Mitchell at my request. The total cost of these priority programs would cost an additional $14,950,000. Mr. Mitchell's list describes these programs:

OFFICE OF HIGH SPEED GROUND TRANSPORTATION PROGRAMS

| | |
|---|---|
| 1. Suspended Vehicle Systems | $400,000 |
| 2. Federal Rail Test Track | 3,000,000 |
| 3. Completion of LIM Test Track | 6,000,000 |
| 4. Single Sided LIM | 2,000,000 |
| 5. Rail Technology | 3,000,000 |
| 6. Power Conditioning | 250,000 |
| 7. Communications | 300,000 |
| Total | 14,950,000 |

These are areas where additional funding in FY 1971 could cause an acceleration in the advancement of high speed ground transportation technology and lead to early implementation of advanced systems. A brief note on each follows:

SUSPENDED VEHICLE SYSTEMS

Of all of the high speed advanced ground transportation systems, the suspended vehicle system appears the most promising for early public demonstration of systems which go beyond the flexibility and performance potential of TACV. Because of the necessary development cycle; i.e., engineering feasibility analysis, exploratory development, fabrication, and demonstration, the Office cannot justify a greater expenditure in FY 1971. In FY 1972, model testing can be conducted and the funding requirement for that activity is estimated at $3 million.

RAIL TEST TRACK

Construction of a conventional rail test track is planned for FY 1973. Advancing this activity to FY 1971 would be very beneficial to both the Government and the rail industry. The purpose of the test track is to provide a controlled, flexible facility for checking out new equipment and concepts, experimenting with track standards for both comfort and safety and better defining construction and maintenance cost associated with higher speed running. It will also provide the ability to experiment with the stability of continuous welded rail track, which is prone to sudden type failures and is thus difficult to test in service. The program cost is estimated at $3 million.

LINEAR INDUCTION MOTOR (LIM) TEST TRACK

Construction of the initial segment of the test track is underway. It is approximately six miles in length. Completion of the LIM track loop (15 mile balance of 21 miles) would allow the LIMRV tests to be extended to its maximum potential of 250 mph. This novel concept—marrying the best of wheel-rail technology with the new propulsion and braking systems growing out of advanced systems research is a very attractive intermediate mode of ground transportation. At the same time, upper limits of rail guidance can be better established through use of this facility. The cost of this extension would be approximately $6 million.

SINGLE SIDED LIM

The most readily developed linear induction motor is the one where two halves of the active portion straddle the reaction rail which extends upward from the guideway. An arrangement where a single active member faces a reaction surface which lies flat on the guideway offers much greater flexibility in vehicle and guideway design, plus a simpler, sturdier rail. We are well into our program on the double LIM and are ready to begin applying the electrical knowledge gained there to the single sided motor—which presents unique mechanical problems to be solved.

RAIL TECHNOLOGY

This effort is directed at near-term rail passenger service and would be divided between improvements in train equipment in the Northeast Corridor, derivation of specifications for a next generation of medium speed (120 to 150 mph) rail vehicles—taking into account all recent experience here and abroad—acceleration experiments with new suspension techniques and proving out roadbeds on which comfort at such speeds may be maintained economically.

POWER CONDITIONING

Application engineering to bring down the space, weight, and cost of electrical apparatus installed in HSGT vehicles, thus making this pollution-free, noiseless form of propulsion more economical.

COMMUNICATIONS

The application of modern electronics technology to the burgeoning demand for information and accessibility is moving steadily but slowly, limited only by funding levels. The Metroliner telephones are only a sample of the service which can be provided to moving vehicles to increase their attraction, counteracting in part the occupancy time relative to air travel.

Installation of a communication system on the LIM Research Vehicle Track and perhaps on the TACRV guideway is planned to determine performance of the system with communication to and from a high speed vehicle and also to establish preferable low cost installation techniques.

Mr. SPRINGER. Mr. Speaker, I rise in opposition to the amendment, and for very good reason. If I may say to my colleagues in the House, my distinguished colleague and beloved friend from Texas (Mr. PICKLE) offered the amendment in the subcommittee and it was not accepted. He offered it in the full committee and it was rejected. He did reserve the right to offer it on the floor of the House even though he had been defeated on it twice.

We have considered most carefully the

amount of money that ought to be put into this program. Overwhelmingly the Committee on Interstate and Foreign Commerce felt that the best we could do this year, if we were to spend money wisely, was $21.7 million. The proposal to add roughly another $14,950,000 to that amount would almost double the amount of money that we have determined, we think wisely, could be spent.

The Bureau of the Budget is opposed to it. It would almost double the Budget figure to add this $15,560,000 to it. I do not want to take anything away from the dedication of the gentleman from Texas. He has been a hard-working member of the Subcommittee on Transportation and Aviation. But he has submitted the amendment to the subcommittee and it has been defeated; he has submitted it to the full committee and it has been defeated, and I think for very good and very solid reasons, in spite of what my distinguished colleague from Michigan (Mr. DINGELL) and my equally distinguished colleague from Washington (Mr. ADAMS) have said. We do not need this money in the next few years. This is an extremely technical development, may I say.

High-speed ground transportation development is exceedingly technical. I would hope that the House would stay with the committee because, as I recall, there were only one, two, or three votes in favor of the amendment when it was offered in the committee.

I trust that my colleagues will defeat the amendment and that we can pass the legislation as it came from the committee.

Mr. GROSS. Mr. Speaker, I move to strike the necessary number of words.

Mr. Speaker, I should like to ask someone knowledgeable in this matter how many millions have been expended over the 5-year life of this program.

Mr. DINGELL. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Michigan.

Mr. DINGELL. About $78 million.

Mr. SPRINGER. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Illinois.

Mr. SPRINGER. The distinguished gentleman from Michigan has predicted the amount with the present $21.7 million included. We have spent $78 million. We have committed $78 million. With the proposed additions it would come out to $97 million.

Mr. GROSS. So with the addition proposed in the pending amendment, it would be much more than $100 million?

Mr. SPRINGER. That is correct. It would be not quite double the amount—$14.9 million as against $21.7 million, about 40 percent.

Mr. GROSS. Now let me ask what we have to show for the expenditure of $78 million up to this point?

Mr. DINGELL. We have a great deal to show. There is nothing much in the way of trains moving from place to place, because most of what has been done has been highly innovative in character. For example, we have come to the point where we will be able to consider very shortly the actual utilization of a linear induction motor, which is an entirely new method of applying propulsion, where the vehicle itself is actually part of the motor that moves it from place to place. We have high-speed tracks, air-cushion vehicles, which are now approaching the point where they can be utilized for actual carriage of passengers from place to place on a highly efficient and high-speed basis at probably a great deal less cost, both in terms of pollution, environmental destruction, and in terms of construction costs in vehicle travel from point to point.

We have the multilinear and we have the turbotrains which are highly successful devices for moving people much more cheaply and efficiently from places like New York to Washington and New York to Boston.

Mr. GROSS. Did none of the experimentation and development take place before this program was initiated?

Mr. DINGELL. I would tell the gentleman from Iowa there was experimentation that was conducted. Very little was conducted either by the Government or by Government-financed endeavors previous to the origination of the program that this piece of legislation would extend.

Mr. SPRINGER. Mr. Speaker, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Illinois, but first I would like to ask someone what effect, if we go out and continue to spend millions of dollars on the development of these trains, this will have on the economic future of the jumbo jets and other aircraft?

Mr. SPRINGER. This has nothing whatever to do with air transportation. This is solely high-speed ground transportation.

Mr. GROSS. I understand that perfectly, but what is going to be the effect on air transportation?

Mr. SPRINGER. I think we ought to go a little further on, and we will have later in the session legislation which is before the Rules Committee. We will designate corridors and routes where passenger service would still continue. It is probable that passenger service would be discontinued on some routes, but continued on others. The only one we can point to presently we know will be continued will be the Washington to New York, and probably it would be extended to Boston, and probably there will be, if there is sufficient demand, a Chicago to St. Louis, and Chicago to Minneapolis, maybe Chicago to Omaha, maybe in the West, San Francisco to Los Angeles, and in the East, I would suspect there would be several—I cannot name them, but there may be several more.

The purpose of this experimentation, may I say to my distinguished colleague, the gentleman from Iowa, is to see if we can improve the type of service, not only just what the people ride in, but also the speed at which these vehicles will get over the ground. Unless we can do that, there cannot be any inducement to ride ground transportation.

When Secretary Alan Boyd, Secretary of Transportation, came before our committee 4 years ago, he gave us figures for 1975 and 1980 and 1990 and 1995, showing the people who would travel over the ground in this country. That absolutely astounded me, because it showed it would be an absolute impossibility to carry all these people by air. We will have to have ground transportation. We cannot even carry them all by bus.

The gentleman ought to have a more detailed answer. On the suspended vehicle systems, this is something similar to what the Japanese are doing with great success, but they can do it better because their distances are shorter between points. It works well for them.

The SPEAKER. The time of the gentleman from Iowa has expired.

(By unanimous consent, Mr. GROSS was allowed to proceed for 2 additional minutes.)

Mr. GROSS. Mr. Speaker, I yield to the gentleman from Illinois.

Mr. SPRINGER. We did not attempt to get into this from the Federal angle of spending money ourselves to get into research, because we do not have the technology to do the job. It has to be done by people who are experts in the field of transportation. A little has been done in the universities, but most of it has been done by companies who presently are in this field but who are not going to undertake this kind of research without our help.

Mr. GROSS. Mr. Speaker, in the light of what happened to the Penn Central, the merger of which was supposed to do great things, I wonder how much of this money is going down a rathole.

Mr. SPRINGER. What happened with the Penn Central does not reflect upon this as far as I can see.

There were great areas of the Penn Central where passenger service simply was not profitable. This was one of the reasons why they went under. They were losing about $60 million a year on passenger service.

Mr. GROSS. The gentleman from Michigan spoke of success of the new Metroliner, running between New York and Washington, D.C.

Mr. DINGELL. That is correct.

Mr. GROSS. I seem to remember that with the first snow flurry last year they were practically stopped.

Mr. DINGELL. Most of the rail transportation stopped on that occasion.

Mr. GROSS. In this part of the country. I do not recall that it stopped out West, where they make some pretense of having equipment capable of dealing with snow. But this Metroliner was not operating, or was practically at a standstill, during that entire snowstorm.

The SPEAKER. The question is on the amendment offered by the gentleman from Washington (Mr. ADAMS).

The question was taken; and on a division—demanded by Mr. ADAMS—there were—ayes 23, noes 42.

So the amendment was rejected.

Mr. BOLAND. Mr. Speaker, I rise in support of H.R. 17538 extending for 1 year the high-speed ground transportation program.

During the past 5 years the Office of High-Speed Ground Transportation has made great strides toward providing faster, more efficient rail transportation

The Metroliner and Turboservice demonstrations, I believe, will prove that it is still possible to have acceptable rail passenger transportation.

I am particularly impressed with the Turboservice demonstration project, Turboservice was initiated between Boston and New York, 229 miles, on April 8, 1969. The service is operated by Penn Central, utilizing two, three-car trains built and maintained by the United Aircraft Corp., and leased for a 2-year period by DOT. The demonstration is designed chiefly to test public reaction to experimental equipment incorporating significant new design features. It is also providing economic and technical data and operating costs which reflect aircraft-type components replacement and preventive maintenance techniques.

The present contract for this project was scheduled to end next month. I am advised, however, that with the $900,000 contained in this legislation the Department of Transportation will be able to continue the Turbo train demonstration.

With the selection of the high-speed ground test site in Colorado and the acquisition of NASA's Electronic Research Center at Cambridge, Mass., this office is now prepared to move ahead with research and development of more sophisticated ground vehicles, such as tracked air-cushioned vehicles and tube vehicles.

The Department of Transportation and its Office of High-Speed Ground Transportation should not attempt to proceed into the demonstration stage with a large variety of costly high-speed systems without first conducting sufficient research to determine the most efficient system and vehicle.

Mr. Speaker, I urge the adoption of the bill.

Mr. STRATTON. Mr. Speaker, I intend to support H.R. 17538, the bill to extend the High-Speed Ground Transportation Act of 1965 for 1 year, and to authorize an additional appropriation of $21.7 million for fiscal year 1971.

The concept of the legislation, to promote a "safe, adequate, economical, and efficient national transportation system" through "research and development in high-speed ground transportation" is one which should not only continue to be implemented, but should be extended. This concept, with emphasis on rail transportation, is important for two reasons:

First of all, we are at last becoming concerned over the state of our environment and the effects of automobiles on the air we breathe. A national system of high-speed rail transportation would seem to be a very effective way of reducing the number of cars and trucks on our highways and therefore reduce pollution caused by combustion engine exhausts.

Second, no one can deny that we are facing a major transportation crisis in this Nation. We have just about reached a saturation point both in air travel and in highways. Mass rail transportation is the only practical way to alleviate the congestion on both our highways and our airways.

The effects of the original 1968 act has been dramatically illustrated by the success of the Washington to New York Metroliner, the demonstration project contracted by the Department of Transportation under that act.

Such a demonstration will be continued by H.R. 17538. But I also hope this legislation will be utilized to extend those projects. In particular, I would urge that the Secretary of Transportation use the authority in this bill to contract for plans to extend the same kind of Metroliner service from New York City to Albany. We need this kind of fast 1-hour service between these two points. It is time the people of upstate New York had first-rate train service. During peak hours the thruway is often clogged bumper to bumper, airplanes are frequently stacked up for hours because of the overcrowded air corridors serving New York City.

While an Albany to New York City Metroliner is not specifically provided for in this legislation, the funding and authority is clearly there, and should be used. I would have preferred that such a project be specifically spelled out in the text of the bill, but since the authorization is broad enough to include such a project, I hope the Department will take steps without delay to get the Metroliner project extended from New York City to Albany.

Mr. MONAGAN. Mr. Speaker, I support H.R. 17538, the High-Speed Ground Transportation Extension Act. The need to improve our rapid-speed ground facilities cannot be denied. One need only ride our congested roadways or wait hours on an airport runway for takeoff to realize this. In the past as transportation demands have multiplied, they have been met through increased auto ownership and new highway construction. In 1945 approximately 25 million automobiles were registered in the United States, and out on our highways. By 1965 this figure had jumped to almost 75 million. The time has now come to emphasize additional transportation facilities.

This legislation authorizes an appropriation of $21.7 million for research, development, and demonstrations in high-speed ground transportation during the fiscal year 1971. The High-Speed Ground Transportation Act was originally established in 1965. Since that time it has provided funds to effect the transition from the past into transportation ideas and equipment of the future. Such successful projects as the New York to Boston Turboservice and the New York to Washington Metroliner have received much needed impetus from the High-Speed Ground Transportation Act. The Turboservice, which serves my own State of Connecticut, has received some $.9 million. As an experiment in new transportation methods it has proved many important points in modern railroading and could help usher in a whole new era of high-speed rail transportation.

The bill we are considering today, which authorizes funds for an additional year of the High-Speed Ground Transportation Act, will allow completion of several valuable projects already begun. The Department of Transportation plans to use this extension to coordinate facilities in Colorado and Massachusetts into a unified research and testing operation. High-speed ground transportation plans also include research and development to meet the door-to-door problems of transportation. One of the most demanding and challenging problems in transportation involves the need to improve both in speed and convenience the door-to-terminal and terminal-to-door segments of transportation. The funding which this bill provides will attack such problems. Finally, work will be continued under this legislation to improve the actual terminal-to-terminal ground travel. Previous work already indicates that high-speed rail equipment can perform satisfactorily for speeds of up to 150 miles per hour. Yet to be developed tracked air-cushioned vehicles will be able to operate at speeds of up to 300 miles per hour. Tube vehicles may reach 500 miles per hour speeds.

The High-Speed Ground Transportation Extension Act continues a program that has proved successful in the past, that plans for the future, and that is consistent with the administration's budget request. For these reasons it is a good bill and deserves our consideration and passage.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

Mr. DINGELL. Mr. Speaker, I ask unanimous consent for the immediate consideration of the Senate bill (S. 3730) to extend for 1 year the act of September 30, 1965, as amended by the act of July 24, 1968, relating to high-speed ground transportation, and for other purposes.

The Clerk read the title of the Senate bill.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

Mr. SPRINGER. Mr. Speaker, reserving the right to object, I am not sure what the gentleman is requesting.

Mr. DINGELL. I have made a unanimous-consent request for the immediate consideration of an identical Senate bill in the House. This is simply to expedite the business of the House.

Mr. SPRINGER. Mr. Speaker, I withdraw my reservation.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

The Clerk read the Senate bill, as follows:

S. 3730

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That (a) the first sentence of section 11 of the Act entitled "An Act to authorize the Secretary of Transportation to undertake research and development in high-speed ground transportation", approved September 30, 1965 (Public Law 89–220; 79 Stat. 893; 49 U.S.C. 1631–1642), as amended, is amended by striking out ", and" and the period at the end thereof and inserting a semicolon and the following: "and $21,700,000 for the fiscal year ending June 30, 1971.".

(b) The first sentence of section 12 of such Act of September 30, 1965, as amended, is further amended by striking out "1971" and inserting in lieu thereof "1972".

The Senate bill was ordered to be read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

A similar House bill (H.R. 17538) was laid on the table.

## GENERAL LEAVE TO EXTEND

Mr. SPRINGER. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the bill just passed.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

## PERMISSION FOR COMMITTEE ON PUBLIC WORKS TO FILE REPORT ON H.R. 19504

Mr. GRAY. Mr. Speaker, I ask unanimous consent that the Committee on Public Works may have until midnight Friday to file a report on H.R. 19504, the Federal-Aid Highway Act of 1970.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

## REQUEST FOR PERMISSION FOR SUBCOMMITTEE ON ECONOMIC DEVELOPMENT, COMMITTEE ON PUBLIC WORKS, TO SIT DURING GENERAL DEBATE TODAY

Mr. GRAY. Mr. Speaker, I ask unanimous consent that the Subcommittee on Economic Development of the Committee on Public Works may be permitted to sit during general debate this afternoon.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

Mr. HALL. There is, Mr. Speaker. I object.

## AMENDING ATOMIC ENERGY ACT OF 1954

Mr. HOLIFIELD. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 18679) to amend the Atomic Energy Act of 1954, as amended, to eliminate the requirement for a finding of practical value, and for other purposes.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 18679, with Mr. BURKE of Massachusetts in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from California (Mr. HOLIFIELD), will be recognized for 30 minutes and the gentleman from California (Mr. HOSMER), will be recognized for 30 minutes.

The Chair recognizes the gentleman from California (Mr. HOLIFIELD).

Mr. HOLIFIELD. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, the bill before us, H.R. 17679, covers three main features and several items that are needed to update, clarify, and improve the provisions of the Atomic Energy Act of 1954, as heretofore amended.

The bill was unanimously adopted by the Joint Committee on Atomic Energy, which I have the honor to chair. It was reported out by our committee without a dissenting vote. The legislation it embodies is distilled essence from a number of legislative proposals during the past several years, considerable testimony and submitted comments by representatives of the Government, industry, and other interested groups and, finally, very thorough consideration by the joint committee.

I will briefly summarize the contents of H.R. 18679, and then I, and my fellow committee members of the House, will be pleased to answer any questions that may be raised.

First, the bill would erase from the Atomic Energy Act of 1954 the requirement that the Atomic Energy Commission must make a finding of practical value before nuclear powerplants or other nuclear facilities may be licensed for industrial or commercial purposes. The Commission has not yet made a finding of practical value for any type of nuclear facility, and consequently nuclear powerplants are still being licensed as research and development facilities. The concept of a finding of practical value as a condition precedent to commercial licensing appeared to be a good idea in 1954, when the generation of electrical energy through the use of nuclear reactors was just a promising prospect for the distant future. Now, this concept serves no useful purpose. It is simply an unnecessary roadblock to the commercial licensing of nuclear powerplants. The bill removes this hurdle. Pursuant to section 6 of the bill, nuclear facilities—defined in the Atomic Energy Act as utilization and production facilities—that are to be used for industrial or commercial purposes, would have to be licensed accordingly, unless some future law otherwise specifically authorizes or a particular application is covered by either of the two small exception categories specified in revised section 102 of the Atomic Energy Act.
